Prescribed meditation practice can elicit physical ease and mental stability, which provide a foundation for health and wellness as it directly influences one's ability to meet the challenges that result from stress, burnout, and illness for the patient and clinician alike. For many people, illness can bring out feelings of confusion, anxiety, fear, and anger. Shock, isolation, depression, fear, and helplessness are some common experiences patients face in dealing with chronic disease.⁹ Feeling out of control or losing one's grounding can give rise to reactivity of the mind and body that leads to increased pain and suffering. Practicing mindfulness—nonjudgmental present-moment awareness—and experiencing how this process can influence one's relationship with life stressors is an essential part of addressing the epidemic of mind-body afflictions that can include acid reflux, migraine headache, low back pain, restless legs, fibromyalgia, chronic fatigue, and irritable bowel. These and other conditions disproportionately burden the health care system and often do not respond to conventional treatment alone.²

Meditation is an inward-orienting, self-empowering practice that can stimulate the healing process and help patients and clinicians navigate unsettling and turbulent experiences. According to Charlotte Joko Beck,¹⁰ “The practice of meditation provides a skill that affords a greater sense of self-determination—the ability to cultivate and draw upon inner resources to help meet all circumstances with equanimity and clarity.” To learn the basic elements of mindfulness, see [Boxes 100.1–100.3](#) and [Fig. 100.1](#).

Prescribed meditation practice can elicit physical ease and mental stability, which provide a foundation for health and wellness because it directly influences one's ability to meet the challenges resulting from stress, burnout, and illness for the patient and clinician alike.

Review of Meditation Research

Evidence pointing to the medical benefits of meditation is widely documented and continues to increase in quality and quantity. As of 2015, there were more than 1000 scientific articles published on meditation. In particular, the biological correlates of meditation experience have received the most attention in medical research, which is disproportionate to the complete meditative experience that includes both objective external effects and subjective internal experience. However, research continues to elucidate how the mind-body connection affects health in promoting wellness, as well as in preventing disease.

The interplay between the mind and body has been difficult to describe and operationalize from a scientific standpoint. However, many case examples reveal the value in developing clinically oriented mind-body therapies. As early as 1935, French cardiologist Brosse¹¹ studied Indian yogis capable of decreasing their heart rates to almost zero as shown on electrocardiography (ECG). In 1961, Bagchi and Wenger¹² found that some expert meditation subjects could produce bidirectional changes in every measurable autonomic variable. The *Lancet* published an account of the voluntary live burial of a yogi who sat cross-legged underground for 62 hours while continuous vital sign recordings revealed no distress.¹³ In 1968, Hoenig¹⁴ witnessed an experiment in which a yogi confined for 9 hours in a small enclosed pit and monitored with electroencephalography and ECG demonstrated a normal waking rhythm for the full 9 hours. He observed that the expert meditator was awake and relaxed throughout the experiment. He also observed a variable heart rate from 40 to 100 beats/minute in recurring cycles on ECG.¹⁴ As in fetal heart monitoring, later research would show that synchronous increases in heart rate variability in adults predict a decrease in cardiovascular mortality,^{15,16} which can be reproduced and maintained using meditation practice^{17,18} (see [Chapter 96](#)).

BOX 100.1 Getting Started With Mindfulness Meditation Practice: SOLAR or SOL Acronym

Stop

- Find a quiet place where you will not be interrupted for the next several minutes.

- Set your cell phone alarm to vibrate in 5 or more minutes, and then forget about time altogether. You can adjust the length of your meditation time as you feel is appropriate.
- Sit comfortably in an alert position with a straight and relaxed back. With eyes open or closed, position your hands as you like.
- Allow an intention for this time, such as, “May I allow myself to be present to the simplicity of movements in the body as breathing, feeling, and sensing. May I enjoy the benefits of silence and stillness.”

Observe

- Notice the sensations of the body such as posture, feet on the floor, and hips on the chair.
- Allow the breath to flow in and out of the nose at a natural and unforced rate. Avoid manipulating either a slower or faster rate. Just let the body breathe and simply notice the sensations of breathing.
- Moment by moment, allow yourself to take *pause, breathe, and feel*.

Let It Be

- For this time now, *let everything be as it is* without reacting to or trying to change anything. Like a watchful bystander, just witness your experience moment by moment as it happens, whether pleasant or unpleasant.
- If your thoughts drift into stories, fantasies, daydreams, ruminations, or other distractions, simply stop, drop into the sensations of breathing, and allow all sensations and thoughts to roll past the screen of your awareness like moving frames on a filmstrip.

And...

Return

- Let the breath be your anchor in the present moment. If you become distracted or caught up in any particular *thought, image, emotion, or sensation (TIES mnemonic)*, just bring your attention back to the breath and *return again and again* to the experience of breathing in a nonjudgmental and self-forgiving way.
- At the end of your meditation period, remain still for a few more moments. Notice how you feel. Be present by taking a moment to *pause, breathe, and feel* whatever is happening in any experience at any

point in the day.

BOX 100.2 Practice Suggestions and Getting Started

- For “formal practice,” find a quiet place to sit, with few distractions. In the beginning, it may be difficult to sit still for even 5 minutes. You may note restless or distracting thoughts. Over time with regular practice, the mind will become more stable and clear.
- Do not meditate too long in the beginning. It may be useful to start with short, guided practices (<http://www.fammed.wisc.edu/our-department/media/mindfulness>).
- Commit to a set amount of time specifically for meditation. A good intention before you start is, “For this short time now, I have nowhere to go and nothing to do.” Having a timer such as a smartphone application (e.g., Insight) can ease any worry of having to keep track of time.
- Sit in a comfortable and alert position with an upright spine. For most people, sitting in a chair with feet flat on the floor is ideal. Other positions can include crossed legs, kneeling on a bench, or straddling a cushion (i.e., Zafu).
- With eyes open or closed, allow the gaze to settle easily (“rest the eyes”).
- Be persistent and regular with daily meditation. Progress comes by maintaining a daily practice. In time, try to meditate for 15–20 minutes in the morning just after rising or before going to bed, but any duration and opportunity for meditation is beneficial, even if it is only one breath or 1 minute. The daily commitment of meditation requires a continual nonjudgmental return to the practice itself, over and over again every day (similar to building a muscle). If you miss a day, or a week, or even years, simply return to the practice of meditation without judgment.
- For “informal practice,” try to approach everyday activities with the same mindful intention, attitude, attention, and presence as in “formal” meditation. While driving to work, focus on driving. When at work, concentrate on the performance of each task. At home, live and be completely present with others. Keep in mind that meditation is not about withdrawal from the world or responsibilities. It is about

living with purpose, awareness, and kindness.

- A deepening of spiritual life or “religious experience” may occur. Although this can be pleasant, it can also be disconcerting early on and may require the reassurance and guidance of an understanding teacher.

BOX 100.3 Precautions and Recommendations for Meditation Practice

- Leg and back discomfort are common concerns. Do not strain the body. Sit in an alert and comfortable position. Remember that meditation is about openness and receptivity, not about distorting the body or being uncomfortable.
- In the beginning, intrusive, repetitive, or distracting thoughts may make it difficult to sit still for even 5 minutes. Keep in mind that meditation is not about making things go away. It is simply the nonjudgmental process of staying present with whatever is happening moment-by-moment, pleasant or unpleasant. However, over time and with regular practice, the mind will become more stable.
- In learning meditation, one should be guided by teachers and practices that resonate authentically, are nondivisive, and instill feelings of support and wellbeing. Do not forfeit personal boundaries and safety for any teacher or teaching. Listen to your intuition and reason, and trust that the experience you are having is exactly what you need in this moment.
- Meditation can at times uncover preexisting stressors or traumas, similar to peeling back the layers of an onion, thus revealing unpleasant underlying emotions. A professional mental health therapist familiar with contemplative practice can help facilitate the healthy release of these emotions.
- Be attentive to and honest about your experience. In a compassionate way, attend to realizations and insights that arise from regular meditation practice. This may include journaling, creative expression, and talking with a skilled meditation teacher.
- Include a gentle form of movement, such as contemplative or mindful walking, walking a labyrinth, yoga, Pilates, Nia, tai chi, or qi gong (or

swimming, biking, running, hiking, canoeing, or skiing). However, avoid striving and straining.

The Experience (TIES Mnemonic)

- Talk/thoughts: mental chatter, incessant thinking, storyline, narratives
- Images: mental pictures, imagined scenes, visualized scenarios
- Emotional feelings: love, hate, fear, joy, sadness, anxiety, etc.
- Physical sensations: sound, touch, sight, taste, smell

Benson et al.¹⁹ helped pioneer academic interest in meditation through research on the physiological and neurochemical principles of “the relaxation response,” which is defined as a hypometabolic state of parasympathetic activation.¹⁹ Furthermore, many studies have demonstrated that meditation can reduce anxiety and increase positive affect,²⁰⁻²² whereas others have shown that mindfulness can help prevent recurrence of depression.^{23,24} In a 1985 study by Kabat-Zinn et al.,²⁵ patients with chronic pain showed a statistically significant reduction in various measures of pain symptoms when they were trained in mindfulness-based stress reduction (MBSR). Meditation can also be helpful for headaches,^{26,27} psoriasis,²⁸ blood pressure,²⁹⁻³¹ hyperlipidemia,³¹ smoking cessation,³²⁻³⁴ alcohol abuse,³⁵ atherosclerosis,³⁶ coronary artery disease,^{3,37,38} longevity and cognitive function in older adults,^{39,40} psychiatric disorders,^{19-24,41} excessive worry,⁴² overuse of medical services,⁴³ and medical costs in treating chronic pain.⁴⁴ Meta-analyses have found mindfulness training useful for a broad range of chronic disorders that are difficult to treat, such as healthy behavior change,⁴⁵ depression and anxiety,⁴⁶ attention deficit hyperactivity disorder (ADHD),⁴⁷ borderline personality disorder,⁴⁸ fibromyalgia, chronic insomnia,⁴⁹ cancer, coronary artery disease, chronic pain, obesity, and eating disorders.^{50,51} The investigators noted consistent and strong effect sizes across these very different situations, thus indicating the potential wide-reaching benefits for both daily life stress and more complex medical disorders.⁵⁰

In a meta-analysis of brain imaging studies on various meditation styles, Newberg⁵² suggested that the neurophysiological effects derived from various meditation practices seem to outline a consistent and

reproducible pattern of significant brain activity in key cerebral structures such as the posterior cingulate cortex.⁵³ Davidson⁵⁴ described a positive correlation between meditation practice and left-sided prefrontal cortex activity, which is associated with a positive effect. In this study, mindfulness meditation was associated with increases in antibody titers to influenza vaccine, a finding suggesting correlations among meditation, positive emotional states, localized brain activity, and improved immune function. Corroborating research demonstrates a direct link between immune function and mood, with positive affective states resulting in stronger immune function and decreased incidence of illness.⁵⁵⁻⁵⁷ Lutz⁵⁸ observed increased left-sided prefrontal cortex gamma wave activity and synchronicity in expert Tibetan Buddhist meditators with more than 10,000 hours of meditation experience when compared with novice meditator controls, both at rest and during meditation. In addition, compared with short-term mindfulness practitioners, long-term meditators showed lower frontal theta activity, indicating the ability to limit excessive processing of unnecessary information (discursive thought).⁵⁹ These findings reveal that attention and affect are flexible traits that can be improved.

Although ongoing research aims to elucidate the measurable biological correlates of meditation and their significance with regard to health, the experiential knowledge that has arisen from time-tested practices of great spiritual traditions should be acknowledged. Meditation practitioners continue to explore the subtle inner dimensions of the meditative experience using methods and perspectives that, like objective sciences, equally address the human condition.

Mindfulness has potential wide-reaching benefits for both daily life stress and more complex medical disorders.

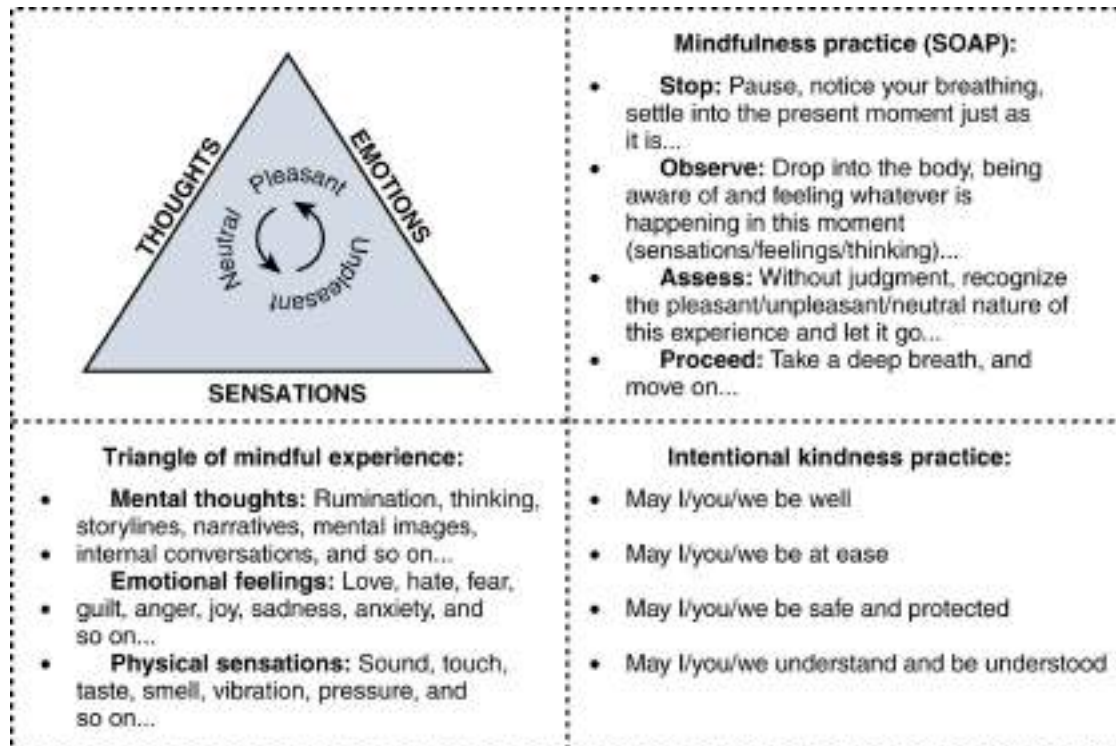

FIG. 100.1 Mindfulness “practice as you go” cards (a cutout handout for patients).

Mindfulness in Medical Practice

Practicing health-oriented medicine in a dysfunctional disease-focused system that does little to honor prevention is increasingly difficult.⁶⁰ Clinicians are pressured to see more patients, work longer hours, and are incentivized to quickly improve reported quality measures (e.g., A1c values) with medications as opposed to lifestyle changes. Particularly in primary care, clinicians are forced to reduce their restricted time, energy, and attention on laboratory tests, imaging studies, documentation, billing and coding, electronic medical record interfacing, and quick prescriptions at the expense of meaningful time with the patient.⁵ For clinicians, maintaining a balance between personal needs and the demands of medical training and practice is often neglected at the cost of their own well-being and health. Sleep, exercise, relaxation, and personal interests take a back seat to increasingly invasive clinical demands that contribute to burnout.^{5,61}

Research suggests that mindfulness can help cultivate present-moment

awareness that may reduce medical error and improve patient care and health care quality.⁶² For example, faulty thinking, such as snap judgments, distracted attention, discursive thought, inadvertent stereotyping, and other cognitive traps can lead to critical mistakes.^{59,63} Growing research also shows that clinicians who themselves exhibit healthy habits are more effective in motivating patients to make significant positive changes in their own lives.⁶⁴ This is also true of clinicians who themselves practice meditation. In a randomized controlled trial of 124 psychiatric inpatients managed by 18 psychology residents, Grepmaier⁶⁵ showed that patients of interns who received mindfulness training did significantly better than did patients treated by interns who did not receive mindfulness training.

The University of Wisconsin Integrative Medicine Program created a collaborative online education module (<http://www.fammed.wisc.edu/mindfulness>; [Box 100.4](#), first item) to provide ongoing support for mindfulness practice and to help clinicians bring mindfulness into the clinical encounter by using a three-step process: (1) pause, (2) presence, and (3) proceed⁶⁶ (see [Chapter 3](#)). The first step, *pause*, encourages the clinician to stop and take a momentary pause. The second step, *presence*, encourages the clinician to focus on the present moment and be aware of sensations, emotions, and thoughts that arise without judgment or analysis. The third step, *proceed*, encourages health-oriented action that responds in a skillful and compassionate way by using insight gained from steps one and two. For example, the symptom-focused visit would only result in a medication to abort a migraine headache, but the mindful clinician is more likely to recognize and address the emotional stressors that are triggering the migraines. This approach focuses more on the underlying cause of the pain rather than just the pain symptoms alone. The mindful clinical encounter encourages the clinician to pay attention to and illuminate key healing mechanisms that arise from the patient-clinician interaction.

Types of Meditation

Most styles of meditation are influenced by the realizations of a particular teacher or group and should be considered within their historical and cultural context. The vast collection of information, teachings, and practices can seem daunting, and selecting a meditation practice style can be challenging. One way to help is to begin reading about the different styles with an open mind, or by attending an

introductory class, or meeting with a meditation teacher to help discern what practice is a good fit. Although the practice styles vary, the insights and realizations that arise from meditation practice have a universal quality. As the common saying goes, “all paths lead to Rome” (see [Box 100.4](#); [Box 100.5](#) and [Table 100.1](#)). It is also helpful to keep in mind that, like exercise, any amount of mindfulness practice can be helpful, even brief interventions.^{5,67}

Neale Donald Walsch, author of *Conversations with God* and founder of Re-Creation retreats. Website: <http://www.nealedonaldwalsch.com>

Movement as Meditation

Often, we think of meditation as sitting on a cushion, folding the legs in a lotus position, closing the eyes, and focusing the attention on something such as a candle, a word, or a chant. These are just a few of the many meditation varieties, but this is not the only way. “Formal” meditation practice typically involves being seated and still in a comfortable and alert position, generally on a supportive chair or meditation cushion on the floor (called a *Zafu*) ([Fig. 100.2](#); meditation postures). In addition,

most styles of meditation also incorporate some form of movement such as yoga, contemplative or mindful walking, tai chi, labyrinth walking, dance, and just strolling through nature (including long distance running, biking, hiking, and skiing). Being present and connected with the body and noticing the qualities of the various physical sensations that arise with movement are fundamental to this process. Body sensations are effectively an anchoring force to facilitate grounding and centering in the present moment. Meditation is an inward-orienting, self-empowering mind-body practice that can stimulate the healing process and help patients and clinicians navigate unsettling and turbulent experiences.

TABLE 100.1
Systems of Meditation Table*

	Centering Prayer/ Contemplation	Kibbuts (Qiblah)	Mindfulness Meditation	Buddhist School Diamond Approach	Self-Realization Fellowship (SRF)	Transcendental Meditation	Tibetan Buddhist	Zen Buddhism/Chan
Traditional Background	Catholic/Christian	Jewish, mystical	Vipassana/insight; mindfulness-based stress reduction (MBSR)	Tantric, esoteric psychology	Shiva/Krishna yoga	Vedic/Hindu	Various Tibetan lineages	Nonsectarian (Chinese and Japanese lineages)
Teachers	Thomas Keating; Thomas Merton; Cynthia Beragoff; M. Basil Pennington; William Meninger	Yehuda Ashlag; David Cooper; Michael Laitman	Jon Kabat-Zinn; Sharon Gersonoff; Sharon Salzberg; Jack Kornfield; Toshi Maki (Zen)	A.H. Almaas (Hemmed All)	Paramahansa Yogananda; Sri Datta Mata	Maharishi Mahesh Yogi (Vedantic)	Fourteenth Dalai Lama; Panchen Lama; Chogyam Trongpa; Seventeenth Karmapa	Bodhidharma; Eisai; Dogen; Huang Po; Charitei Lohan; Nichiren; Gosho A. Thomas
Technique	Sacred word; prayer words (kavanah)	Kibbuts	Breath/body awareness	Inquiry	Krishna yoga; Bhag- vata, Avana	Formalized mantra	Mantra; visualization; chanting	Zazen
Back/Activity Focus	Contemplative walking	Self-directed	Mindful walking; Hatha yoga; body scan	Breath- ing exercises	Integration exercises	Self-directed	Using objects and language	Martial arts (Kung fu; Zen arts (karate, aikido, judo/jujitsu))
Readings/Books	<i>New Seeds of Contemplation</i> (Merton); <i>Open Mind Open Heart</i> (Keating)	<i>A Beginner's Guide to Kabbalah</i> (CD), <i>A Heart of Kabbalah</i> (Cooper)	<i>Mindfulness in Plain English</i> (Gombrin); <i>Full Catastrophe Living</i> (Kabat-Zinn); <i>A Path with Heart</i> (Kornfield)	<i>Emerson: The Diamond Mystic Series 1-3</i> ; <i>Inner Journey Home</i> (by Almaas)	<i>Autobiography of a Yogi</i> ; <i>SRF Lessons</i> (Yogananda)	<i>Science of Being and Art of Living</i> (transcendental meditation) (Maharishi)	<i>The World of Tibetan Buddhism: Path to Bliss</i> (Gombrin); <i>Seven Years in Tibet</i> (Chodron)	<i>Zen Mind Beginner's Manual</i> (Suzuki); <i>The Three Pillars of Zen</i> (Kaplan); <i>Everyday Zen</i> (Buddh)
Counselors	Various; contemplative approach	Try of Life; Ten Sefirat; Davidson; teacher- directed	Mindfulness-based stress reduction/cognitive therapy	Direct approach beyond practice	Meditation; ritual; guru relationship; interviews with monks	Seven-step contemplative approach; personal training; retreats	Teacher-student; Sungya-directed	Teacher-student
Main Sites/Headquarters	Albany at Carkness, Tinsport, KY; Sawanna, CO; multiple regional	Multiple	Insight Meditation Society, MA; University of Massachusetts (the mindfulness-based stress reduction); Spirit Rock, CA; Plum Village, France; multiple	Park City, CA; Boulder, CO; multiple	Los Angeles; Multiple (see also Yagoda Sungya Society of India, sister organization to SRF)	Fairfield, IA; multiple; (Transcendental Meditation Independent UK)	Lhasa, Tibet; Dharamsala, India; multiple	Shasta, Turpuk, China multiple; local; multiple centers

CHAPTER 101

Motivational Interviewing

Robert Rhode, PhD

Health care providers often diagnose a patient's condition and recommend health-promoting behaviors (e.g., take this drug as prescribed, exercise, stop smoking, decrease substance use, make appointments for care, follow a diet). Integrative medicine is more than just recommending some alternative or complimentary health-promoting behaviors. It also involves the way in which the health care provider interacts with the client.

Three Helping Styles¹

Directing

In most health care settings, the health care provider uses a directing helping style, which often includes identifying the health goal or destination and giving clear advice on how to reach that destination. The health care provider is using his or her expertise, identifying the problems to be addressed, and prescribing treatments or prescribing behaviors. The client would do well to heed and follow this well-intended advice. Health care providers with years of experience are familiar with how their accurate advice is not always followed by clients.

Even though a directing helping style may not always facilitate the desired health improvement, it is valuable in health care, and some clients are responsive to it. In some situations, the client's cooperation cannot be solicited, such as during an emergency or when the client is unconscious. At such times, the clinician takes charge, acts unilaterally, and performs the treatment to the client or for the client.

Following

A following helping style is more common in counseling or psychotherapy than in medical settings. There is a goal of developing rapport and staying with the client. Health care providers facilitate healing by being genuinely present and attending to clients with heart and mind. When one choice or another has no obvious risks or benefits (e.g., changing jobs, relationships, or becoming pregnant), the clinician is very likely to use a following helping style to facilitate the client's talking about his or her choices and avoid advocating or emphasizing any particular choice.

Guiding

A guiding helping style is a third way, and may be somewhere between a directing and a following helping style. Motivational interviewing can be considered a specialized version of a guiding helping style that assists clients to access their thoughts, experiences, and emotions to engage in the health-promoting behavior. It may be a style that is most useful when the client is the one who has to implement the health-promoting behavior and the health care provider cannot do it to the client or for the client. Many lifestyle behaviors might be responsive to this helping style because it is the client who has to exercise, eat more nutritiously, engage in meditation, or abstain from smoking.

Motivational interviewing can be considered a specialized version of a guiding helping style that assists clients to access their own thoughts and experiences to implement the health-promoting behavior.

A guiding helping style involves going toward a destination, and in that way it resembles a directing helping style. It also is client centered, by collaborating with the client and recognizing the client as an expert and the primary decision maker, and in that way it is similar to a following helping style.

A directing helping style has been called a "push technology."² The clinician is attempting to install knowledge or motivation as if the client is missing it. A guiding helping style is a "pull technology." The health care provider is attempting to pull the knowledge and motivation from the client's existing resources and experiences. A directing helping style is consistent with the clinician's role as the healer, the one who cures, and the expert. A guiding helping style emphasizes healing rather than the

healer, with two experts (the client and the clinician) in the consultation room. In settings where a directing helping style is common, the recipients of care are often called “patients.” When a guiding or following helping style is more often used, the care recipients are often called “clients” or even “consumers.”

All these styles are helpful, and you might think where in your clinical encounters each style is useful. A trauma surgeon is going to need and use a directing helping style more than a following helping style, but a primary care provider might use a guiding helping style more than a directing helping style, especially for health-promoting behaviors that involve lifestyle changes (eating, exercise, stress management, etc.). This chapter focuses on the guiding helping style and, in particular, on motivational interviewing, not because it is always better but because it is often underused given the common reliance on a directing helping style in health care settings. A guiding helping style may also be more consistent with integrative medicine.

Knowing About Versus Using Motivational Interviewing

Many health care providers have heard about motivational interviewing. However, it is sometimes reduced to “be nice” or “roll with client resistance,” which hardly helps the health care provider know what to say during a consult. Less than 18% of primary health care providers report that they are generally or very familiar with motivational interviewing.³ Even after some formal training, the frequency and quality of the motivational interviewing skills used with actual clients is probably less than what is required to see improvements in client behaviors.⁴⁻⁶ Motivational interviewing is like other areas of health care: knowing that a surgery can be done is not the same thing as being able to perform that surgery skillfully. William Miller, one of the primary authors in the field, has said that it can take up to 10 years to become really good at using motivational interviewing. Although this may be so, this chapter presents several ways for the health care provider to use it immediately. All of them are consistent with motivational interviewing, although perhaps only the most elegant one is particular to motivational interviewing.

Foundation or Spirit of Motivational Interviewing

A motivational interviewing approach is built upon four foundational values. Most health care providers, particularly integrative medicine ones, find that these are already part of their consultations or interactions:

1. **Accepting the client.** This includes empathizing with the client and recognizing that the client is valuable and competent regardless of his or her circumstances. It also involves recognizing that it is the client who has to adopt the health-promoting behavior; the health care provider cannot do it to the client or for the client. This also includes demonstrating support for the client's ability to decide to change now, later, or not at all.
2. **Compassion.** Dedication to others' welfare and well-being has often been present in the health care provider's life and values long before formal training and working with clients.
3. **Collaboration.** Involves coming along side, joining up, or looking at the client's life or situation with the client; partnering with the client to consider a difficult situation.
4. **Curiosity.** Instead of trying to instill knowledge or motivation, the health care provider helps the client access his desire and reasons for doing the health-promoting behavior. The health care provider does not lead with his or her expertise but rather solicits and learns what the client knows first.

A directive helping style does not involve a lot of collaboration with the client because the health care provider is adopting an expert role and "driving the bus." Similarly, it is not so important to be curious about the client's experience because the clinician is deciding what needs to be done. An example of this is when the clinician tells the client that he or she is drinking too much, meets the criteria for alcoholism, needs to attend Alcoholics Anonymous meetings, and should abstain from drinking. The client's objection to the diagnosis and treatment recommendation does not change the clinician's directions and is often labeled, very logically, by the clinician as an example of the client's denying reality or the truth ("The patient is in denial.").

Noncompliance is often used to blame the patient that does not follow

a directive helping style. In fact, noncompliance is two people working towards different goals.

When a motivational interviewing style is used, the clinician respects the client as capable and competent, and therefore it makes sense to collaborate with him or her. If the clinician intends to collaborate with the client, it makes sense to respect and support his or her autonomy. The client will literally be the one to implement (or not) the health-promoting behavior. During a stay in the hospital, health care providers may have more control over the patient's diet, activity, and medication. When the client is out of the hospital, he or she decides what to eat, what to do, and what medication to take. Respecting this reality and explicitly recognizing that the client will make these decisions relieves the clinician of the frustrating task of trying to control the client. The clinician is no longer driving the bus but is "on the bus" with the client, looking at health behaviors and decisions with the client. If the client is capable, competent, and believed to be the key person to implement any treatment, then it makes perfect sense to be curious about the client's experience and his or her reasons for embracing or rejecting the health-promoting behaviors.

The client who is drinking too much is approached differently with this mindset. The clinician still maintains a focus on the destination of less drinking or abstaining, but instead of telling the client what the problem is, he or she now asks what the client thinks about the drinking and how it fits with other goals or values. Instead of pushing a treatment, the clinician explores what makes sense to the client. The client's objections to abstaining are not heard as denial but rather as the client's natural ambivalence to giving up something that he or she enjoys or to which he or she is attached. The clinician may help the client find his or her motivation to change this drinking by exploring which of the client's goals or experiences are diminished by the current drinking.

This collaboration with a client who is recognized as capable seems consistent with integrative medicine as described by Andrew Weil:² "There is this tremendous innate healing capacity that we all have. When I sit with a person who is sick, always at the back of my mind is the question, *What is blocking healing here? What is preventing it? What can I do from outside that can facilitate that process?*"

[Table 101.1](#) describes some ways to experiment with a helping style that is consistent with motivational interviewing. This can be summarized as, "Don't tell, ask."

TABLE 101.1**One Way to Experiment With a Helping Style That Is Consistent With Motivational Interviewing**

Directing Helping Style	Motivational Interviewing Style
These may be methods that a health care provider could use to help a client. These fit with a directing helping style.	Instead of using a directing helping style, a health care provider could use a style consistent with motivational interviewing:
Explaining why the client should engage in the health-promoting behavior.	Listening with the goal of understanding the client's dilemma concerning the health-promoting behavior.
Teaching the client, telling him or her what to do, or giving advice.	Asking what the client knows, then providing some information or advice if necessary, and finally asking how that fits with his or her understanding or experience.
Describing specific benefits that would result from doing the health-promoting behavior.	Asking, "What benefits may there be for you if you engaged in this health-promoting behavior?"
Telling the client how to implement the health-promoting behavior.	Asking, "What are you already doing that would make it possible for you to do this health-promoting behavior?" Or, "How might you do this health-promoting behavior so it fits into your day?"
Emphasizing how important it is for the client to engage in the health-promoting behavior.	Asking, "Why is it important to you to think about or do this health-promoting behavior?"
Telling or inspiring the client to engage in the health-promoting behavior.	Asking, "Why would you want to enhance your health?"

TABLE 101.2**A Second Way to Experiment With a Helping Style That Is Consistent With Motivational Interviewing**

1. Would it be OK if I asked you a couple of questions about how you are taking care of your _____ {health, diabetes, asthma, blood pressure, etc.}?
2. What are you doing these days that you think makes a positive contribution or helps with your _____ {health, diabetes, asthma, blood pressure, etc.}? (Spend a minute or two on this. The client is likely to say one or two things. Help the client elaborate about what they are doing and why.)
3. Most of us at one point or another forget to take our medicines or forget our good intentions to follow the advice of a physician or nurse. What are you sometimes forgetting to do or sometimes not getting around to doing that might otherwise help your health?
4. Sometimes we might do things that we might enjoy but others think aren't good for us, like drinking too much

alcohol, eating too much fast food, or being too sedentary.
What might you put in this category?

A similar way to generate a motivational interviewing consistent approach is for the health care provider to suspend the expert role. He or she will very likely join the client who is facing the challenge of improving well-being or managing a chronic condition. Although “care” today has the connotation of intervening in a beneficial way, another meaning is “to be with.” Collaborating includes looking together at the situation. While looking in the same direction, being curious about the client’s motivation for the health-promoting behaviors is easier. [Table 101.2](#) outlines four questions that have been used in this manner.

What Difference May it Make if a Motivational Interviewing Approach is Used?

Meta-analysis and reviews of the effectiveness of motivational interviewing have been published.⁸⁻¹³ Much of the initial research was related to health behaviors in the area of substance use. Over the years, more studies have focused on a broader range of health-promoting behaviors ([Fig. 101.1](#)). The effect sizes for various health behaviors 3 and 12 months after treatment are shown in [Fig. 101.2](#).

Perhaps the Strength of Recommendation Taxonomy rating for the evidence would be grade A for health behaviors such as substance use and human immunodeficiency virus risk behaviors. For other health behaviors such as nutrition, exercise, and smoking, the rating may be grade B. The rating for potential harm may be grade 1 for all health behaviors.

Helping Clients Find and Use Their Motivation

Motivation is not binary, on or off, there or not there. Most clients are ambivalent about engaging in health-promoting behaviors, rather than either being motivated or not motivated. They have some motivation for the health-risky behavior and some for the health-promoting behavior. They enjoy smoking but know they should quit. They have reasons to lose weight but have failed in the past. They want to reduce their blood pressure but have no time to meditate or exercise. When clinicians use a motivational interviewing helping style, they think of this ambivalence as a common human experience rather than an indication of denial or resistance.

A client who is not engaging in some health-promoting behavior can be conceptualized by the health care provider as not having sufficient motivation to do what would be health promoting. Trying to install more motivation either by inspiration or by threat can be seductive. That kind of directing helping style sometimes works. A health care provider who intends to use a motivational interviewing style similarly recognizes that the client does not have sufficient motivation to engage in the health-promoting behavior; in this case, however, the clinician goes looking for what motivation there is and ways that the client may find additional motivation.

The health care provider can work hard to instill motivation into the client or help the client find his or her already existing experiences, thoughts, and emotions that go with doing the health-promoting behavior.

FIG. 101.1 Growth of motivational interviewing studies. *promo*, promotion; *psych*, psychological issues; *sub use*, substance use.

Finding the client’s motivation can be easier when the clinician thinks about various aspects of motivation. Researcher Paul Amrhein¹⁴ identified that statements about desire, ability, reasons, and need often come up in conversations with a focus on changing a particular behavior (in motivational interviewing, this particular behavior or goal is called the *target behavior*). Statements the client makes in these categories probably indicate some facet of the client’s motivation about doing the health behavior. Two additional categories related to the client’s action can also be heard from clients sometimes: already taken steps (past tense) and commitment (future tense). Clients can make statements in any of these six categories in the direction of health (in which case motivational interviewing refers to it as *change talk*) or in the direction of not engaging in the health-promoting behavior (in which case it is referred to as *sustain talk*, as in maintaining the status quo). [Table 101.3](#) provides additional descriptions of each of these categories.

These categories provide the health care provider with guidance about where to go fishing for the client’s motivation. A client who says “I don’t have time to meditate” is describing something about ability. The

clinician may then focus on a different category to try to solicit a motivation for meditating, “You don’t have time to meditate, but it sounds like you wish you did.” This statement involves recognizing ability in the sustain direction and fishing for desire in the change direction. If the client complains about following a new cholesterol-lowering diet, the clinician can respond, “You are not finding it fun to follow this diet, so why are you intending to do so?” This question involves recognizing desire in the sustain direction and fishing for reasons in the change direction. [Table 101.4](#) provides examples of each category of motivation in both sustain and change directions for the target behavior of engaging in behaviors that would promote heart health after a heart attack.

FIG. 101.2 Effect size comparing motivational interviewing to a directing helping style at 3 and 12 months. (From Hettema J, Steele J, Miller W. Motivational interviewing. *Annu Rev Clin Psychol.* 2005;1:91-111.)

TABLE 101.3

Change Talk and Sustain Talk by the Client

Category	Client Talks About	Words That May Be Clues That the Client Is Talking About This Aspect of TH or Her Motivation	
Desire	What he may enjoy or not enjoy, like or dislike, find as fun or not fun, and want or not want.	I want	I don't want
		I would like	I hate, I don't like
		I enjoy	I wouldn't enjoy
		It's fun to...	It's not fun to... It's not to...
Ability	What he perceives he is able or unable to do, what is possible or impossible, and what he or she can or cannot do.	Yes, I could	I can't
		I'm able	I'm unable
		It's possible	It's impossible
Need	What he thinks he should do, has to do, should not have to do, what is just or unjust, what the "right" or "wrong" thing is to do.	I need to	I don't need to
		I should	I shouldn't have to
		I'd better	It's not important that I...
		I have to	I don't have to
Reason	The rationale, justifications, or motives for doing or not doing the behavior.	Reasons are often provided by "no," "because," or "so that," and they often follow statements in other categories, particularly need: "I don't need to because..." Reasons answer the questions, "Who?" or "Why not?" Desire and Need are two specific reasons. Anything that answers the question, "Why?" or "Why not?" that is neither Desire nor Need might be a Reason.	
Already Taken Steps	Behaviors he has performed (in the recent past) that may be in the direction of change or in the direction of staying the same.	Already Taken Steps are actions that have already occurred and have helped or hindered progress toward the health-promoting behaviors.	
Commitment	What the client will or will not do in the future and intentions or agreements about the future. The strength of the commitments can vary, but they are commitment statements because they talk about the future.	I'll try I definitely will I promise to I suppose I might try to I will	I'm not going to try I won't There is no way I will I won't I am not going to

TABLE 101.4

Categories of Motivation in Both Sustain and Change Directions for the Target Behavior of Engaging in Behaviors That Would Promote Heart Health After a Heart Attack

Target behavior is engaging in behaviors that would reduce the risk of another heart attack. The client says this:	Is the client's statement in the direction of health (change talk) or in the direction of continuing the health risk (sustain talk)?	Within what category of motivation was the client's statement (D)?	Possible response by the health care provider to manage the sustain talk or pull for or reinforce the change talk:
I don't like reduced-risk foods.	Sustain	Desire. Key word is, "like."	"So using a salt substitute is going to be hard to do. Why were you thinking it may be a good idea?" (Demonstrate that the desire in the sustain direction has been heard, and then pull for reasons in the change direction.)
I can't go to that evening healthy meal meeting.	Sustain	Ability. Key word is, "can't."	"You aren't able to get there, but it sounds like you have some recognition that it may be useful." (Recognize the sustain talk, and then pull for reasons or need in the change direction.)
The support from the Healthy Heart class would be helpful.	Change	Reason. What the client is saying answers the question of, "Why go to the Healthy Heart class?"	"You may like the class." (Attempt to evoke change talk in an additional category of desire.) Or, "You can struggle with benefits from the class." (Reinforce the change talk in the reason category.)

Table Continued.

Target behavior is engaging in behaviors that would reduce the risk of another heart attack. The client says this:	Is the client's statement in the direction of health (change talk) or in the direction of maintaining the health risk (resistance talk)?	Which client category of motivation may the client's statement fit?	Possible response by the health care provider to manage the sustain talk or pull for or reinforce the change talk:
I shouldn't have to do all this for my heart.	Sustain	Need. Key word is, "shouldn't."	"It's not fair." (Acknowledge the sense of injustice and injury.) Or, "You would prefer that your heart just work." (Recognize how taking care of the heart is not enjoyable, but begin to call attention to the client's desire for the heart to work, which could lead to recognizing the need to take care of the heart.)
I think I may enjoy this support group.	Change	Desire. Key word is, "enjoy."	"You are looking forward to it." (Reinforce the desire change talk.) Or, "What are you hoping to get out of it?" (Attempt to evoke additional change talk in the reason category.)
I got a salt substitute.	Change	Already Taken Step. Key is that the client is talking about new action that he has already taken.	"Good for you." (Affirm the client's action in the change direction.) Or, "What will you do next?" (Pull for more change talk in the commitment category.)
I'm not having any signs anymore, so I figure I don't need to take this medication.	Sustain	Reason. What the client is saying answers the question of, "Why don't you have to take your medication?"	"You're glad your angina is gone." (Stay away from the reason category, desire, and hope to find change talk there.)
I give up on those recipes with less salt.	Sustain	Already Taken Step. Key is that the client is talking about new action that he has already taken.	"Something else makes more sense to you to try than reducing your salt." (Avoid trying to install reasons or restrictions to reduce salt, and pull for other things the client may be willing to do.)
I could get a ride to the Heart Healthy class.	Change	Ability. Key word is, "could."	"Sounds like it is important to you to try it out." (Pull for change talk in the need or reason category.)
I won't be weighing myself every day.	Sustain	Commitment because the client is talking about what he won't be doing in the future.	"It doesn't make sense to you to weigh every day. Why do you think it is or isn't as recommended?" (Avoid arguing about what the client is going to do, and pull for reasons or need in the change direction.)
I probably need to go to a yoga class every day.	Change	Need. Key word is, "need."	"It's something that you think would help." (Pull for change talk in the reason category.)
I will be going to that exercise class tomorrow.	Change	Commitment because the client is talking about what he will be doing in the future.	"You're making up your mind to try it out." (Stay from the change talk in the commitment category.)

These categories can be used by the health care provider to guess where to go next during the consult. Several research studies found that the goals of the consult where change talk is elicited were associated with the desired behavior change. In one study of clients in treatment for alcohol problems, 16% of the days a client abstained 9–15 months after treatment could be predicted from how much the client was drinking at the start of treatment. A similar amount, 19% of the days a client abstained and 34% of the amount the client consumed alcohol, could be predicted from how much change talk the client said in a single session 9–15 months earlier.¹⁵ Patients that made two or more change talk statements about taking their antidepressant medications during a consult were almost twice as likely to have filled the prescription over the next 6 months as those patients that said none or only one change talk statement.¹⁶ Change talk during today's consultation may be a good proxy for the actual behavior change in the future.

A client who says things such as those listed in the change talk column of [Table 101.5](#) is rehearsing what he or she literally must think or say after the consultation is over to remind, justify, or motivate himself or herself to engage in behaviors related to managing diabetes. Similarly, a client who is making statements during the consult such as those in the sustain talk column is probably reducing his or her motivation to engage in health-promoting behaviors. One way that health care providers inadvertently arrange this is by saying the change talk. The client, who is ambivalent, then brings up the sustain talk, and that is what he or she may remember after the consultation. However, a health care provider

who says the sustain talk before the client says it may be perceived as very empathic. The client experiences the clinician as someone who understands why it is so difficult to engage in the health-promoting behavior. By saying the sustain talk first, the health care provider alleviates the client from having to say it and decreases the client's reinforcement of the status quo. Having recognized the sustain talk, the health care provider has perhaps increased the client's willingness to consider if there is some change talk.

TABLE 101.5

Target Behavior Is to Engage in Those Behaviors That Would Manage a Diabetic Condition

Sustain Talk	Facet of Motivation	Change Talk
I don't like sticking my finger.	Desire	I like keeping a record of my sugars.
I can't take my meter with me during the day.	Ability	I could get that new, smaller meter.
I don't need to do all this checking and changing my diet.	Need	I must learn more about the glycemic index.
I don't follow my diet sometimes because I don't want people to know I have diabetes and have to accommodate my dietary needs.	Reasons	If I lower my sugars, maybe I won't wind up like my mother, who had diabetes and lost her foot.

Helping the Client Access His or Her Motivation for Change

Helping the client experience and say more change talk can sometimes be as simple as asking the client to describe his or her desires, abilities, needs, or reasons for engaging in the health-promoting behavior.

“What would you *enjoy* about meditation?”

“How might you be *able* to arrange to take your medications reliably?”

“Why do you think you *need* to reduce the salt in your diet?”

“What *reasons* do you have for continuing with your exercises?”

“What are you *already doing* that helps you lose weight?”

Notice these examples are all open questions, which help the client take the lead toward doing the health-promoting behavior, whereas closed questions allow the client to be more passive. Also these questions pull for change talk rather than sustain talk. It is very common when using a directing helping style to ask open or closed questions that pull for sustain talk. Evoking from the client his or her experiences, thoughts, and emotions that support doing the health-promoting behavior is central to using a motivational interviewing helping style. So, these open

questions are a third way to implement a motivational interviewing helping style. It is not as creative or elegant as you might ultimately be, but you can use the scripted questions shown in [Table 101.6](#). If the client does respond with change talk, providing reinforcement and encouragement through affirmation, paraphrase, or summary can be useful.

TABLE 101.6

A Third Way to Experiment Using a Motivational Interviewing Helping Style

Possible Open Question to Ask the Client	Which Pulls or Fishes for This Facet of Motivation
What might you enjoy about _____ {insert the health-promoting behavior}?	Desire
What abilities do you have that would make it possible for you to _____ {insert the health-promoting behavior} if you decided to do it?	Ability
How important is it to you to _____ {insert the health-promoting behavior}?	Need
What, if any, are the important benefits of _____ {insert the health-promoting behavior}?	Reason
What are you already doing that makes it possible to _____ {insert the health-promoting behavior}?	Already Taken Steps

Sometimes, change talk can be solicited by having the client envision the future. The health care provider can ask the client to talk about what he or she imagines in the future if changes are made or if changes are not made. Possible examples are: “What do you imagine will happen in the future if you don’t lower your blood pressure this year?” or “How do you think this _____ (health-risky behavior) might become worse?” Both these examples pull for reasons to engage in the health-promoting behavior.

Facilitating the client’s talking about goals or values and how they fit or do not fit with health behaviors may also evoke change talk. This could sound like: “How does the _____ (health-risky behavior) help or hurt your work?” or “How would taking care of your heart fit with what you want to do with your family?”

These ideas of change and sustain talk, the various facets of motivation, and the range of possible responses creates the steep learning curve for motivational interviewing. A fourth way to implement and approach doing motivational interviewing is just to listen for what you are glad the client is saying. If you are glad to hear the client talk a certain way about his health-promoting behavior, it is probably change talk. As you listen to the client’s story, listen in particular for what part you like that the client is explicitly saying or even implying. When you hear it, reinforce it by asking for more explanation, summarizing it, or

connecting it with other statements the client has said that you are glad to hear.

Client: I've been in AA for 6 years, but I am having trouble relating to it.

Health care provider possible response 1: Good for you for using that resource.

Health care provider possible response 2: Sounds like you are glad to have created some sobriety but now are looking for something else that will help you continue.

Health care provider possible response 3: You are looking for something to which you can relate better.

Because most clients are ambivalent about engaging in health-promoting behaviors, some sustain talk by the client is normal and to be expected. To help the client increase his or her motivation for the health-promoting behavior, the health care provider should be active in helping the client manage the sustain talk. Often, a first step is to demonstrate to the client that the sustain talk has been heard and understood. This is where the health care provider's skill in expressing empathy through paraphrasing or summarizing is useful and necessary. Sometimes, the client will return to change talk if the health care provider overstates the sustain talk the client has just said. Possible examples are:

Example 1: Client: "I don't really see the ankle swelling as a problem.

They just hurt some."

Counselor: "You're not using the ankle swelling to think at all about your heart."

Example 2: Client: "I doubt if there is a problem. I don't have difficulties moving around."

Counselor: "As long as you can move, *everything* is OK."

The health care provider must say these kinds of amplified reflections (called *amplified* because the health care provider is increasing the emphasis or overstating the sustain talk) in a neutral voice tone. A sarcastic or critical tone will very likely increase the client's sustain talk rather than decrease it.

Earlier in this chapter, examples were given of managing sustain talk by first paraphrasing the sustain talk and then focusing on a different category. These double-sided reflections will help manage sustain talk if the first side or phrase is the sustain side and the second side or phrase is the change side. The client is more likely to talk about the side (sustain or change) on which the health care provider finishes his or her statement. Another way to manage sustain talk is to provide an alternative meaning for the client's observation ([Table 101.7](#)).

TABLE 101.7**Examples of Providing an Alternative Meaning for the Client's Observation in Sustain Talk**

Observation the client has made	I've tried in the past and haven't succeeded (stopping smoking, maintaining my exercise, and improving my diet).
Meaning client may give this observation	I can't do this. Or I'm not successful. (Notice this statement is sustain talk in the ability category.)
Meaning you may want the client to have	This is important to you. You have tried out several ways that have not worked as well as you want. (The past failures are given a new meaning, and attention is called to desire, which is a different category than ability.)

Enhancing Your Motivational Interviewing Skills

Most health care providers use all three helping styles. Although the directing helping style is most frequently used, most health care providers occasionally use a guiding helping style whether or not they have received formal training in it. However, research has demonstrated that reading or attending workshops is probably not sufficient to enhance motivational interviewing skills. Listening to audio recordings of your consultations with clients is very likely helpful.¹⁸ Whether alone, with one or several peers, or with an expert in motivational interviewing, you could listen for the characteristics listed in [Box 101.1](#). A health care provider who practices with as few as six instances (not even hours, just the minutes during the consult where the health care provider was intending to use a motivational interviewing approach) of recordings may significantly enhance his or her motivational interviewing skills.

One perhaps memorable way to remember the approach described here are these clinical pearls:

1. **Quit your job.** Do not be the only expert in the room. Imagine that you do not know, because it will make it easier for you to avoid adopting an expert role and easier for you to be curious about the client's experience.
2. **Get on the bus.** Be with the client, ride with him or her for a while, and look together at his or her life and dilemma of making this change. Respect that the client is going to get off the bus at whatever stop he or she chooses.
3. **Go fishing.** This is easier to do if you give up being the expert and the one who has to solve the problem. Treat the client as competent. Then it makes sense to go looking with the client for his or her motivation and

the solutions he or she can create.

BOX 101.1 A Way to Enhance Your Practice

Audiotape a session with a client. By yourself, with a colleague, or a motivational interviewing expert:

- Count the number of open questions and closed questions. You are more likely to be using a motivational interviewing style if at least 50% of your questions are open.
 - Count the number of reflections you made. You are more likely to be using a motivational interviewing style if you have at least twice as many reflections as questions and you have at least one reflection every minute. Complex reflections often elicit more change talk than do simple reflections.
 - Did you talk less than the client? You are more likely to be using a motivational interviewing style if the client talks approximately twice as much as you.
 - Listen for where you did or could have solicited or reinforced any client statements about desire, ability, need, reasons, or already taken steps toward the health-promoting behavior (change talk).
 - What did the client say or imply that you were glad to hear the client say? This is very likely change talk. How could you have called more attention to it?
 - Identify instances in which the client was saying sustain talk. Now that you have more time to think about your response, how else could you have demonstrated that you understood this sustain talk and called attention to possible change talk? How might an amplified reflection sound or a double-sided reflection or a reframe?
 - Look at any instance where you gave the client advice. Did you use an elicit-provide-elicited format or in some other way ask for permission and ask the client to consider how well the advice fits?
 - Did you warn the client of any possible consequences, confront the client regarding the behavior, or raise concerns without using elicit-provide-elicited? You are more likely to be using a motivational interviewing style if you avoid warning or confronting the client.

CHAPTER 102

Emotional Awareness for Pain

Howard Schubiner, MD

Introduction

There is an epidemic of chronic pain and related disorders in the United States and around the world.¹⁻³ It is estimated that there are more than 100 million individuals with chronic pain in the United States, and this number is increasing.⁴⁻⁶ Back pain, neck pain, fibromyalgia (FM), tension and migraine headaches, temporomandibular joint (TMJ) syndrome, and abdominal and pelvic pain syndromes are among the most common diagnoses made in primary care and consume a significant proportion of medical costs.⁷ In addition to these disorders associated with chronic pain, there are a variety of commonly associated disorders such as chronic fatigue, irritable bowel syndrome (IBS), interstitial cystitis (IC), and postural orthostatic tachycardia syndrome (POTS) that are frequently seen by both traditional and integrative practitioners.⁸

The traditional biomedical model attempts to identify an underlying local and structural cause for pain. However, evidence of pathological conditions in this group of disorders has been elusive. Furthermore, treatment of these conditions has proven to be difficult,^{9,10} as becomes clear when one considers the number of people who chronically suffer from these conditions. For example, the vast majority of individuals diagnosed with headaches, abdominal and pelvic pain syndromes, and FM have no clear evidence of peripheral nociceptive inputs generating pain. Chronic back pain often occurs in the absence of radicular pain corresponding to an observed nerve root lesion or evidence of nerve root compression, such as altered muscle strength, deep tendon reflexes, or sensation. In these patients, magnetic resonance imaging (MRI) evidence of degenerative disk disease, bulging or herniated disks, spinal stenosis, and other syndromes are assumed to be the cause of pain. However,

studies comparing MRI findings of individuals with and without pain show similar findings.^{11,12} The assumption that commonly seen MRI findings are the cause of pain in those without objective evidence of structural abnormalities often leads to overtreatment and the resulting increased costs and complications.^{13,14} Whiplash is another example of a chronic pain syndrome that has been shown to be unrelated to ongoing injury or a specific disease process in the neck.¹⁵

For many pain syndromes the etiology is complex with no simple cause and effect. When the mind suffers, the body sympathizes. This chapter addresses this powerful effect.

While central nervous system (CNS) transmitters have been found to be associated with FM and migraine headaches,¹⁶ it is not clear whether they are the cause of these disorders or the result. There are genetic predispositions toward some of these conditions, such as migraine, anxiety, and depression.¹⁷ However, studies have shown that life events are required to trigger these conditions, that is, to cause expression of underlying genetic predispositions.¹⁸ In fact, one study showed that a particular genotype for depression can be activated by a stressful childhood (thus increasing risk for depression) and can be deactivated by an emotionally supportive childhood (thus decreasing depression risk).¹⁹

Because of the inability to identify and treat the underlying cause for most chronic pain conditions, attention has shifted to pain management. However, biomedical approaches to pain management, including pain medications (including opiates), injection techniques, and surgical and chemical ablations, have also not been shown to be efficacious.^{9,10,13-15,20} There is clearly a need for a new understanding and approach to these disorders. Please note that the disorders considered in this article exclude those with objective evidence of structural pathology, such as cancer, fractures, and inflammatory and infectious conditions. This chapter describes a mind-body model in which these disorders are conceptualized to be related to individual reactions to stressful events and unresolved emotions.

Their Pain is Real

Neuroscientists have identified areas of the brain that process,

accentuate, and reduce pain.²¹⁻²⁴ To appropriately diagnose and treat chronic pain, it is necessary to develop a more nuanced view of the relationship between pain and the brain. Physical injuries do not always result in the experience of pain; and pain (even severe pain) can result in the absence of a physical injury.²⁵ There is clear evidence that pain can originate in the absence of a tissue disorder in the area where the pain is being felt, as seen in phantom limb syndrome.²⁶ A study by Derbyshire et al. confirmed that pain initiated by the brain is identical to pain originating in peripheral tissues.²⁷ This implies that pain is a function of the brain, with inputs from peripheral nociceptors as well as from pain generating / processing centers in the brain and that the resultant pain experiences are indistinguishable. This understanding is important for reassuring patients that all pain is real and will be taken seriously.

The anterior cingulate cortex (ACC) is a key area within the brain that, when activated, augments pain.^{22,24} Pain also activates the amygdala and the autonomic nervous system (ANS).^{28,29} Emotional memories are stored in the amygdala, and individuals with adverse childhood experiences are more likely to develop migraine, FM, IC, IBS, and chronic pelvic pain.³⁰⁻³⁶ Evidence also indicates that the amygdala, the ACC, and the ANS are activated when emotions are experienced.^{37,38} To summarize, these areas are involved in the activation of pain pathways, and these pathways are strongly influenced by thoughts and emotions.²²⁻²⁴

Learned pain pathways can develop after an injury (even a mild one) or can be created during times of significant stress and emotional reactions. While most injuries heal within a reasonable amount of time, pain pathways can persist (become “wired”), thus creating intermittent or chronic pain that may be refractory to medical therapies. These pain pathways are often very specific and can involve discrete or large areas of the body. A veteran told me that he was injured in the Vietnam war during an ambush that led to a dangerous Med-evac escape. He had shrapnel wounds to his left leg, resulting in pain and limping. Within a few months, both of these symptoms had completely resolved. Interestingly, he had a recurrence of the pain and limping 20 years later when a helicopter flew overhead.

There are also built in central mechanisms for reducing pain. Notably, activation of the dorsolateral prefrontal cortex (DLPFC) area results in diminished pain.²³ Positive emotional states and reductions in pain are correlated with activation of the DLPFC³⁹ ([Fig. 102.1](#)).

The Psychology of Pain

There are two major components of the mind: conscious and subconscious. We are consciously aware of many of our actions, decisions, thoughts, and feelings. However, the majority of our thoughts and emotions are actually derived from subconscious processes.^{40,41} In addition, these subconscious processes are typically the basis for most of our actions. Thus many of our activities are routine and programmed by our subconscious minds, such as walking, talking, eating, driving, as well as reactions to people, places smells, and situations. These activities and reactions are carried out via sets of learned neural pathways.

Another function of the subconscious mind is to protect us from physical threats, and therefore we continuously monitor our environment for stimuli that might be “dangerous” in some way.³⁸ Innate neural pathways cause our bodies to react very quickly to a snake, a thrown object, or other physical threats. Our reactions to these threats are immediate and do not involve conscious processing (i.e., we are aware of them after they occur).^{38,41} The subconscious mind also notices emotional threats and causes our bodies to react to them in a similar fashion. In fact, Kross and colleagues demonstrated that the same regions of the brain were activated by both peripheral nociceptive stimulation and emotional stimulation.⁴² We are all aware that our bodies react to stress with a variety of reactions, including facial flushing, tight stomach muscles, sweaty palms, voice changes, and others. Given the previous, it should not be surprising that during times of significant tension and stress, our bodies can develop physical reactions in a myriad of ways, such as the development of neck or back pain, headache, gastrointestinal or genitourinary symptoms, and many other symptoms. The danger or alarm pathways (fight/flight and freeze/submit) are centered in the amygdala and are necessarily sensitive to relatively small stimuli that are potentially harmful for protective purposes.^{38,43}

A useful question to ask is, “Where do you carry stress in your body?” This often gives insight into how we can learn from these subconscious pathways.

Individuals subjected to adverse childhood events develop a priming of the brain’s danger pathways along with a corresponding emotional memory for specific types of threats.⁴⁴ These children may develop stomachaches, insomnia, anxiety, headaches, and other disorders.^{30,31}

Later in life, if new emotional or physical threats occur (especially if they are similar to those that occurred in childhood), neural pathways can be activated causing new symptoms to develop, with musculoskeletal or visceral pain syndromes being the most common.⁴⁵ In a typical history, a girl who grows up with an emotionally abusive and controlling parent may develop migraine headaches as a teen when she is subjected to a jealous and controlling boyfriend. If she marries an abusive husband in her twenties, she may develop abdominal or pelvic pain. In her thirties, when subjected to a threatening work situation or a motor vehicle accident, she may develop widespread pain that will often be diagnosed as FM, as well as anxiety and/or depression. These symptoms prompt medical attention that usually leads to symptom-based pharmaceutical or physical interventions. If these treatments are ineffective, the persistence of symptoms activates fear, which leads to increases in the danger signal and resulting increases in symptoms. This vicious cycle is common and can explain the fact that pain syndromes often worsen over time in terms of the location, frequency, and severity of pain.

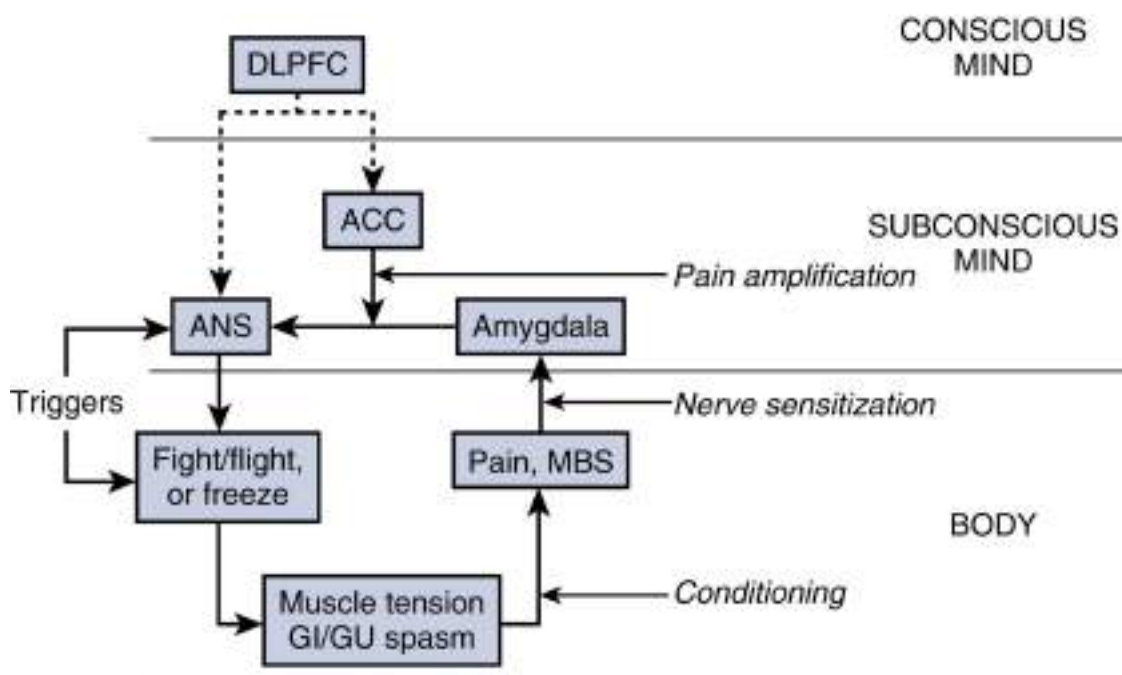

FIG. 102.1 The neurology of psychophysiological disorders (*thick solid line, activating; dashed line, deactivating*). ACC, anterior cingulate cortex; ANS, autonomic nervous system; DLPFC, dorsolateral prefrontal cortex; GI/GU, gastrointestinal/genitourinary; MBS, mind-body syndrome.

These physical reactions are real, and the pain they cause is real. The source of pain, whether due to nociceptive inputs or created by neural pathways, cannot be distinguished by the quality or severity of pain. Since neural pathways are physiological, rather than pathological, responses (i.e., they do not involve tissue destruction), they can be reversed. These symptoms are created by the subconscious mind in an attempt to warn us or protect us from some threat (for example, a controlling boss, an abusive husband, or an overwhelming set of responsibilities). In essence, pain and other symptoms serve as a “danger” message from the brain. In the case of an arm fracture, the message is “rest and get a cast,” while in the situation of stressful life events causing headaches or neck pain, the message should be “you are feeling threatened, take action to alter the situation or respond to it.” We are currently using the term “psychophysiologic disorders” (PPDs) to describe these neural pathway symptoms, but they have also been termed psychosomatic or functional disorders, medically unexplained illnesses,⁴⁶ tension myositis syndrome,⁴⁷ stress-related illness,⁴⁸ and mind-body syndrome.⁴⁵

Psychophysiologic disorders (PPD) is the current term being used to describe this process.

Another observation commonly made about those who develop psychophysiologic reactions is that they tend to have a highly developed conscience.^{45,47} Individuals who are affected by this group of disorders ([Table 102.1](#)) typically exhibit the following characteristics: being selfless, highly responsible, or self-critical; feeling excessive guilt; lacking assertiveness; being perfectionists; holding themselves to very high standards; caring what others think of them; holding emotions in; and neglecting their own needs. Large international studies have shown that women are more likely than men to display these characteristics (possibly due to higher rates of childhood and adult victimization and gender-based socialization).^{49,50} These personality factors may play a role in the higher rates of chronic pain and other PPDs among women.

Diagnosis of Psychophysiologic Disorders

PPD should be suspected in patients who present with symptoms of one or more of the common PPD diagnoses ([Table 102.2](#)) and for whom a specific structural condition is not identified. If it is understood that PPD can cause a wide variety of symptoms, the practitioner can suspect it from the beginning of an encounter. There are several clues in a medical history that suggest a PPD. An injury, particularly a mild one, that doesn't follow the usual pattern of gradual diminution of pain over time is likely to be due to PPD. This diagnosis should be considered when symptoms vary significantly with regard to time and place, such as pain that goes away when on vacation or when doing certain activities or pain that occurs only when sitting in some chairs but not in other chairs. Similarly, pain that shifts from one location to another within the body is often due to PPD. I saw a patient who had wrist and hand pain while keyboarding at her job, forcing her to be unable to work. Rest and antiinflammatory medications had not been effective. Her doctors assumed that this was simply a repetitive strain injury. However, further history revealed that the pain also regularly occurred on Sunday evenings when she hadn't done any keyboarding. This suggested that her brain was activating pain in anticipation of stress during the workweek. She had a complete recovery after treatment for a PPD. Of course, a medical workup should be conducted to rule out any structural conditions such as tumors, fractures, infections, or vascular or inflammatory conditions. A physical exam to rule out evidence of nerve root compression is mandatory as those findings would preclude a diagnosis of PPD. Imaging studies of the neck and back are likely to demonstrate degenerative changes because asymptomatic individuals have high rates of such MRI findings. A study from Finland showed that degenerative disk disease and bulging disks were identified in 50% and 25%, respectively, in healthy 21-year-olds.⁵¹ As mentioned, similar degenerative MRI findings are found in the majority of middle-aged adults,^{11,12} and physicians should be cautious in attributing back pain to these findings. Similar studies document the presence of abnormal MRI findings of the hips, shoulders, and knees in healthy individuals without pain.⁵²⁻⁵⁵

TABLE 102.1**Personality Traits Common to Those With Psychophysiologic Disorders (PPDs)**

Would you describe yourself as:

1. Having low self-esteem _____
2. Being a perfectionist _____
3. Having high expectations of yourself _____
4. Wanting to be good and/or be liked _____
5. Frequently feeling guilt _____
6. Feeling dependent on others _____
7. Being conscientious _____
8. Being hard on yourself _____
9. Being overly responsible _____
10. Taking on responsibility for others _____
11. Often worrying _____
12. Having difficulty making decisions _____
13. Following rules strictly _____
14. Having difficulty letting go _____
15. Feeling cautious, shy, or reserved _____
16. Tending to hold thoughts and feelings in _____
17. Tending to harbor rage or resentment _____
18. Not standing up for yourself _____

TABLE 102.2

Syndromes That Are Commonly Caused by Psychophysiologic Disorders (PPDs)

Chronic Pain Syndromes

Tension headaches

Migraine headaches

Back pain

Neck pain

Whiplash

Fibromyalgia

Temporomandibular joint (TMJ) syndrome

Chronic abdominal and pelvic pain syndromes

Chronic tendonitis

- Vulvodynia
- Piriformis syndrome
- Sciatic pain syndrome
- Repetitive stress injury
- Foot pain syndromes
- Myofascial pain syndrome

Autonomic Nervous System-Related Disorders

- Irritable bowel syndrome
- Interstitial cystitis (irritable bladder syndrome)
- Postural orthostatic tachycardia syndrome
- Inappropriate sinus tachycardia
- Reflex sympathetic dystrophy (chronic regional pain disorder)
- Functional dyspepsia

Other Syndromes

- Insomnia
- Chronic fatigue syndrome
- Paresthesias (numbness, tingling, burning)
- Tinnitus
- Dizziness
- Spasmodic dysphonia
- Chronic hives
- Anxiety
- Depression
- Obsessive-compulsive disorder
- Posttraumatic stress disorder

Once this is accomplished, the topic of PPD should be broached with the patient. Talking with patients about PPD should be done in a way that emphasizes that their symptoms are real and with empathy toward their situation and frustration in not getting better. The clinician should explain that real symptoms, including severe and chronic pain, can frequently occur in the absence of structural disease processes, and one can use phantom limb syndrome as an example of this phenomenon.²⁶

Introducing the concept of learned neural pathways helps patients to connect their symptoms to a CNS processes. The practitioner should state that learned neural pathways are simply sets of nerve connections that have developed through experiences, such as the pathways that allow us to ride a bicycle, throw a ball, walk, and talk a certain way. Pain and other symptoms are easily learned, and once these pathways are established, they can continue for several years and can be reactivated after many years. Reassure the patient that there is no physical and structural disease process and offer hope that the real condition that they suffer from can be reversed. Whether or not a physical injury occurs, stressful situations and powerful subconscious emotions are universal triggers of pain pathways in PPD. These pathways become engrained in the presence of situations and emotions that remain unresolved. In addition, chronic pain frequently leads to frustration about ongoing pain and fear about an underlying physical disease. These reactions further activate pain pathways in the brain by activation of the amygdala, ANS, and ACC.^{56,57}

This educational process is extremely important to allay fears of a disease process, explain the reason for the symptoms, and offer hope and the expectation that these symptoms can be resolved. Treatment for PPD in the absence of understanding and accepting the above is typically not effective.

The Diagnostic Interview

Many practitioners are not trained, nor do they have the time, to conduct an in-depth psychological interview that begins in childhood and attempts to elicit the key psychological factors that have created psychophysiologic disorders. However, the author has published a template for this type of assessment that can be used by patients and/or practitioners.⁴⁵ A brief description of this interview is provided herein. As previously mentioned, before diagnosing a form of PPD, the practitioner should rule out a pathological medical condition so that the practitioner and patient are comfortable that they are dealing with a form of PPD. Prior to the interview, it is helpful to have the patient complete a checklist of symptoms and syndromes that are commonly caused by PPD ([Table 102.3](#)). Five questions form the basis of this interview ([Table 102.4](#)).

Begin the interview by gathering data on the patient's family of origin and ask probing questions about their parents, siblings, and any other

important individuals in their childhood. Gently inquire about episodes or patterns of emotional, physical, or sexual abuse; of criticism, taunting, teasing, blame, humiliation, or judging; and of overly high expectations or conditional love. Ask about parental alcohol or drug abuse, divorce or extramarital affairs, unequal treatment of siblings, and psychological and physical illnesses among family members. Inquire about sibling relationships with special regard to episodes of cruel behaviors, psychological or physical illness, or acting out behaviors. Synthesize the patient's childhood experiences and reactions to them in an attempt to understand the effects that their upbringing had on their personality and development. Most people with PPD develop a set of personality traits that include having an overly developed conscience (heightened sense of responsibility) and a lack in self-esteem, self-worth, and assertiveness (see [Table 102.1](#)). Typically, one finds a set of events and responses that create a priming of the ANS that sets the stage for the development of PPD later in life. Some of the common patterns are those of loss, abandonment, fear, guilt, resentment, and anger. In many instances, people with PPD have very healthy childhoods, and when they are exposed to stressful situations later in life that belie the values that they learned in childhood, PPD symptoms can develop. I often explain to patients that since they are human, they have a mind and a body, and since those are intimately connected, it is not surprising that physical symptoms occur at times of stress; in fact, it probably happens to most people at some points in their lives.

TABLE 102.4

Five Questions to Rule in a Psychophysiologic Disorder (PPD)

1. Did you have a stressful childhood? Did you experience neglect, abandonment, loss, criticism, or conditional love?
2. Did you experience traumatic events, such as physical or sexual abuse?

3. How many symptoms/syndromes have you had in your lifetime? See [Table 102.2](#) for a checklist.
4. Were stressful life events occurring at the time of the onset of the symptoms?
5. Do you have several of the personality traits commonly associated with PPD? (See [Table 3](#) for a description.)

TABLE 102.5

Synthesis of the Diagnosis of Psychophysiological Disorder (PPD) Chart

Age	PPD Symptom	Potential Triggering Events	Emotions That Were Triggered/Core Issues
7	Stomach aches	Parents arguing	Fear of parents separating/loss
16	Irritable bowel syndrome	Parental divorce	Loss of father, mother depressed
28	Migraines	Husband "cheating"	Loss, anger, betrayal
38	Fibromyalgia/fatigue	Divorce/difficult boss	Loss, fear, powerlessness

The next phase of the interview consists of an evaluation of the events that trigger PPD syndromes. A simple approach is to inquire about the onset of each of the PPD syndromes ([Table 102.5](#)). Although the onset may coincide with injury or a viral infection, these events create neural pathways that are usually transient. PPD symptoms can become chronic if the danger signals in the brain are activated. This process occurs in two ways. First, the individual may be in a situation where several of the following circumstances are present: there is an inherently stressful situation; the current events trigger emotional memories of stressful events from childhood; the individual experiences guilt, self-criticism, a strong sense of responsibility, or other issues listed in [Table 102.1](#); the individual is unable to express emotions of fear or anger or is unable to escape feeling trapped in the triggering situation. Second, the symptoms are worrisome or severe, are believed to be due to a disease process, and are labeled by health practitioners as something other than a psychophysiological process. These beliefs lead the patient to develop a significant amount of fear of the symptoms. This fear activates the danger signal and causes increased symptoms often leading to a vicious

cycle of pain-fear-pain. Complete this process with each of the PPD symptoms that have occurred in the lifetime of the patient. You will frequently see clear patterns emerge that will help the patient understand that their symptoms are, in fact, caused by PPD and that they are not crazy, incompetent, or weak, but rather someone who has been exposed to a series of events that have created physical or psychological symptoms in response to a particular combination of stressful life events. When this occurs, the patients can be encouraged to see that they are not to blame for the symptoms, are not physically or psychologically damaged, and have the opportunity to overcome these symptoms.

If it is appropriate, the interview may be concluded with the following messages:

“You have a form of PPD, rather than a structural disease process. PPD is caused by learned neural pathways that have been triggered by the particular set of stressors that you have encountered. It is not your fault. Almost everyone gets PPD, and anyone would likely develop these symptoms given the events that occurred. You can get better because learned neural pathways can be reversed. There is a way to unlearn your pain and other PPD symptoms if you are willing to do the work.”

Treatment Approach

Because PPD is a disorder caused by stress and unresolved emotions, it is possible for everyone with PPD to experience dramatic improvements or remissions. However, it is primarily patient-related factors that determine successful treatment, rather than practitioner-related factors. It is the author’s clinical experience that successful patients are those who are convinced that they have PPD rather than a structural disease process, are confident that they can address the issues that created PPD, are willing and able to devote a significant amount of time for psychological interventions, and have adequate resources as well as a lack of overwhelming obstacles in their lives. It is the practitioner’s job to help the patient develop the first of these attributes, while it is primarily up to the patient to attain the latter ones.

Research Support

There are two studies that have been conducted documenting the efficacy of the therapeutic approach. The first was a randomized controlled trial for individuals diagnosed with FM.⁵⁸ In this small trial, at

a 6-month follow-up, those who participated in a 3-week intervention had a mean decrease in pain of 2.5 on a 10-point Likert pain scale. In addition, 45% had a decreased pain level of at least 30% and 25% had a decrease of at least 50%. A second study described the outcomes of patients with a variety of musculoskeletal pain syndromes, including FM, back and neck pain, headache, and other syndromes. Patients had a mean duration of pain of 8.8 years and had even better results. After the month-long intervention, 6-month follow-up pain scores showed that 67% had at least a 30% pain reduction and 53% had at least a 50% pain reduction.⁵⁹

Therapeutic Program

Once a biomedical condition has been ruled out, the interview has demonstrated the linkages between priming and triggering events as well as the onset of PPD symptoms, and the patient has been educated and accepts the diagnosis, the intervention may proceed. The author has developed a comprehensive program designed to empower the patients and guide them toward healing.⁴⁵ It consists of a mixture of cognitive-behavioral, mindfulness, and emotional expressive techniques, which is primarily self-guided. It has been shown to increase an internal locus of control, i.e., patients begin to believe that their thoughts and actions are capable of reversing their PPD symptoms.^{58,59}

Several authors have developed a variety of expressive and therapeutic writing techniques.^{60,61} James Pennebaker and others have conducted research on many of these techniques, which has documented beneficial effects on health and well-being.⁶⁰⁻⁶³ The author has incorporated several of these techniques along with others into a program designed to reverse PPD.⁴⁵ These techniques are summarized in [Table 102.6](#) and discussed in [Chapter 98](#). One of the keys to the efficacy of expressive writing is the ability of the patient to identify, express, and release emotions. The clinician can help patients recognize that their feelings are justified and valid. Encouraging patients to experience and give voice to feelings of anger or resentment, guilt, and grief is often an important process in recovery. A therapeutic model that emphasizes emotional experiences, intensive short-term dynamic psychotherapy, has been shown to have benefit in patients with somatic disorders.⁶⁴

TABLE 102.6

Expressive and Therapeutic Writing Exercises

Free writing: uncensored expressive writing about an emotionally charged topic.

Unsent letters: expressing thoughts and feelings fully in a letter format.

Dialogues: creating an imaginary conversation between two entities who discuss a relevant issue.

Gratitude: writing about things for which one is grateful.

Forgiveness: writing to express forgiveness toward oneself or others.

Barriers: writing about potential barriers, both internal and external, that may prevent healing.

Creating new responses: writing how one chooses to respond to potentially difficult situations.

Life narratives: creating an alternative life story that emphasizes overcoming obstacles rather than being victimized.

Meditations and visualizations are useful adjuncts in the treatment of PPD. Mindfulness meditation has been shown to reduce reactivity to emotional issues and thus reduce pain,^{65,66} guided imagery is an effective tool to create images of health and well-being, which are essential to this therapeutic model.^{67,68} The author has created a CD with meditations designed to help patients reverse PPD,⁴⁵ and [Chapters 97](#) and [100](#) provide practical advice on using these methods.

A key element of the program is to change how one views the symptom and how one responds to it. As mentioned, patients with PPD are often caught in a cycle of pain-fear-pain. To break this cycle, fear of pain must be reduced. Once the symptoms are accepted by the patient as being due to PPD, he or she can begin to stop fearing the pain, separate from it, and take control over it. Consciously choosing to stop monitoring pain and focus more on being active and engaged in living deprives the pain of its fuel, fear. It is remarkable that simple, strong assertions can often reverse pain within minutes when one is convinced of the

diagnosis of PPD and of one's power in overcoming it. However, it can take several months of programmatically ignoring the pain to reprogram learned pain pathways. [Box 102.1](#) offers a script for patients to use.

Another key component in healing is to challenge triggers that maintain symptoms. A trigger can be defined as a stimulus that leads to PPD symptoms, yet would not typically cause a symptom in someone else. Typical examples are weather changes, bright lighting, foods, wine or other alcoholic drinks, family gatherings, visiting certain people, places, movements, driving, and many others. Triggers become activated by subconscious processes in a similar way that Pavlovian responses develop (i.e., operant conditioning). Therefore, triggers cause symptoms because they activate learned neural pathways, and they can be attenuated by understanding this process and by actively challenging them. Avoiding triggers allows them to exert even greater effects, so patients should be encouraged to seek out these triggers and expose themselves to them in order to overcome them. It requires significant courage to begin to engage in exercise despite pain or the anticipation of pain. See [Box 102.2](#) for a script regarding eliminating triggers.

BOX 102.1 Sample Script for Reducing Psychophysiologic Disorder (PPD) Symptoms

When pain or other symptoms occur, stop and take a deep breath. Then take a moment to remind yourself that there is nothing seriously wrong with your body. You are healthy, and the mind-body syndrome (MBS) symptoms will subside soon. Tell your mind that you realize that the symptoms are just a way of warning you about underlying feelings of fear, guilt, anger, anxiety, shame, inadequacy, or other emotions. Tell your mind to stop producing the symptoms immediately. Do this with force and conviction, either out loud or silently. Separate from the pain or other neural pathway symptoms and reframe them as sensations that are not harming you. Take a few deep breaths, and focus on things that you need to do in your life. Congratulate yourself on the steps you are taking to bring about recovery, even if symptoms persist for the time being.

BOX 102.2 Sample Script for Reducing

Psychophysiological Disorder (PPD) Triggers

When you notice you are encountering or are about to encounter any triggers to the symptoms or any stressful situations, immediately stop and take a deep breath. Take a moment to remind your mind that this activity or trigger will NOT cause any symptoms or problems any more. For example, if you are lifting an object, remind yourself, "This will not cause any back problems. My back is healthy and strong, and I can do this without worrying about hurting myself." It is important to have a deep understanding that your body is healthy and that you can get better by using these methods. Keep reminding yourself that you will not be allowing your mind to produce symptoms at these times. Relax and breathe in order to decrease fear. Repeat positive phrases about yourself, your body, and your recovery when you encounter any of your triggers until your brain unlearns unwanted neural pathways.

As previously mentioned, many patients with PPD have personality traits of being overly responsible, self-critical, and unassertive. Individuals with PPD often find themselves in situations in which they feel trapped or conflicted. They may be caring for an ailing parent who was abusive, work for a boss who is controlling and manipulative, or have a spouse or child who continually takes advantage of them. In these situations, it is often necessary to take action. Pain is often dramatically reduced when a difficult situation is resolved or ameliorated to a significant degree. It is often necessary to encourage patients and help them find assertive, yet civil, methods for dealing with these situations.

Finally, individuals who have endured significant childhood and adult stressors and who have suffered with chronic pain often have a negative view of themselves and low levels of self-esteem and self-efficacy. Therefore, an overarching theme for guiding individuals with PPD to health is the development of love and compassion toward themselves. This can be accomplished by positive affirmations, meditations and visualizations, and encouraging them to stand up for themselves and take time for themselves. There are some excellent resources for helping patients achieve compassion for themselves.^{69,70}

Conclusion

A significant proportion of people with chronic pain do not have a

structural cause for this pain and are actually suffering from PPD. Biomedical approaches to PPD often lead to an endless cycle of pain and ineffective interventions. When a biomedical condition is ruled out, a careful interview will usually identify the priming and triggering events leading to the onset of pain. Education about PPD will help the patient discard the biomedical explanation for their pain and empower the patient to take control of their symptoms and their lives. Reversing PPD often takes time and a variety of cognitive, behavioral, and emotional interventions. However, it can be gratifying to help patients realize that their pain, even if it has persisted for many years, can be reversed or reduced.

CHAPTER 103

Energy Psychology

Larry Stoler, PhD, MSSA

The cell is a machine driven by energy. It can thus be approached by studying matter, or by studying energy. In every culture and in every medical tradition before ours, healing was accomplished by moving energy.

Albert Szent-Gyorgyi, Nobel Laureate in Medicine

Case Study 1: Fear of a Flu Shot

A female patient enters your office, and you recommend that she receive a flu shot. However, this patient is terrified of needles. You learn that because of this fear, the patient has never had a flu shot, despite being at risk. You explain to the patient that you can help her overcome this fear of needles by teaching her how to calm herself using a simple technique. You obtain her consent, and then you ask her to rate her fear of needles from 0 to 10, where 0 means she has no fear at all and 10 is the worst imaginable fear. She says that her fear at that moment, while just thinking about getting the flu shot, is a 9. This is her Subjective Units of Distress (SUDS) rating. Then you instruct her to tap on several acupuncture points on her hand, face, and chest. The procedure takes a couple of minutes. Immediately following this intervention, you observe that she has become calmer: her breathing has slowed down, she is smiling, and her body posture is softer. You ask her how high her fear rating is now. She pauses briefly, has a somewhat confused expression on her face, and reports that the fear is hardly there. She reports that her SUDS rating is now 3. You ask her what the fear is based on now. She says that it is the image of the nurse preparing the needle. You ask her to focus on this image and you guide her in repeating the tapping on the same acupoints. When she completes the tapping sequence, you ask her

to rate her fear level again, and she reports that she does not feel any fear. Her SUDS rating is 0. You then ask her to imagine receiving a flu shot in full detail. She does this imaginal exercise without any fear. You review with her the tapping sequence she just used and advise her that she can do this as a self-treatment any time she needs to and that she can use it to help her overcome any fear or limiting beliefs that she encounters in her life. You can tell her in full confidence that because she reached a 0 in this brief treatment, the likelihood is great that she will have little or no fear when she receives her flu shot. You send her over to your nurse, who administers the flu shot. The patient has no adverse reactions. It took you 10 minutes to help this patient.

The SUDS rating stands for Subjective Units of Distress and is measured from 0 to 10, with 10 being the maximum amount of subjective feelings of distress and unrest.

Case Study 2: Bloating, Weight Gain, and Anxiety

A 47-year-old woman comes to see you. Her presenting complaints include bloating, 10-pound weight gain over the past 6 months, and anxiety. During the evaluation, you learn that her last child left for college, she faces insecurity at work due to restructuring, and her husband's mother, who lives out of town, had a stroke 8 months ago. You note that this patient has suffered from anxiety in the past and has taken anxiolytics, but did this only briefly because she prefers natural approaches. You discuss the stresses in her life with her and inform her that her body is giving her important messages that her life is out of balance. Because she prefers natural approaches, you introduce the Four Energy Gates practice to her and emphasize the importance of regular daily practice at home. You share with her that you have been doing them as well and noticed improvements in your mood and general well-being. You show her the exercises and give her a home self-practice handout. She agrees to return to the office in 1 month. After 1 week, your nurse follows up with the patient, and the patient says that she has been practicing 4 out of 7 days but that she feels noticeably calmer. When she returns after 1 month, she says that she continues to have concerns about her job security and her mother-in-law's care, but that the bloating has

gone away and she is much calmer. She said that she showed her husband the practice and that he is doing it with good results as well.

These two examples show how both focused energy psychology (EP) methods (case report 1) and more global EP wellness methods (case report 2) can be used by physicians, nurse practitioners, and other health care professionals in their offices to introduce patients to effective self-help practices ([Box 103.1](#)).

BOX 103.1 Overview of Energy Psychology

1. Uses meridian, chakra, or biofield interventions to treat the symptom
2. Provides rapid, gentle, nonretraumatizing treatment for a wide range of emotional and psychological conditions.
3. Does not require deep emotional processing of the problem.
4. Activates hope because long-standing problems can often be helped.
5. Is easily taught as a self-help method.

What is Energy Psychology?

EP is a family of integrative approaches to psychotherapy, self-improvement, and wellness rooted in mind-body healing traditions that are up to 5000 years old. EP methods blend the bioenergetic insights of these traditions with the best of contemporary psychological practice. EP practitioners combine cognitive interventions (including focused awareness and mindfulness, imaginal exposure of disturbing memories, and cognitive reframing) simultaneously with the activation of one or more of the human bioenergy systems such as meridians, chakras, and biofields. EP is a part of the broader integration of the profound shifts in science as the implications of relativity and quantum theory are applied to healing practices.¹ Along with this is a recognition in health care of the role of consciousness, intention, and energy in wellness and healing.² With roots that link to ancient Chinese medicine and acupuncture, including qigong self-healing practices, EP is a bridge that connects this ancient healing wisdom to modern therapeutic practice and research as well as leads modern practitioners to directly explore these ancient practices themselves.

EP emerged in the early 1980s as part of a search for more effective treatments for posttraumatic stress disorder (PTSD) and phobias. It is also an outgrowth of the continuing convergence of medical and healing

systems of the West and the East. This convergence broke into public awareness in 1971 when *New York Times* journalist James Reston wrote about his experience of acupuncture successfully treating his postsurgical pain. This occurred while he was in China prior to President Nixon's historic visit.

At the time of this writing, many EP treatment modalities are in use in the United States and are increasingly being used throughout the world. Examples of popular modalities include the Emotional Freedom Techniques (EFT), Thought Field Therapy (TFT), Tapas Acupressure Technique (TAT), Energy Diagnostic and Treatment Methods (EDxTMs), Advanced Integrative Therapy (AIT), and Heart Assisted Therapy (HAT), with EFT being the most commonly used method. They are being used by a range of professionals and lay people. Psychologists, social workers, and other mental health practitioners—along with physicians, nurses, chiropractors, life coaches, educators, sports performance experts, yoga teachers, and lay people, among other groups—are integrating EP methods into their work (see [Chapter 116](#)).

By the mid-1990s in the United States, awareness of EP's effectiveness as a rapid and comprehensive trauma treatment spread. Therapists who were already familiar with other effective trauma therapies, such as exposure therapies and eye movement desensitization and reprocessing (EMDR),³ began to embrace EP because of the positive results they found in the treatment of recalcitrant trauma patients. In their practices, they observed that patients typically experienced rapid and robust relief from trauma symptoms, with significant symptom improvement evident typically after only a couple of sessions.

In the field, trauma-relief teams used EP interventions to help people who were traumatized as a result of both natural and manmade disasters, including survivors of the Newtown school shootings, the attacks of 9/11, the Indonesian tsunami, earthquakes in Guatemala and Pakistan, Hurricane Katrina in New Orleans, the war in Serbia and Bosnia, and the genocide in Rwanda. Because EP can be quickly taught to indigenous relief workers who are not mental health professionals, treatments can be locally administered while relying on only a few trained outside professionals. This method of treatment delivery was used successfully in Guatemala and Indonesia as well as in Rwanda. EP is showing great promise as an effective treatment for PTSD among U.S. military veterans. Similar to other traumatized populations, EP treatment of veterans led to the resolution of chronic disabling symptoms, such as nightmares, flashbacks, hypervigilance, and emotional numbness. As an

empowerment strategy, patients were taught how to use EP for symptom maintenance and as an effective generalized self-help method.

Significantly, EP treatment is gentle and does not retraumatize the patient. A holistic therapy, EP treatment typically leads to rapid and simultaneous positive changes in emotions, mind, body, and overall well-being. In general clinical practice, well-trained EP practitioners can help people rapidly recover from a broad range of problems, including panic attacks, phobias, and generalized anxiety; traumatic reactions including PTSD; persistent negative emotional states such as sadness, grief, and anger; and blocks to creative expression and peak performance. EP approaches can be helpful adjuncts to more severe problems such as major depression, bipolar disorder, and personality disorders, including borderline personality disorder.

Despite these promising results, EP has faced significant professional opposition. To support practitioners and to promote EP generally, in 1999, the Association for Comprehensive Energy Psychology (ACEP) was founded (see [Key Web Resources](#)). ACEP, a nonprofit international professional organization, which is headquartered in the United States, promotes the education, research, and professional practice of EP. In addition, ACEP is a leader in addressing the ethics and scope of practice issues associated with EP. ACEP offers education and certification in EP. Recognizing that EP methods have an important role in mental health settings, in the broader health care arena, and in all areas in which people are working to help others advance themselves and overcome problems (e.g., education, corrections, coaching, and sports performance), ACEP developed advanced training programs for both mental health professionals and allied health practitioners.

In 2012, as a result of ACEP's efforts, the American Psychological Association (APA) made the historic decision to approve ACEP as a continuing education (CE) provider for psychologists. Both the clinical applications of EP and research into EP have been growing since.

What is the Evidence for Energy Psychology?

The APA decision was based on the fact that research had established a threshold, evidence-based foundation for EP. Studies demonstrated that EP is an effective treatment for anxiety, specifically for certain phobias (e.g., insects and small animals⁴ and public speaking anxiety,⁵ along with

other common fear states).

A good overview of the evidence-based support for EP can be found in Feinstein's 2012 article in the *Review of General Psychology*.⁶

EP's efficacy as a trauma treatment has been shown in clinical field research. In the case of Rwanda, in 2006, members of the Trauma Relief Committee of the Association for Thought Field Therapy Foundation worked with children at the El Shadai orphanage. Children there who had witnessed the murder of their parents and other family members during the Rwandan genocide were profoundly traumatized. The therapists worked with 50 children aged 13–18 years. These children suffered typical PTSD symptoms including flashbacks, nightmares, bedwetting, depression, withdrawal, isolation, difficulty concentrating, and aggression. The children's level of PTSD was evaluated using standardized tests. Their average scores exceeded the cutoffs for a diagnosis of PTSD, as outlined in the fourth edition of the *Diagnostic and Statistical Manual of Mental Disorders*. These 50 children were treated with three TFT sessions lasting 20 minutes each. After the TFT sessions were administered, most of the children experienced an immediate decrease in the frequency and intensity of flashbacks and other symptoms. The clinical improvement was matched by improvement in the children's test scores. At the conclusion of the three sessions, the tests were readministered, and the children's scores were found to be no longer in the PTSD range. These improvements continued to hold a year later when the children were retested.^{6,7}

EP methods show great promise in the treatment of returning veterans. In a randomized controlled trial of EP in combat veterans, 49 veterans had scores higher than the PTSD cutoff. After six treatment sessions, 42 of these veterans had scores that were no longer in the PTSD range. These gains were maintained at the 6-month follow-up.⁸

The near instantaneous calming of severe emotional reactions that can occur with EP treatment suggests that EP treatment affects trauma-associated brain systems. Indeed, research suggests that EP treatment produces rapid changes in the brain. As an example, Diepold and Goldstein compared a patient's quantitative electroencephalography pattern before and after a single TFT session. The pattern was abnormal when the subject brought to mind a specific personal trauma, but it was normal when the subject thought about a neutral event. Following a single TFT treatment, no abnormalities were observed in either the traumatic or neutral condition. These positive changes in brain wave patterns remained at 18-month follow-up.⁷

Evidence is growing to support the clinical findings that EP treatments can ameliorate physical problems, including headache and pain. Bougea et al. showed that EFT can reduce the pain associated with tension-type headaches.^{9,10}

Church has summarized research to date indicating that clinical EFT is an effective treatment for psychological and many physiological conditions.¹¹

Energy psychology, although a shift from the conventional Western medical belief, appears to be an easy to practice, low-cost with low-harm intervention that can empower patients to recruit internal resources that can resolve stressful emotions. Results have been shown to be sustained over time.

How Does Energy Psychology Work?

The debate on how EP modalities work is lively. Kathleen Hui's work¹² at Harvard University demonstrated that stimulating acupoints can lead to modulation of the limbic system. Some investigators, such as Ruden,¹³ argue that the clinical results seen in EP treatment can be explained by extending current neuroscience understanding of neuroplasticity in the brain. Porges' polyvagal theory has been used as a model for understanding trauma and the efficacy of EP.^{14,15} Feinstein argued that EP is an accelerated exposure therapy. In other words, the somatic component of EP treatments, by stimulating the meridian system, accesses a much more rapid information processing system that turns off the body's alarm response and leads to repatterning of negative memory patterns (in the amygdala and hippocampus, respectively). Presumably, Feinstein's argument could be expanded to include EP methods (e.g., HAT, TAT, and AIT) that are somatically focused but do not employ percussive tapping on acupuncture points.

Roger Callahan,¹⁶ the developer of TFT, proposed an informational and energetic model suggesting that stimulating meridian points helps to collapse perturbations in the patient's thought field. These energetic perturbations are presumed to be caused by some initial upsetting or traumatic incident. The notion of the existence of a thought field, which is a field of information fundamentally energetic and not localized in brain tissue, appears to be supported by Rupert Sheldrake's work on

morphic resonance.¹⁷ In addition, studies on mind effects at a distance offer further support for the possibility that our mind extends beyond the brain.¹⁸ These latter energy- and consciousness-based explanations may better fit actual clinical experience because many clinicians report positive EP clinical outcomes by activating body energy centers without touching the body or through intention only. Larry Dossey¹⁹ argued that the evidence for nonlocal mind is compelling, and this nonmechanistic view points toward new possibilities for healing. At the same time, it echoes ancient ideas about human interconnectedness.²⁰ EP, like qigong, by focusing on meridians, consciousness, and energy may be helping us rediscover hidden healing capacities that were long overlooked in the Western scientific paradigm.²¹

How Do I Get Started?

Because EP approaches can be used for self-help, one of the best ways to learn about EP is to begin by trying it out yourself. A basic tenet of EP treatment (similar to acupuncture) is that symptoms occur when we are in a state of energetic imbalance or disharmony. So, a good starting point for self-treatment is a comprehensive energy balancing practice.

A good option is the Four Energy Gates ([Fig. 103.1](#) within the Patient Handout). According to Master Nan Lu, daily practice of these qigong energy exercises drawn from traditional Chinese medicine can promote overall wellness and contribute to the improvement of emotional and physical symptoms.²²

To work on a personal issue, follow these four basic steps: begin with a basic balancing practice (the Four Energy Gates), identify the problem, perform an energy clearing or balancing exercise (e.g., the EFT tapping sequence), and evaluate the results and repeat if necessary ([Box 103.2](#)).

For example, let us say that you have an important speaking event coming up and you are experiencing apprehensions about presenting. As the day of the event approaches, you notice that you are avoiding preparing for the talk; you have an unsettled feeling in your belly when you think about it; when you respond to your colleagues' questions about it, your voice trembles; and you worry that you will embarrass yourself. Of course, these anxieties are common, but you feel your fears are excessive. You decide that you are going to help yourself overcome this problem by using an EP approach. You have already noted the behavioral (avoidance), physical (distress in your belly and shaky voice),

emotional (anxiety), and cognitive (worry about embarrassment) components of your anxious reaction. Considering these symptoms, you identify your worry that you will embarrass yourself as the most salient aspect. You establish that your SUDS rating when you think about these worries is a 9. If you choose the more comprehensive of the self-treatment protocols, you would begin with the Four Energy Gates practice. This takes approximately 15–20 minutes. The acupuncture points used in the Four Energy Gates improve the flow and distribution of your body's qi. The first three open up the energy flow to the head, the heart, and the kidneys, respectively. The last one helps to integrate and harmonize the qi flow in the body. Many times, just doing the Four Energy Gates can lead to a significant improvement in the problem (a brief video of the Four Energy Gates can be found here:

<http://taoofhealing.com/patient-care/self-care/>).

If, after completing the Four Energy Gates, your anxiety persists (you still feel distress when you think about embarrassing yourself when you give the speech) and your SUDS rating is not 0, you can proceed to treat your worry of embarrassing yourself by using this EFT protocol ([Fig. 103.2](#) within the Patient Handout):

1. While tapping firmly and steadily on the side of the hand (sh on the chart), say out loud:
2. "Even though I have this worry that I'll embarrass myself, I deeply love and accept myself." Another version you can use is this: "Even though I have this worry that I'll embarrass myself, I'm attracting love and compassion into my heart." Repeat these statements three times.
3. Next, tap approximately seven to nine times on each of these acupoints while repeating at each point this phrase, which serves to keep you attuned to the problem: "this worry." Again, steady and firm tapping works best.
4. Move from one point to the next until you have tapped on all seven points:
5. Eyebrow: eb
6. Side of the eye: oe
7. Under the eye: e
8. Under the nose: un
9. Under the lower lip: ul
10. Under the collarbone: c
11. Under the arm: ua

(Note: You can tap on all the points on the chart, but usually tapping on these seven points is sufficient. Also, do your best to tap on the

location shown in the chart. If you are not sure whether you are doing it correctly, do your best and continue with the procedure.)

After you have tapped on these points, stop and reevaluate the intensity of the problem. What is the SUDS rating now? How much distress remains? To what extent are you able to imagine yourself in the situation and be free from worry and distress? If any upset remains, repeat these steps. However, this time adjust the first statement to this: "Even though I still have some of this worry, I deeply love and accept myself." The reminder phrase could be "the remaining worry" or "still have some worry." Complete the tapping sequence and reevaluate. Sometimes, you need to shift the focus of the treatment to a different facet or aspect of the problem, say from the worry of embarrassment to the queasy feeling in your belly. By doing this, usually the problem significantly subsides or disappears after a few rounds of tapping. In some instances, more persistence is required. If you do not experience immediate improvement, keep at it.

Usually, when your SUDS rating reaches 0 and you have no distress when you imagine experiencing the situation, the likelihood is high that you will be able to go through the actual event with little or no distress. However, because the tapping is easy to do, you can always use it as a self-help booster whenever you feel the need. You should test out the treatment as much as possible to be sure that you are completely free of the negative reactions. As you start to notice improvements, push yourself to imagine the target situation at its worst to see whether you experience any distress. If you do, repeat the tapping, targeting those specific reactions.

Patient Handout: Energy Psychology Self-Care Patient Handout

Use the 4 Energy Gates (Figure 103-1) for daily self-care. Also, use this practice when dealing with an emotional, personal, or physical problem that is not passing on its own. You can do one or more of the 4 Energy Gates throughout the day, whenever you need a pick-me-up. (Remember to consult with your physician if you have any serious health concerns.)

Use the tapping method (Figure 103-2) to address a particular distressing emotional or personal issue.

The Four Energy Healing Gates: Universal Pathways to Health

On the web between the thumb and index finger: With firm pressure, make small circles for 4 to 5 minutes. Note: the outside, active hand supports and protects.

On the center line of the body between the breasts: Place one palm over the other, and using light pressure only, circle in a clockwise direction at least 200 times (can also be done counter-clockwise).

Just to each side of the center line, four fingers below the navel: Tap this area with two fingers of each hand for 4 to 5 minutes.

In the center "triangle" of the main muscle of the buttocks: Keeping arms, shoulders and hips relaxed, hold a loose fist and alternately punch this area for 4 to 5 minutes.

Fig 103-1. Energy Psychology Meridian Tapping Protocol

From: Traditional Chinese Medicine World Foundation. http://www.tcmworld.org/_downloads/FourEnergyGates_FullPage.pdf
Accessed June 20, 2011.

1. Identify the problem that is blocking you. Is it primarily an emotional, cognitive, or behavioral issue? Is it physical (e.g., shoulder pain)? Rate it from 0–10 (10 is the most distress).

2. Then while tapping firmly and steadily on the side of the hand (sh on the chart) say aloud (to yourself):
"Even though I have this **[insert your problem]**, I deeply love and accept myself." Or, use this:
"Even though I have this **[insert your problem]**, I attract love and compassion into my heart."
Repeat 3 times.

3. Next, tap steadily and firmly about 7–9 times on each of the following acupoints while saying at least once at each point a brief reminder of the issue you are working on. (See Fig. 103-2.)

- Eyebrow – eb
- Side of the eye – oe
- Under the eye – e
- Under the nose – un
- Under the lower lip – ul
- Under the collarbone – c
- Under the arm – ua

(Note: You can tap on all of the points on the chart, but usually tapping on these 7 points is sufficient. Also, do your best to tap on the location shown in the chart. If you are not sure if you are doing it correctly, do your best and continue with the procedure.)

FIG. 103.1

BOX 103.2 Steps for Energy Psychology Self-Treatment

1. Begin with a balancing practice (Four Energy Gates).
2. Identify the issue (cognitive, emotional, and behavioral aspects).
3. Hold the problem in mind while doing the Emotional Freedom Techniques tapping sequence.
4. Evaluate the results and repeat, if necessary.
For a shortcut, do only steps 2–4.

How Do I Get Trained?

EP appears simple, and for many issues it can be. Using EP clinically to treat a diverse clinical population with a range of problems requires advanced training, however. Furthermore, knowledge of various ways of working energetically allows you to individualize treatment. EP training for professionals is becoming more rigorous. ACEP sponsors several training programs, and you can also go to the websites of other methods to discover ways to learn and become certified in those approaches (see the [Key Web Resources](#)).

FIG. 103.2

Importance of Personal Practice and Development

As you use EP methods more frequently, an important shift occurs. You internalize your experience that entrenched and difficult-to-treat problems can often be transformed quickly. Contrary to the generally held idea that you must work through the deep psychological roots of problems, you can reliably facilitate deep and enduring personal change

by addressing the energetic foundations of problems.

In all energy work, indeed in all healing, the practitioner's personal development is critical. Caring, compassion, and technical skill are essential to the healing encounter and so is the internal energetic level of the practitioner. Practitioners should establish a personal practice that can increase their energy level. For example, performing the Four Energy Gates everyday gradually improves your internal energy and helps you to be more effective. Other examples could include a regular meditation practice, doing yoga, or taking daily walks in nature. Time devoted to your personal practice has many visible and invisible benefits.

As with any healing-oriented practice, work on yourself first by grounding and balancing your own energy. This can be done in various ways, including the Four Energy Gates technique, meditation, breath work, and others.

Energy Psychology as a First-Line Treatment

Patients come to see their doctors and health care practitioners to seek treatment for disturbing symptoms. That many of these symptoms are not based on any significant pathology is well known. Often, these symptoms are somatic messages related to ongoing stress and disharmony in the patient's life. Having EP as part of your tool set will enable you to alleviate your patients' symptoms by helping them deal with the underlying stress that is at the root of their distress. An added benefit is that by offering EP treatment, you can help patients leave your office feeling better. In addition, they will have an effective, inexpensive, and safe self-help tool that they will be able to use forever.

CHAPTER 104

Prescribing Botanicals

Paula Gardiner, MD, MPH, Amanda C. Filippelli, MSN, MPH, RN, APRN, and Tieraona Low Dog, MD

A careful examination of the evidence regarding the safety and efficacy of herbal medicines should guide the clinician as they partner with their patients in creating optimal health care.

Overview

In 2012, 33.2% percent of the American population used some form of complementary and alternative medicine (CAM), with 17.7% percent of the population using nonvitamin, nonmineral dietary supplements.¹ During 2012, whole-food supplements had approximately \$1.1 billion in sales.² This was more than 10% annual growth. It is clear that many of our patients are regularly using herbs and dietary supplements.

Who Uses Herbs?

Rates of herbal product use vary by age, gender, race, and ethnicity. Substantial numbers of all patient groups report using herbs and dietary supplements, particularly women and people with chronic or recurrent illnesses who also receive care from conventional health care professionals. In adult national studies, there are many conditions where herb use has been commonly reported for relief of gastrointestinal conditions, memory improvement, cardiovascular health, and cancer symptom improvement.³⁻⁶ Herbal medicine has also been used in pediatric populations for common conditions, including mental health disorders, headaches, eczema, and asthma.⁷⁻¹⁰

What Else are they Taking?

Approximately one-third of all adults in the United States might be taking an over-the-counter medication and herb or a prescription medication and herb concurrently.¹¹ Different patient populations are at high risk for drug/herb interactions; these include human immunodeficiency virus (HIV)-positive patients, chronically ill patients, cancer patients, and elderly Medicare patients.¹²⁻¹⁴

There is no universally accepted guideline for managing a patient's prescription medication and herbal medicine in the outpatient or inpatient setting.¹¹ However, the Joint Commission Accreditation of Healthcare Organization requires that dietary supplements (herbs, vitamins, and minerals) conform to the same hospital standards as prescription medications.¹⁵

Despite the documented high prevalence of patient use of herbal products, fewer than half of patients who use herbs typically discuss it with their clinician.^{16,17} Therefore, it is critical to have an approach to discussing herb with patients.

Talking About Herbs with Patients

Health care providers must be able to talk with patients about a wide variety of treatment options, including those that fall outside what the health care provider learned in formal training. Because use of herbs has the potential for both benefit and harm, it is important that providers approach the topic of herb usage in an open and nonjudgmental way. Many cultures have a rich history of using botanical medicines; indeed, herbal medicine is the most common form of traditional medicine in the world. Because such a wide variety of herbal practices and products are available in the United States, generalizations are difficult. Nevertheless, by asking a few open-ended questions, the clinician should be able to assess the patient's beliefs and cultural practices regarding his/her use of herbal medicines. Examples of such questions are as follows:

- When you were growing up, did you or your family ever use any medicinal plants or herbal remedies to improve your health or treat an illness?
- If I were to walk around your house and look for containers of herbs, vitamins, or dietary supplements, what would I find?
- How do you use herbs or herbal remedies in your home?

- Are you taking any herbs or herbal medicines now? If so, what are you trying to treat, and do you think the herbs are working?

Using herbs in practice is a holistic process. Besides the patient's cultural and social background, it is important for the clinician to take into account what symptoms the patient has, any chronic or acute illness, prescribed medications the patient is taking, and any nonprescribed medications as well as to judge how adherent the patient will be to the regimen the clinician recommends.

Efficacy

How does the clinician know whether an herb actually works for a patient's condition? Is there strong historical evidence? Is there a biologically plausible mechanism of action based on in vitro or animal research? Has the herb undergone controlled clinical trials? And if so, which type of product was studied and at what dose? These are important questions to ask when trying to determine efficacy. First, here is a summary of the strengths and weaknesses of different types of evidence used to assess the efficacy of botanical medicines.

In vitro studies, objective measurements using isolated tissue or cell culture, are a well-accepted first step for understanding the physiological and/or pharmacological activity of a particular substance. Animal studies are often used in pharmacological studies because they permit control over a number of variables and can help explain potential mechanisms of action. The strengths of in vitro and animal studies are that they:

- Allow control over a number of variables
- Generate and test hypotheses for mechanism of action
- Help determine safety at varying doses and duration

They do have limitations, which are as follows:

- Results may not accurately predict physiological effects in humans.
- Parenteral administration may give differing results from oral administration.
- Study of isolated constituents may not reflect use of the whole plant.
- Ethical issues surround the use of animals in medical research.

A long history of use is an important source of information regarding the safe and effective use of plant medicines. These historical data are almost exclusively based on observational data, and even today, a clinician's observations remain an important tool for assessing efficacy and adverse effects in the office. One strength of observational data is

that they can provide useful insight when a therapy has been used by multiple cultures, over time, for similar purposes. Also, the astute clinician may detect a therapeutic effect, or an adverse effect, that is not well known or recognized. An important limitation is that there is a risk of bias if the observers are not studying a defined cohort of patients.

Nonrandomized and nonblinded, or uncontrolled, studies are a valuable method for generating hypotheses and assisting in the identification of adverse events, although they are best regarded as yielding “supportive” evidence. Strengths of uncontrolled studies are that they are:

- Valuable for generating hypotheses
- Useful for identifying adverse events

The limitation is that the presence of multiple uncontrolled variables increases risk of bias in the results.

Outcome research generally involves a cohort of patients with the same diagnosis (e.g., diabetes, heart disease) that relates their clinical and health outcomes (e.g., death, events, improvement) to the care that they received (e.g., physical therapy, medication). The strengths of outcomes research is that it:

- Reflects more closely the actual day-to-day practice of clinical medicine
- Is well suited for whole-system approaches (e.g., traditional Chinese medicine, Ayurveda, naturopathy)

A challenge in prescribing botanicals is the variation that is naturally found within any growing plant. Where is the active ingredient...the root, stem, leaves, or flowers? What type of soil was it grown in? What was the growing season like? A good botanical is like a good wine.

The limitation is that it is difficult to establish efficacy for any particular aspect of treatment.

It has the following strengths:

- It provides safeguards against numerous forms of bias.
- The model is applicable for the study of many botanical interventions.

Limitations of randomized, double-blind trials are as follows:

- The average randomly allocated patient may not adequately reflect the clinical subgroups seen in clinical medicine.
- This model may not be applicable for answering some clinical questions, such as individualization of therapy.
- The lack of a randomized controlled trial (RCT) is often interpreted as

lack of efficacy; this is a problem in botanical medicine in which treatments may have been used for centuries but lack current gold standard evidence.

In addition to clearly understanding the limitations of different research methods, the clinician must understand exactly what type of product is actually being tested. The complex nature of botanicals (e.g., the variations in constituents between species, plant parts, and preparation) makes it essential that authors of research articles clearly provide an adequate description of the product used in the clinical trial. Descriptions should include identification (Latin binomial and authority), plant part (root, leaf, seed, etc.), and type of preparation (tea, tincture, extract, oil, etc.).

Tincture and extract description should include the identity of the solvent and the ratio of solvent to plant material. If the preparation is standardized to a chemical constituent, that information should also be included. Precise and clear dose and dosage form should be provided.¹⁸ These are critically important issues to consider when conducting and publishing research on botanical medicines. Thus it is important for us to ask the question “Is the product that my patient is taking for her particular condition similar to what was clinically tested?” In 2006, the Consolidated Standards of Reporting Trials (CONSORT) developed guidelines in reporting clinical trials of herbal medicine in the peer-reviewed literature, which has been adapted by many journals.^{19,20} There is a growing need for more clinical trials examining herbal medicine.

An increasing number of systematic reviews and meta-analyses are now available for busy clinicians to evaluate the evidence of efficacy for a number of botanicals, including echinacea (*Echinacea* spp.),²¹ garlic (*Allium sativum* L.),²² kava (*Piper methysticum* G. Forster),²³ ginkgo (*Ginkgo biloba* L.),^{24,25} horse chestnut (*Aesculus hippocastanum* L.),²⁶ saw palmetto (*Serenoa repens* W. Bartram),²⁷ and St. John’s wort (*Hypericum perforatum* L.).²⁸ While recognizing the value of meta-analyses in the medical literature, it is important to point out one potential problem with this approach in the field of herbal medicine—the “pooling” of different products to reach a specific conclusion about a particular plant. For example, a review of garlic pooled results from clinical trials using raw garlic, aged garlic extracts, dehydrated garlic, and garlic oil macerates to reach a specific conclusion regarding the benefit of garlic for cardiovascular health.²⁹ When one evaluates these products from an analytical perspective, it is clear that there are marked chemical differences between them, making any general conclusion about the

efficacy of garlic (or lack thereof) questionable.

And finally, we must consider what level of evidence of efficacy is acceptable to support the use of a medicinal plant by our patient. This must take into consideration the relative safety of the product, the medical condition being treated, and the personal beliefs and preferences of the patient.

Before moving on to safety, it is important to consider the use of herbal products in pediatric populations. While herbs are used by children for a variety of reasons, there is a great need for more research on the use of herbs in pediatric populations.

Safety Considerations

As with any drug or chemically active constituent, whether an herb is toxic depends on its dose, form of product, what it is taken with, and the underlying condition of the patient. Overall, most herbs commonly used in the United States have a relatively good safety profile, and the incidences of herbal adverse events are low. More than 1500 dietary supplement-related regulatory alerts from the Food and Drug Administration (FDA), MedWatch, and Health Canada websites were identified from 2005 to 2013.³⁰ In general, many case reports are of poor quality and are anecdotal in nature, and frequently, the adverse effects are caused not by the supplements themselves, but rather by adulteration or contamination of these products.³¹

Modern use of an herbal product may not reflect the use of herbal preparations in traditional medicine. For example, an excellent safety record of a traditional oral preparation may well have limited relevance to use of the same herb in a concentrated product at a high dose. Moreover, herbs that are apparently safe under normal conditions may be more hazardous in specific conditions (e.g., pregnancy, impairment of renal or liver function), under special circumstances (e.g., during the perioperative period), or when combined with certain conventional drugs.

Adverse effects of botanicals commonly arise not from the supplement itself but from contaminants within it.

When one is considering the safety of botanicals, it is important to look at the framework for regulating the sale of dietary supplements in the

United States. The Dietary Supplement and Health Education Act (DSHEA), which was enacted in 1994, has had a profound influence on how herbal products are sold and marketed to the consumer. To discuss herbal products with patients, clinicians must understand this act.³² The following points are important:

- DSHEA allows dietary ingredients that were in the market before 1994 to be marketed without prior approval of their efficacy and safety by the FDA. Herbs that were brought to market in the United States after 1994 must submit a notification to the FDA. If it wasn't present in the food supply, the manufacturer must document why they believe it to be safe when used under the conditions suggested on the label.
- The manufacturer of an herbal product is responsible for the truthfulness of claims made on the label and must have evidence that the claims are supported; nevertheless, DSHEA neither provides a standard for the evidence needed nor requires submission of the evidence to the FDA.
- Manufacturers are permitted to claim that the product affects the structure or function of the body, as long as (1) there is no claim of effectiveness for the prevention or treatment of a specific disease and (2) a disclaimer appears on the container informing the user that the FDA has not evaluated the product for any claim.
- The manufacturer is responsible for controlling quality and safety of the product, but if a concern about safety arises, the burden of proof lies not with the manufacturer but with the FDA, which has to prove that the product is unsafe.

The FDA has released good manufacturing practices (GMPs) for herbal products. GMPs set standards for purity, strength, and potency of the supplements to reflect what is stated on the label.³³

Even if clinicians are able to identify an herbal product that shows strong efficacy, the concern about the safety of herbal products often overshadows our discussions with patients. These concerns include contamination with other products, such as heavy metals, pesticides, microorganisms, or misidentified herbal ingredients, and adulteration with a prescription drug.³¹ The quality of plant material varies considerably depending on where it is cultivated or gathered, the times and methods of harvest and drying, and environmental conditions such as climate and soil type. There may be considerable variation in the composition of an herbal product among manufacturers, as well as discrepancies between label information and actual content. Clinicians should be cognizant of potential adverse events from food or drug

interactions. For instance, there is sufficient evidence from interaction studies and case reports to demonstrate that St. John's wort (*H. perforatum* L.) induces the cytochrome P450 (CYP) 3A4 enzyme system and the P-glycoprotein drug transporter in a clinically relevant manner, reducing the efficacy of comedications.^{34,35}

In December of 2006, the Dietary Supplement and Nonprescription Drug Consumer Protection Act was passed. It requires the reporting of a serious adverse event as a result of a dietary supplement and labeling of the manufacturer's address and phone number. The manufacturer is required to forward information on serious adverse events to the FDA within 15 days. The health care professional can also report a drug/herb interaction or an adverse effect to MedWatch, a program administered by the FDA. Another excellent resource is to contact your local poison control centers; the new nationwide toll-free number for poison control is 800-222-1222. There is also a need for better reporting of adverse events in children following herb use³⁶.

Choosing a Brand or Product: a Question of Quality

Once the clinician has determined that an herb is efficacious and safe for a particular patient, he or she must advise the patient on choosing high-quality products. The quality of an herbal preparation partly determines its efficacy and safety. Even with DSHEA, loopholes in the regulatory system have allowed poor-quality products to be introduced into the marketplace. The FDA is addressing some of the problems associated with manufacturing herbal products with its new GMPs.³³ Nonprofit and for-profit organizations have taken on the task of certifying manufacturers who are following GMPs and testing to see that what is on a label is in the bottle ([Table 104.1](#)). It is critical to guide patients toward purchasing the best-quality herbal product; high quality generally translates to better safety and efficacy.

Dosing

Once the correct herb has been chosen for the correct patient's diagnosis, the clinician confronts confusing questions of dosing. Where is the dosing information on the label of the bottle? How much herb should the

patient take and for how long? Is the dose different for a child?

There are many ways for patients to prepare and use “herbal medicines” (Table 104.2). A traditional herbalist will individualize every treatment protocol on the basis of the patient’s unique situation, often using more than one herb or type of preparation. However, tailoring the herbal treatment for the patient can be difficult for the conventional provider in this age of uncertainty regarding the safety of all herbal products. Traditionally, most herbalists administered crude herbs in the form of teas, decoctions, tinctures, poultices, or compresses. These preparations are relatively inexpensive and easy to use. We encourage our patients to get involved by developing self-care routines (e.g., cooking with herbs, making a cup of tea, taking an herbal bath). The majority of commercial herbal products are sold in solid dosage forms, such as tablets and capsules, although teas, tinctures, and liquid extracts remain popular. Teas (water extracts) have a long history of use but are often limited by taste and rapid spoilage (they have to be made fresh). Hydroethanolic extracts, such as tinctures and fluid extracts, are more concentrated and easier to administer, although the alcohol content can be a problem for some patients.

TABLE 104.1
Information on Testing Dietary Supplement and Herbal Products

Organization	What to Look for on the Label	W
NSF is a nonprofit public health organization. NSF’s certification service includes product testing, Good Manufacturing Practices (GMP) inspections, ongoing monitoring, and use of the NSF Mark.		ht

NSF

The United States Pharmacopeia (USP)—testing for contamination, adulteration, and good manufacturing processes. USP also examines products for pharmacological properties.

[ht](#)
[su](#)

Consumer Labs evaluates commercially available dietary supplement

[ht](#)

products for composition, potency, purity, bioavailability, and consistency of products.

U.S. government —GRAS “GRAS” is an acronym for the phrase Generally Recognized As Safe. Under sections 201(s) and 409 of the Federal Food, Drug, and Cosmetic Act (the Act), any substance that is intentionally added to food is a food additive, that is subject to premarket

GRAS

[ht](#)

<p>review and approval by FDA, unless the substance is generally recognized, among qualified experts, as having been adequately shown to be safe under the conditions of its intended use, or unless the use of the substance is otherwise excluded from the definition of a food additive.</p>		
<p>Health Canada In Canada dietary supplements are regulated by the government in a natural health products category insuring safety and efficacy of these products. This link includes all dietary supplements that are licensed for sale in Canada.</p>		<p>ht</p>

A growing number of herbal preparations are now standardized to a specific constituent, or group of compounds, helping to ensure batch-to-batch consistency of the product. The standardizing compound may or may not be one of the “active” ingredients in the product. Most clinical trials are conducted on standardized products.

TABLE 104.2
Preparation of Herbal Products

- Balm or salve—A soothing lipid-based topical preparation containing beeswax, vegetable, or mineral oil.
- Bath—Herbal preparation placed in a soaking bath; transdermal absorption extremely limited and mostly relevant to herbs with high volatile oil content. Herbal baths can be useful for skin irritation or enjoyed simply for their pleasant aroma.
- Decoction—An extraction of the soluble compounds from hard plant material (e.g., bark or roots) in boiling water. Herbs are generally simmered for at least 10 minutes.
- Essential oil—Volatile oils extracted from a plant, often through distillation. Essential oils are often many times more potent than the plant itself, which also means an increased risk of potentially adverse effects when used internally. Some popular essential oils include eucalyptus, peppermint, and tea tree oil.
- Fluid extract—A hydroethanol solution with the strength of one part solvent to one part herb (more concentrated than a tincture; alcohol content can vary).
- Glycerite—An herbal compound infused in a solution of glycerin (no alcohol).
- Infusion—An extraction of soluble compounds from fresh or dried flowers, leaves, or seeds in hot water. Infusions are generally steeped for a minimum of 5–10 minutes (a tea).
- Maceration—An herbal infusion made with cold or room temperature water.
- Pills, capsules, or tablets—These may contain the whole herb (or particular plant part such as leaf, root, or seed) or the dried extract of a herb.
- Poultice—An herbal preparation wrapped in cloth and applied to the skin.
- Powders—An herbal preparation applied in a powder form (e.g., talc).
- Syrup—Herbs infused in a syrup product.
- Tincture—A hydroethanolic solution of active plant constituents with a strength of greater than one part herb

- per one part solvent (alcoholic content can vary).
- Tonic—A preparation used to invigorate and restore the body, generally taken on a daily basis (e.g., nettles).

The type of herbal preparation a clinician chooses to use depends on a variety of considerations, including the patient, whether the medical problem is acute or chronic, personal preferences, and medicinal properties of the herb. For example, many people find valerian tea unpleasant tasting; recommending a tincture or capsule may improve the chance that the patient will adhere to therapy. Chamomile tea is quite appropriate for people of all ages. If using garlic for cardiovascular health, the patient could simply add garlic to the daily diet or choose a standardized extract.

For dose, the clinician can start by looking at the clinical trials on the product studied, the dose used, and side effects reported. The majority of herbal clinical trials have been conducted on standardized extracts in solid dosage forms (capsules and tablets). There are also excellent resources about correct dosages on the Internet ([Table 104.3](#)). The clinician should nevertheless be aware that products in the marketplace vary widely in dose and may not accurately represent either what was historically used or the dose typically seen in clinical trials.

We recommend asking patients to bring to the office all their dietary supplement bottles, teas, tinctures, and so on. This can be a fruitful exercise in starting an open discussion, teaching the patient how to read supplement labels, and catching potential drug–herb interactions and adverse effects. [Table 104.4](#) contains explanations of the elements of a label on a botanical product bottle.

Conclusion

In conclusion, the clinician should remember to:³⁷

- Ask all patients about botanicals and the supplements they use. (Offer examples of types of products meant in the question.)
- Record the responses in the patient’s record so that anyone consulting the patient can check for possible safety concerns such as herb–drug interactions.

- Advise patients about the safety and effectiveness of the products that they are using or considering using.
- If unable to answer all the patient’s questions about some botanicals, the clinician should be prepared to refer the patient to evidence-based sources of information (see [Table 104.4](#)).
- The clinician who uncovers a possible adverse effect should report it to MedWatch, as previously discussed.

TABLE 104.3
Evidence-Based Resources for Dietary Supplements

Subscription Services	
Dynamed: Reference and powered by Elsevier with summaries for more than 3200 topics. There is a mobile application available as well (\$395/year for physician subscription).	http://www.dynamed.com/boxes/
Natural Medicines: You can search by supplement or commercial product name. Also includes information about pregnancy and lactation, as well as adverse events (signal for prudence).	https://naturalmedicines.therapeuticresearch.com/
HerbMed: HerbMed is a herbal database that provides scientific data underlying the use of herbs for health. HerbMedPro, an enhanced version of HerbMed, is available for subscription, licensing, and data mining. The public site has 20 herbs; HerbMedPro has an additional 233 herbs and continuous updating (individual subscription \$45,000/year).	www.herbmed.org
Nonsubscription Services	
The National Center for Complementary and Alternative Medicine (NCCAM): NCCAM is the Federal Government’s lead agency for scientific research on CAM. Merit at a Glance, a series of 42 patient information sheets, are listed at http://nccam.nih.gov/health/meritataglance.htm	http://nccam.nih.gov/
NIH Office of Dietary Supplements: Provides overview of vitamins, minerals, and dietary supplements with two levels of information—Health Professional and QuickFacts.	http://ods.od.nih.gov/
Dietary Supplement Label Database: Dietary Supplement Label Database offers information about label ingredients, enabling users to compare label ingredients in different brands. Each dietary supplement has additional links to other government created ODS resources such as Medline, Chemical Toxicology, and NCCAM.	http://www.fda.gov/oc/ohrt/ods/ddl/
MedlinePlus—Dietary Supplements—For Free: This consumer health database from the National Library of Medicine offers extensive information on dietary supplements. http://www.nlm.nih.gov/medlineplus/druginfo/med/a261101.html	http://medlineplus.gov/
American Botanical Council: This nonprofit organization has helped information and continuing medical education resources.	http://www.herbalgram.org
Health Canada: The Canadian government regulates natural health products in Canada (including products with proof of safety and efficacy). This is a very helpful site—it lists products licensed in Canada and has helpful monographs.	http://www.hc-sc.gc.ca

TABLE 104.4
Interpreting Product Labels

1. Trade name
2. Product herb name
3. Herbal products and other "dietary supplements" may make "statements of nutritional support," often referred to as "structure/function claims," as long as they are truthful and not misleading, are demonstrable by scientific data, and do not claim to diagnose, cure, treat, or prevent any disease and carry a disclaimer on the product label to this effect. The disclaimer must also note that FDA has not evaluated the claim. The product manufacturer must also notify the FDA of the structure/function claim within 30 days of bringing the product to market. According to current FDA regulations, examples of acceptable structure/function claims include "supports the immune system" and "support a healthy heart," while claims such as "helps treat the common cold" and "helps prevent heart disease" are considered unacceptable because these are considered drug claims. Thus "helps maintain urinary tract health" is acceptable, while "helps prevent urinary tract infections" is not.
4. A structure/function claim requires the disclaimer when it appears on the label of a dietary supplement as well as in any brochures or advertising. The disclaimer must be in bold type and in a box.
5. Number of tablets, capsules, and net weight of herb in package
6. Directions for use and cautions
7. Name 1-10 are part of the "Supplement Facts Panel"
8. * "Serving Size" is the suggested number of tablets, capsules, softgels, tea bags, liquid extract, or amount to take at one time
9. * "Amount per Serving" first indicates the nutrients present in the herb and then specifies the quantity. The following items must be declared if in excess of what can legally be declared as zero: calories, fat, carbohydrates, sodium, and protein. In addition, the following nutrients must also be declared if present in quantities exceeding what can legally be declared as zero: vitamins A, C, D, E, K, B1, B2, B3, B6, B12, folic acid, biotin, calcium, iron, phosphorus, iodine, magnesium, zinc, selenium, copper, manganese, chromium, molybdenum, chloride, and potassium. Most herbal products contain negligible amounts of these nutrients.
10. * "Percent Daily Value" (%DV) indicates the percentage of daily intake provided by the herb. An asterisk under the "Percent Daily Value" heading indicates that a Daily Value is not established for that dietary ingredient.
11. * Herbs should be designated by their standardized common names as listed in the book *Herbs of Commerce*, published in 1992 by the American Herbal Products Association. If the common name is not listed in *Herbs of Commerce*, then the common name must be followed by the herb's Latin name. The plant part must be listed for each herb. The amount in milligrams of each herb must be listed unless the herbs are grouped as a proprietary blend—then only the total amount of the blend can be listed. For herbal extracts, the following information must be disclosed:
 - a. the ratio of the weight of the starting material to the volume of the solvent (even for dried extracts where the solvent has been removed, the solvent used to extract the herb must be listed)
 - b. whether the starting material is fresh or dry
 - c. the concentration of the herb(s) in the solvent
12. Standardization. If a product is chemically standardized, the product label may list the component used to measure standardization (e.g., ginsenosides in *Aster ginseng*, valerenic acids in valerian) and the level to which the product is standardized (e.g., 4% ginsenosides). Therefore, if a product contained 100 mg of *Aster ginseng* extract per capsule and the extract was standardized to 4% ginsenosides, one capsule would contain 4 mg of ginsenosides. In most, but not all, cases, the component used to measure standardization is inactive, although the standardization component may not be responsible for the intended primary activity of the herbal supplement; other active compounds may be responsible. Products can also be standardized to "total compound" for purposes of quality control. These matters may or may not be active.
13. A list of all other ingredients, in descending order by weight, must appear outside the Supplement Facts box. In herb formulas containing multiple herbal ingredients, the herbs must be listed in descending order of predominance.
14. The proper location for storage of herbal products is typically labeled as a cool, dry place.
15. All herbal products and other dietary supplements should be kept out of the reach of children.
16. The herb should be used before the expiration date for maximum potency and effectiveness. Expiration dates are often arbitrarily established by the manufacturer, regardless of the ingredients and their relative stability. Such dates are normally set at two years from the date of manufacture of the finished dietary supplement, although this period may be longer or shorter depending on the manufacturer's policies, stability testing, storage time, and other variables.
17. The product name for the manufacturer or distributor's name, city, state, and zip code.

^a Adapted with permission from the table "Interpreting Product Labels" in Blumenthal M, Hall T, Goldberg A, et al., eds. *The ABC Clinical Guide to Herbs*. CHAPTER 105

Prescribing Probiotics

Jonathan Takahashi, MD, MPH, and J. Adam Rindfleisch, MPhil, MD

Why Probiotics?

The Gut Microbiome in Health and Disease

The quantity of microbes in our bodies number approximately 100 trillion cells, ten times more than the number of human cells; the collective genome of these organisms is 100 times larger than our own.¹ Most of these bacteria reside in the intestinal tract, with an estimated 70% in the colon alone.² *Metagenomics* is the study of all DNA from a given environment, which for humans includes the DNA from the host and the *microbiota*, a term that refers to the totality of microorganisms that coexist with the host or in a specified part of the host's body, such as the gastrointestinal (GI) tract.^{3,4} Recent metagenomic studies have revealed that each individual harbors 160 or more bacterial species from a consortium of about 1150 prevalent species.⁵ Given that more than 90% of our "superorganism" is actually microbial rather than human, technological advances in molecular biology have fueled a virtual explosion of research in the quest to better understand the role of the microbiome in physiology, health, and disease.

Scientific interest in the symbiotic relationships between humans and certain microbes is not new, beginning soon after Louis Pasteur and Robert Koch established the idea that microorganisms were responsible for infectious diseases. In 1907, Nobel laureate Ilya Metchnikov postulated that lactic acid bacteria (LAB), such as those consumed in fermented foods, contributed to longevity by replacing pathogenic microbes such as *Clostridia* with beneficial, nonpathogenic microbes. The diet he promoted included milk fermented with what he called "Bulgarian bacillus."⁶ Scientific research progressed during the 20th

century, but it was only with technological advances in molecular biology and genomics during the latter part of the century that a more detailed understanding of human–microbial symbiosis started to emerge. Recently, the National Institute of Health (NIH)-sponsored Human Microbiome Project (2008–2012) utilized samples from 18 locations, ranging from the nares to the vagina and gut, from nearly 5000 healthy individuals to create an initial characterization of the normal microbiota in healthy adults in a Western population.⁵ Our understanding of how the microbiota is intricately entwined with human physiology continues to evolve with each passing year as research brings new discoveries.

As the home for the vast majority of the human microbiota, the GI tract has been the main focus of recent research. While popular understanding views the GI tract as a simple, closed tube through which food and waste products pass, science continues to uncover how it merits its nickname as “our second brain.” Gut–microbial interactions have been shown to play a key role in the following physiological processes:

- *Intestinal barrier function.* The extent to which the epithelial barrier allows bacterial translocation into the bloodstream, what is commonly referred to as the “leakiness” of the gut, is affected by the microbiota itself, which regulate the production of desmosomes and tight junctions.⁴ The integrity of the intestinal barrier is important in defending against pathogens and also in decreasing circulatory proinflammatory lipopolysaccharides (LPS) that are implicated in a number of chronic inflammatory diseases.^{2,4,7,8}
- *Immune regulation.* The mucosal immune system must strike a fine balance between tolerance of beneficial microbes and reaction to potentially pathogenic microbes. The mucus layer changes its composition and thickness in response to microbial stimulation, and maturation of the extensive gut-associated lymphoid tissue (GALT), including Peyer’s patches, depends on microbial colonization. Furthermore, specific species drive the differentiation of immune cell subsets, particularly T cell responses, as well as the production of immune mediators such as IgA, which have a range of downstream effects.⁴
- *Metabolism and adiposity.* Facilitation of nutrient absorption is one of the core functions of the intestinal tract, but the microbiota affect not only local but also systemic metabolism. The exact details continue to be elucidated by research, but the complex interplay between the ingested food, bile acids, mucus layer, and microbiota modulates the release of hormones such as glucose-dependent insulinotropic polypeptide,

glucagon-like peptide, and lipoprotein lipase inhibitors. Short-chain fatty acids (SCFAs) produced by bacterial fermentation are thought to be key mediators in these processes.^{4,8}

- *Brain and behavior effects.* The gut possesses its own enteric nervous system (ENS), which is in constant communication with the central nervous system (CNS) through conduits such as the vagus nerve, and there is clear evidence of bidirectional communication in the physiological stress response. Animal models have begun to reveal how microbes directly produce or stimulate the production of signaling molecules, such as norepinephrine, GABA receptor ligands, and serotonin, even directly influencing behaviors, such as anxiety. This “microbiome–gut–brain neuroendocrine axis” is the subject of ongoing investigation.^{4,9,10}
- *Tissue and organ homeostasis.* Evidence from mouse models shows a role for molecular signaling from intestinal microbes in intestinal tissue repair as well as the potential contribution to osteoporosis through influence on bone remodeling. Some studies have associated certain microbial species with the development of colon cancer, possibly through inflammatory mechanisms.⁴

The term *dysbiosis* signifies “an imbalance in the structure and / or function of the microbiota that leads to disruption of host–microorganism homeostasis.”^{4,7} A familiar example of dysbiosis is *Clostridium difficile* infection, which most commonly occurs after repeated antibiotic or broad-spectrum antibiotic administration. *C. difficile* colitis represents an example of severe imbalance between commensal organism and the pathogenic *C. difficile*, creating levels of inflammation that can even precipitate severe sepsis.⁷

There is growing evidence for the potential role of dysbiosis in noncommunicable chronic diseases that comprise a substantial and growing portion of the global disease burden. A unifying hypothesis for many of these diseases is chronic inflammation, which gut microbes modulate at the local and systemic level, as previously noted. Studies in animal models and correlative studies in humans suggest a possible role for dysbiosis in inflammatory bowel disease,⁷ atopic and allergic diseases,⁷ obesity,^{7,8,11,12} type 2 diabetes and metabolic syndrome,^{3,7,8,11,13,14} atherosclerosis,^{15,16} and autoimmune diseases.^{17,18} It should be noted that studies in humans to date are largely correlative, and further research will be vital in determining causality.

How the Human Microbiota is Established and Altered

Every person's microbiota begins to be established even before birth. One of the largest influences on the establishment of the infant's microbiota appears to be whether or not the baby is delivered vaginally, with concomitant exposure to the mother's vaginal and gut flora.¹⁹ Perinatal factors found to be associated with differences in the diversity and specific composition of the infant gut microbiota include:²⁰

- Maternal exposures such as stress, antibiotic use, smoking
- Length of gestation (term vs. preterm)
- Mode of delivery (cesarean vs. vaginal)
- Nourishment (breastmilk vs. formula)
- Antibiotic administration
- Surrounding environment (e.g., sanitation, urban vs. rural, geographic factors)
- Caregiving structure (e.g., extended family involvement)
- Ethnicity and cultural practices

The composition and diversity of the intestinal microbiota of the breastfed infant is different from that of the formula-fed infant, including greater numbers of beneficial bacteria such as *Bifidobacterium* with breastfeeding.^{21,22} In particular, higher concentrations of potentially beneficial *Bifidobacteria* are found in the gut when babies are breast fed, as are fewer potential pathogens.²³ Evidence demonstrates an enteromammary pathway for bacterial transfer in addition to the substantial provision of prebiotics in breastmilk.²⁴⁻²⁶ The establishment of healthy gut microbiota is postulated as one of the possible mechanisms through which breastfeeding decreases the rates of numerous chronic diseases, ranging from allergic diseases to obesity²⁰ ([Fig. 105.1](#)).

Colonization of the gut with healthy flora can be listed as another benefit of breastfeeding.

A 2013 study of healthy volunteers examining the stability of the human microbiota over time found that in a given individual, an average of 60% of strains remained after 5 years.²⁷ There was a significant concordance between family members, supporting the idea that the early environment shapes the composition of the lifelong microbiota.²⁷ The

findings of this study, along with results from animal models, hint at a possible, although unproven, role for the early-life microbiota in genetic imprinting, or epigenetics, which has been found to be increasingly important in health and disease.⁴ At the same time, a 2012 study showed the most significant similarity between cohabiting mothers and fathers and their children, even if they were genetically unrelated.²⁸ Furthermore, the 2013 study found a significant change in the microbiota after a subset of four subjects consumed a monotonous low-calorie diet for a portion of the study protocol.²⁷ This corresponds with results of animal studies demonstrating later-life malleability of the microbiota and potential contributions to disease through dysbiosis.^{4,27}

What are Probiotics, Prebiotics, and Synbiotics? ([Table 105.1](#))

Since the 1980s, tremendous interest has developed regarding the ways the ecosystem of the gut may be altered, not only to decrease pathogen numbers but also to promote overall health by correcting dysbiosis and supporting homeostasis. Many different foods and supplements that contain microbes—namely, species of bacteria or yeasts—are now available over the counter. These products are widely known as *probiotics*, a hybrid word created by combining the Latin *pro-* (“for”) with the Greek adjective *-biotic* (“life”).²⁹ The first use of the word in the scientific literature may have been by Kollath in 1953 to describe supplements that help restore health in patients suffering a form of malnutrition resulting from eating too much highly refined food.²⁹ For all the commercial and scientific attention these supplements currently receive, only in the 1990s did the word *probiotic* enter both medical and general lexicons on a regular basis.

In 2002, the Food and Agriculture Organization of the United Nations clearly defined probiotics as “live microorganisms which, when administered in adequate amounts, confer health benefits upon the host.”³⁰ The International Scientific Association for Probiotics and Prebiotics released a consensus statement in 2014 that supported continued use of this definition and also created the following subcategories of probiotics:³¹

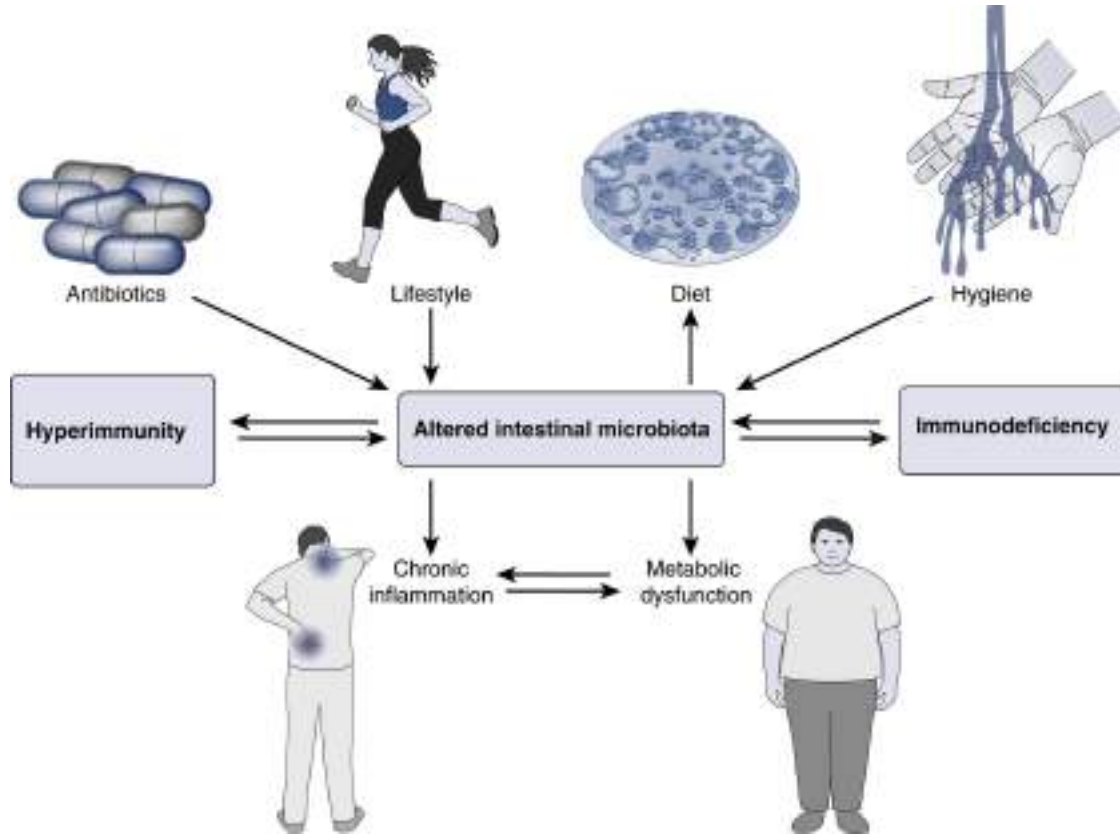

FIG. 105.1 Some of the factors that can shape the composition of the intestinal microbiota and effects of dysbiosis on chronic disease. Environmental factors such as lifestyle, diet, hygiene, and use of antibiotics can impact the gut microbiota. The immune system also impacts the gut microbiota, while a state of dysbiosis alters levels of immune mediators, inducing both chronic inflammation and metabolic dysfunction. (Adapted from Sommer F, Bäckhed F. The gut microbiota--masters of host development and physiology. *Nat Rev Microbiol* . 2013;11(4):227-238.)

TABLE 105.1

Basic Definitions for Probiotics, Prebiotics, and Synbiotics

Probiotics	Live microorganisms that confer a health benefit on the host when administered in adequate amounts
Prebiotics	Selectively fermented ingredients that result in specific changes in the composition and/or activity of the gastrointestinal microbiota thus conferring health benefit(s) upon host
Synbiotics	Products that contain both probiotics and prebiotics

Adapted from: Guarner F, Khan AG, Garisch J, et al. World Gastroenterology Organisation Global Guidelines: probiotics and prebiotics October 2011. *J Clin Gastroenterol*. 2012;46(6):468-481.

1. Probiotic in a health food or supplement without a health claim (member of a species or specific microbe generally considered safe and

supported by evidence that it is “generally beneficial”)

2. Probiotic in a health food or supplement with a specific health claim (defined strain with proof of delivery and viability at end of shelf life, with robust clinical evidence of efficacy)

3. Probiotic drug (similar to #2, but also meeting regulatory standards for drugs)

To fulfill these requirements, a useful probiotic should have certain properties: (1) survival to the target organ (e.g., be resistant to both gastric and bile acids), (2) interaction with host systems, (3) antipathogenic/ prohealth actions, (4) safety, and (5) amenability to manufacturing.³²

The most commonly available probiotics today include bacteria from the genus *Lactobacillus* (e.g., *Lactobacillus acidophilus*) and *Bifidobacterium* (e.g., *Bifidobacterium bifidum*) as well as the yeast *Saccharomyces boulardii* (to be distinguished from *Saccharomyces cerevisiae*, used in baking and brewing). Strains of *Streptococcus* and *Enterobacteriaceae* and other genera are less commonly included.

The most commonly used probiotic species belong to the genera *Lactobacillus* and *Bifidobacterium*. *S. boulardii*, a probiotic yeast, is also increasingly utilized.

Michel Cohendy, a colleague of Metchnikov working in the early 20th century, carried out further investigations with “the Bulgarian bacillus” (now known as *Lactobacillus delbrueckii* subsp. *bulgaricus*) that led to a product called “Le Ferment” sold by the Pasteur Institute of Paris. However, it was Leo Rettger et al. at Yale University who demonstrated that *Lactobacillus bulgaricus* did not survive gastric passage to the small intestine, calling into question which strains Cohendy may have actually been studying. In 1921, they proposed *L. acidophilus* as a better therapeutic candidate based on its ability to survive gastric passage and transform the intestinal flora with lactose and dextrin supplementation.⁶

Henry Tissier, also of the Pasteur Institute, first isolated *B. bifidum* from the feces of a breastfed infant in 1906. He suggested that this bacterium could be administered to infants with diarrhea to displace pathogenic bacteria.^{33,34}

During a cholera outbreak in Indochina in 1920, the French microbiologist Henri Boulard noticed that people drinking a special tea made from the outer skin of lychee and mangosteens seemed to be more

protected from the disease. He succeeded in isolating the responsible yeast and named it *S. boulardii*.³³

Escherichia coli Nissle 1917 (the last part of the name is the subspecies designation) is notable in that it is a nonlactic acid-producing bacterium (non-LAB). This specific strain was discovered by Alfred Nissle in the feces of World War I soldiers who were resistant to salmonellosis and shigellosis, and is more widely used in Europe than in the United States.³²

Prebiotics

Prebiotics are nutrients that selectively stimulate the growth and activity of one or more colonic microorganisms that act to promote the health and wellbeing of the host.³⁵ Prebiotics consist mostly of nonstarch polysaccharides and oligosaccharides poorly digested by human enzymes, which have traditionally been used to add fiber to foods without adding bulk.³⁴ However, since not all dietary carbohydrates may be true prebiotics, Gibson et al. have proposed a specific set of criteria, which are as follows:³⁶

1. Resistance to gastric acidity, hydrolysis by mammalian enzymes, and GI absorption
2. Fermentation by intestinal microflora
3. Selective stimulation of the growth and/or activity of intestinal bacteria associated with health and wellbeing

According to the criteria of Gibson et al., only a select few substances have accumulated sufficient research evidence to definitively declare their prebiotic activity. These include the following:

- Inulin-type fructans: inulin, oligofructose, fructooligosaccharides
- Galactooligosaccharides
- Lactulose
- Human milk oligosaccharides

Other molecules that are promising, but have less evidence to date, include isomaltooligosaccharides, lactosucrose, xylooligosaccharides, soya bean oligosaccharides, and glucooligosaccharides.^{34,36-38}

Inulin and oligofructose occur naturally in many food sources, including garlic, onions, leeks, asparagus, chicory, bananas, wheat, oats, soybeans, and artichokes.³⁵

Although not as extensive as the research on probiotics, there is a growing body of evidence supporting the ability of prebiotics to facilitate significant shifts in the gut ecosystem, for example, away from potentially pathogenic strains toward *Bifidobacterium*,³⁵ and to potentially offer benefit for conditions such as *C. difficile* infection,³⁹ traveler's diarrhea,⁴⁰ allergic disease,⁴¹ and irritable bowel syndrome.⁴² In addition, prebiotics can help increase the effective absorption of dietary calcium.^{43,44} Much of the ongoing basic research focuses on obesity and the metabolic syndrome. Prebiotics may also have a direct beneficial effect through the action of short-chain fatty acids (SCFAs) produced through fermentation, which modulate intestinal permeability and can decrease circulating inflammatory mediators such as bacterial lipopolysaccharides (LPS).⁴⁵

Synbiotics

Synbiotics are products that contain both prebiotic and probiotic ingredients. The theory is that consuming both at once, instead of just the probiotic alone, may enhance microbe survival and lead to greater positive effects on the beneficial microbes already established in the intestines. Although most studies have focused on probiotics, research on synbiotics is growing. An extensive review of the clinical evidence for synbiotics is beyond the scope of this chapter, but summaries can be found in published reviews.⁴⁶

How Do Probiotics Work? Potential Mechanisms

Probiotics are postulated to exert a beneficial effect through numerous mechanisms, many of which may be specific to individual species. Probiotic mechanisms of action relate directly to the basic physiology of the gut–microbial relationships. One central mechanism for probiotics is the restoration of a more normal balance of intestinal flora after some disruptive event that contributes to dysbiosis. Although few studies have included an evaluation of both the restoration of normal microbiota and disease treatment efficacy, a synthesis of the literature for eight common disease indications revealed that many of the probiotics shown to have a restorative effect on intestinal flora, particularly *S. boulardii* and *L. acidophilus*, were also shown to be effective in clinical randomized

controlled trials (RCTs).⁴⁷

Some of the key mechanisms of action of probiotics, as described in the literature, are summarized in [Table 105.2](#) and [Fig. 105.2](#).

What are the Clinical Indications for Prebiotics and Probiotics?

Potential benefits from probiotic therapy are strain specific. A list of many of the conditions that have been studied is shown in [Table 105.3](#).

TABLE 105.2

Summary of Biological Effects and Mechanisms of Action of Probiotics

Immunological effects	<ul style="list-style-type: none">• Reduce secretion of proinflammatory cytokines• Increase secretion of antiinflammatory cytokines• Activate local macrophages to increase antigen presentation to B lymphocytes and increase secretory IgA production• Induction of T regulatory lymphocytes• Promote hyporesponsiveness to food antigens
Antimicrobial effects	<ul style="list-style-type: none">• Compete for nutrients with pathogens• Compete for adhesion with pathogens• Inhibit translocation• Alter local environment (e.g., decrease pH) to inhibit pathogens• Produce bacteriocins to inhibit pathogens• Modify pathogen-derived toxins• Provide “decoy binding sites” for pathogens
Enhancement of mucosal barrier	<ul style="list-style-type: none">• Stimulate epithelial mucin production• Strengthen epithelial barrier, e.g., via tight junction function and alteration of surface proteins
Other effects	<ul style="list-style-type: none">• Scavenge superoxide radicals• Produce short-chain fatty acids (SCFAs), which have multiple downstream effects

Modified from references [32,34,46, 48](#).

FIG. 105.2 Schematic summary of some of the mechanisms of action of probiotics in the bowel. Probiotics can alter pathogenic bacterial adherence to the bowel wall through (1) a physical barrier, (2) an altered epithelial surface glycosylation pattern, and (3) increased mucin production. Other modes of action include (4) secretion of antimicrobial peptides and (5) modulation of the immune system and altered gene expression. *IFN*, interferon; *IL*, interleukin; *TNF*, tumor necrosis factor. (Redrawn from Borowiec AM, Fedorak RN. The role of probiotics in management of irritable bowel syndrome. *Curr Gastroenterol Rep* . 2007;9(5):393-400.)

TABLE 105.3

Potential Therapeutic Applications for Probiotics

Conditions for which there is moderate to strong level of evidence for benefit	<ul style="list-style-type: none"> Prevention of necrotizing enterocolitis in preterm infants^{43,71} Prevention of upper respiratory infections (URIs) in preschool-age children²¹⁻²⁶ Primary prevention of <i>Clostridium difficile</i>-associated diarrhea^{77,78} Treatment of acute viral infectious diarrhea⁸⁰ Prevention of traveler's diarrhea⁸¹ Prevention of antibiotic-associated diarrhea (children)⁸¹ Irritable bowel syndrome (IBS)^{82,83} <i>Helicobacter pylori</i> treatment enhancement^{84,85}
Conditions for which there is limited evidence for benefit	<ul style="list-style-type: none"> Bacterial vaginosis (oral and intravaginal)^{67,68} Prevention of URIs in adults⁵² Prevention of gestational diabetes^{65,70} Allergic rhinitis⁷¹ Prevention and treatment of atopic dermatitis (infants)⁷²⁻⁷⁶ Prevention of eczema (infants/children)⁷⁷ Infant growth (especially in human immunodeficiency-1 infection)^{78,79} Ulcerative colitis (induction or maintenance of remission)^{46,80-82} Prevention of ventilator-associated pneumonia^{83,84} Cystic fibrosis⁸⁵⁻⁸⁹
Table Continued	

Conditions for which there is conflicting, inconclusive, or insufficient evidence	<ul style="list-style-type: none"> Hepatic encephalopathy⁹⁰⁻⁹² Secondary prevention of <i>C. difficile</i>-associated diarrhea⁷⁴ Treatment of <i>C. difficile</i>-associated diarrhea (together with antibiotics)⁸⁹ Prevention of antibiotic-associated diarrhea (adults)^{54,93} Persistent diarrhea (children)⁷⁶ Functional constipation^{97,98} Prevention and treatment of atopic dermatitis^{73,74,99} Prevention of chemotherapy- and radiation-induced enteritis/diarrhea¹⁰⁰ Treatment of radiation-induced enteritis¹⁰⁰ Hypertension¹⁰¹ Hyperlipidemia^{102,103} Type 2 diabetes^{14,104} Crohn's disease (induction or maintenance of remission)^{46,80,105} Pouchitis^{95,99} Oral health (e.g., caries, periodontal disease)^{106,107} Infant colic¹⁰⁸⁻¹¹⁰ Prophylaxis of UTIs in infants with vesicoureteral reflux (VUR)¹¹¹ Lactose intolerance¹¹² Autism¹¹³ Nonalcoholic fatty liver disease¹¹⁴ Prevention of acute otitis media¹¹⁵ Acute pancreatitis^{116,117} Prevention of preterm labor¹¹⁸ Improving outcomes for malnourished individuals¹¹⁹ Weight loss¹²⁰ Rheumatoid arthritis^{121,122} Diverticular disease¹²³ Chronic fatigue syndrome¹²⁴
Conditions for which there is evidence suggesting lack of benefit	<ul style="list-style-type: none"> Prevention of food hypersensitivity (infants/children)⁴¹ Prevention of allergic rhinitis (infants/children)⁴¹ Prevention of asthma (infants/children)^{41,74}

The methodology for the categorization of clinical evidence was adapted from criteria utilized by the American Academy of Family Physicians (SORT criteria), Oxford Centre for Evidence-based Medicine (Levels of Evidence), and DynaMed (Levels of Evidence), including number, type, and quality of published clinical trials including potential for bias, statistical and clinical significance, and homogeneity of results. This review was based largely on published systematic reviews and meta-analyses.

Prescribing Probiotics: Which Ones,

What Dose, and How Should They be Taken?

One of the principal challenges in evaluating the clinical efficacy of probiotics is the range of species, dosages, preparations, and treatment duration used in the intervention arm of different clinical trials. These features of the research literature can inhibit meaningful meta-analysis, placing importance instead on the systematic review of multiple, well-conducted trials. Since, from a rigorous scientific standpoint, therapeutic benefits ascribed to probiotic therapy are strain and dose specific, recommending a specific treatment plan to patients can seem daunting. The ideal scenario would be to prescribe exactly the same product used in a given clinical trial; however, considering the very real limitations in cost and availability for many products, a reasonable approach would be to choose probiotic products that are merely as similar as possible. While probiotics are not subject to the same testing requirements as pharmaceuticals, there are some parallels in the use of generic drugs, which claim to have the same active ingredients but do not carry the same requirement for proof of therapeutic efficacy as their brand-name counterparts.¹²⁶

In general, dosages given for prebiotics and probiotics range widely, anywhere from 1 million to 20 billion colony-forming units (CFUs) or more, but recommendations tend toward 1–10 billion CFUs for infants and 10–20 billion CFUs for older children and adults. Probiotics must be administered consistently to ensure a sufficient population and effect on the intestinal microbiota over time.⁴⁷ Available data regarding the minimum duration of therapy for various clinical conditions are limited, however.

[Table 105.4](#) lists some of the indications for which probiotics have been shown to be most effective, with examples of the probiotic regimens used in clinical trials.

Recommendations for how to take probiotics can vary and are largely based on expert opinion, but clinical trial protocols can be informative. Some experts recommend taking probiotics on an empty stomach, but the protocols for many trials, particularly in children, often have had patients take probiotics with meals to increase treatment adherence. When taken during a course of antibiotic therapy, probiotics should be started as soon as possible; clinical trials typically have had patients take probiotics only during antibiotic therapy, but since research has

suggested that it may take several weeks for the intestinal flora to recover after antibiotic therapy, it is a reasonable recommendation to take probiotics for several days to weeks longer.¹⁴³

Treatment with probiotics is typically well tolerated. Probiotics come in capsules that can be swallowed whole, opened and mixed into drinks or soft foods, in sachets and powder form, and in fermented milk beverages. If effective, treatment can likely continue indefinitely, although it should be noted that long-term safety data are lacking, and precautions do exist (see later in this chapter).

TABLE 105.4

Examples of Probiotic Regimens for Clinical Indications That Have at Least Moderate Evidence of Benefit (see Clinical Evidence [Table 105.3](#))

Indication	Probiotic Species, Dose (Colony-Forming Units)
Prevention of necrotizing enterocolitis (NEC) in very low birth weight (VLBW)/preterm infants ^{50,51}	<i>Lactobacillus acidophilus</i> + <i>Bifidobacterium bifidum</i> $0.056\text{--}6 \times 10^7$ to 0^9 in one or two divided doses per day ⁵¹
Irritable bowel syndrome (IBS) ^{62,63}	<i>Lactobacillus rhamnosus</i> GG, 3×10^9 twice daily for 8 wks ^{63,127} <i>Lactobacillus plantarum</i> , 10×10^{10} daily for 4 wks ^{62,128} <i>B. bifidum</i> , 1×10^9 daily ^{62,129}
<i>Helicobacter pylori</i> treatment enhancement ⁶⁴⁻⁶⁶	<i>Saccharomyces boulardii</i> , 3×10^{10} three times daily for 4 wks (starting with triple therapy) ^{65,130} <i>Lactobacillus gasseri</i> , $\geq 10^9$ twice daily for 4 wks (3 wks before and 1 wk after triple therapy) ^{65,131} <i>L. acidophilus</i> , 5×10^6 + <i>Streptococcus faecalis</i> 2.5×10^6 + <i>Bacillus subtilis</i> , 5×10^3 daily (for 2 wks before or for 2 wks after triple therapy) ^{65,132} Kefir, 250 mL daily (<i>Lactobacillus</i> + <i>Bifidobacterium</i>) for 2 wks (concurrent with triple therapy) ^{65,133} <i>L. acidophilus</i> , 5×10^9 three times daily for 10 days (concurrent with and 3 days after triple therapy) ^{65,134}
Prevention of upper respiratory infections (URIs) in preschool-age children ⁵²⁻⁵⁶	<i>L. acidophilus</i> , 10^{10} + <i>Bifidobacterium lactis</i> , 10^{10} twice daily ⁵³ <i>L. rhamnosus</i> , GG 10^9 daily ⁵⁴ <i>Lactobacillus paracasei</i> , 10^8 + <i>Streptococcus thermophilus</i> 10^7 + <i>Lactobacillus bulgaricus</i> , 10^7 (DanActive) daily ⁵⁶
Primary prevention of <i>Clostridium difficile</i> -associated diarrhea ^{57,58}	<i>L. acidophilus</i> + <i>Lactobacillus casei</i> , 10^{11} (total) daily for duration of antibiotic treatment then for 5 additional days ^{57,58,135} <i>L. acidophilus</i> + <i>B. bifidum</i> 2×10^{10} (total) within 36 hours of antibiotics then for 20 days ^{57,136} <i>L. casei</i> 1.9×10^{10} + <i>L. bulgaricus</i> 1.9×10^{10} + <i>S. thermophilus</i> 1.8×10^9 (DanActive) twice daily for length of course of antibiotics and then for 1 wk ^{57,137}
Treatment of acute viral infectious diarrhea ⁵⁹	<i>L. rhamnosus</i> , GG 2×10^{10} twice daily (for 7 days or duration of symptoms) ^{59,138} <i>S. boulardii</i> , 4×10^{10} twice daily ^{59,139}
Prevention of traveler's diarrhea ⁶⁰	<i>S. boulardii</i> , 2×10^{10} daily ^{60,140} (for 5 days before leaving and then throughout trip)
Prevention of antibiotic-associated diarrhea (children) ⁶¹	<i>S. boulardii</i> , 250 mg twice daily for duration of antibiotic treatment ^{61,141} <i>L. rhamnosus</i> GG, 1×10^{10} daily for duration of antibiotic treatment ^{61,142}

Examples are drawn from the clinical trials that demonstrated more positive results with greater statistical significance.

Refrigeration is recommended for products that have been heat dried because they are more likely to die with temperature extremes. Lyophilized preparations (as noted on the bottle) do not need refrigeration and tend to have good long-term survival. Brand choice is important. One study of 14 commercial probiotics sold in the United States found that 93% were incorrectly labeled, nearly 36% did not list strains on the label at all, and nearly 60% had contaminants. Another study that tested 58 products from around the world found that only 38% contained the dose stated on the label and 29% did not contain strains listed on the label.^{144,145}

How may one select a reliable probiotic brand? Consider the following:

- Use products from companies that have sponsored probiotics research.
- Consider using www.consumerlab.com (subscription required). The laboratory tests different brands of supplements to verify whether each contains what is claimed on the label.
- Make certain that products have a Good Manufacturing Practice (GMP) seal.
- Ensure that the product specifies which species it contains and in what quantities.

Although many companies manufacture probiotic cocktails (mixtures of several different species), care should be taken to ensure that the specific species known to have clinical efficacy are present in sufficient quantity. For example, different *Bifidobacteria* tolerate different pH levels and vary in terms of fecal recovery rates after they have been consumed.¹⁴⁶

Examples of some commercially available probiotics that have been utilized in research trials are listed in [Table 105.5](#).

Do Natural Food Sources Provide Probiotics?

Natural food sources can provide probiotics, but not without a few caveats. European, African, and Asian consumers have long been exposed to probiotics found in fermented foods such as yogurt, buttermilk, sauerkraut, kefir, and kimchi. There is a growing body of basic science and clinical research on fermented foods made with LAB, such as kefir, and it appears likely that some of these foods may provide

health benefit via their probiotic potential.^{133,147-149} However, the organisms typically found within these foods are often not the same microbes for which significant supportive research data regarding health benefits exist. Similar to “prescription” probiotics used in research studies, the potential benefit of a probiotic food for a given clinical indication should be considered strain specific and based on available research, when possible.

TABLE 105.5
Examples of Some Commercially Available Probiotics That Have Been Utilized in Research Trials

Probiotic Strain(s)	Brand Name(s)	Producer
<i>Bifidobacterium infantis</i> 35624	Align	Procter & Gamble
<i>Bifidobacterium animalis</i> subsp. <i>lactis</i> DN-173010	Activia	Dannon
<i>Lactobacillus casei</i> DN-114001	Actimel, DanActive	Dannon
<i>Lactobacillus rhamnosus</i> GG (ATC 53013)	Culturelle	Amerifit
<i>Lactobacillus casei</i> subsp. <i>Shirota</i>	Yakult	Yakult
<i>Lactobacillus acidophilus</i> Lb	Lacteol	Aptalis
<i>Saccharomyces boulardii</i> CNCM I-745 (lyo)	Florastor	Biocodex
<i>L. acidophilus</i> CL 1285 + <i>L. casei</i> Lbc80r + <i>L. rhamnosus</i> CLR2	Bio K+	BioK+ Intl
<i>Bifidobacterium breve</i> , <i>Bifidobacterium longum</i> , <i>B. infantis</i> , <i>L. acidophilus</i> , <i>L. plantarum</i> , <i>L. casei</i> , <i>L. bulgaricus</i> , <i>Streptococcus thermophilus</i>	VSL#3	Sigma-Tau

Adapted from McFarland L V. From yaks to yogurt: the history, development, and current use of probiotics. *Clin Infect Dis.* 2015;60(suppl 2):S85-S90 and Garner F, Khan AG, Garisch J, et al. World gastroenterology organisation global guidelines: probiotics and prebiotics october 2011. *J Clin Gastroenterol.* 2012;46(6):468-481.

In evaluating the potential of a food to provide either specific or general health benefits from probiotic ingredients, consider the following:

- Is the product pasteurized? Yogurt may be “made with live cultures,” but pasteurization kills beneficial as well as harmful organisms. A probiotic dairy product must have bacteria added back after pasteurization.
- Is it clear which strains are present in a given food, and whether they are known to have probiotic potential or not?
- Do the “live cultures” in a specific product include species that will survive acidic pH? Yogurts frequently emphasize *L. delbrueckii* subspecies *bulgaricus* and *Streptococcus thermophilus*, two organisms that may not survive passage through gastric acid and bile to colonize the gut mucosa.

- Typically, frozen foods do not contain live cultures, so foods such as frozen yogurt likely do not constitute a good probiotic source. However, work is progressing in the development of probiotic ice creams, which may be able to deliver adequate amounts of *Lactobacillus casei* and *Lactobacillus rhamnosus*.¹⁵⁰

How Safe are Probiotics?

Across numerous systematic reviews, probiotics appear to be extremely safe.* A 2011 Agency for Healthcare Research and Quality (AHRQ) review of RCT data noted that the existing data do not show evidence of increased risk, but “the current literature is not well equipped to answer questions on the safety of probiotics in intervention studies with confidence.”¹⁵³ A commentary on this report suggested that, were the AHRQ to attempt to answer the question, “Are apples safe?” it would have come to the same conclusion and argued that in the absence of drug-like toxicology and safety data, the AHRQ results are encouraging.¹⁵⁵ Most safety concerns raised are linked to case reports only, and when compared with commonly used pharmaceuticals (including antibiotics), probiotics and prebiotics fare much better in terms of adverse effects. Among the most commonly reported adverse effects attributable to probiotics are flatulence and bloating.¹⁵⁶

Case reports of *Lactobacillus* bacteremia, with complications such as endocarditis and liver abscess, do exist.^{154,157,158} The mechanism in some cases is thought to be due to bacterial translocation; many case reports have involved immunocompromised people, such as cancer patients receiving chemotherapy or patients with diabetes.¹⁵⁸ The occurrence of bacteremia with *Lactobacillus* is thought to be extremely rare, and there is research to suggest that probiotics may have little effect on its incidence.¹⁵⁴ An observational study in Finland during the 1990s, when *L. rhamnosus* GG consumption increased widely across Finland, showed no increase in the incidence of *Lactobacillus*-positive blood cultures.¹⁵⁹ There have been rare infectious complications documented with *S. boulardii* in nonimmunocompromised patients who were nonetheless ill.^{160,161} Most case reports of fungemia with *S. boulardii* have been in patients with severe comorbidities and/or central venous catheters.^{33,153} Nonetheless, in studies focusing on patients with diagnoses such as human immunodeficiency virus (HIV) infection and cancer, as well as elderly adults and premature infants, overall, there has been a very low rate of

adverse effects attributable to the probiotic intervention.^{152,153}

Perhaps the most well-known instance of an adverse outcome occurring in a trial involving probiotics was the 2008 Dutch Probiotic Prophylaxis in Patients with Predicted Severe Acute Pancreatitis (PROPATRIA) trial in patients with severe acute pancreatitis, which found increased mortality in the intervention group, possibly be due to an increased risk of bowel ischemia.¹⁶² There has been considerable discussion, both by the original study authors as well as others, regarding the possible mechanisms for the higher mortality rate with probiotic treatment as well as issues with the trial design that could have contributed to this high rate.^{119,163,164} Following the PROPATRIA trial, the U.S. Food and Drug Administration (FDA) responded by making the restrictions on probiotics used in clinical trials more similar to those on pharmaceutical drugs.¹⁶⁴ Based on the currently available research showing a possible increased risk of mortality, patients with severe, acute pancreatitis should not be given probiotic-supplemented enteral nutrition.

Caution is advised regarding the use of probiotics in the following patient populations:

- Immunocompromised patients.^{152,154} The FDA specifically recommends caution for patients taking antirejection medication after stem cell or solid organ transplant, injectable immunosuppressive drugs for autoimmune disease, or corticosteroids (greater than 0.5 mg/kg of body weight prednisone or its equivalent) or those receiving chemotherapy or radiation treatment
- Patients with indwelling medical devices such as central venous catheters^{152,164}
- Severe acute pancreatitis^{152,164}
- Critically ill patients in general, such as those with organ failure^{152,164}
- Patients with valve abnormality or replacement, history of endocarditis¹⁵⁴
- Premature infants in certain categories.^{51,152} The weight of evidence showing benefit for prevention of necrotizing enterocolitis (NEC) has recently shifted the discussion toward whether it would be ethical *not* to administer probiotics to infants at high risk of NEC. However, citing a lack of evidence in specific, particularly vulnerable populations, caution is advised for infants who are extremely low birth weight (ELBW), clinically unstable, and/or have GI, cardiac, or genetic abnormalities.⁵¹
- Patients with previous bowel surgery and short-gut syndrome and

neonates (less than 6 months of age); caution is advised specific to strains that can produce D(-)-lactate.^{152,154}

- Patients with lactose hypersensitivity and yeast allergy. Some authorities recommend that *Lactobacillus* preparations be avoided in persons with hypersensitivity to lactose or milk, and yeasts should not be used in anyone with a yeast allergy. *Bifidobacteria* have no listed contraindications because they are generally considered nonpathogenic and nontoxicogenic.¹⁵⁶
- Patients who are pregnant. A 2009 review examining safety during pregnancy found no adverse effect on gestational age, growth, or cesarean section rate for *Lactobacillus* and *Bifidobacterium*, and there were no reports of fetal malformation. There was no evidence available for *Saccharomyces*. Due to the limited data availability, the investigators cautioned that further research is needed before definitive conclusions can be made regarding the safety of probiotics in pregnancy, and the FDA recommends caution in pregnant patients.^{165,154}
- The use of *Enterobacter* species is controversial, given the potential risk of pathogenicity compared with other species.

As a general rule, most good-quality probiotics are quite safe with low risk of side effects, but caution must be observed in patients who are immunocompromised, have indwelling medical equipment, or are critically ill and/or have organ failure.

Based on the available data showing a lack of observed adverse effects or negative impacts on growth, a 2011 review concluded that prebiotics and probiotics are safe to use in infant formula, although they are not recommended for routine supplementation and are indicated only for specific conditions.¹⁶⁶

Conclusion

Scientific research in metagenomics and bioinformatics continues to discover more ways in which our lives as human beings are intimately tied to the trillions of microbes that we each harbor. Together with a nutritious, antiinflammatory diet, probiotics are one potential way in which we may influence host–gut–microbiota interactions and support health and treat disease. Ongoing basic research on mechanisms of action

and high-quality clinical trials, along with consistent manufacturing and regulatory standards, will help clinicians and patients make best use of this promising field of therapy.

Detoxification

Luke Fortney, MD, FAAFP, Rian Podein, MD, and Michael Hernke, PhD

What is Detoxification and Why Do it?

Detoxification, as reviewed here, is the constellation of physiological and psychological processes through which the body identifies, neutralizes, and eliminates toxic substances, metabolic byproducts, habits, and patterns. Alcohol and other narcotic withdrawal therapies are serious medical conditions requiring close supervision and are not discussed here.

For an increasing number of people living in a more polluted and stressful world, body systems can become overburdened and strained by various contaminants that may lead to health problems.¹ In general, these toxins can be identified within the following general categories:²

- Antinutrients such as high-fructose corn syrup, trans fats, caffeine, alcohol, and processed foods

- Internal metabolic toxins such as nitrogen, carbon dioxide, bile, urea, free radicals, and stool
- Medications used improperly, inappropriately, or too often
- Heavy metals such as mercury, arsenic, lead, cadmium, tin, and aluminum
- Chemicals such as pesticides, herbicides, cleaning products, solvents, and glues
- Allergens such as food, mold, dust, pollen, and chemicals
- Infectious organisms such as bacteria, viruses, yeast, and parasites

Further, the following social, emotional, and spiritual challenges affect health and well-being:^{3,4}

- Stress, such as lack of personal time, too much work, excessive worry, too little rest, and financial strain
- Unhealthy mental states, such as addictions, overeating, and destructive mental patterns
- Ambient distractions, such as pervasive noises, smells, lights, and images
- Overstimulation from advertisements, radio, computers, television, smart phones, and pagers
- Lack of spiritual connection, a loss of meaning and purpose
- Isolation, the lack of social support and community

- Nature deprivation, being disconnected from natural environments⁵
- Negative emotions and persistent self-defeating thoughts, such as anger, fear, guilt, and hopelessness

Although too infrequently acknowledged, the body and mind already possess the capacity to handle these challenges. This process of maintaining biological and mental balance is called homeostasis. The major systems that work together synchronously to maintain health and balance include the following:

- Liver and gallbladder ([Figs. 106.1–106.3](#))
- Kidneys
- Gastrointestinal system
- Skin
- Lungs
- Lymphatic and circulatory systems
- Mind and brain

Symptoms that may reflect an overtaxed or dysfunctional detoxification system are often vague and nonspecific, but when seen in constellation, they suggest a problem with the body's ability to restore itself. When potentially serious medical conditions have been ruled out by a reasonable medical workup, symptoms that may be attributed to a detoxification problem with the body often

include the following:^{1,6,7}

- Fatigue with sleep disruption and brain-fog
- Mood disturbance, especially depression, anxiety, fear, and anger
- Muscle aches and joint pain
- Sinus congestion, dark circles under the eyes, and postnasal drip
- Headaches with neck and shoulder pain
- Bloating and flatulence
- Irritable bowel, foul-smelling stools, and dark urine
- Weight changes and loss of muscle tone
- Heartburn, recurrent colds, and persistent infections
- Infertility and low libido
- Premature aging and weakness
- Fluid retention and excess weight
- Rashes and canker sores
- Bad breath and adverse body odor

Although conclusive scientific data supporting detoxification therapies are largely lacking, the question for a patient suffering from any of these symptoms remains this: “What can I do to feel better?” Unfortunately, many gimmicky, expensive, unnecessary, and potentially harmful products and programs exist, and dubious practitioners may exaggerate their claims. In general, patients should

avoid dramatic, expensive, and extreme approaches in favor of reasonable, safe, and health-promoting lifestyle changes that empower patients and avoid dependency and unrealistic expectations. The five basic components of any detoxification program should include the following:

- Daily physical activity, such as yoga and walking (preferably in natural “outdoor” environments when possible)⁵
- Regular sweating, through physical activity, use of a sauna or steam room, or a hot-room yoga class
- Healthy nutrition, rich in organic fruits and vegetables and filtered water (see [Figs. 106.1–106.3](#))
- Self-reflection, such as any contemplative practice (e.g., meditation), journaling, and breathing-focused relaxation techniques

- Manual therapies, such as massage and

acupuncture

- Regular supportive social time with friends, family, and community⁸

Testing for Toxins

Although laboratory testing for various chemicals and toxins has the appeal of specifically identifying potential culprits to explain various symptoms in some cases, random screening testing remains largely unfounded with few exceptions, and evidence does not support regular or widespread use. The Centers for Disease Control and Prevention (CDC) conducts a National Biomonitoring Program that tests urine and serum samples from representative populations for industrial pollutants.⁹ Results continue to demonstrate the ubiquitous nature of industrial pollutants, or body burdens, across all demographic groups regardless of health status.¹⁰⁻¹³ Sadly, these findings indicate the widespread presence of societal chemicals and suggest that chemical body burden can be presumed for any presenting patient.¹⁴⁻¹⁹ Given the expense, variable quality, questionable validity, and unclear clinical significance of the majority of specific pollutant body burdens, routine testing is not recommended.^{13,20,21} Moreover, the health

significance of specific chemical exposures—at what levels, during which times, and at what frequency—is poorly understood.²² Indiscriminate and unfounded causal statements about exposure, harm, and treatment efficacy should be approached cautiously and skeptically. Therefore the focus should be on reducing the amount of toxicity in our living environments (see [Chapter 108](#)).

Chelation Therapy

Using safe and effective methods to prevent disease, treat symptoms, and achieve homeostasis is the primary goal of a good detoxification regimen. Appropriate, well-placed skepticism and concern exists over many detoxification therapies, including chelation for the removal of various heavy metals from the body.²³ For example, a common but unfounded use for chelation therapy is autism spectrum disorder (ASD). However, a Cochrane Review found no evidence that chelation therapy was effective. The review went on to caution against its use because the risks of adverse effects far outweigh any potential benefits.²⁴ The safety of widespread chelation therapy remains questionable. A study from the Emergency Department at Emory University in Atlanta,

Georgia, found common adverse effects associated with intravenous chelation that included diaphoresis, hypotension, tachycardia, leukopenia, thrombocytopenia, electrocardiographic abnormalities, and increased serum creatinine.²⁵ The clinical significance of chelation therapy is also uncertain. A Cochrane Review concluded that, at present, evidence of the effectiveness or ineffectiveness of chelation therapy in improving clinical outcomes of patients with atherosclerotic cardiovascular disease is insufficient.²⁶ However, the CDC did recommend that the calcium disodium edetate (CaNa₂EDTA) challenge test be considered for children who have blood lead levels of 1.21–2.12 mmol/L (25–44 mcg/dL) to determine whether chelation is indicated.²⁷ Another option could include use of a modified citrus pectin product (such as Pectasol), which may also have benefit in children whose test results reveal levels higher than those acceptable for lead and other heavy metals.²⁸⁻³² The dose in one study was 5 g three times daily for 4 weeks.

Unfortunately, pectin is a viscous fiber that is not absorbed into the bloodstream, and food sources (e.g., citrus, apples, legumes, and cabbage) do not

help chelate heavy metals outside of the gut. However, modified citrus pectin is absorbed through the gastrointestinal tract and appears to reduce this burden via renal clearance and urinary elimination.

In general, what can or should be done to address the ubiquitous nature of chemical body burden is uncertain. Caution and skepticism in the use of chelation therapy are therefore recommended. Further information regarding chelation therapy can be found online (see the [Key Web Resources](#) and [Chapter 107](#)).

Sauna Therapy

The body stores fat-soluble toxins such as pesticides in adipose tissue (also called lipophilic persistent organic pollutants, or POPs). One well-known example are the flame retardants polybrominated diphenyl ethers (PBDEs); some of the highest levels of these compounds throughout the world have been found in the breasts of lactating American women.³³ These compounds were banned in Europe due to their association with reproductive, neurodevelopmental, and thyroid toxicities.³³ Taking a relaxing sauna or steam bath is an effective

therapy to help the body detoxify.³⁴ The traditional sauna increases the air temperature to 160°F–200°F (approximately 70°C–90°C), with 25% humidity compared with a steam room, which is heated to 120°F–130°F at 100% humidity. The exogenous heat diverts blood to the skin, where sweating releases excess sodium, nitrogen, and toxins.³⁵⁻³⁷ In addition to its use in Scandinavia and many cultures around the world for hundreds of years, research since the 1960s has demonstrated the health-promoting effects of regular sauna use, including stress reduction, detoxification, lower blood pressure, and decreased pain.³⁸ In fact, increased frequency of sauna use is actually associated with a reduced risk of sudden cardiac death, fatal cardiovascular disease, and all-cause mortality.³⁹ Sauna cessation is advised for men attempting to conceive with their partners as heat-based therapies temporarily impair sperm count and motility.⁴⁰

Although sauna use is safe for most people of all ages, caution should be used in people who have undergone recent surgery; have unstable cardiovascular conditions such as recent myocardial infarction or cerebrovascular accident; or have multiple sclerosis, acute lung infections, or pregnancy complications.⁴¹ Even people with known heart disease can partake in sauna therapy.

The greatest risk for all uses is hypotension and syncope, particularly if alcohol is used during sauna use (which is not recommended).³⁹

Some evidence indicates that a lower-temperature infrared sauna may offer similar health benefits. Lower-temperature infrared saunas are typically heated to 120°F and are a good option for those who cannot tolerate the higher temperatures of a traditional sauna or steam room (e.g., individuals with multiple sclerosis). For further reading on the many health effects of sauna therapy, please refer to an excellent book entitled, *The Holistic Handbook of Sauna Therapy*, by Nenah Sylver.⁴²

Exercise

Reasonable and safe approaches to body burden detoxification include increasing awareness and adherence to healthy lifestyle behaviors such as regular physical activity, healthy nutrition, stress reduction, mind-body practices, spiritual connection, and avoidance of harmful behaviors such as smoking. Exercise has been shown to enhance adipose tissue circulation and therefore increases the release of stored toxins.⁴³

Cardiovascular exercise also supports detoxification through sweating. Starting with gentle, but regular,

forms of exercise, such as walking or bicycling for 30 minutes or more per day, is best. Ideally, a person should set a goal of vigorous movement of any kind for 60 minutes or more on a daily basis. Hot room yoga is particularly beneficial for detoxification, but any and all forms of movement are encouraged.

Nutrition

Nutrition is arguably the first and most important step in promoting health and supporting the body's efforts to remove harmful substances. What a person avoids eating is equally important as what is included in a healthy diet. By avoiding artificial additives and unhealthy fats, reducing excess calories (including less salt, saturated fats, and sugars), and adhering to a diverse whole food organic diet, a person will be better able to support the body's detoxification process, in large part, by avoiding overeating and ingestion of environmental pollutants⁴⁴⁻⁴⁶ (see [Chapter 88](#)).

While annually millions of people worldwide take part in various forms of detoxification, little is mentioned about the role of the gut microbial microbiota. One study evaluated the effects of several 3-day dietary detox regimens and found that

they do indeed change the microbial community, with some of them increasing a genus of bacteria thought to help prevent obesity and diabetes.⁴⁷ However, with return to their prior standard American diet, the gut microbial changes returned to their predetox state at approximately 10 days. These findings are consistent with those of a prior research study that showed that dietary changes can rapidly and reproducibly alter the human gut microbiota but that short-term detox programs may be most effective as a jumpstart to an ongoing dietary lifestyle modification that supports an optimal gut microbiome⁴⁸ as well as the many health benefits associated with probiotic supplementation for various medical conditions.⁴⁹

TABLE 106.1

The Environmental Working Group's List of the "Dirty Dozen" (Foods Highest in Pesticides Used) and the "Clean 15" (Foods Lowest in Pesticides Used)

Dirty Dozen (Better to Buy Organic)	Clean 15 (Less Important to Buy Organic)
1. Celery	1. Onions
2. Peaches	2. Avocado
3. Strawberries	3. Sweet corn
4. Apples	4. Pineapple
5. Blueberries	5. Mangoes
6. Nectarines	6. Sweet peas
7. Bell peppers	7. Asparagus
8. Spinach	8. Kiwi
9. Cherries	9. Cabbage
10. Kale and collard greens	10. Eggplant
11. Potatoes	11. Cantaloupe
12. Grapes (imported)	12. Watermelon
	13. Grapefruit
	14. Sweet potato
	15. Honeydew melon

Data from the Environmental Working Group:
<http://www.ewg.org>.

Safe and Environmentally Friendly Fish and Seafood Choices

Consuming fish and seafood a few times per week has many benefits;⁵⁰ however, concerns exist about contaminants that may affect our health and the environmental impact of fishing practices.

Resources that can be used to help guide safe fish and environmentally sustainable seafood choices are provided in the [Key Web Resources](#).

Pesticides in Produce

When deciding whether to invest in organic produce, it can be helpful to understand which conventional fruits and vegetables are highest and lowest in pesticide content. The Environmental Working Group publishes a helpful guide that lists the “Dirty Dozen” (foods highest in pesticides) and the “Clean 15” (foods lowest in pesticides), as shown in [Table 106.1](#) (see also the [Key Web Resources](#)).

Fasting

Occasional and sensible fasting may be helpful as well. Several variations of fasting exist, some involve drinking only water or juices or other nonsolid foods. During fasting, the main source of energy used by the body comes from hydrolyzing fatty acids from triglycerides stored in adipose tissue.⁵¹⁻⁵⁴ Because many toxins are sequestered in adipose tissue, fasting may be helpful in eliminating these toxins from the body. Initially, a person may

feel worse during a fast because of this mobilization process. Resting and drinking plenty of fluids are therefore helpful during a fast.

Manual Therapies

Manual therapies such as massage may be helpful to mobilize and eliminate toxins from the body by mobilizing the lymphatic system, among other possible benefits. Together with exercise and sauna therapy, massage can greatly enhance the ability of the lymphatic, cardiopulmonary, and hepatorenal circulatory systems to eliminate toxins. For example, massage has been shown to reduce excessive fluid volume by 65% in patients with lymphedema.^{55,56} Other forms of body work such as acupuncture may be helpful as well, in part, by increasing the relaxation response as well as treating qi stagnation and myofascial restrictions.

Mind-Body Connection

Finally, any detoxification review or program that ignores the mind-body connection is remiss. Stress is arguably the most significant toxin confronting patients on a daily and long-term basis. As measures of happiness decline in the United States

([Fig. 106.4](#)), various mind-body syndromes such as fibromyalgia, migraine, chronic fatigue, irritable bowel, multiple chemical sensitivity, and others continue to affect more people.^{57,58} Unfortunately, support and awareness are lacking for mind-body interventions that cultivate understanding, behavior changes, insight, and accountability for patients and health care workers.⁵⁹ Various chapters in this text offer helpful tools to support a healthy mind and emotions.

Detoxification Program

Patient Handout: Seven Day Detoxification Program

Many detoxification programs are available, but caution is advised before doing one. Very often symptoms are a signal from the body that something is out of balance and needs to be addressed. However, before adding any treatments, it is often the case that something should be removed as the first step to healing (eg smoking cessation for coughing). This program is about jump-starting a healthy lifestyle, which is far more important than any short-term detox. Most importantly, be flexible and adapt this program to your specific needs. The following plan (found online at www.fammed.wisc.edu/integrative/modules) offers a general outline for a self-guided detox program.

Getting Started

- This regimen is not intended to be an exhaustive resource, nor is it a test of will and endurance. It is designed to be a safe, gentle, useful, empowering, and accessible health guide that takes into account personal variability. **Adaptations** should be made as necessary. However, this process does require **planning and preparation**, so read through it and make preparations ahead of time.
- In addition to physiologic approaches, this plan equally emphasizes mind-body approaches that can aid the relaxation response and unravel negative and unconscious mental patterns that often result in pain and discomfort.
- The most important part of going through a detox program is to first ask **why** you are doing it. Being clear about your intentions helps avoid inflated expectations and disappointment. **Write down** the reason for going through a detox in your own words.
- The **five basic ingredients** of this detox regimen are self-reflection, exercise, sauna, nutrition, and manual therapy. The program offered here is designed to support and enhance your body's inherent ability to heal and be well. It is intended for most people with few exceptions.
- The program has a strong emphasis on using organic, sustainable, local, responsible, gentle, natural, whole, and balanced ingredients that honor the global and spiritual aspect of health.

Precautions and Expectations

- **Healing crises** can occur during a detox. Common temporary symptoms can include general malaise, fatigue, headache, lightheadedness, diarrhea, cramps, bloating, body-aches, mood-changes, and generalized weakness. These symptoms are often caused by a combination of factors including the mobilization of toxins, low blood sugar, low fluids, electrolyte imbalance, withdrawal from habitual substances (such as alcohol, caffeine, sugar, nicotine), and even changes in your daily routine.
 - Most often the best approach is to **continue** with the detox. However, you may need to stop or alter the detox if you experience ongoing or worsening symptoms.
 - **Dehydration** is unnecessary during a detox. Make sure that you drink a lot of fluids.
 - **Address your particular needs** as you go along, such as more frequent snacks, larger meals, increase protein and healthy fats, less physical work, more rest, and less striving in general.
 - Continued use of **prescription medications** is advised and should be monitored by a physician. If needed, use "over-the-counter" medications sparingly for relief of headaches or other symptoms.
 - **Communicate with your health care provider** about any concerns that arise during the detox as needed.
- In the end, you will likely find that you feel better, have more energy, are healthier, and may require less medication.

Below are three examples of different detoxification programs to consider. You can choose the one that best matches your needs and lifestyle. They progress from simple (#1) to more involved (#3).

Version #1 (short) for 5 or more days:

- * Eat only fruits and vegetables in any combination, amount, and preparation using healthy oils and spices as needed.
- * Drink plenty of filtered water, juice, tea, and broth.
- * Move and exercise the body in any variety, intensity, and duration everyday.
- * Keep a daily journal and practice any form of self-reflection everyday (eg meditation). Use the "Mind/Body Awareness Writing Exercises" workbook at www.fammed.wisc.edu/integrative/modules as a guide for journaling.

Version #2 (simplified) for 7 or more days (extend days 6 and 7 to a full 10 days if desired):

- * **Days 1 and 2:** Eliminate meat, eggs, dairy, wheat, alcohol, caffeine, chocolate, and refined sugars. Eat only organic vegan foods in any arrangement, preparation, and amount using cooking oils and seasonings.
- * **Day 3:** Further eliminate all grains, nuts, beans, and legumes. Eat only fruits and vegetables in any combination, amount, and preparation using oils and spices as needed.
- * **Day 4:** If possible avoid eating any solid food. Drink plenty of water, broth, juice, and tea. Rest during this day.
- * **Day 5:** (same as Day 3)
- * **Days 6 and 7 (and optional extended days 8-10):** (same as Days 1 and 2)
- * Throughout the detox, keep a daily journal and practice any form of self-reflection everyday (eg meditation). Use the "Mind/Body Awareness Writing Exercises" workbook at www.fammed.wisc.edu/integrative/modules as a guide for journaling.

Version #3 (advanced) with added supplements and probiotic bowel regimen:

Days 1 and 2: For the entire detox week, eliminate all meat (e.g., fish, beef, pork, lamb, poultry), refined sugars (white/brown sugar and especially high-fructose syrup), and especially artificial sweeteners such as saccharine, aspartame, and Splenda (natural sweeteners such as honey, maple syrup, molasses, Stevia, and erythritol, are okay to use in small amounts). Also avoid alcohol, tobacco, caffeine, cigarettes, chocolate, and recreational drugs for the entire week. It is advised to avoid dairy, wheat, and eggs during the detox week as well (instead try soy/almond/rice milk, soy cheese, soy yogurt, stand/steril spreads). Cooking should be guided by healthy recipes for soups, steaming, sautéing, and baking etc based on your preferences.

Keep a daily journal and practice any form of self-reflection everyday (eg meditation). Use the "Mind/Body Awareness Writing Exercises" workbook at www.fammed.wisc.edu/integrative/modules as a guide for journaling.

Encouraged foods for days 1 and 2 include fresh/frozen/dried vegetables, fruit, and mushrooms (maitake, shiitake, oyster, and/or enoki, etc).

Healthy grains are also recommended for days 1 and 2 (brown/wild rice, quinoa, buckwheat, oatmeal, millet etc), as well as seeds, nuts, legumes, and flaxseed.

Other suggestions for days 1 & 2 include the following:

- Cold-pressed organic extra virgin olive oil as guided by "detox appropriate" recipes.
- Spices and healthy seasonings as needed based on your preferences.
- Drink 8-10 glasses of filtered water, including "vitalizing beverage," "detox broth," smoothies, and diluted juices.
- Drink tea throughout the day, such as peppermint, decaf green, chamomile, licorice, ginger, rooibos, and digestive tea.
- For snacks eat mixed nuts, dried and fresh fruit, vegetables, and detox broth (see Table ***).
- Consider using the optional herbs and supplements at recommended dosages.
- Consider 15-30 minutes of sauna or steam-room therapy.
- Consider 30-60 minutes of light exercise such as walking, running, biking, skiing, jump rope, stretching, yoga, pilates.
- Practice any variety of self-reflection, including meditation and breathing exercises. Journaling is encouraged.

Day 3: For day 3 also eliminate grains, nuts, seeds, legumes, beans, and mushrooms.

Eat only fruit and vegetables fresh/frozen/dried in any combination and amount using detox appropriate recipes.

Just like days 1 & 2 the following items are suggested:

- Olive oil
- Spices and seasonings
- Filtered water, tea, vitalizing-beverage, detox broth, smoothies, and diluted juice
- Optional herbs and supplements at recommended dosages
- Sauna or steam-room heat therapy
- Light exercise
- Journaling, self-reflection/meditation

A new suggestion for today is to add a session of *massage therapy* to help mobilize toxins and stimulate the lymphatic circulation.

Day 4 (Modified Fasting): Eliminate all solid food (i.e., using only water, tea, juices, and broth with adaptations as needed). Pay attention to the needs of your body! Sensitive, ill, weak, and thin people should avoid or modify this day of fasting if needed, such as drinking more juice and broth as needed.

Other suggestions for this day include:

- Rest and relaxation—avoid exercise and sauna today. Do minimal or no work today.
- Stop all previous supplements for today.
- Drink plenty of fluids and keep up with bowel and bladder issues (tea with honey, vitalizing beverage, diluted fruit/vegetable juice, and detox broth).
- Use journaling, self-reflection, or meditation.

A new suggestion for today only is to add an optional bowel cleansing regimen:

- Take 500–1000 mg of activated charcoal capsules (or bentonite clay)—toxin binders for the gut—by mouth three times per day with water.
- Drink 300 mL of **magnesium citrate** (typically one bottle) in the morning as a laxative for bowel elimination.
- Use 1 saline **Probiotic Fleet Enema** in the afternoon or evening (See Table *** below for instructions).

Day 5 (Same as Day 3 except for added Energy Work session): For day 5, add back fruit and vegetables in any combination, preparation, and amount using detox appropriate recipes. Again, encouraged foods include fresh/frozen/dried vegetables and fruit (but no mushrooms, grains, seeds, beans, legumes, or nuts for this day). Just like day 3, the following items are suggested:

- Olive oil
- Spices and seasonings
- Filtered water, tea, vitalizing-beverage, detox broth, smoothies, and diluted juice
- Optional herbs and supplements re-started at recommended dosages
- Sauna or steam room therapy
- Light exercise
- Journaling, and self-reflection, or meditation

A new suggestion for today is to add a session of *Energy Work* such as acupuncture, Reiki, Healing Touch etc to help balance your newly cleansed system.

Days 6 and 7 (Same as Days 1 and 2, extend for days 8-10 if desired): In addition to fruits and vegetables, add back mushrooms, beans, legumes, seeds, nuts, and healthy grains (same as Days 1 & 2 above).

The following suggestions continue to be encouraged:

- Olive oil
- Spices and seasonings
- Filtered water, tea, vitalizing-beverage, detox broth, smoothies, and diluted juice
- Optional herbs and supplements at recommended dosages
- Sauna or steam room heat therapy
- Light exercise
- Journaling, self-reflection, or meditation

Detox Recipes and Supplements

Detox broth recipe:

Use fresh organic ingredients if possible. This is an excellent aid for fasting on Day 4. Ingredients can vary depending on availability.

- 1 large soup pot or kettle
- 1 strainer
- 1 large bowl or container for straining the soup
- 3–4 quarts of filtered water (fill pot after all ingredients are in)
- 1 large chopped onion (white or yellow)
- 3–5 small bunches of various chopped greens (kale, parsley, cilantro, chard, or dandelion)
- 2 stalks of sliced celery
- 1 cup of fresh or dried seaweed (nori, dulse, wakame, kelp, or kombu)
- 1/2 small-medium head of chopped cabbage (any variety)
- 2 peeled carrots
- 2 stalks of peeled burdock root
- 1 large peeled daikon root
- 1 cup of squash (any variety) chopped into cubes
- 3 chopped root vegetables (turnip, parsnip, or rutabaga)

2–3 cups fresh/dried mushrooms (maitake, shiitake, oyster, or enoki)

Add all ingredients to the large pot at once and bring to a low boil for 40–60 minutes (add water to fill). Strain the stock to remove the solid material (keep the liquid broth and dispose the left over solid parts). Salt to taste. Store in the original soup pot or a tightly sealed container for use all week. Keep the remaining broth cooled in the refrigerator, and reheat for use. Enjoy as a sipping broth throughout the detox week, especially during the day of fasting on day 4.

Smoothie recipe with optional supplements:

Use organic ingredients when possible. This makes about 1 liter which is divided into 4 servings, or 2 days worth, a glass in the AM and PM.

- About 2 tablespoons (20 mL) of organic cold pressed extra virgin olive oil
- 1/2 avocado

About 4 tablespoons (20 g) of **whey protein powder** (optional)

About 4 tablespoons (20 g) of **modified citrus pectin** (Pectasol, optional)

1/2 cup of orange juice (or 100% organic juice of choice)

1/2 cup of vanilla flavored soy milk, rice milk, or almond milk

About 4 tablespoons (40 g) of flaxseed (or psyllium)

8–10 ice cubes (or 1/2 cup of filtered water)

1 organic banana (sliced)

1 organic apple or pear with peel (sliced)

1/2 cup organic frozen or fresh blueberries (and/or seasonal berries of choice)

Place ingredients in a blender and grind up until smooth, adding more water as needed. Store remaining mix in the refrigerator. Be creative; this can be varied according to taste and availability of various fruit. Enjoy 1 tall glass twice a day with or between meals.

Digestive tea recipe:

1/2 teaspoon (t) of whole fennel seeds

1/2 t of whole coriander seeds

1/2 t of whole cumin seeds

Add seeds to about one quart boiling water. Let the seeds steep for about 10 minutes. Enjoy after meals throughout the detox week. Other recommended teas include ginger, licorice, peppermint, chamomile, rooibos, and decaf green teas.

Vitalizing beverage:

This is an excellent aid for fasting on day 4.

1–2 tablespoons fresh lemon and/or lime juice (about 1/2 crushed or squeezed lemon/lime)

1–2 tablespoons of real maple syrup

1/10 teaspoon cayenne pepper (a small pinch)

Purified, spring, or mineral water (carbonated water can also be used)

In a tall glass combine the juice, syrup, and cayenne. Fill the glass with water and stir well. Add crushed ice as desired. Enjoy throughout the detox, especially during fasting on day 4. Diluted fruit juice of any variety (1/2 real juice and 1/2 water) is also recommended.

Optional supplements list for advanced detox regimen:

- **Hydrolyzed whey protein powder 10 g powder** two times per day mixed in smoothies or juice. Whey protein contains bonded cysteine that increases glutathione, a potent antioxidant, immune modulator, and detoxifier.
- **Pectasol powder** (modified citrus pectin-MCP, **NOT pectin fiber**) 10 g powder two times per day mixed in smoothies. MCP is absorbed in the gut and chelates heavy metals in the body that flow to the kidneys and liver where they are eliminated. It may be easier to find online.
- **Milk thistle crude extract capsules** 500–1000 mg three times per day with meals. This is a safe and beneficial herb used for 7 days for liver support.
- **Dandelion root capsules**, 500–1000 mg three times per day with meals. This is a safe and beneficial herb for kidney and gallbladder support. It may increase urination.
- **Multivitamin tablet**, one daily with a meal.
- **Turmeric capsules**, 500–1000 mg three times per day with meals. This is a safe and beneficial herb used for 7 days for inflammation and gut support.
- **Probiotics**, one capsule three times per day. This is a safe and beneficial supplement used for 7–10 days to colonize the gut with healthy supportive bacteria.
- **Fish Oil omega-3 essential fatty acids**, 1000 mg total of EPA and DHA daily in liquid or capsule form. Vegetarian options include 2 tablespoons (T) daily of ground flaxseed or flax oil mixed in with smoothies. This supplement is used to reduce inflammation in the body.
- **Extra virgin, cold-pressed, organic olive oil**, 2 tablespoons in smoothies twice a day (and used in any amount in food for cooking). This healthy oil is rich in essential fatty acids.
- **DAY OF FASTING ONLY: Activated charcoal or bentonite clay capsules**, 500–1000 mg three times per day to bind gut toxins, but only taken during fasting. Always take 1–2 hours before or after anything else by mouth.

Probiotic fleet enema regimen (this should be done after a bowel movement)

What you'll need:

- * Over-the-counter saline Fleet Enema (4.5 oz, or 133 mL).
- * Unscrew the Fleet enema cap to access the saline solution.
- * Dissolve 2 probiotic capsules from 3 different probiotic brands/varieties and pour in the contents into the fleet enema solution (each of the 3 different probiotic brands should include a bacterial strain that is different from the other 2 brands for variety).
- * Laying on your LEFT side, insert the probiotic enema rectally, and squeeze the bottle firmly, and then remove.
- * Suggested body poses for use immediately after (rest in each pose for 20–30 seconds): LEFT side, BACK (bridge pose), RIGHT side, child-pose, hands-&-knees, then stand up.
- * Hold the enema as long as you can.

CHAPTER 107

Chelation Therapy

Jeanne A. Drisko, MD

Introduction

The word chelation has its roots in the late 19th and early 20th centuries with European and American chemical discoveries.^{1,2} The word itself is derived from the Greek *CHELE* that means pincher with reference to grabbing by the claws of a crab or lobster. As such, it was recognized that certain types of chemicals could effectively grab and bind metals and minerals, and thus the term chelation arose to describe the incorporation of a metal ion into a heterocyclic ring structure. The understanding of binding and removing of heavy metals in human systems led to therapeutic applications, and this occurred as early as World War II when chelation was introduced as an antidote for arsenic-based poisonous gas exposure.³⁻⁵ Chelation, as a treatment for heavy metal intoxication, has enjoyed robust basic science and clinical research through the years and is the mainstay in conventional toxicology as a resource for documented acute heavy metal poisoning.^{4,6-9} Integrative medicine practitioners have also embraced chelation therapy for acute and chronic heavy metal poisoning, although the practice is not always supported by conventional toxicologists.^{2,10,11} However, within rigorous guidelines and with accurate laboratory testing, chelation therapy can be an effective tool in the integrative medicine armamentarium for symptomatic patients with positive biological markers for heavy metal toxicity.

There are many types of chelators with wide-ranging chemical structures and differing affinities for metals and minerals that can be obtained from naturally occurring food sources as well as pharmaceutical compounds. Biological systems in both plants and animals are replete with metal-binding proteins such as

metallothioneins.¹² These potent chelators of heavy metals are central to the natural response of biological systems to toxic chemicals. Because natural chelators are found ubiquitously, foods have been suggested as ways to reduce absorption or reabsorption of heavy metals found in the gastrointestinal (GI) tract and to support natural detoxification pathways.

Examples of food-based natural chelators include dietary fibers, sulfur-containing foods such as garlic and onions, amino acids, and pectins from fruit.

Chelation as an applied clinical therapeutic intervention usually involves pharmaceutically derived compounds. Some representative types are highlighted later. It is important to understand that the term *chelation* is a general, nonspecific term that defines a chemical equilibrium reaction between a charged metal ion and complexing agent, characterized by the formation of bonds between the two. The metal is said to be chelated, and the complexing agent is the chelator, whether it is from a plant-derived source or an administered pharmaceutical agent.

History of Chelation Uses

Heavy Metal Chelation

Biologically based metals/minerals can be used to restore the normal healthy physiology of the body, and this beneficial effect can be accomplished by direct administration of essential metals, such as iron, in deficient states. In addition, toxic metals or minerals found in excess can be chelated and removed.⁴ Interested readers looking for more detailed chemical explanations regarding chelation therapy should review several of the following references.^{6,7}

Ethylenediaminetetraacetic acid (EDTA) was first used during the 1930s in the German textile industry as a chelating agent to remove calcium during dye processing. In the 1940s, Martin Rubin, PhD, along with chemist Frederick Bersworth discovered the biological effects of EDTA on calcium homeostasis, leading to its laboratory use as an anticoagulant.¹³ Rubin subsequently gained approval from the Food and Drug Administration (FDA) for EDTA use in humans with lead poisoning (CaEDTA) and hypercalcemia (disodium EDTA). Norman E. Clarke, Sr. and Albert Boyle separately published case reports that

showed improvement in cardiovascular status in patients who received disodium EDTA for lead poisoning.^{14,2} Conventional toxicologists continued to administer and study EDTA for its FDA-approved uses of lead toxicity and hypercalcemia. It was during this time that the use of EDTA took divergent paths.

2,3-Dimercaptosuccinic acid (DMSA) was developed in the 1960s from an older chelator, British antilewisite or BAL, that had fallen out of favor because of its highly toxic profile.^{4,15} Applied clinically in 1981, DMSA was proposed for use in cases of arsenic poisoning.^{16,17} Throughout the 1980s and beyond, the toxicology and basic science literature reported DMSA to be effective in treating a broader range of toxic heavy metals such as lead, arsenic, and mercury.^{3,17,18} In the 1980s, Aposhian suggested that oral chelation could replace intravenous (IV) chelation in the future.^{3,15} Continued ongoing use of DMSA to the present confirms its proposed place as an effective oral chelator.

In 1972, Russian researchers published the first reports of a dithiol compound, 2,3-dimercaptopropane-1-sulfonate (DMPS), suggesting benefit in improving clinical outcomes in atherosclerotic vascular disease.^{4,17,19} With follow-up reports confirming these benefits, DMPS was also found to be beneficial for treatment of hypertension and age-related cognitive decline. Soon, it was discovered that DMPS was found to be particularly efficient at chelating mercury, and this was related to its sulfhydryl chemistry. Its chelating ability was postulated to be the mechanism of improvement in chronic disorders. DMPS is parenterally and orally administered and has enjoyed wide use; however, at this writing, it is not approved for any use in the United States by the FDA.²⁰

DMPS is considered to be an experimental drug, and although not approved by the FDA as a drug on formulary, it is allowed as a bulk item to be compounded by compounding pharmacists.

Over ensuing decades, studies continued using DMSA and DMPS with ongoing encouraging outcomes in patients with proven heavy metal toxicity. In 1994, a pharmacokinetic study in patients with lead toxicity showed that DMSA appeared to enter into unhealthy red blood cells at greater rates than that into healthy red blood cells.²¹ In 1996, a DMPS pharmacokinetic study found that heavy metals were not redistributed to the brain in an animal model.⁶ The numbers of research studies continue to show the utility and safety of oral DMSA and DMPS chelation for

removal of heavy metals.^{4,18-20,22}

It was during the decade of the 1960s that other types of injectable and oral chelators began to be studied and used for mineral and metal overload. Notably, deferoxamine (DFO) was reported in 1964 to be effective in chelation of iron overload.²³⁻²⁵ In the following decades after its introduction, DFO gained further credence as an oral chelator of iron and was demonstrated to have significant improvements in cardiovascular function when there was biopsy-proven cardiac iron.²⁴ Iron chelation remains well accepted.

Cardiovascular Disease

Chelation as a therapy for cardiovascular disease began garnering attention in the 1950s with early anecdotal medical reports of patients, while receiving IV EDTA therapy for lead toxicity, demonstrated reversal of calcified atherosclerotic plaques and reduction in complaints of angina.¹⁴ Endrate, manufactured by Abbott, was the trade name assigned to one form of EDTA with variations of its chemical structure attributed to other trade names. It is this type of intravenously administered chelator that has become synonymous with the practice of chelation therapy for cardiovascular disease and that draws the heat and light of scrutiny. The literature of that time is replete with numerous articles that include case reports, small clinical trials, mechanistic studies, observational studies, and anecdotal reports of benefit when used in patients with atherosclerotic vascular disease.^{2,26,27} However, EDTA chelation for atherosclerotic vascular disease was dealt a blow in 1963 when data published from a study of 10 male patients were combined with another trial of 81 patients.²⁸ The authors recommended that EDTA chelation therapy be discontinued for atherosclerotic vascular disease because of disappointing results. Of note, across the 2 years of the study, the authors infused EDTA chelation therapy at a dose of 3 grams across 2.5–3 hours in 2000 consecutive infusions without a reported untoward adverse effect. It is not in the best interest of this review to debate the merits or problems with the referenced report of Meltzer et al., but it should be sufficient to say that as a result of the publication, the practice of EDTA chelation as a therapy for atherosclerotic vascular disease was driven underground and continued to be practiced only by alternative medicine physicians. During the intervening years to the present years, rigorous conventional research continued supporting the use of IV EDTA for acute lead toxicity in children and adults.^{3,4,22,29-31,32,33}

In 2002, the Cochrane Collaboration published a review of chelation therapy for atherosclerotic vascular disease.²⁶ At that writing, the report concluded that there were no trials on the effectiveness of chelation therapy for coronary or cerebrovascular disease. The majority of trials had been focused on peripheral vascular disease, specifically investigating EDTA chelation as a treatment for intermittent claudication. The report encouraged randomized trials to be conducted in coronary and cerebrovascular disease to determine if there was an effect. Indeed, a follow-up randomized trial was conducted in 84 participants with known ischemic heart disease and angina, and the trial concluded that there was no evidence to support a beneficial effect of EDTA chelation therapy in this cohort.³⁴ But, the trial was acknowledged to be underpowered, and the placebo infusions contained IV vitamin C that could not be excluded from having a beneficial effect.³⁵

The Trial to Assess Chelation Therapy

In 2002, the National Center for Complementary and Alternative Medicine at the National Institutes of Health in partnership with the National Heart, Lung, and Blood Institute funded the largest randomized controlled trial, the Trial to Assess Chelation Therapy (TACT).³⁶ TACT was the largest multicenter study that assessed EDTA chelation in a randomized placebo-controlled fashion and enrolled 1708 participants with a history of prior myocardial infarction to either the arm to receive 40 infusions of an EDTA chelation solution or the arm receiving a placebo solution^{36,37} (Fig. 107.1). It is beyond the scope of this review to discuss the use of low-dose versus high-dose oral multivitamin regimens in the TACT trial.³⁸ Lamas et al. reported at the conclusion of TACT that the IV chelation regimen with disodium EDTA, compared with placebo, reduced the risk for adverse cardiovascular outcomes, many of which were revascularization procedures. The TACT trial did show a statistically significant effect in decreasing all-cause mortality in the treatment arm in this cohort.³⁷ A follow-up paper on TACT findings showed a highly significant benefit of EDTA chelation therapy in type 2 diabetic patients.³⁹ It is important to highlight the fact that the EDTA-based infusion regimen included not only disodium EDTA but also magnesium, procaine hydrochloride, heparin, 7 g of injectable vitamin C, potassium chloride, sodium bicarbonate, pantothenic acid, thiamine, and pyridoxine, all delivered in sterile water.^{36,37} The TACT trial was not

designed to tease out the effect of each of these components or their contribution to the outcome, nor was it designed to determine a plausible mechanism of action. It was designed, however, to mimic the real-world administration of EDTA chelation therapy as practiced by integrative medicine practitioners. Further trials will be needed to answer these questions and to replicate the TACT findings. As the TACT investigators cautioned, the findings were not sufficient to support the routine use of chelation therapy for the treatment of patients who have had a myocardial infarction.³⁷ The history of EDTA chelation therapy for cardiovascular disease is certainly at a crossroads and not at a dead end.

FIG. 107.1 Incidence of cardiovascular events in those with a prior myocardial infarction treated with placebo versus ethylenediaminetetraacetic acid (EDTA) chelation with a 60-month follow-up. (Adapted and modified from Lamas GA, Goertz C, Boineau R, et al. Effect of disodium EDTA chelation regimen on cardiovascular events in patients with previous myocardial infarction: the TACT randomized trial. *JAMA* 2013;309:1241–1250.)

Clinical Use of Chelation Therapy

Background

Biologically based metals and minerals serve as central components of normal healthy physiology, but when in excess or deficient, serious adverse manifestations may result. In contrast, heavy metals such as mercury, lead, arsenic, and cadmium are found ubiquitously yet have no beneficial role in human biological systems.⁴⁰ Recently, gadolinium exposure has been brought into question as a source of heavy metal toxicity that may occur with routine medical imaging.⁴¹ The effects of acute as well as long-term exposure to heavy metals are well known to contribute to human chronic disease burden.^{4,31,40,42-49} For these reasons, chelation of heavy metals is well supported by the scientific literature.*

Heavy metal intoxication induces reactive oxygen species and subsequent depletion of antioxidant cell defenses.^{4,43,50,55,56} The generation of reactive oxygen species from heavy metal exposure in biological systems includes such things as superoxide, singlet oxygen, peroxynitrite, hydroxyl radical, and others. The generation of reactive oxygen species and the subsequent cascade of oxidative damage in biological systems initiate reactions resulting in lipid peroxidation, protein oxidation, and damage to DNA and RNA.⁵ Oxidative stress can be partially implicated as a mechanism of metal toxicity, and a resultant strategy to increase the antioxidant capacity of affected tissues could enhance its long-term effective treatment. As a point, in fact, acute metal intoxication in experimental systems has been shown to increase antioxidant defense enzymes like superoxide dismutase, catalase, glutathione peroxidase, and others.⁴ With the depletion of critical antioxidants such as glutathione and resultant oxidative stress with time and chronic exposure, there is mitochondrial dysfunction, DNA damage, and mutagenesis. This has been shown to lead to abnormal signal transcription, apoptosis, and cell proliferation that have potential for carcinogenesis^{57,58} Treatment with supplementation of antioxidant nutraceuticals to augment the cells' antioxidant defenses could reduce the toxic metal interaction with the biological system.⁴ Although this appears to be an attractive idea, the usefulness of antioxidants in conjunction with chelation therapy has not been extensively investigated.

In addition to oxidative damage, several mechanisms have been proposed to explain how heavy metals induce toxicity, yet none of these mechanisms has been explicitly defined. Besides the well-described increased oxidative stress, heavy metals are known to alter multiple cellular pathways such as inhibition of DNA repair, alterations in DNA

methylation, decreased immune response, and eventual genotoxicity and carcinogenicity.⁵⁷ As a carcinogen, there has been increasing evidence that heavy metal exposure promotes carcinogenicity through epigenetic binding of the DNA rather than classic mutations.⁵⁰ Although these mechanisms are in the beginning stages of exploration, what it is known is the final alterations result in nervous system dysfunction, immune dysregulation, organ system damage, mitochondrial dysfunction, cardiovascular disease, and endocrine disruption.¹⁴

Toxicity from metal overload or heavy metals can be treated with chelation therapy. Chelation therapy complexes the metal and allows removal of the excess or toxic metal from the system and aids in reducing chronic effects. Although there are a variety of metal chelators approved by the FDA for metal chelation, the identification of the ideal chelator has not been realized. Most of the current chelators have the disadvantage of adverse effects, nonspecific binding, and/or administration difficulties. Currently, with the amount of heavy metal exposure increasing throughout the world, it is imperative to develop better tolerated and more effective chelation compounds and determine if combination therapies of various chelation agents along with antioxidants, vitamins, and minerals might augment successful outcomes. Better outcomes may be identified and advanced strategies could be developed and tested through large clinical trials.

Chelators mobilize heavy metals from stores that may be bound in soft tissue or bone, but mobilization does not guarantee excretion and elimination.¹⁹ If the chelation approach is aggressive and reaches beyond what the patient is able to eliminate, then redistribution may occur back into soft tissues and bone with ongoing toxic effects. If the patient is not adequately prepared with good nutrition, a baseline assessment of micronutrients, and repletion of deficiencies prior to chelation, then redistribution may occur.

It is also helpful to evaluate detoxification pathways by genetic screening to determine if there are polymorphisms in key pathways that need support, such as glutathione and methylation. Assuring a healthy terrain prior to chelation avoids health consequences. Approaching chelation of the patient gently and slowly to assess for reactions is wise. Follow-up frequent assessment of critical micronutrients, such as calcium, magnesium, selenium, and zinc, is essential to support what

might be lost during the chelation process.^{3,4,17} Conservative approaches are rarely wrong. Finally, if there are GI tract abnormalities that result in malabsorption, then oral chelators may be poorly absorbed, and as a result, less available systemically.^{10,19,59} If there is an emergent need for chelation prior to GI healing, then it may be necessary to bypass the intestine in favor of using IV chelators.

Treatment of Heavy Metal Intoxication

Testing for Heavy Metal Intoxication

Blood and urine tests are routinely performed by a classically trained toxicologist to search for acute exposures to heavy metals.^{1,9,60} This type of testing is valuable for documenting current acute poisoning as seen in industrial exposures, but it is of limited value in assessing the total body burden from chronic exposures. Blood, urine, and hair analyses for heavy metals are poor surrogates for heavy metal body burden from chronic exposures.^{10,19,59} Conventional labs that offer testing for heavy metals provide reference ranges for each based on internal standards from their own clientele and are constantly updated with time. Until recently, these labs had no national data points to utilize when setting internal reference ranges. The Centers for Disease Control (CDC) has accumulated a significant database analyzing United States residents and determining the average burden of toxic compounds. These reports are available online (<http://www.cdc.gov/exposurereport/>). It is from the wealth of these data that more accurate ranges for blood and urine levels are available to evaluate heavy metal burden from acute exposures. Of interest, the findings in the CDC report are from individuals who provided random samples throughout the day without having taken a heavy metal–mobilizing agent or chelator. The reported values are a reflection of the heavy metals present in the blood or urine, which are related to current dietary or environmental exposures and not chronic body stores. Because of the collection method, only a small portion of these ranges are reflective of chronic exposure, with heavy metal buildup bound in soft and/or hard tissues, and therefore are not available in the circulation. It is generally recommended that a nonchelator-challenged collection of urine or blood be obtained as a baseline assessment. This is to determine if there is an acute exposure that needs to be removed and addressed such as in the case of mercury where there is ongoing contaminated fish consumption. If one would directly undergo a

chelator-challenged urine collection without the baseline nonchallenged assessment, potential acute ongoing exposure might be overlooked while the patient is treated for chronic exposure with chelation therapy.^{10,19,59} It goes without stating that the clinician needs to take an accurate heavy metal exposure history from the patient prior to any type of testing.

It should be emphasized that no standards or reference ranges are currently in place to support a clinician in evaluating a chelation postprovoked urine heavy metal test. There are no available data to define reference ranges for postchelation challenge urine collection from any of the myriad of chelators used.

There are currently no accepted standards of use for a single chelating agent or proper dosage of any chelating agent to make sense of reference ranges. In addition, not all chelating agents bind all of the heavy metals with efficiency. For example, if a DMSA chelation challenge is given prior to urine collection to assess for mercury, cadmium will be removed at a much lower rate because it has reduced affinity for and is poorly mobilized by DMSA. If there is significant cadmium body burden, this may be poorly evaluated in this setting and improperly treated across the long course.⁶¹ While the postchallenge urine collection is standard among integrative medicine practitioners of chelation, using a prechelation challenge test would augment information that cannot be obtained otherwise. Restated, random samples collected where a chelating agent is not administered are excellent for showing current and acute exposures to heavy metals, whereas urine collection obtained after a chelating agent is given is a reflection of the chronic exposure and total body burden. Clinical information can assist in selecting the correct chelating agent to be administered not only for testing but also possibly for treatment ([Table 107.1](#)).

It is generally recommended that a nonchelator-challenged collection of urine or blood be obtained as a baseline assessment. This determines if there is an acute exposure that needs to be removed and addressed such as in the case of mercury where there is ongoing contaminated fish consumption. If one would go directly to a chelator-challenged urine collection without the baseline nonchallenged assessment, potential acute ongoing exposure might be overlooked while the

patient is treated for chronic exposure with chelation therapy.

TABLE 107.1
Review of Chelating Agents

Agent	Indications	Route of Administration	Precautions	Notes
EDTA	Lead, and to a much lesser extent, mercury and cadmium	Intravenous administration	Monoethylenic, calcium, iron, and copper levels during chelation; can be nephrotoxic if administered too frequently and rapidly; disodium EDTA is lethal if given by rapid IV push secondary to rapid loss of calcium; limited distribution in biological systems to intercellular space	Pharmaceutical preparation for IV administration; oral and transmucosal agents available OTC but with very limited absorption
DMSA	Lead, mercury, arsenic, antimony, cadmium, others	Oral administration	Limited distribution in biological systems to intercellular space; monitor zinc, copper, and sodium levels during chelation	Pharmaceutical preparation; least toxic of FDA-approved drugs for chelation; various heavy metals have different affinities with same binding moieties and others with less attraction
DMPS	Mercury	Intravenous, transmucosal, and oral administration	Not FDA approved	Is available by compounding; limited chelation of lead and arsenic
Deferasirox	Iron, and rarely used for aluminum	Subcutaneous, intravenous, and intravenous administration	Not FDA approved for aluminum toxicity	Pharmaceutical preparation
Deferiprone	Iron	Oral administration	Increased risk for death	Pharmaceutical preparation
Citric acid	Post-dated arsenic, lead, mercury, cadmium, and antimony	Oral administration	Slow and mild chelation process not suitable for acute severe toxicity; does not appear to reduce essential nutrients like zinc and calcium with time	Metamaterial; appears safe in children
Blue-green algal (spirulina and chlorella)	Post-dated arsenic, mercury, cadmium, aluminum, lead	Oral administration	May contain toxins and heavy metals from the way they are harvested; interacts with Coenzyme Q by naturally occurring vitamin K in its product	Metamaterial
Zinc	Post-dated lead, iron, and cadmium	Oral administration	May bind zinc and manganese; very limited human research	Metamaterial

DMPS, 2,3-dimercaptopropane-1-sulfonate; *DMSA*, 2,3-dimercaptosuccinic acid; *EDTA*, ethylenediaminetetraacetic acid; *FDA*, Food and Drug Administration; *OTC*, over-the-counter.

Pharmacological Approaches

DMPS

DMPS is given orally, intravenously, and transmucosally. DMPS, when administered orally, is approximately 39% absorbed from the GI tract.¹⁹ Pharmacokinetic studies have shown that solutions are stable, rapidly converted to the disulfide form, and excreted largely by the kidneys. It is mainly distributed in the extracellular space but may enter the cell by specific transport mechanisms to aid in chelation and removal of mercury.⁴ Currently, DMPS is not considered an appropriate chelator for lead toxicity and has only limited applicability in arsenic toxicity. But, it is reported to be very effective for elimination of mercury.^{3,4,20} DMPS has a long history of use in Russia and Germany and is sold as an over-the-counter oral agent because of its demonstrated safety.^{3,17} There are reports of minor adverse effects of GI discomfort, skin reactions, mild

neutropenia, and elevated liver enzymes.

DMSA

Oral administration of DMSA is possible because of its hydrophilic nature that results in absorption from the GI tract.^{4,17,19} It is worth noting that in patients with associated intestinal dysbiosis, DMSA may have limited gut absorption.¹⁹ Oral absorption is approximately 25% of the total dose, and most of the DMSA found circulating is protein-bound; 95% to albumin, and only a small percent is present as the free drug. DMSA is extensively metabolized in humans with approximately 25% excreted in the urine and the remainder excreted in the feces.¹⁷ It has proven to be the least toxic but has a significant drawback in that it lacks the ability to cross cellular membranes and is distributed in the extracellular fluids only.^{4,62} DMSA mobilizes lead from soft tissues without redistribution to the brain in contrast with EDTA, which has been demonstrated to do so.¹⁵ However, there may be initial mercury redistribution to the brain that appears to subside as therapy is continued.¹⁵ Because important minerals are also mobilized, bound, and excreted, blood levels of zinc, copper, and sodium should be monitored. This is compared with EDTA, where there is increased urinary excretion of zinc and copper, as well as iron and calcium. Although DMSA it is known to be a safe agent when used in correct clinical settings, there have been reports of GI upsets, skin reactions, mild neutropenia, and elevated liver enzymes.⁴ A rare side effect reported is mucocutaneous eruptions and toxic epidermal necrosis that resolves when DMSA is discontinued.¹⁹

EDTA

EDTA is poorly absorbed from the GI tract (<5%) and, as a consequence, should only be administered by a parenteral route.⁴ It is primarily distributed in extracellular fluids, which limit its capacity to chelate intracellular metals. EDTA is also known to redistribute lead to the brain and should not be used to assess for lead mobilization in children.⁴ EDTA can be obtained as disodium EDTA or calcium disodium EDTA with different applications of use. The FDA archived a report from 2013 entitled, "Questions and Answers on Edetate Disodium (marketed as Endrate and generic products)."⁶³ EDTA is used to refer to two similar but separate drugs with differing indications of use. The first drug is calcium

disodium EDTA (Versinate), and the second drug is disodium EDTA (Endrate). The confusion lies in the common name of EDTA for both drugs; however, there are two very separate indications of use for each. Calcium disodium EDTA is approved by the FDA for use in lead poisoning and has been the mainstay of treatment for childhood lead poisoning since the 1950s.⁴ The second drug, disodium EDTA, is approved for use in patients with rhythm disorders from drug intoxication such as digitalis where there is hypercalcemia. Calcium disodium EDTA, Versinate, will not deplete calcium if given rapidly, while disodium EDTA will remove calcium through renal excretion in a life-threatening fashion if administered rapidly. In fact, erroneous administration of a bolus infusion of disodium EDTA for lead poisoning, when calcium disodium EDTA was meant to be administered, resulted in the death of a child.⁶⁴ Between 1971 and 2007, there were 11 deaths associated with the use of EDTA infusions. Nine of these deaths were attributed to disodium EDTA specifically, while two of the deaths only refer to EDTA as the causative agent. In fact, in five of the deaths, there was confusion when ordering the drug that resulted in the adverse outcome. There have been no deaths reported from administering calcium disodium EDTA. Risks associated with IV EDTA chelation have been reported to be renal failure, arrhythmia, tetany, hypocalcemia, hypotension, and prolongation of bleeding time, among others.^{4,34}

Cardiovascular

The above being said, TACT was the largest randomized clinical trial evaluating disodium EDTA in 1708 patients postmyocardial infarction.^{36,37}

TACT found that disodium EDTA infusions, when given according to protocol and not administered as a rapid bolus, were very safe. For practitioners of EDTA chelation therapy, full assessment includes basic laboratory testing including analysis of renal function, mineral status, and close monitoring of vital signs. Safety concerns are real, and the administration of IV EDTA chelation for whatever reason should be done by a trained medical professional in an environment conducive to full assessment of potential problems and the ability to respond immediately to problems if they should occur.

Natural Products

Over-the-Counter Chelators

It is not uncommon to find EDTA capsules for oral administration advertised to the public on the Internet.⁶⁵ While it is well known that this is a powerful chelating agent when given intravenously, oral use of EDTA has not been validated. Pharmacokinetic studies of oral EDTA have not been undertaken. It is well documented that EDTA is only marginally absorbed from the GI tract.^{4,19} A case report of a single patient exposed to lead showed that there was a 36-fold mobilization following each IV EDTA chelation but only a three-fold increase in blood excretion with oral EDTA.⁵⁹ Certainly, further evaluation is warranted.

The FDA became aware of an increase in the number of oral chelation products offered for sale over the Internet, and these products claimed to treat and prevent disease by cleansing the body of heavy metals and toxic chemicals.⁶⁵ The majority of these products contained EDTA and DMSA. Although they were marketed as dietary supplements, they were claiming to treat and prevent disease, and as a result of the language, the FDA designated them as drugs. As such, these products need to be approved by the FDA to be legally marketed. According to the report, the concern for these available chelating products was first and foremost that they targeted vulnerable populations. The objectionable language in the claims was related to treating and preventing disease without specific clinical trial evidence for benefit from any of the products. Products containing EDTA have never been shown to provide any benefit for heavy metal chelation when administered orally or as a suppository. There was also reported a misleading reference to the CDC's recommendation for EDTA chelation therapy for lead poisoning, giving the false impression that the use of an oral EDTA product was approved and/or sanctioned by the CDC.⁶⁵ The FDA division of Health Fraud and Consumer Outreach Branch enforced action against several of the websites forcing removal of the products and their claims, although there continue to be a plethora of these types of websites. Caveat emptor.

Antioxidants and Sulfhydryl Compounds

Antioxidants with sulfhydryl chemistry could double as free radical scavengers as well as chelating agents, although clinical trial evidence is only just building.^{5,43,44,49,50,67} Examples include N-acetyl cysteine (NAC), taurine, alpha lipoic acid, melatonin, and other natural agents. As antioxidants, these products have the capacity to enhance cellular

antioxidant defenses by regenerating endogenous glutathione, vitamin C, and vitamin E. These important natural products have the potential to remove heavy metals from biological systems, quench free radicals, regenerate antioxidants, and excrete the heavy metals without redistribution in the biological system.^{5,68} In addition to their role as agents modifying metal toxicity, antioxidants could potentially act as complementary chelating agents or adjuvants that increase the efficacy of a known chelator. Combination therapies with chelators and antioxidants such as glutathione, NAC, lipoic acid, melatonin, and vitamin C, along with supportive therapies such as zinc, copper, vitamins, and sulfhydryl amino acids like methionine have been proposed as adjunctive therapies.⁵ The endogenous thiol-containing molecules, glutathione, cysteine, homocysteine, metallothionein, and albumin, all contain sulfur groups that readily bind heavy metals. The higher the thiol concentration is in the biological system, the more it is able to protect against accumulation of heavy metals. Although certainly a plausible mechanism of action could be proposed for the addition of these agents to chelation, no supportive clinical research has been undertaken. Of note, in an animal system exposed to mercury vapor then given a chelating agent with antioxidants or antioxidants alone, glutathione, alpha lipoic acid, and vitamin C administered without a chelating agent were insufficient for reducing mercury content in the brain or kidney.⁶⁹

N-Acetyl Cysteine

NAC has been reported to be a chelator of toxic metals as well as a precursor for glutathione synthesis.^{19,43} Pharmacokinetic studies show rapid absorption after oral administration, and because it is a component of glutathione, NAC actively forms glutathione during first-pass metabolism through the liver.⁷⁰ The sulfhydryl component of the structure is responsible for the metabolic activity. Of interest, NAC appears to have chelating ability in acute heavy metal poisoning and in fact has been shown to be more effective than EDTA or DMSA by increasing urinary excretion of lead and chromium.⁷¹ An animal study combining NAC with DMSA reduced arsenic-related oxidative stress.⁷² One review went so far as to state that NAC is an excellent choice as an antioxidant and could be safely combined with other drugs and chelators to improve outcomes ([Table 107.2](#)).⁵

Glutathione

Reduced glutathione is found in high concentrations in cellular systems and plays a major role in detoxification of various electrophilic compounds.⁵ Deficiency of glutathione puts the cell at risk for oxidative damage. Besides its antioxidant defense and free radical scavenging, glutathione regenerates important antioxidants such as vitamins C and E. Glutathione maintains the redox state of critical protein sulfhydryl groups that are necessary for DNA repair. Besides neutralization of free radicals, glutathione also is suggested to chelate transition metals, thereby reducing their toxic ability.⁵ Glutathione is known to be both a carrier of mercury as well as an antioxidant with specific roles in protecting the body from mercury toxicity. Glutathione targets and binds methylmercury, preventing it from binding to other cellular proteins, which results in organ damage. Glutathione also prevents mercury from entering the intracellular environment and becoming an intracellular toxin. It has been suggested that IV glutathione combined with EDTA chelation significantly increases cadmium excretion.^{5,73} It was also found that renal protection was augmented. However, this was conducted in a single patient, albeit in a controlled fashion. This suggests that glutathione could provide additional chelation in the proper setting, but needs verification in clinical trials.⁷³ Oral glutathione administration is not recommended unless it is delivered in a form that protects it from digestion such as liposomal. IV glutathione can bypass the GI tract and is an important physiological chelator as well as antioxidant.¹⁹ Both oral liposomal and IV glutathione have good safety profiles.^{74,75}

TABLE 107.2
Supplements to Support Chelation

Supplement	Dosing	Precautions	Mechanism of Action	Notes
N-acetyl-cysteine (NAC)	Dial with doses beginning at 200 mg and as high as 600 mg three times daily (will not correct initial dosing or recommendations for other metabolic)	Considered likely safe; hypothesized to reduce clotting; may potentiate the effects of nitroglycerin therapy	Important in the production of glutathione; as an antioxidant, can regenerate vitamins C and E; chelates through sulfhydryl chemistry	Not enough human trial data to suggest a significant chelating effect, although early evidence suggests an effect to lead and aluminum toxicity
Alpha-lipoic acid	Dial with doses beginning at 200 mg and up to 600 mg three times daily	May lower blood sugar in certain individuals; may lower thiamine stores; may interfere with thyroid medications; may reduce lead and mercury in human systems	As an antioxidant, can regenerate vitamins C and E; chelates through sulfhydryl chemistry; aids in regeneration of glutathione	Not enough human trial evidence to recommend as a chelator
Flavonoids	Dial dosing through food and supplementation as extracts of tea, berries, grapes, etc.	May negatively impact cytochrome P450 enzymes; high doses inhibit platelet aggregation; may bind selenium; may decrease absorption of vitamin C from the intestine	Antioxidant and anti-inflammatory properties; modulates signaling pathways; direct chelating properties through its chemical structure	Common components of the human diet and found ubiquitously in nature; insufficient human trial evidence for recommendation as a chelator
Taurine	Dial with doses beginning at 500 mg and up to 3000 mg/day in divided doses	Generally considered safe; may interact with lithium to reduce levels	Critical in bile production and therefore assists in hepatic clearance; important in phase II detoxification; may chelate through sulfhydryl chemistry; considered an antioxidant	Insufficient human clinical trial evidence as a chelating agent

Table Continued

Supplement	Dosing	Precautions	Mechanism of Action	Notes
Selenium	Oral with doses generally recommended at 200–400 mcg (optimal daily amount is around 55 mcg)	May interfere with glucose control in some diabetics; may be highly toxic if high doses above 400 mcg are taken for a prolonged period.	Important functions in aspartate/cysteine synthesis and sulfoxidation; important for glutathione function and antioxidant balance; changes metabolism of arsenic.	Evidence suggests a low to arsenic toxicity.
Glutathione	Oral dosing of 500 mg and up and reported to be safe; intravenous dosing beginning at 400 mg with some reports up to 12,000 mg in infusion without reported significant adverse events; (will run address labeled dosing and uses)	Oral dosing may be better absorbed in the liposomal form; best to begin with lower doses of intravenous glutathione and slowly increase dosing; no serious adverse events noted and is generally considered safe.	Important antioxidant; chelates through sulfhydryl chemistry.	Insufficient clinical trial evidence to recommend glutathione as a chelator, although evidence shows it carries mercury and reduces its toxicity; does not appear to become a prooxidant at high intravenous doses.

Glutathione is poorly absorbed orally. If prescribed orally, recommend a product that is liposomal, which protects it against digestion.

Flavonoids

Flavonoids or bioflavonoids are phytochemicals well known to be antioxidants and widely available as dietary supplements. These are found throughout nature as components of seeds, fruits, flowers, vegetables, and beverages. Flavonoids enjoy a reputation as regulators of physiological processes including inflammation, thrombosis, immune reaction, antitumor properties, and vasodilatation.⁷⁶ Because of their interesting ring structure, flavonoids may act to sequester heavy metals apart from their antioxidant function and seem to have a synergy between free radical scavenging and formation of metal complexes.^{77–79}

Taurine

Two sulfur-containing amino acids, taurine and methionine, have been proposed as adjuncts in removing heavy metals during chelation because of their sulfhydryl chemistry. They appear to have a role in decreasing oxidative stress.^{19,80–82} Taurine, when coadministered with DMSA, helped to further reduce the total body burden of arsenic and lead.¹⁹ Taurine is found ubiquitously throughout mammalian tissues and is known to act as a powerful antioxidant.^{80,81,83} Taurine is able to form unstable metal complexes with transition metals based on its electrophilic nature.⁵ Taurine is a remarkable thiol-containing amino acid and has been shown to maintain calcium homeostasis, bile acid conjugation, neuromodulation, stabilization of membranes, and has scavenging capabilities.^{5,80} Part of its ability to protect the cell membranes is related to regulating the enzyme phospholipid methyltransferase, which regulates the activity of phosphatidylethanolamine and phosphatidylcholine critical to cell membrane structure.⁸²

Alpha Lipoic Acid

Alpha lipoic acid is characterized as a particularly efficient antioxidant with the capacity to regenerate endogenous antioxidants such as glutathione, vitamin C, and vitamin E with potential therapeutic properties in the treatment of metal-induced oxidative stress.^{84–86} Because of its dual lipophilic and hydrophilic nature, it is readily absorbed by the gut and crosses cellular and blood–brain membranes. It has also been shown to decrease lipid peroxidation in the brain and peripheral nervous tissue when given orally in an animal model.⁸⁴ Alpha lipoic acid has been shown to increase both intra- and extracellular levels of glutathione in human systems. Increases in glutathione levels are felt to be related to lipoic acid's antioxidant capabilities.^{43,85} Another very important attribute is its metal-chelating activity.^{84,85} It is known to be readily absorbed into the intracellular environment and can form complexes with metals that were previously found to be bound to other sulfhydryl-containing proteins. Alpha lipoic acid crosses the blood–brain barrier where it readily binds with lead and mercury. It should be cautioned, however, that it may redistribute metals.¹⁹ Metal ions known to be chelated by alpha lipoic acid include copper, zinc, lead, mercury, and iron. Alpha lipoic acid has been administered both orally and by an IV route without reports of significant toxicity.⁵ It is a safe product and has been administered up to 1200 mg intravenously in humans without toxicity and orally in daily divided doses of 1800 mg with negligible reported adverse effects. However, studies have largely been conducted in animals and further human clinical trials need to be done.

Mineral Support

Concomitant administration of selenium, magnesium, zinc, and calcium with chelation therapy has an effect on blood biochemistry and oxidative stress. Selenium was the most effective in reducing arsenic-induced inhibition of blood delta-aminolevulinic acid dehydratase (ALAD) activity and liver oxidative stress.⁸⁷ Calcium and magnesium also showed favorable effects on hematological and other biochemical parameters. Because selenium was the most effective, it was recommended to be added to chelation therapy to achieve the best protective effects against arsenic poisoning in humans.⁸⁷ Selenium as an important essential element that should be evaluated in the face of heavy metal intoxication. It is capable of forming an insoluble compound with

mercury, which may be transported through biological membranes. It is important to remember that selenium depletion in the face of mercury exposure will also deplete selenoenzymes.¹⁹ Zinc and selenium have also been shown to exert protective effects against mercury toxicity, most likely mediated by induction of the metal binding proteins metallothionein and selenoprotein-P.⁸⁸ It is critical to follow mineral levels during chelation therapy as depletion may occur.

Modified Citrus Pectin

Modified citrus pectin (MCP) is an over-the-counter nutritional supplement derived from the inner peel white pulp of citrus fruit.⁸⁹⁻⁹¹ MCP has a complex polysaccharide structure, and as such, is soluble with the principal component being D-galacturonic acid. Unmodified pectin is nondigestible because the polysaccharides are cross-linked in long polymers. MCP is composed of citrus pectin that has been broken down into shorter chains, and this is accomplished by using enzyme and pH modifications. The shorter structure and lower molecular weight are required for the pectin to be absorbed out of the GI tract and into the bloodstream during digestion. It has been proposed that MCP is able to bind heavy metals and eliminate them without eliminating essential biological minerals.⁹¹ One postulated mechanism of action of heavy metal binding by MCP appears to be related to passive binding with decreased absorption of heavy metals in the GI tract. This appears to be through bile trapping of heavy metals in intrahepatic circulation with reduced reabsorption of the heavy metals in the gut. Another postulated mechanism of binding is that MCP is absorbed into the bloodstream with subsequent direct chelation of heavy metals and elimination of the metal-pectin complex in the urine.⁹¹ It should be cautioned that no human trials of significance including pharmacokinetic studies have been completed, although case reports are available and there does seem to be a promise of effect. In several uncontrolled human studies, MCP was shown to result in excretion of cadmium, mercury, arsenic, and lead.⁹¹ There is a need for a gentle, safe heavy metal chelating agent, especially for children in areas with endemic chronic heavy metal exposure. MCP appears to be a safe and effective chelating agent that has been shown to lower levels of heavy metals in children, although the trial was small and uncontrolled with questions of conflict of interest on the part of the investigators.^{90,92} MCP can be given safely to children in divided doses throughout the day for extended periods of time without apparent

adverse events.⁹⁰

Modified citrus pectin is a safe chelator that can be used in children with lead toxicity.

Algae

Blue-green algae, such as the *Spirulina* and *Chlorella* species, are unicellular organisms and commercially distributed as organic algae dietary supplements.^{19,93-95} These species have been proposed for use in chronic disorders including heavy metal toxicity.^{91,96-98} Unfortunately, robust controlled clinical trial evidence is lacking and human use is inferred from industrial applications in polluted water and toxic site cleanup. Some limited human trials show improved oxygen consumption and aerobic endurance when chlorella is used orally.⁹⁸ It is proposed that alginates passively bind to heavy metals, sequester them, and subsequently excrete these toxins via normal excretory processes. In areas of endemic arsenic poisoning with high incidences of resultant immunotoxicity and oxidative stress, blue-green algae have been proposed as a safe and cheap chelator.^{96,99} But, only animal studies of arsenic toxicity have been conducted demonstrating downregulation of immunotoxicity with improved oxygenation after arsenic exposure.¹⁰⁰ In cadmium-exposed rats, chlorella appeared to protect against cadmium-induced liver toxicity.⁹⁶ In addition, it was also reported that there were lesser hepatic concentrations of cadmium when chlorella was administered. An uncontrolled prospective study was conducted in 34 human subjects, 17 at high risk for heavy metal exposure and 17 healthy.⁹⁴ It appears as if there is preferential binding of heavy metals compared with essential minerals. A proposed mechanism of action for preferential binding of heavy metals appears to be related to the “egg box” structure of the molecule resulting in a high affinity of binding of heavy metals when compared with essential minerals.⁸⁹ It was reported that chlorella intake resulted in reductions in body fat percentage, serum total cholesterol, and fasting glucose levels. Gene analysis identified changes in signal transduction molecules, metabolic enzymes, receptors, transporters, and cytokines, particularly in fat metabolism and insulin signaling pathways.⁹⁴ However, it is cautioned that arsenic can be found in naturally occurring dietary supplements such as algae because of its

inherent chelating ability and the ubiquitous distribution of arsenic in the Earth's crust.^{101,102} It is also reported that there is an accumulation of other toxic byproducts such as microcystins in naturally derived algae supplements, and naturally occurring increased levels of vitamin K may result in a drug interaction with Coumadin. An interesting case report in the psychiatric literature describes an adult female with onset of psychosis with no predisposing factors after the ingestion of chlorella.¹⁰³ Withdrawal of the chlorella supplement resulted in disappearance of the psychotic symptoms, and when the patient resumed the supplement, the symptoms recurred. The psychiatrist caring for this patient cautioned against the use of the supplement because of unknown adulterants, toxic impurities, or from the effect of the algae itself. Because of the potential for toxicity or adverse events, algae species should not be recommended for regular consumption until further human research is conducted and safety assured.

Zeolites

Zeolites naturally occur and are composed of aluminum complexed with silicate-containing minerals. Most of the commonly found natural zeolites are formed by changes that occur in volcanic rocks when in contact with fresh- or seawater.¹⁰⁴ There is a three-dimensional structure with the aluminum ion occupying the center surrounded by four oxygen atoms, and the complex lattice has a negative charge. This allows the complex to bind with certain cations such as lead, cadmium, zinc, and manganese. The most common use of zeolites is industrial for removal of heavy metals during purification in water management.^{104,105} Zeolites are routinely used in water management systems and for animal feed purification. Animal studies have been conducted to evaluate the ability of zeolites to remove heavy metals from biological systems and have been shown to be effective. Although used in integrative health regimens for detoxification, no formal human clinical trials have been conducted using zeolites.^{58,105} Oral zeolite is commercially available as a dietary supplement. The author compared a pre- and postzeolite flush test with IV EDTA and DMPS.⁵⁸ In this single case report, the author noted that zeolite failed to enhance the excretion of lead, noting that it was ineffective in this particular patient.

Summary

The role of chelation therapy for heavy metal intoxication is well established and supported in the scientific literature. Classically trained toxicologists usually address the effects of acute metal toxicity and treat with chelation therapy when certain rigid testing parameters are followed. Assessment approaches used by integrative practitioners of chelation are less rigid, including the use of provoked urine evaluation, which is not approved of in classic toxicology. The use of FDA-approved chelators such as EDTA and DMSA are used by both groups. However, some practitioners promote off-label use of EDTA for cardiovascular disease and routinely use the non-FDA approved chelator DMPS. Although classically trained toxicologists and integrative practitioner chelationists have been at odds, there appears to be some meeting in the middle because of the recent results of the TACT trial that investigated EDTA for cardiovascular disease and the growing realization of worsening heavy metal exposures around the world and the need for safe, effective, and inexpensive chelators. Only further research will be able to address the unanswered questions.

Case Study

The patient is a 59-year-old male with long-standing metabolic syndrome with dyslipidemia, hypertension, truncal obesity, and borderline elevated glucose and having stent placement in coronary vessels 3 years prior. The patient also had a diagnosis of prostate cancer 2 years prior but is currently without evidence of disease. There was a history of long-standing irritable bowel syndrome with predominant constipation.

The patient visited the University of Kansas Medical Center, KU Integrative Medicine clinic to discover a better approach for his chronic disorders through diet and lifestyle interventions. Laboratory assessment revealed the need for micronutrient replacement based on results of laboratory testing, and he was referred to the KU Integrative Medicine clinic dietitian for the management of his poor-quality diet and food hypersensitivity.

In the course of the patient's workup, it was discovered that he had been a lifelong hunter and had been taught as a young man to reload his shotgun shells with pellets. As a result, he had significant long-term exposure to lead and antimony. Other toxic exposures elicited were

related to multiple amalgam fillings, many of which were placed in early adolescence and had not been replaced in the ensuing years in spite of fractures and deterioration. The patient had also been exposed to second-hand tobacco smoke in his childhood but did not smoke himself.

Heavy Metal Testing

An unprovoked urine collection was obtained for heavy metal analysis, which showed significantly elevated levels of lead, uranium, nickel, and cadmium. Antimony and mercury levels were elevated but were not outside the reference range. Subsequently, DMSA was administered, and a urine sample was collected 6 hours postchelator administration. This showed markedly elevated lead and mercury levels with elevated antimony, cadmium, nickel, and thallium levels. There was no evidence of uranium in the second sample postchelator.

Chelation Therapy

The patient was placed on a chelation schedule with DMSA, with frequent laboratory testing for minerals such as zinc that may be removed during chelation and ongoing periodic checks of excreted heavy metals. The patient was supplemented with a mineral complex to support any deficiencies that might occur while undergoing DMSA chelation. He also received micronutrients that he was found to be deficient in at the outset, and those were also followed by serial laboratory testing to ensure adequacy. In addition, it was imperative that he drank plenty of water to flush the excreted chelator-heavy metal complexes through the kidneys and to encourage daily bowel movements for elimination of heavy metal complexes via the bowel. Renal function remained normal.

Chelation Support

Other supportive nutritional supplements included green tea extract for bioflavonoids, oral liposomal glutathione, oral vitamin C, whole-foods diet with plenty of cruciferous vegetables, juicing, and cilantro/chlorella supplements. He was also encouraged to add forms of lymphatic drainage with rebounding on a mini trampoline, skin brushing, and infrared sauna.

Outcome

Over time, the very high lead and mercury levels began to clear with some increase in cadmium and antimony levels, related to the decreasing competition for binding by DMSA. The patient chose highly filtered water, and uranium did not reappear with time. DMSA chelation was terminated when the last challenged urine collection was found to have only negligible amounts of heavy metals. This occurred during a 6-month period.

With dietary changes and weight loss, micronutrient support, and chelation therapy, the metabolic syndrome cleared with normalization of blood pressure, dyslipidemia, and borderline elevated glucose level. His irritable bowel syndrome was no longer a problem. The patient's therapy was a multipronged approach that resulted in the overall improvements, but the chelation was important because of the well-known cardiovascular adverse effects from heavy metals that would result in ongoing untoward effects if not addressed.

Case Discussion

This case is instructive for several reasons. First of all, uranium was present in the initial unchallenged sample but not evident after DMSA was given. This tells us that there was an acute exposure of uranium, and this most likely occurred from a water source, as it can be fairly ubiquitous in drinking water. There are two explanations for why it was not present in the postchallenge urine. Either the patient was not exposed to the water source during the follow-up and hence no acute ongoing uranium exposure; or more likely, DMSA, because of its very strong affinity for lead and mercury and low affinity for uranium, preferentially bound the lead and mercury. With the very high levels of lead and mercury in the postchelation sample, the chelator was saturated with heavy metals and unlikely to bind the uranium because of the lower affinity. In any event, the patient was counseled about checking his water source for uranium. Another important point is the initial unchallenged urine collection chelates and excretes heavy metals that are only available from the bloodstream and not from body stores. This may occur when there is turnover of bone with a release of lead, or it may occur when there is breakdown of amalgam dental work with releases of mercury and tin into the circulation. Another consideration

is that heavy metals may come from acute exposure such as from food, tobacco use, hobbies, and /or work exposures. Careful patient questioning about diet and lifestyle habits is imperative.

Key Web Resources

American College for Advancement in Medicine (ACAM): This is the oldest physician membership organization for those who practice integrative/restorative medicine. The ACAM has been in the forefront of teaching chelation therapy for heavy metal toxicity.	http://www.acam.org/
American Academy of Environmental Medicine (AAEM): The AAEM is well known for their approach to patient care in the face of toxic environmental exposures, including heavy metal toxicity. They educate physicians about detoxification and chelation therapy.	https://www.aamonline.org
International College of Integrative Medicine (ICIM): The ICIM is a physician membership organization composed of clinicians who have been successful in obtaining heavy metal chelation effects cardiovascular disease.	http://www.icimall.com/

CHAPTER 108

Integrative Strategies for Planetary Health

Nancy L. Sudak, MD, ABIHM, and James Harvie, PEng

Awareness of the ecological impact of modern human activities necessitates urgent action on the part of society. Integrative holistic practitioners intuitively utilize an expansive ecological, or whole-system, model of health. At the individual level, an ecological model embraces the interplay of psychosocial, spiritual, environmental, and other factors in the support and promotion of individual health and well-being. A systems worldview also supports the understanding and interplay of social determinants and diseases. One cannot separate human health from the health of communities and the planet. Holistic integrative practitioners, who are uniquely oriented toward an expansive ecological worldview, are ideal educators for patients and colleagues about the steps that can be taken to mitigate ecological health impacts and advocate for policies and practices that promote health and well-being at individual, community, and planetary levels.

This chapter provides a practical overview of some of the major issues eroding global ecological services and of preventive strategies through the lens of climate change, food system, and toxic chemicals. Although acute toxicity is problematic, this chapter focuses on the chronic toxicity. The chapter does not address the myriad of established environmentally related occupational exposures, and it assumes an everyday workplace that is not dissimilar from our homes with respect to the use of products, technologies, and consumption of foods and water. The important social health impact of our current materials economy is similarly beyond the scope of this chapter.

A Systems Approach

Human populations are tied to ecological functions, and from a wellness perspective, differentiating between human and environmental effects is not logical. What food we grow, and how we grow it, has consequences with respect to nutrition, greenhouse gas emissions, water and air quality, and socioeconomic health.¹ A 2015 Institutes of Medicine report concluded that the food system can be conceptualized as a complex, adaptive system and found that systemic approaches that take full account of social, economic, ecological, and evolutionary factors and processes will be required to meet challenges to the U.S. food system in the 21st century.²

Similarly, the toxic, persistent cycle demonstrates the potential for distant releases to cause local exposures and the role of prevention at the local level in promoting global restoration. [Fig. 108.1](#) helps illustrate that when we pour something undesired down the drain, our action has multiple unseen effects, and although a burden may have been relieved on the home front, another burden occurs elsewhere. A systems approach incorporates the whole. By shifting focus from the parts to the whole, we can better grasp that we are not immune from externalized social and environmental impacts on the products and materials we use, as ultimately they are all connected to individual health.

The Precautionary Principle

An important concept that has evolved from the study of environmental health is the precautionary principle, a decision-making tool used if an activity raises the threat of harm, but the cause and effect are not definite. The precautionary principle proposes that the burden of proof that an activity or product is *not* harmful should fall on the purveyors of a potentially harmful activity. This principle embodies the Hippocratic premise, “First do no harm,” and is gaining widespread acceptance because it eliminates the barrier of uncertainty to allow for protective action. Rather than asking how much toxic damage is acceptable in a baby or an ecosystem, a precautionary approach asks how much exposure can be avoided.³ For example, although we know that many industrial chemicals have adverse health effects and that our body burdens are striking, we may not fully understand whether safe threshold limits exist or have the benefit of studies that demonstrate

synergism among various chemical combinations. It is also reasonable to consider the biochemical diversity among detoxification mechanisms in human beings⁴ and to acknowledge that what may be tolerated in one individual may have a devastating health impact on another. When consequences are not known with certainty, but are judged from available evidence to pose a significant risk, avoidance is the most prudent course of action.

The precautionary principle proposes that the burden of proof that an activity or product is not harmful should fall on the purveyors of a potentially harmful activity. When consequences are not known with certainty, but are judged from available evidence to pose a significant risk, avoidance is the most prudent course of action.

The burden of scientific proof has become an obstruction to protecting health and the environment because many people will be irreversibly sickened during the lengthy process required to prove that a substance is harmful. In fact, under current regulatory practice, proponents of harmful activities are served by investment in research that prolongs uncertainty. Many smokers died of lung cancer before cause and effect were definitively established between cigarette smoking and lung cancer. Application of the precautionary principle has become a critical component of environmental agreements throughout the world because it proactively combines scientific rigor from all current available evidence with the primary concern of protecting public health and serves as an effective evidence-informed tool. When human health and environmental health are at stake, protective action is the most ethical course of action, even when it precedes unequivocal scientific certainty. The challenge is that application of the precautionary approach is still limited in scope. The following two examples demonstrate the importance of these considerations.

FIG. 108.1 Toxic persistent cycle. (From Western Lake Superior Sanitary District.

Safe solutions to toxic problems: a guide to eliminating persistent toxic substances from the

Lake Superior Basin . Duluth, MN: Western Lake Superior Sanitary District; 2007.

http://www.wlssd.com/Safe_Solutions_Toxic_Problems.pdf .)

Nanotechnology

Nanomaterials are engineered particles made to have extremely small dimensions to take advantage of unique physical and chemical properties that exist at the nanoscale. As a result of their unique size, the physical and chemical properties of nanomaterials differ from those of their larger-scale particles, and they may act unpredictably and in ways that are currently not understood. For example, evidence indicates that nanomaterials can pass through skin and blood–brain barriers⁵ and exhibit a host of negative health impacts.⁶⁻⁹ Scientific bodies have recommended that nanomaterials be treated and regulated as new chemicals¹⁰ and that the precautionary principle be applied.¹¹ Nonetheless, hundreds of consumer products and food additives in the marketplace contain nanomaterials. These products are typically undisclosed and untested for their impacts on human and environmental health.

Genetically Engineered Foods

Genetically engineered (GE) foods were first introduced to the marketplace in 1994 when producers in the United States brought out the Flavr Savr tomato. In 1996, GE soy became the first GE crop to be widely grown. GE technologies incorporate genetic material into the food supply to produce foods that would not otherwise occur in nature. Up to 70% of packaged foods in the U.S. supermarkets may contain ingredients from GE corn,¹² soy, canola,¹³ or sugar.¹⁴ In 2009, GE beets were introduced to the U.S. market. U.S. residents have therefore been consuming GE foods without the benefit of adequate studies to ensure that these foods will have no adverse impacts on human or animal health or on the environment. Health concerns associated with GE foods include both potential human and ecological impacts. These include allergies,¹⁵ antibiotic resistance,¹⁶⁻²³ food toxicity,²⁴⁻²⁸ threats to nontarget species by contamination,²⁹⁻³² and gene dispersal.³³⁻³⁹ Moreover, GE crop use promotes the increased use and toxicity of pesticides.⁴⁰⁻⁴³

In 1992, the U.S. Food and Drug Administration (FDA) declared that GM crops are generally regarded as safe (GRAS) and therefore do not require any safety evaluations or labeling of genetically modified organisms (GMOs).⁴⁴ Problematically, technology stewardship agreements state that the purchase of genetically modified seeds from patent owners (such as Monsanto) for purposes of research is explicitly prohibited unless that research is approved by the technology proponents. Leading researchers released a statement concluding that “as a result of restricted access, no truly independent research can be legally conducted on many critical questions regarding the technology, its performance, its management implications,...and its interactions with insect biology.”⁴⁵ We continue to face a paucity of studies specifically designed to assess the potential for health effects from GE foods or feed.⁴⁶ In 2005, a Parliamentary Assembly of the Council of Europe noted the health and safety issues around GE crops and the lack of studies assessing these threats by stating that “the health risks to humans (allergies, nutritional effects, etc.) so far have hardly been examined... [and] there is as yet no reliable information concerning their medium- and long-term environmental effects.”⁴⁷ Scientists have stated that the scarcity and contradictory nature of the scientific evidence published to date prevents conclusive claims of safety, or of lack of safety, of GMOs.⁴⁸

In 2011, the Parliamentary Assembly adopted a resolution⁴⁹ that highlights the contrast between the U.S. approach to GMOs, which assumes safety without research, and the European approach, which hinges on the precautionary principle. Moreover, the resolution

recommended that member countries “take the necessary steps to label products containing GMOs or derived from animals fed with GMOs” and “that the European Union guarantee the right of its member states to decide whether or not to cultivate genetically modified plants and, if such cultivations exist, to establish GMO-free zones.” In 2009, a leading U.S. Catholic health system introduced a policy aimed at preferentially purchasing GE-free foods.⁵⁰ By 2011, the American Academy of Environmental Medicine (AAEM),⁵¹ the American Nurses Association, the Illinois Public Health Association,⁵² and the American Public Health Association⁵³ endorsed resolutions calling, in part, for the labeling of GMO foods. Specifically, the AAEM stated, “with the precautionary principle in mind, because GM foods have not been properly tested for human consumption and because there is ample evidence of probable harm, the AAEM asks, in part, that physicians educate their patients, the medical community, and the public to avoid GM foods when possible and provide educational materials concerning GM foods and health risks.”⁵¹ As of mid-2015, the European Union, Japan, Russia, and China were among the 64 nations worldwide that required GMO foods to be labeled. The European Union has also banned the cultivation of GMO crops altogether, with only minor exceptions. Vermont, Connecticut, and Maine have already passed labeling laws and, as of 2013, more than 70 labeling bills or ballot initiatives were introduced across 30 states.⁵⁴

Pressing Ecological Problems in Today’s World: Three Examples

Exploring ecological health can feel daunting when we begin to comprehend the profound impact of modern life on the planet and its inhabitants. Remaining ignorant with respect to ecological issues or adopting a mindset that an individual has little power to influence the solution is not uncommon. Patients have questions about these issues and look for answers and understanding about how to process these concerns, become empowered, and feel hopeful. Health care practitioners have an important opportunity to engage populations in an understanding of a systems model of health. Clinicians can help them link harm to the planet and harm to themselves and offer health-promoting strategies. The following three interrelated examples are critically important to understand as we engage with our patients and the broader community.

Chemical Exposures and Associated Policies

Since 2000, studies conducted by the U.S. Centers for Disease Control and Prevention (CDC)⁵⁵ have documented the scale of our toxic body burden, as measured in human blood and urine. Many toxic chemicals have also been identified in umbilical cord blood, thereby demonstrating in utero exposure. Epigenetic programming is commonly disrupted by environmental exposures, particularly during sensitive windows of development.⁵⁶⁻⁵⁸ Some well-known human endocrine disruptors include diethylstilbestrol (DES), dioxin, polychlorinated biphenyls (PCBs), dichlorodiphenyl trichloroethane (DDT) and other pesticides, bisphenol A (BPA), and phthalates. Unlike some chemicals, these disruptors have no threshold of toxicity, and their effects do not correlate linearly with the magnitude of exposure; thus miniscule exposures can result in dramatic impacts on function. A newly recognized class of compounds called *obesogens* interferes with the body's adipose tissue biology, endocrine hormone systems, or central hypothalamic-pituitary-adrenal axis. Obesogens are implicated in derailing the homeostatic mechanisms important to weight control.⁵⁹⁻⁶¹ Organizations including the World Health Organization (WHO) and the Endocrine Society recognize that industrial chemicals provide a significant risk to public health.^{62,63} Substances for use outside of the food and drug industries may be introduced into the marketplace without assessment for toxicity. Thus the burden of harm is on consumers, rather than on product manufacturers. Of the more than 80,000 chemicals in use today, approximately 5000 are used pervasively. At the heart of many of the issues associated with toxic chemicals is the Toxic Substances Control Act of 1976 (TSCA), which was created with the intent to identify and regulate dangerous chemicals. A 2009 report by the U.S. Government Accountability Office (GAO) included the TSCA on its "High-Risk" areas of government needing immediate reform. The GAO concluded that the Environmental Protection Agency (EPA) "does not have sufficient chemical assessment information to determine whether it should establish controls to limit public exposure to many chemicals that may pose substantial health risks."⁶⁴

No animal or individual experiences one toxin at a time, but toxicity studies are conducted individually. Although chemical mixtures represent a huge unknown area in toxicology, chemicals interact with one another to produce effects that may be inhibitory, additive, or synergistic.⁶⁵ The American Medical Association advocates for a

comprehensive chemicals policy in line with current scientific knowledge and the training of medical students, physicians, and other health professionals about the human health effects of toxic chemical exposures.⁶⁶

Food and Water Concerns

Since the early 20th century, we have radically altered the way we produce and distribute food. The industrialization of our food system is fundamentally affecting the health of individuals and the planet. Not only are the foods we promote misaligned with dietary guidelines but also methods of their production and distribution, divorced from natural ecological processes, are promoting increased antibiotic-resistant bacteria, poisoned air and water, foodborne pathogens, pollinator impacts,⁶⁷ and collapsing rural communities.

The impact of pesticides on pollinators is worth highlighting. Bees pollinate approximately 75% of the fruits, nuts, and vegetables grown in the United States.⁶⁸ We are currently experiencing a growing problem with bee colony collapse; worldwide, the population of honeybees used as pollinators has been declining precipitously. A report released from the Public Library of Science⁶⁹ identified a “remarkably high level” of 98 pesticides/metabolites in bee pollen. No single cause of bee colony collapse has been conclusively proven, but chemical contamination and pathogens are leading theories.^{70,71}

Bees pollinate 75% of food produce in the United States. Bee colony collapse threatens this food supply and may be associated with pesticides because high levels of pesticide metabolites are found in bee pollen.

Because poor nutrition is a risk factor for four of the six leading causes of death in the United States (i.e., heart disease, stroke, diabetes, and cancer), the public health, medical, nursing, and hospital communities have recognized the need to address the food system by promoting nutritious foods from sustainable food systems⁷²⁻⁷⁵ ([Boxes 108.1](#) and [108.2](#)). A United Nations report, endorsed by 57 countries, has called for support of agroecology and local, sustainable economic food models if we are to support ecological services and health communities and reduce hunger.^{76,77}

Like food, water is essential for life and good health. The water crisis is the foremost global risk on the basis of the impact to society as a measure of devastation.⁷⁸ According to the United Nations, around 700 million people in 43 countries currently suffer from water scarcity. By 2025, 1.8 billion people will be living in countries or regions with absolute water scarcity and two-thirds of the world's population could be living under water-stressed conditions. With the existing climate change scenario, almost half of the world's population will be living in areas of high water stress by 2030, including between 75 million and 250 million people in Africa.⁷⁹

BOX 108.1 Key Principles of Chemical Policy

Key Principles of a Health-Oriented Chemicals Policy

- Immediately initiate action on the worst chemicals. Persistent bioaccumulative toxins are uniquely hazardous.
- Request for basic information for all chemicals. Manufacturers should be required to provide basic information on the health hazards associated with their chemicals, how they are used, and the ways that the public or workers could be exposed.
- Protect the most vulnerable.
- Hold industry responsible for demonstrating chemical safety.
- Promote safer alternatives.
- Ensure the right to know.

Adapted from the Safer Chemicals, Healthy Families Coalition: www.saferchemicals.org.

BOX 108.2 Sustainable or Healthy Food System Characteristics

- Proximate (obtained close to home)
- Healthy, as part of a balanced diet
- Fairly traded
- Nonexploitive
- Environmentally beneficial
- Accessible and affordable
- Meeting animal welfare standards
- Socially inclusive

- Encouraging knowledge of food and food culture

Although most of the U.S. population has access to fresh, treated water, increasing concerns are associated with contaminated water⁸⁰⁻⁸² and with water scarcity resulting from drought or resource depletion as agriculture, industry, and households become increasingly affected by climate change. In the United States, 40 of 50 state water managers expect water shortages in some portion of their states under average conditions by 2023.⁸³ Adding to the complexity is the role of water privatization in which water companies are purchasing aquifers, water supplies, and watersheds that had previously been held in the common domain.

Climate Change

According to the Intergovernmental Panel on Climate Change, warming of the climate system is now unequivocal, and evidence from all continents and most oceans shows that many natural systems are being affected by regional climate changes, particularly temperature increases.⁸⁴ The direct and indirect impacts on human health are staggering and include asthma, loss of life, a range of infectious disease vectors, respiratory diseases, allergies, and childhood development problems.⁸⁵⁻⁸⁷ In 2003, more than 35,000 people died in Europe as a result of heat stress. Clearly, the health care system will be required to carry a significant burden in treating climate-related health care costs. Approximately 25% of global emissions leading to climate change are attributable to agricultural activities, including land use changes such as deforestation.⁸⁸ Without greater efforts to reduce our emissions, these could increase an additional 30% by 2050.⁸⁹ We must recognize that health care itself has a sizable greenhouse gas footprint. The National Health System (NHS) of the United Kingdom is a global health care climate mitigation leader through its comprehensive assessment of climate footprint and the development of a climate mitigation and adaptation strategy.⁹⁰ The 2004 NHS greenhouse gas footprint was calculated as representing 3% of the total UK greenhouse gas footprint. In a similar, albeit less comprehensive analysis, investigators estimated that the U.S. health care greenhouse gas emissions in 2007 represented 8% of the total U.S. emissions.⁹¹ Consistent with the UK calculations, prescription drugs represented a significant contribution to the U.S. health care footprint: 14% of the total health care greenhouse gas emissions.⁹¹

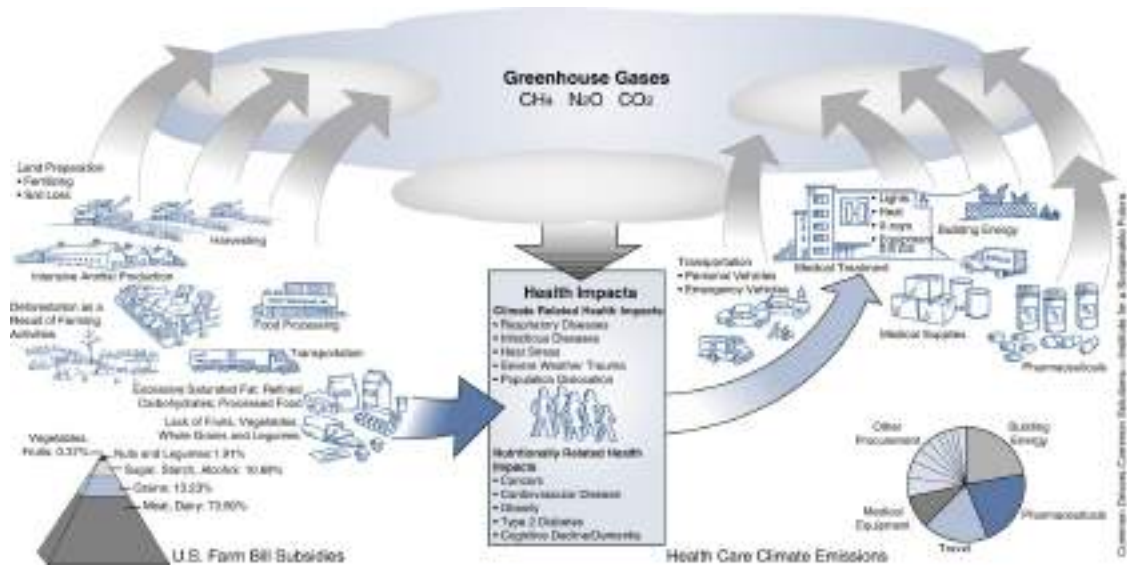

FIG. 108.2 Common drivers common solutions. (From Institute for a Sustainable Future.)

Because pharmaceutical interventions are used extensively for nutrition-related diseases, such as stroke, heart disease, and diabetes, and given that our food system is a significant climate emissions contributor, we suggest that a dietary-focused primary prevention strategy would have health and climate benefits. See [Fig. 108.2](#) for an illustration of the role of our food and health systems in climate mitigation.⁹³ Research indicates that we must increase the resilience of our social and ecological systems considerably to cope with future climate change and other components of global change.⁹⁴

Personal and Planetary Health in Everyday Life

Besides specific occupations and their own unique set of environmental exposures, relative commonality exists in the nature of the foods we eat, water we drink, and products we use on our bodies and in our homes. Moreover, because white collar employment now comprises approximately 50% of the workplace, from an environmental health perspective, our workplaces may be almost indistinguishable from our homes.

Household Products

Many people are unaware of the magnitude of toxic exposure they receive through ordinary household products. Nearly every type of common household cleaner, deodorizer, drain clog substance, and laundry product has been identified as having some toxic properties.⁹⁵ Health effects associated with indoor cleaners include cancer, reproductive disorders, and respiratory or skin damage. Cleaning chemicals eventually enter the environment and may have deleterious effects, such as depletion of the ozone layer, diminution of drinking water quality, and accumulation in aquatic life. Some of the less safe chemicals are persistent and remain in the environment for many years or even indefinitely. Many cleaning chemicals are considered hazardous owing to their flammability, corrosivity, or toxicity, and they present safety and cost concerns in their handling, storage, and disposal.⁹⁶⁻⁹⁸

Almost all home cleaning products can be effectively replaced by common household ingredients. Recipes for specific uses are abundant on the Internet and available in most public libraries. Typical suggested alternative ingredients are vinegar, baking soda, corn starch, salt, borax (toxic if ingested), lemon juice, olive oil, essential oils, mild liquid nondetergent soaps, reusable nonimpregnated steel wool, and nonchlorine and nonsodium hypochlorite scouring powder. For people less interested in making their own products, many “green” cleaning products are available in the marketplace.⁹⁹ Environmentally preferable products have been designated by the Green Seal Standard for Industrial and Institutional Cleaners (GS-37).¹⁰⁰ Patients should be informed that the safety of a product is not guaranteed even when products are found on the shelves of their trusted stores. Learning to avoid toxic substances does require concern, the ability to read labels, and some scientific literacy. Physicians can help patients by compiling recipes for effective nontoxic cleaning solutions or lists of preferred commercial home cleaners. Hosting demonstrations and lectures in the clinic or hospital settings also send an important message of public health to patients.

To make a nontoxic home cleaning product, fill a jar with citrus peels (orange, lime, or lemon) and pour undiluted white vinegar over them. Close the lid, and let sit for 2 weeks. Then, strain out the remaining fluid to use as a natural cleaner. Can dilute with water to wash windows or use full strength for washing surfaces and floors.

Because of the toxic persistent cycle, discarding toxic household products can be complicated. As a rule, these substances should not be poured down the drain, flushed down the toilet, or thrown in the trash. Because many common household products are considered hazardous waste, local environmental agencies, university extension services, or public works departments should be contacted for instructions on proper disposal. Some waste facilities have specialized departments that accept and properly manage toxic substances.

Personal Care Products

Most consumers would be surprised to learn that the government does not require health studies or premarket testing for cosmetics and other personal care products. Personal care products include soaps, hair dyes, body lotions, perfumes, cosmetics, deodorants, fragrances, and other similar products. Teenage girls use an average of 17 personal care products per day (compared with adult women, who use an average of 12 products per day).¹⁰¹

Serious health effects associated with personal care products include carcinogenicity and reproductive or developmental toxicity. Personal care products are associated with phthalate exposure in children; phthalates are increasingly implicated for serious endocrine-disrupting impacts.¹⁰² Manufacturers are currently reformulating products in Europe to comply with an amendment to the European Union's Cosmetics Directive to ban the use of chemicals that are known or strongly suspected of causing cancer, mutation, or birth defects, but this effort was voluntary within the United States as of 2014. Patients should be counseled to reduce their use of personal care products and avoid products with heavy fragrance, aerosols, and dark hair dyes (which may contain lead acetate).

Use of milder soaps and avoidance of nail polish, hairspray, and other phthalate-containing substances (known endocrine disruptors) should be encouraged. Despite the apparent confidence they engender in consumers, commonly used antibacterial soaps are harmful to our ecological system and provide no added protection to household consumers. Triclosan is a bactericide used in a growing number of consumer products, including antibacterial soaps, toothpaste, shampoos, lotions, and deodorants. Even at low levels, it is acutely toxic to some aquatic organisms, particularly certain algae species, and has been detected in surface waters.^{17,103,104} Triclocarban and tricarban are good

examples of avoidable toxic substances with pervasive impacts and little to no consumer benefit. Triclosan is problematic for its persistence, its activity as an endocrine disruptor, and its potential to promote antibiotic-resistant organisms. In 2014, the State of Minnesota declared a phase-out of the use of triclosan in consumer products after 2017. As a protective measure to the people and aquatic species exposed, an informed consumer may simply learn to avoid the purchase and use of antibacterial (or antimicrobial) personal care products such as soaps, gels, cleansers, toothpaste, cosmetics, or other “antibacterial” or “antimicrobial” items such as cutting boards, towels, shoes, clothing, and bedding.

Cellular and Cordless Phones

In 1900, our experience of electromagnetic radiation was limited to natural sources. Since 1950, however, we have become increasingly reliant on electric technologies involving various electromagnetic frequencies. Accordingly, concern about health hazards (most notably cancer) has escalated. Conflicting results have emerged with respect to health risks and electromagnetic radiation exposure through microwaves, computers, and televisions. An oft-cited study released in April 2007 revealed an increased risk of ipsilateral acoustic neuroma and high-grade glioma in long-term users (more than 10 years) of cell phones.¹⁰⁵ These same concerns have also been generated by cordless phones.¹⁰⁶ A large subsequent study performed in 2010 by the Interphone Study Group concluded that there is no increased risk of cancer in long-term cell phone users. However, this study has been criticized for design flaws generated by selection bias, exposure bias, and age-range bias.^{107,108} In 2011, the WHO issued a press release stating that the International Agency for Research on Cancer, and the WHO classified radiofrequency electromagnetic fields as possibly carcinogenic to humans, on the basis of an increased risk for glioma associated with wireless phone use.¹⁰⁹ Since that time, further evidence has mounted to substantiate concerns of carcinogenic risk posed by cell phones for both acoustic neuroma and glioma relative to area of exposure from cell phone use, and have urged a precautionary approach, especially where children are concerned.¹¹⁰⁻¹¹² A newer concern based on compelling case reports is the risk of multifocal invasive breast carcinoma in young women who store their cell phones in their bras.¹¹³

On the basis of the foregoing studies and the pervasive nature of cell

phone and cordless phone use, the Environmental Health Trust has issued practical recommendations regarding cell phone and cordless phone use, including the following:

- Do not hold a cell phone directly up to your head. Use a headset or speakerphone when using the device, or a nonmetal case that has been independently tested to reduce radiation up to 90%.
- Pregnant women should keep cell phones away from their abdomen and men who wish to become fathers should not keep these phones on while in their pocket.
- Do not allow children to play with or use your cell phone. Older children should use a headset or speakerphone when talking on a cell phone.
- Do not text and drive and only use specially adapted antennas when using mobile phones in cars to avoid absorbing maximum power as the phone moves from one cell system to another. When buying a new car, pay attention that the car has a built-in antenna that reduces your direct exposure.
- Turn off your wireless router at night to minimize exposure to radiation.
- Eat green vegetables and get a good night's sleep in a dark room to enhance natural repair of DNA that may have been damaged by radiation.

As wireless usage escalates, it is anticipated that further evidence of harm will continue to emerge. Cities and countries outside of the United States have accordingly adopted proactive policies to curtail exposures, especially in children.

Household Pesticides

The use of pesticides is widespread, and homeowners use substantially more per acre than does the agriculture sector. House dust typically contains concentrations of pesticides and other endocrine-disrupting compounds of magnitudes higher than outdoor air.^{114,115} In a Nonoccupational Pesticide Exposure Study, a cross section of homes was found to contain pesticide residues, including those of substances banned years earlier.¹¹⁶

By their very nature, pesticides tend to show a high degree of toxicity because they are designed to kill certain organisms and thus create some risk of harm. Within this context, pesticide use has raised serious concerns not only of potential effects on human health but also about

impacts on wildlife and sensitive ecosystems. Often, pesticide applications prove counterproductive because they kill beneficial species such as natural enemies of pests and increase the chances of development of resistance to pesticides among pests. Furthermore, many end users have poor knowledge of the risks associated with the use of pesticides, including the essential role of the correct application and the necessary precautions. Even farmers who are well aware of the harmful effects of pesticides are sometimes unable to translate this awareness into their practices.¹¹⁷

The Ontario College of Family Physicians completed an extensive literature review of pesticides and determined that “Exposure to all the commonly used pesticides...has shown positive associations with adverse health effects. The literature does not support the concept that some pesticides are safer than others; it simply points to different health effects with different latency periods for the different classes.”¹¹⁸ The College urged a focus on reducing exposure to all pesticides rather than targeting specific pesticides or classes. The investigators encouraged family doctors to learn about high-risk groups (women of childbearing age, occupationally exposed patients, children) and teach methods of reducing pesticide exposures. Physicians are ideally suited to bring these issues to the grounds of hospitals, schools, and government facilities and suggest safer, yet effective, alternatives for landscaping and lawn care. Finally, the College suggested that physicians convey health concerns to politicians who make regulatory decisions about pesticide use and public health. As of 2010, every province and territory in Canada has pesticide-related legislation in place to protect its citizens from unnecessary exposure.

Various reduction strategies exist through the application of integrated pest management (IPM), an approach to pest management that focuses on preventing and managing pest problems through nontoxic methods by using a hierarchy of strategies, with chemical controls as a last resort. Homeowners who use a pest control or lawn maintenance company should clearly communicate an IPM plan to the contractor. Many contractors now employ IPM, but homeowners are encouraged to request a thorough explanation of individual company IPM policies.

Furnishings

That furnishings of the typical U.S. home contain toxins is not intuitively obvious. However, substances such as wrinkle-resistant fabrics,

permanent press sheets, curtains, and clothing, as well as modern furniture made from pressed composite wood, contain and emit formaldehyde and other substances. Carpeting is usually made of synthetic fibers that have been treated with pesticides, fungicides, and adhesives. Many office carpets emit a chemical called *4-phenylcyclohexene*, an additive to the latex backing used in more commercial and home carpets, which is thought to be one of the chemicals responsible for “sick” office buildings.¹¹⁹ Modern furniture also contains a significant amount of plastics and foam, which are highly flammable petroleum-based products requiring chemical flame retardants (polybrominated diphenyl ethers [PBDEs]). This is a topic of growing concern in environmental health. Perfluorinated compounds (PFCs), associated with fabric protectors and stain guards, constitute another type of persistent bioaccumulative toxin (PBT) of increasing concern. Vinyl (polyvinylchloride [PVC]) plastic coverings contain phthalates and release dioxin and furans during manufacture and breakdown.

Patients, let alone design professionals, may have trouble discerning the differences among various product components. As a general rule, products constructed from solid wood, metal, and natural fibers such as cotton and wool tend to be safe alternatives.

Meat, Poultry, and Seafood

Confined (or Concentrated) Animal Feedlot Operations (CAFOs) epitomize the extreme of our industrialized food system. These operations confine large quantities of livestock to a closed area where all food and water inputs are carefully controlled. CAFOs are defined as more than 1000 beef cattle, 2500 hogs, or 100,000 broiler hens; they generate an estimated 575 billion pounds of manure annually.¹²⁰ The largest 2% of U.S. livestock farms now produces 40% of all animals in the United States.¹²¹ In 2002, half of all hogs in the United States were raised on large-scale farms that managed more than 5000 hogs.¹²² Five companies control roughly 60% of chicken processing, while four companies control more than 80% of the U.S. beef packing.¹²³ Although not exclusive to CAFOs, many different feed additives are provided, including growth hormones, antibiotics in feed and water, and arsenic. Public health and medical associations have called for a moratorium on CAFO construction because of concerns that include runoff, community impacts, air quality, worker health and safety, and issues of antibiotic resistance,^{124,126} notwithstanding issues of cruelty to animals.

The Food and Agriculture Organization identified meat production alone as responsible for 18% of global greenhouse gas emissions.¹²⁷ The wide variety of public health and infectious diseases has called attention to increasing concerns with antibiotic resistance.¹²⁸⁻¹³² The CDC noted that 90,000 patients died as a result of hospital-acquired infections, and more than 70% of the bacteria that caused hospital-acquired infections were resistant to at least one of the drugs most commonly used to treat them. Investigators estimated that more than 70% of all antibiotics consumed in the United States are used as feed additives for poultry, swine, and beef cattle for nontherapeutic purposes.¹³³ The strong consensus is that agricultural antibiotic use contributes to antibiotic resistance in humans, and more than 300 organizations, including the American Medical Association, have advised that restrictions on agricultural use of antibiotics are necessary.¹³⁴ Yet according to a 2014 FDA report, the total quantity of antibiotics that are known to be important in human medicine and are sold or distributed for use in food-producing animals jumped by 16% between 2009 and 2012.¹³⁵ Investigators have recommended that health professionals become aware of these trends as they promote healthier sustainable diets.¹³⁶ The 2015 Dietary Guidelines Advisory Committee stated that “Linking health, dietary guidance, and the environment will promote human health and the sustainability of natural resources and ensure current and long-term food security.”¹³⁷ Meatless Mondays is a global movement of participating individuals, hospitals, schools, worksites, and restaurants around the world working to minimize the ecological footprint of meat production by eliminating meat from the diet on Mondays. Institutions and homeowners are utilizing independent third-party certified food labels, such as organic, certified humane, and fair trade, to support sustainable food procurement.¹³⁸

Although fish is a good source of protein and omega-3 fatty acids, some species should be avoided because of PBT content. Mercury is the PBT most commonly associated with fish contamination; others are PBDEs, dioxin, furans, and PCBs. Mercury is bound to the protein component and cannot be removed. Most other PBTs accumulate in fat, which should be removed. Most fish advisories are based on federal guidelines developed to protect the average 160-lb man; patients should be advised to recognize this fact. Patients who catch and eat their own fish should be advised to become familiar with local fish consumption advisories, which are typically developed for specific inland lakes. Many fish stocks are in serious decline as a result of overfishing. In addition,

evidence indicates that salmon produced from the aquaculture industry has higher levels of PCBs than does wild-caught fish.^{139,140} Similar to industrialized food production, ecological health issues associated with aquaculture are varied including genetic manipulation, fish waste, forage fish, and antibiotic use.¹⁴¹ Many websites have developed “fish calculators” that allow users to determine “allowable” fish intake based on individualized weight, age, and sex, while others have developed easy-to-use fish consumption guides, which list fish choices that are of concern with respect to both overfishing and contamination.^{142,143}

Organic Food Considerations

Conscientious health care practitioners are well aware of the challenges involved in encouraging patients to consume healthy foods. Warning patients about food contaminants adds a layer of complexity to the discussion. However, the issue of contaminated food is particularly relevant during vulnerable periods of life and should not be overlooked. This information can be introduced in the clinic setting and followed up with handouts, community presentations, and resource lists for patients (see the [Key Web Resources](#)). Practitioners need not feel the burden of expressing every pertinent aspect of this problem to the patient. They should enlist the expertise of community professionals.

Growing children consume far more food and water per body weight than adults, and their biological detoxification mechanisms are not fully developed. As a result of these differences and the qualities of foods eaten in high amounts by typical children, a child experiences a substantial burden of pesticide exposure in the first decade.¹⁴⁴ Consequently, elimination of pesticide residues is a sensible precautionary strategy. Although families may have budgetary challenges that do not allow for a complete transition to an organic diet, avoidance of the most contaminated foods is a useful approach ([Table 108.1](#)). The Environmental Work Group Shoppers Guide to Pesticides in Produce¹⁴⁵ is a regularly updated list of produce that has been found to be highest in tested pesticide residues and are best to avoid when substitutes are available. The Pesticide Action Network’s *What’s On My Food* app is another helpful app that helps consumers identify which pesticides they might be exposed to, along with toxicological data.¹⁴⁶

Strawberries

Drinking Water

According to the EPA, the United States has one of the safest water supplies in the world.¹⁴⁷ We are fortunate that public regulation of drinking water has provided a public health benefit, but this relativistic assessment does not address potential exposure to unregulated contaminants found in the drinking water supplies or the relative safety of existing standards. The EPA has drinking water regulations for more than 90 contaminants. The Safe Drinking Water Act set up a process for identification of new contaminants that may require regulation in the future.

The EPA must periodically release a Contaminant Candidate List (CCL).¹⁴⁸ The contaminants on the list are known or anticipated to occur in public water systems. However, they are currently unregulated by existing national primary drinking water regulations. The most current list, published in 2011, contains many different industrial chemicals such as perchlorate (used in the manufacture of rocket fuel) and toluene, as well as a long list of pesticides, and even the pharmaceutical hormone estrogen. As of April, 2015, the EPA was accepting comments on a revised CCL.¹⁴⁹ The water supply for approximately 15% of the U.S. population derives from sources separate from public supplies, such as wells, cisterns, and springs.¹⁵⁰ These sources are unregulated and require

the homeowner to test the water for safety.

Many patients interested in a precautionary approach install water filters or treatment systems. Numerous systems are commercially available. Ideal water filtration devices are certified to remove specified contaminants. The National Sanitary Foundation International, an independent standard-setting organization, certifies water treatment systems.¹⁵¹ Water filtration is especially advisable for patients who have private wells in proximity to industrial sites, landfills, combined annual feedlot operations, contaminated soils, or agricultural areas as surface waters are recognized to be contaminated with pharmaceuticals and other contaminants.^{152,153}

Patients may be under the misguided impression that bottled water is purer than tap water. A 1999 report, however, found that some bottled water contained bacterial contaminants and that several brands contained synthetic organic chemicals or inorganic contaminants.¹⁵⁴ The report also noted that bottled water regulations have gaping holes, and both state and federal bottled water regulatory programs are severely underfunded. Bottled water costs up to 10,000 times more than tap water (notwithstanding the energy use and pollution costs associated with transport across the country). Bottled water produces up to 1.5 million tons of plastic waste per year. In 2006, the U.S. population consumed more than 30 billion bottles of water, of which more than 80% went to a landfill or were incinerated. Plastic bottles are one of largest sources of marine debris, 70% of which is plastic.¹⁵⁵ Water is essential to human life and an inherent right, but access to affordable, safe, and sustainable water is becoming increasingly difficult around the world. By supporting and promoting publicly owned water infrastructures, the health care community can provide the moral voice for the right to affordable, safe, and sustainable drinking water. Drinking water concerns represent a challenging issue that jeopardizes our planetary health.

Conclusion

Rachel Carson was one of the first scientists to raise an alarm about the unconditional belief in “better living through chemistry” and reminded us of humans’ intimate relationship with the environment. Clearly, many modern chemicals provide humans with products that are extraordinarily effective and convenient. We must realize, however, that despite the short-term benefits, these products have a host of recognized long-term impacts that have been either purposely or inadvertently

ignored. This lesson parallels what we have learned about our unfettered use of energy and the industrialization of our food system. We are reminded that we are part of a system with intricate feedback loops, and as we interfere with these relationships, we may create unintended consequences. These relationships suggest the necessity for an important global shift in our consciousness from the one that has been oriented toward an efficient, linear, Western scientific model to the one with a greater appreciation of an interconnected resilient systems model.

An important approach forward draws from the research on the “commons” by Nobel Prize economist Elinor Ostrom.¹⁵⁶ The commons represent a broad array of “resources” or gifts of nature, many of which are essential human needs such as seed, water, or fisheries. She drew on examples from around the world to show how local communities have worked together to craft, monitor, enforce, and revise rules to limit their behavior and keep their resources available for the long term. From her work, she articulated a set of shared rules, or commons management principles, which, because of their demonstrated success, has spurred thinking and global application. These principles such as transparency and democratic decision making, localized boundaries or “sense of place,” and inclusivity are consistent with many of the fundamental tenets of democratic societies. At their core is an acknowledgment of the importance of a system that provides a means to have an equal say in decision-making and the right to health and well-being.

As integrative providers, this thinking is not new. We have recognized the value of pharmaceutical interventions, but we have worked first to explore primary prevention interventions and naturally sustainable treatment options. We acknowledge patients as primary to decision making. Reports by the United Nations Millennium Assessment, the Intergovernmental Panel on Climate Change, and global governmental scientific bodies add a layer of urgency to holistic thinking and provide clarity that human activities are affecting ecological systems. Our action today is imperative and requires an approach that moves from a model of disease treatment to one of ecological prevention ([Box 108.3](#)).

BOX 108.3 Key Advocacy Strategies

Develop and Adopt an Ecological Health Mission Statement and Plan

Work with your clinic or institution to develop or tailor an existing

ecological health mission statement and plan. Use the plan meaningfully to guide purchasing and other practices.

Model Behavior in Home and Practice

Adopt policies and practices within your clinic and institution consistent with your ecological health mission. As products and services become obsolete, change to those that are more ecologically benign (see [Key Web Resources](#)).

Educate

Provide resources and information to patients and colleagues within the clinic or institution as hard copies or on the website.

Meet With Your Hospital CEO

Numerous hospitals and clinics are adopting ecologically sustainable practices and policies. One clinician's voice is an important support for new or existing "green" or environmental teams; many clinicians' voices add potency to the message.

Meet With Elected Officials

Elected officials and their staff are interested in meeting with constituents to hear their views. A physician's voice brings considerable moral authority. Most visitors are paid lobbyists representing industry and corporations, not typically the voice of community and health. Call and make appointments, and if that is not possible, speak to senior staff. Elected officials are busy; stay on point to keep your message relevant and concise. Ask for their specific position, and try to gain a commitment. Follow up with a letter, and keep the ball rolling.

Offer Your Voice to a Community Organization

Most community-based organizations have limited resources and welcome occasional help. Offer to write an article for their newsletter, be a spokesperson at media events, or meet with them and an elected official.

Share Your Views With Media

Although media are changing, sharing your views on issues with the

public is important. We need more health advocates. Letters to the editor and opinion editorials are widely read and shared. Call your newspaper to learn about word length and other submission guidelines.

Host Community Events: Book Signing, Movie Viewing

Many ecological health multimedia resources are available. Host a community movie viewing or book reading and help integrate an ecological health message.

Conduct Grand Rounds

Grand rounds are an important way to bring the latest science to your colleagues.

Prevention Prescription

- Substitute nontoxic alternatives for chemical pesticides for home and garden.
- Choose organically grown, locally raised produce and animal products.
- Prefer third-party food ecolabels (<http://www.greenerchoices.org/eco-labels/>).
- Eat low on the food chain.
- Select “green cleaners.”
- Purchase bath and beauty products that are free of phthalates and other toxic compounds.
- Purchase furniture and building materials that are produced from simple components (wood, metal, cotton materials).
- Avoid polyvinylchloride (vinyl) products and polystyrene and plastic containers made of polycarbonate, respectively designated as recycle numbers 3, 6, and 7 on these plastic containers.¹⁵⁷
- Purchase “green” computers and home electronics with a priority for those that may be returned to the manufacturer for recycling at the end of the product’s life.
- Avoid polytetrafluoroethylene (Teflon) and stain-treatment products.
- Avoid antimicrobial products.
- Prefer metal, ceramic, or glass containers, especially for hot and acidic

foods.

- Conserve energy and consume less.

CHAPTER 109

Strain/Counterstrain

Harmon Myers, DO[†], and Julia Jernberg, MD

History and Theory of Counterstrain Therapy

In the 1950s, Lawrence Jones, an osteopathic physician in rural Oregon, discovered a novel, highly effective, low-risk form of manipulation that, six decades later, has become an internationally taught technique. In an attempt to ameliorate a farmer's severe back pain, Dr. Jones noted that the passive positioning of this index patient into a position of comfort and holding of that position resulted in the complete resolution of the patient's back pain. Jones followed up this serendipitous discovery with the meticulous cataloging of hundreds of points that could be relieved by precisely positioning the patient.¹ The position needed to treat the patient's pain effectively could be determined by finding specific points of disease that Jones termed "tender points." Tender points were areas that, when palpated, caused the patient to experience discomfort at that site and felt more taut to the examiner or were of a firmer consistency than the surrounding tissue. Jones believed that the cause—and subsequently the treatment—centered on the pathological features of agonist and antagonist muscles of specific joints.

Jones (and subsequent theorists) ascribed the pathological features of a tender point and the associated pain to the inappropriate and ceaseless firing of muscle proprioceptors and nociceptors that were, as a result, constantly "turned on" without any relaxation. Jones termed his treatment of the pain associated with these tender points, "strain-counterstrain" because he hypothesized that a rapid attempt to return a strained agonist muscle back to its neutral position would excessively accelerate the lengthening of the antagonist muscle. Because the

antagonist was short while the agonist was stretched out (the strain), the proprioceptors within the shortened antagonist were hypervigilant for signs of stretch (i.e., the “gain” was increased to enhance the sensitivity to subsequent stretch). Thus when the antagonist was rapidly lengthened (the counterstrain) as the agonist raced back to its neutral position, the antagonist’s highly attuned proprioceptors could “see” the prompt lengthening as a signal that the antagonist was being stretched beyond neutral, even though it was not actually longer than its neutral length. This false sensation that the antagonist was being stretched led to chronic overfiring of the antagonist’s proprioceptors. Because the muscle was signaling “stretch” when it was not actually lengthened, it had no opportunity to turn down the neural discharge. The muscle therefore continually tried to shorten (i.e., was chronically constricted) in its attempt to alleviate the false sensation of stretch ([Fig. 109.1](#)).

Counterstrain is simply the shortening of specific muscles that are in spasm. It is a safe and effective therapy for common myofascial trigger points. Compared to other manual techniques it is relatively easy to learn but takes practice.

Strain-counterstrain, Jones reasoned, was effective because it enabled the cessation of the inappropriate firing of the proprioceptors in the antagonist muscle. If the muscle were shortened while it was not contracted, the perpetual firing that relayed the false sensation of stretch could be shut down and the proprioceptors could be “reset” with the normal length of the muscle as the baseline. Thus Jones’ therapy is based on the *passive* shortening of the afflicted muscle into an optimum relaxed position that allows the afferent nerve impulses to dampen. As a result, the muscle can escape from signals to contract on a long-term basis.

While Jones was beginning to appreciate the therapeutic potential of strain-counterstrain manipulations, Janet Travell, MD, John F. Kennedy’s physician, was embarking on what was to become an exhaustive study of myofascial trigger points and their pain referral patterns. Travell’s trigger points were similar to Jones’ tender points—in that they were nodular, taut areas in muscle that were tender to palpation. Travell noted that trigger points could refer pain to areas beyond the region of the trigger point, and she extensively mapped out both mundane and unexpected referred sites. For instance, Travell noted that a trigger point in the soleus muscle in the leg could cause pain in the leg, the sacral area and,

surprisingly, the jaw. Travell's therapy of the trigger points differed markedly from Jones' counterstrain manipulations. Travell's preferred method of treating trigger points was to topically anesthetize the skin using a cold spray and then to stretch out the muscle containing the trigger point. In addition, injection into a trigger point was also noted to relieve the associated pain ([Box 109.1](#)).

Harmon Myers, DO, was an early student and a subsequent teacher of Jones' technique. Myers synthesized the joint-centered tender points and manipulations of Jones with Travell's myofascial referral patterns of pain stemming from muscular trigger points. Myers realized that Jones' tender points and counterstrain treatment positions actually were locating and shortening Travell's myofascial trigger points and associated muscles. In counterstrain, the passively and optimally shortened position (held for 90 seconds) allowed the inappropriate firing of the proprioceptors located in the muscle containing Travell's trigger point to abate. When the chronically contracted muscle finally relaxed, Travell's trigger point palpably dissolved and the myofascial pattern of pain ceased.

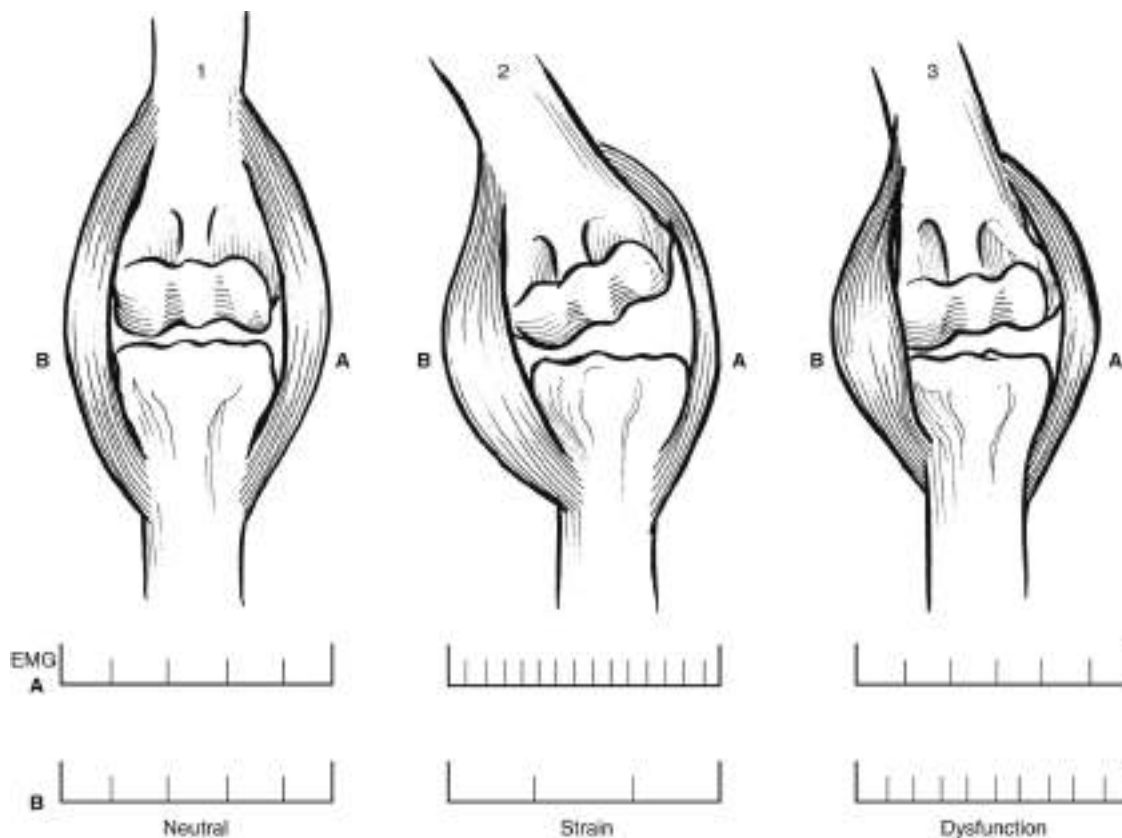

FIG. 109.1 Jones' neuromuscular model. EMG, electromyography. (From D'Ambrogio KJ, Roth GB. *Positional release therapy: assessment and treatment of musculoskeletal dysfunction*. St. Louis: Mosby; 1997; modified from Jones LH. *Strain and counterstrain*. Newark, OH: American Academy of Osteopathy; 1981.)

BOX 109.1 Pathophysiology of a Tender Point

Awareness of tender points in the myofascial system dates back to the Chinese Tang Dynasty (AD 618) when these areas were called Ah Shi points. Descriptions of these points in Western medicine have included terms such as trigger points, fibrositis, muscle callus, chronic myositis, and muscular nodules. The underlying mechanisms of pain and inflammation appear to share common origins. Tender points result from the following three mechanisms:

- A proprioceptive neural response to acute muscular strain that registers the rate of stretch of the muscle spindle fibers
- A nociceptive neural response to visceral disease, muscle strain, or injury that persists because of a lack of response to treatment
- An autonomic–somatic neural response to increased tone of the sympathetic nervous system that can result from anxiety and pain

Within the area of the tender point, proinflammatory and vasoconstrictive chemical mediators, including histamine, prostaglandins, bradykinin, products of anaerobic metabolism, and potassium, accumulate. These mediators team with an influx of calcium ions and lead to chronic hyperstimulation of the associated muscle, thereby causing a neurological reflex arc that further exacerbates and “tightens” the painful muscle. The underlying trigger of this phenomenon can be an acute injury, repetitive strain, imbalance of muscle use, visceral disease, or chronic stress and tension.

Often, complete symptom resolution was obtained with just a few counterstrain sessions. This was true not only for muscular pain but also for other symptoms noted by Travell or Jones. Not uncommonly, patients with complaints of dizziness (sternocleidomastoid muscle), cough (pretracheal fascia and sternocleidomastoid muscle), gastric reflux, and bowel symptoms (rectus abdominis, external abdominal oblique, and longissimus thoracis muscles) dramatically improved with the

application of Jones' positioning integrated with Travell's myofascial patterns of pain.

The seemingly remarkable efficacy of this therapy, when administered in a finite number of sessions, along with the relatively benign nature of the treatment led to its appeal among patients and therapists alike. Without further provocation, a few sessions of counterstrain can be quite effective, even for long-standing pain problems.

Practical Applications of Counterstrain Therapy

Evaluating the Patient for Therapy

To determine whether a patient might be helped by counterstrain, the practitioner must know the myofascial pain referral patterns as well as the associated visceral and autonomic symptoms. Once the clinician is familiar with the referral patterns, especially for the more common muscles, a search for tender points within those muscles can ascertain whether counterstrain is likely to be an effective therapy for that particular patient.

TABLE 109.1

Myofascial Pain Patterns Associated With Common Ailments

Headache and Neck Pain	Bowel Problems	Back Pain
Sternocleidomastoid	External abdominal oblique	Quadratus lumborum
Trapezius	Rectus abdominis	Longissimus thoracis
Levator scapulae	Iliacus	Multifidus
	Longissimus thoracis	Rectus abdominis

To help guide the search for culprit muscles, ask yourself what muscles are stretched when the pain worsens and then look for tender points within those muscles. If a patient complains of back pain and enters the office hunched over (back in flexion), an examination of the anterior muscles (rectus abdominis, external abdominal oblique, and iliacus) may very well yield significant tender points. The back pain in this patient would worsen when the patient is standing straight because of stretching of the anterior (abdominal) thoracic and lumbar muscles.

Myofascial pain is not limited solely to the somatic realm. Multiple examples of muscular pain stemming from the stomach and intestines exist, and ample evidence indicates neural feedback between the viscera and the muscles and vice versa. A thorough understanding of the somatovisceral relationships, followed by subsequent treatment of identified muscular disorders, can prove invaluable in patients who have failed to attain relief by pharmaceutical and other conventional methods (e.g., for gastroesophageal reflux disease, inflammatory bowel disease, irritable bowel syndrome, and the associated back pain).

Some ailments associated with the more common myofascial pain patterns are listed in [Table 109.1](#). More detailed lists can be found in the references.¹⁻³ Successful treatment of muscle disorders implicated in myofascial pain referral patterns can frequently spare patients unnecessary consumption of pain medications, sometimes prevent surgery (e.g., appendectomy for a tender point in the right lower external abdominal oblique muscle), and, of course, often provide pain relief.

Even if you should decide to refer patients elsewhere for treatment instead of endeavoring to treat them yourself, you must appreciate the contributions of myofascial patterns of pain. A clinician who is adept—or at least competent—in diagnosing myofascial contributions to pain and other dysfunctions will cultivate appreciative patients.

Counterstrain is also referred to as Positional Release Therapy.

History and Examination

Clues From History

Determine the probable initial or continuing source of pain or dysfunction. This can lead to a directed search for related myofascial referral. For example, a patient with upper back pain who has a history of chronic gastroesophageal reflux disease would prompt evaluation of upper tender points in the anterior rectus abdominis and external abdominal oblique muscles, in addition to posterior tender points, whereas a patient who has headaches and dizziness that began after she ran into a truck's side mirror, with resultant forceful turning of her head, may well have tender points in the sternocleidomastoid muscle.

Exacerbating and Alleviating Factors

Assess what positions the patient naturally assumes to alleviate the discomfort and what movements make it worse. Realize that shortening of the culprit muscle lessens pain and stretching of that muscle worsens it. In addition, active use of an afflicted muscle worsens the pain. For example, low back pain that worsens with lumbar extension could implicate the anterior abdominal muscles, whereas pain in the knee on rising from a sitting position would prompt an examination of the groin for a tender point in the rectus femoris muscle.

Feel the Tender Point

Attentively “listen” to the patient’s muscles with your fingers as you search for tender points. Closing your eyes and directing your full attention to the symphony of textures that your fingers encounter will markedly enhance your ability to appreciate tender points.

Treatment Logistics

Once the tender points have been discerned, treatment consists of *shortening* the affected muscles while they are in a *relaxed* state. This passively shortened position enables the constantly firing proprioceptors and nociceptors to sense that continual stretching is no longer occurring; thus they can finally turn down their signal intensity to a normal level. For this to happen, the treatment position must be precisely determined so that the muscle is optimally shortened. A solid knowledge of anatomy helps the counterstrain practitioner envision the correct position, and the palpable softening of the previously taut tender point confirms the optimum treatment position. Subjective input from the patient is also very helpful in finding the correct position. Palpation of the tender point initially elicits a painful sensation in the patient. However, when the patient is perfectly positioned for optimal shortening of the muscle, he or she will experience at least 70% improvement in the level of pain with palpation of the tender point. Often, complete amelioration of the pain with palpation at the tender point coincides with ideal muscle shortening, and the patient is incredulous that the palpating finger is still on the same tender point (as it should be throughout the treatment and after returning the patient to neutral position while the practitioner checks periodically for the texture and the subjective sensitivity of the tender point). Especially when a practitioner is first learning counterstrain, the patient’s subjective input regarding tenderness from firm palpation of the tender point can be very helpful in guiding his or

her proper positioning.

The final test for the efficacy of that position is to check for the disappearance of the tender point on returning the patient to a neutral position. Because the practitioner's finger remains on the tender point during the entire treatment, it is possible to reevaluate the consistency and sensitivity of the tender point after holding the optimum position for 90 seconds. If the maneuver is done correctly, the posttreatment tender point should no longer be tender (or should be at least 70% improved) and should no longer feel taut or ropey in the neutral position.

During counterstrain treatments, the patient is moved into and out of positions very slowly so as not to reset the inappropriate receptor firing with any rapid stretching. The optimal position must be held for 90 seconds to effectively turn off the inappropriately firing neurons. Counterstrain should not be painful, and the patient should not experience any discomfort (except the occasional gentle stretching sensation in muscles opposite to those being shortened). The patient must be instructed to alert the practitioner if any pain or discomfort is experienced, and the practitioner should adjust the position accordingly to ensure that the position is comfortable.

Precautions

Although this technique can be powerfully beneficial, a few potential warnings are in order. Occasionally, the patient will feel sore or have flulike symptoms for 24–48 hours after a treatment, as the inflammatory mediators and byproducts of anaerobic metabolism are released into the circulatory system. This phase typically does not last more than 48 hours, and the patient is usually markedly improved thereafter. A more serious caveat of treatment applies to patients with severe posttraumatic stress disorder (PTSD). Relief of chronic and debilitating pain may destabilize the psychological state of a tenuous patient with PTSD who has come to rely on pain as a distraction from mental trauma. Other than these precautions, if a patient is treated in a position of comfort, counterstrain can be an astonishingly effective, yet reassuringly benign, manual therapy to incorporate in your arsenal.

General Guidelines

Treat Referral Points First

Before you attempt to treat the tender points at the site of pain, search for

the important and common myofascial pain referral areas and treat those first. If a patient has a headache, first examine and treat the neck referral muscles (sternocleidomastoid, trapezius, and levator scapulae) before you begin to treat any tender points in the head itself. Approximately half the time, abolition of tender points in these referral muscles alone will resolve the head pain. Similarly, if a patient has sacral or buttock pain, you must evaluate and alleviate any tender points in the quadratus lumborum or longissimus thoracis muscles that refer pain to this area before trying to remedy any points in the piriformis or gluteus muscles themselves. If you fail to remove disorders in the offending *referral* muscles before addressing the tender points within the area itself, therapy will often be ineffective because the major culprit of the pain— anatomically removed from the site of the discomfort—will continue to cause symptoms until it is treated.

Order of Treatment

Once you have located the tender points, treat the most severe or the middle of a chain of tender points first. Sometimes, this approach can “turn off” adjacent or milder tender points.

Be Slow and Gentle

Move the patient into and out of position very slowly and gently. Ask the patient to tell you if he or she has any discomfort beyond the mild stretching of muscles on the side opposite the one being treated.

Listen to Your Fingers and the Patient

As you strive to position the patient so that the afflicted muscle is at its shortest length, the palpable softening of the texture of the tender point combined with the patient’s subjective assessment of the resolution of the discomfort noted during application of pressure to the tender point will guide you to the optimal position.

Hold

Hold the position for 90 seconds. This is how long it takes to reset the inappropriately firing nerves. If pain is long standing, you may need to hold the position for a minute or two more. Use the sensation that the tender point is dissolving to know when the patient can be returned to neutral position.

Check Response

Keep your fingers on the tender point during treatment, and occasionally check back to make sure the tender point is soft and painless. When you return the patient to neutral position after treating that particular muscle, recheck the tender point. It should be at least 70% improved for lasting therapeutic efficacy.

Variations in Position

Although each particular muscle has general guidelines to direct you to the correct position, each patient will differ in the extent needed to achieve ideal resolution of the tender point. Often, younger, more limber patients need more flexing, bending, or rotating, whereas older, stiffer patients experience complete tender point and pain relief with much less dramatic contortion of the body.

Anterior tender points tend to be treated in flexion, whereas posterior tender points tend to be treated in extension. The more lateral tender points tend to need more side-bending or rotation, whereas the more midline tender points tend to evoke more flexion or extension in their resolution.

Comfort Is Paramount

Always treat the patient while he or she is in a position of comfort. Counterstrain is an inherently low-risk therapy as long as the patient is comfortable during treatment. Obviously, extreme extension of the cervical spine (rarely used in counterstrain) should be undertaken with a degree of caution in the older adults or in young women and others more prone to vertebral artery issues.

Sequelae

Inform the patient that he or she may feel sore or have flulike symptoms for 24–48 hours after treatment. Most ailments need three or fewer treatments to resolve. If the pain persists beyond three sessions, the source of pain needs to be reevaluated.

Examples of the Technique

This section contains illustrations of referral patterns, tender points, and treatment positions for several muscle groups that are commonly involved in pain. This discussion provides just a short sample, and the reader should refer to referenced resources or continuing medical education for more information.^{2,3}

Headache, a common and frequently debilitating complaint, aptly illustrates the need for a clinician to be familiar with the myofascial pain patterns and also provides an example of the ease and efficacy of using counterstrain in clinical practice. Many headaches are associated with tender points in three noncranial muscles: the sternocleidomastoid, trapezius, and levator scapulae. These tender points are relatively easy to locate, and the positions of treatment can be readily learned. Because the neck is not extended, the risk of vertebral artery dissection is not a concern. Thus this is a rewarding set of muscles on which to learn the counterstrain technique. Consider checking to see whether these muscles are implicated in patients with migraines, stress headaches, or other head or neck pain complaints.

Trapezius Muscle

The trapezius muscle, an expansive muscle in the upper back, can have various trigger point locations. The trapezius muscle can refer pain from the posterior neck into the head and sometimes causes discomfort in the frontal sinus area. The two most common tender points (medial and lateral) that refer pain to the head and neck are found by pinching the uppermost area between the shoulder and the neck and are depicted by the Xs in [Fig. 109.2A](#).

Tender Points

- Tender points are located in the fibers of the upper part of the muscle at the junction of the neck and shoulder and are found by pinching the muscle between finger and thumb.
- Medial point: The medial point is found in the webbing at the junction of the neck and thorax (a gentle version of the *Star Trek* “Vulcan death grip”).
- Lateral point: The lateral point is found 1 or 2 cm more lateral than the medial point as you pinch out toward the shoulder.

Referral Pattern

- Medial point: Pain can be located at the angle of the jaw, behind the eye, and through the temporal region into the lateral neck.
- Lateral point: Pain is found in the suboccipital area through the posterior neck (see [Fig. 109.2B](#)).

Treatment Position

With patient lying on back:

- Medial points: Side-bend the patient's cervical spine toward the side of pain so the ear is moved toward the shoulder.
- Lateral points: Flex the patient's shoulders so that the arms are approximately 150–170 degrees overhead (so that the humerus is through the plane of the eyes), as shown in [Fig. 109.2C](#), and apply steady, gentle cephalic traction (in effect, moving the scapular attachments closer to the vertebral origins of the muscle).

Levator Scapulae Muscle

Chronic contraction within the levator scapulae muscle can be a frequent source of pain in the shoulders and the posterior neck, with radiation of pain into the occipital area. This condition is seen in people with tension and anxiety (chronic shoulder shrug), those who work extensively with a keyboard, or those who regularly hold a telephone between the ear and the shoulder. A hint that the levator scapulae is in need of treatment comes when a patient holds his or her contralateral hand over the area between the shoulder and neck and rubs the upper back with his or her fingers.

- Tender point: This point is located at the superomedial border of the scapula between the scapula and the nape of the neck ([Fig. 109.3A](#)). Slide your fingers medially over the scapular spine and move laterally to medially. When the spine of the scapula ends, hook your fingers up and onto the superior medial border of the scapula and press posterior to anterior and medial to lateral against the medial edge of the scapula.
- Referral pattern: Pain is felt in the posterior neck through the shoulder, with referral pain in the occipital area (see [Fig. 109.3B](#)).
- Treatment position: With the patient supine, side-bend the neck toward the side of the tender point. Flex the patient's shoulder to approximately 30–45 degrees with the elbow flexed. Abduct the shoulder slightly and apply a cephalic force through the shaft of the

humerus to elevate the scapula. It feels as though you are shoving the shoulder toward the ear (see [Fig. 109.3C](#)).

FIG. 109.2 The counterstrain technique applied to the trapezius muscle. See text for details. A, Tender points. B, Pain referral pattern. C, Treatment position for lateral trapezius points.

Sternocleidomastoid Muscle

This muscle is a myofascial culprit often implicated in headache, ear pain, or sinus symptoms. Additionally, the sternal branch attachment can

be associated with dry cough, whereas disorders of the clavicular belly of the muscle can be associated with postural dizziness and a sense of imbalance. Generally, patients do not actually complain of any discomfort in the anterior neck, and thus awareness of Travell's myofascial patterns of pain can be important in resolving the many headaches and other symptoms originating from dysfunction in the sternocleidomastoid muscle.

- **Tender point:** This is located anywhere in the body of either the sternal or the clavicular division of the muscle (or the sternal attachment in the case of cough). Pinch the belly of the muscle with your thumb and index finger to help find the tender point. Obviously, care should be taken to avoid carotid massage ([Fig. 109.4A](#)).
- **Referral pattern:** Pain is referred to the suboccipital, frontal, maxillary, or other areas of the head. Further symptoms stemming from the sternocleidomastoid muscle include ear, eye, or temporomandibular joint symptoms; dizziness or imbalance; and dry cough (see [Fig. 109.4B](#)).
- **Treatment position:** With the patient supine, support the head as you gently but markedly flex the neck, rotate the head away from the tender point, and side-bend it toward the tender point. Imagine coaxing the patient's ear toward either the sternum (for the sternal branch) or the clavicular insertion (for the clavicular branch). Sometimes, using a pillow helps the patient relax enough to soften the sternocleidomastoid muscle while the patient's head is elevated off the table (see [Fig. 109.4C](#)).

Piriformis Muscle

The sciatic nerve and the piriformis muscle are in close proximity ([Fig. 109.5](#)). In fact, in 5% of the population, the nerve runs through or over the muscle, thus making irritation of the nerve much more likely when the muscle is inflamed. This condition, called piriformis syndrome, is a common cause of buttock pain with radiation of pain down the back of the thigh. Before treating the piriformis muscle, be sure to assess for and treat any tender points in the quadratus lumborum and longissimus thoracis muscles because both these muscles can radiate to the sacral or buttocks area. The rectus abdominis and external abdominal oblique muscles can also be involved anteriorly.

FIG. 109.3 The manipulation technique applied to the levator scapulae muscle. See text for details. A, Tender point. B, Pain referral pattern. C, Treatment position.

- Tender point: This point is located within the piriformis muscle, which is 3 inches medial and slightly cephalad to the greater trochanter. Tender points can occur anywhere within muscle, which runs between the midsacrum and the greater trochanter of the proximal femur (see [Fig. 109.5A](#)).
- Referral pattern: Pain may occur in the buttock and the back of the

thigh (see [Fig. 109.5B](#)).

- Treatment position: The patient is prone. The therapist sits on the same side as the tender point. The patient's leg on the tender point side is suspended off the table, with the patient's anterior ankle resting on the therapist's thigh. Flex the patient's hip 120–130 degrees, adduct the hip to tolerance, and slightly rotate the hip internally by gently pulling outward on the foot (see [Fig. 109.5C](#)).

Benefits

The counterstrain technique is beneficial for the following reasons:

- It often provides immediate relief of discomfort. The benefits are frequently long lasting or even permanent, and they can usually be achieved in a few sessions.
- It readily and efficiently helps the body regain normal function and range of motion that may have been severely and chronically limited by a remote injury that led to continual myofascial dysfunction.

FIG. 109.4 The manipulation technique applied to the sternocleidomastoid muscle. See text for details. A, Tender point. B, Pain referral pattern. C, Treatment position.

- Not only is it comfortable for the patient to experience, but also counterstrain can be highly rewarding for the practitioner to perform. Counterstrain is easy to learn (especially using Myers' method of combining Travell's myofascial trigger point and Jones' positioning) and not difficult to master at an advanced level.
- It enables you to touch the patient and thereby increase a sense of

caring and rapport in a time when technology is creating barriers between practitioner and patient.

- In addition to treating pure somatic pain, counterstrain can help relieve visceral symptoms and the associated somatic pain resulting from somatovisceral or viscerosomatic neural feedback loops.
- It uses a position of comfort, with almost negligible inherent risk to the patient.
- The acquisition of this technique can be readily accomplished by most medical practitioners who have a fundamental medical or anatomical knowledge base.

Limitations

The limitations of counterstrain therapy are as follows:

- Although pain relief is usually permanent, in some cases pain can recur. Recurrence is more likely when the initial source of injury is not adequately addressed.
- A somewhat localized technique such as this may not be the most effective approach for treating a patient with diffuse and disseminated tender points (e.g., fibromyalgia). In addition, it may not be as rewarding when treating someone with frequent or continuous recurrent reinjury (e.g., as seen in untreated Crohn's disease or gastroesophageal reflux disease in which the visceral problem restimulates the somatic disorder).

FIG. 109.5 The manipulation technique applied to the piriformis muscle. See text for details. A, Tender point. B, Pain referral pattern. C, Treatment position.

- The technique is conceptually easy to learn, but it takes practice to become thoroughly adept at it. The practitioner should start by becoming familiar with the common and important muscle groups and then progress from there.
- When able, one should begin the counterstrain technique by practicing on children because their limited soft tissue mass allows for easy

identification of tender points and their small frames enable ready maneuverability into treatment positions.

- If psychological problems are not addressed, a patient who “needs” somatic pain to maintain equilibrium can become destabilized. Close coordination with a mental health professional is recommended in patients with a history of severe psychological issues or with significant PTSD before attempts are made to relieve the somatic pain.

CHAPTER 110

Acupuncture for Headache

Aaron J. Michelfelder, MD

Overview

Acupuncture is the technique of piercing the skin with needles at specific points on the body to treat or prevent various conditions. Acupuncture has been used for thousands of years by practitioners in many different cultures and societies around the world. Because acupuncture has become more popular, physicians should have at least a basic working knowledge of the technique. The best physicians use all their knowledge of integrative medicine to provide the most comprehensive care available to patients.

Acupuncture points are not random. They are palpable and often correspond to depressions in muscles or bones or to neural foramina. An acupuncture point usually has its own neurovascular bundle, which distinguishes it from the surrounding tissue, and is sometimes quite tender to palpation. In traditional Chinese medicine (TCM), these points connect to energy (qi) channels, called *meridians*, within the body. Fourteen principal meridians (6 bilateral [12 in total] and 2 central) are recognized, typically named after organs of the body: kidney (KI), heart (HT), small intestine (SI), bladder (BL), liver (LV), master of the heart (MH) also called pericardium or (P), triple heater (TH), gallbladder (GB), spleen (SP), lung (LU), large intestine (LI), stomach (ST), conception vessel (CV), and governor vessel (GV).

Mechanism of Action

The exact mechanism of action of acupuncture is unclear. However, significant evidence indicates that acupuncture effects changes in the muscles where the needle is inserted, changes starting at nerves near the

needle and passing all the way up to the higher cortex, and changes in circulating and local hormones, cytokines, neurotransmitters, and other body chemicals.¹

Safety of Acupuncture

Because of the use of sterile needles to pierce unsterilized skin, serious adverse reactions to acupuncture are very rare. A systematic review of the world literature on prospective studies of the safety of acupuncture revealed that in nine trials involving tens of thousands of treatments, pneumothorax was the only life-threatening complication, and it occurred twice; infections did not occur at all.² A prospective survey of 34,000 treatments by traditional acupuncturists in the United Kingdom found no serious adverse events.³ In the largest prospective trial to date, involving 97,733 patients and more than 760,000 treatments performed by 7050 physicians in Germany, pneumothorax was found to occur twice, and one occurrence each of exacerbation of depression, acute hypertensive crisis, vasovagal reaction, and asthma attack with hypertension and angina was observed.⁴ The most commonly reported reactions were needling pain in 3.28%, hematoma in 3.19%, bleeding in 1.38%, and orthostasis in 0.46% of patients. Overall, nonserious adverse events were reported to occur in 7.1% of patients.⁴

Training in Acupuncture

Laws concerning the practice of acupuncture are defined by each state. Practitioners include the following: licensed acupuncturists, who have completed at least 3 years of training at a college of Oriental medicine; chiropractors, who receive variable amounts of training in chiropractic school but may have additional training after chiropractic school; and physicians and dentists who have completed acupuncture training courses outside their regular professional training. For physicians to practice acupuncture, some states require no training at all, others require 200 hours, and some mandate 300 hours of acupuncture training. Board certification is available to physicians through the American Board of Medical Acupuncture. Details on physician training and licensure can be found on the website of the American Academy of Medical Acupuncture (see the [Key Web Resources](#)).

Techniques

Technique for Acupressure

Acupressure is essentially massage, but with the purpose of stimulating an acupuncture point for a desired effect. Acupressure can also be used to relax trigger points, as well as other areas of spasm within muscles that may or may not be acupuncture points.

The technique is to find the point or area to be stimulated as follows:

1. With your index finger or thumb, start superficially and apply just enough pressure to move the skin.
2. Move the finger or thumb in gentle, slow circles.
3. With every few circles, apply more and more pressure until you feel the muscle fibers beginning to relax beneath your fingers. If you are stimulating an area without a muscle, such as over the supraorbital foramen, just keep applying slow, steady, downward, circular pressure over the foramen.
4. With the stimulation of an acupuncture point, the patient should eventually feel a dull, aching sensation. Stimulation of the point should last at least several minutes, past which the patient feels this aching sensation. You may have to apply acupressure intermittently, such as for a few minutes, several times an hour.

This technique is a good one to teach patients to perform on themselves for problems such as sinus headaches and pressure.

Technique for Acupuncture

Acupuncture needles come in all sizes, ranging from very thin (approximately 40 gauge) to much thicker (up to 20 gauge). An acupuncture needle comes with a very sharp point and has a plastic or wrapped metal handle. Because acupuncture needles are not hollow like phlebotomy needles, they are believed to separate tissue more than to cut it ([Fig. 110.1](#)).

1. After the desired acupuncture point is found, palpation of the point is important to prepare the body for the needle ([Fig. 110.2](#)).

FIG. 110.1 Package of acupuncture needles.

FIG. 110.2 Palpation.

2. A very small needle may need an introducer, which is included with most needles. The introducer is a plastic tube, which is a few millimeters shorter than the needle. Place the introducer on top of the acupuncture point, and then, drop the needle into the introducer (Figs. [110.3](#) and [110.4](#)). The handle of the needle will protrude a few millimeters from the top of the introducer.
3. Holding the introducer between the thumb and third finger of your dominant hand, tap the needle into the skin using your index finger (Figs. [110.5](#) and [110.6](#)). With practice, the right amount of force needed to pierce the skin is simple to recognize.
4. After the initial tap of the needle into the skin, carefully remove the introducer. Then, the needle may be pushed in deeper and angled to the desired location. Typically, the needle enters the body of a muscle, but the depth depends on the acupuncture point. A point on the back of the neck may be 2–3 cm deep, but a point on the forehead may only be a few millimeters deep.

Inserting the needles without the plastic introducer requires some training and supervision and is beyond the scope of this chapter.

FIG. 110.3 Positioning the introducer.

FIG. 110.4 Needle in introducer.

FIG. 110.5 Tapping needle into place.

FIG. 110.6 Needle in place.

Once a needle has been inserted, it can either be stimulated or left alone. If it is left alone, the coiled handle and temperature difference between the needle tip in the body and the needle handle at room temperature will cause electrons to move from inside the body into the needle. Inserting a needle and then leaving it alone is called *needle in dispersion*. The needle becomes a capacitor removing electrons from the body. In TCM, this action is believed to be calming, cooling, and depleting.

To add electrons to the body, the needle can be stimulated by a back-and-forth twirling action, which the acupuncturist achieves by rotating the needle approximately 180 degrees, alternating clockwise and counterclockwise. The needle can also be stimulated by warming with something like Chinese moxa, an herb pressed into an incense-like stick that, when lit, smolders and emits a steady stream of heat. Electrical stimulators are very popular and may be connected to the needles in a circuit to add electron flow from one needle to another. This is the process for percutaneous electrical nerve stimulation (PENS), the acupuncture version of transcutaneous electrical nerve stimulation

(TENS). Lasers can also be used to stimulate acupuncture points with or without needles.

Both acupuncture and acupressure can be used to stimulate acupuncture points. Patients can be taught to perform their own acupressure, thus empowering them to help themselves.

Evidence for Acupuncture in Headache

The allopathic tradition of the randomized placebo-controlled clinical trial is very difficult to apply to acupuncture. Defining placebo acupuncture is challenging because many people argue that any needle piercing the skin is acupuncture. Many studies use no acupuncture as the control intervention, or they use sham acupuncture, which usually means inserting needles into places that are not acupuncture points. Some studies have tried to use acupressure as the control. In any case, many studies have been unsuccessful in blinding patients or the clinicians regarding whether they had acupuncture, and the acupuncturist is certainly not blinded regarding whether traditional or sham acupuncture is being used on the patient. Many studies also use protocols whereby every patient receives the same treatment. Most acupuncturists individualize the acupuncture treatment to each patient and modify treatments based on response to earlier treatments.

To put acupuncture studies into context, the U.S. Food and Drug Administration requires only two studies of a drug to show that the drug is better than placebo before the agent can be approved. A drug could show neutral results in many studies, but as long as two studies have positive results, the drug can be approved for use. Possibly because of the difficulties in experimental design, many studies of acupuncture have had positive results and many have had neutral results.

In 1999, Melchart et al.⁵ performed a review of 22 randomized controlled trials of acupuncture for headache involving 1042 patients from European countries. These reviewers concluded that the trials tended to be small and had methodological problems; however, the evidence suggested a role for acupuncture in headache treatment.⁵ In a well-designed trial reported in 2004, Vickers et al.⁶ studied acupuncture in 401 patients with chronic headaches in the United Kingdom. Subjects underwent either acupuncture treatments once a week for 3 months or

no acupuncture. Over 1 year, the decrease in headache score was 34% in treatment group versus 16% in the control group. In addition, the treatment group was found to have 20 fewer days of headache per year, 15% less medication use, 25% fewer visits to the general practitioner, and 15% fewer days off work. Wonderling et al.,⁷ examining the cost effectiveness of acupuncture for headaches in the United Kingdom, found that acupuncture improved health-related quality of life at a small additional cost and was relatively cost effective.

Two Cochrane Collaboration reviews of acupuncture performed meta-analyses of available acupuncture trials for headache. The first meta-analysis of acupuncture trials included 22 studies with a total of 4419 patients in whom acupuncture was used for migraine prophylaxis. The reviewers concluded that “these studies suggest that acupuncture is at least as effective as, and possibly more effective than, prophylactic drug treatment and has fewer side effects.” They recommended acupuncture as a treatment option for patients with migraines.⁸ The second meta-analysis concerned acupuncture for tension headaches and included 11 trials with a total of 2317 participants. The reviewers found that patients had a statistically significant reduction in the number, frequency, and intensity of tension headaches over 3 months, but none had studied effects beyond 3 months. The reviewers concluded that “acupuncture could be a valuable nonpharmacological tool in patients with frequent episodic or chronic tension-type headaches.”⁹

Yang et al. compared acupuncture to topiramate for chronic migraine prophylaxis and found that the acupuncture group had a larger decrease in moderate to severe headache days, and adverse events occurred in 6% of the acupuncture group compared with 66% of the topiramate group.¹⁰ Additionally, several studies have shown acupuncture to be cost effective when compared with the cost of medications and days or work lost.^{11,12} A recent review of all available evidence for acupuncture in migraine prevention concluded that “acupuncture seems to be at least as effective as conventional drug therapy for migraine and is safe, long lasting, and cost effective.”¹³

The latest evidence shows that acupuncture is helpful in treating headaches.

Selecting Acupuncture and Acupressure Points

Selection of acupuncture or acupressure points for the treatment of headaches should proceed as follows:

1. Start with general relaxation or calming points.
2. Release trigger points in the posterior cervical region.
3. Depending on the type of headache, use local points.

General Relaxation and Calming Points

Governor Vessel 20

The GV20 point is located at the top of the head, over the sagittal suture, which is created by the closure of the posterior fontanelle. Often, a bony ridge is present at this point. Visually, GV20 can be found by tracing an imaginary line from the ear lobes up through the middle of the top of the ears (the helix) and up to the midline. The point where that line crosses the sagittal suture (midline) is the GV20 point. Acupressure can be applied to this point, or a needle can be inserted here and left in dispersion ([Fig. 110.7](#)).

FIG. 110.7 The governor vessel 20 (GV20) acupuncture point.

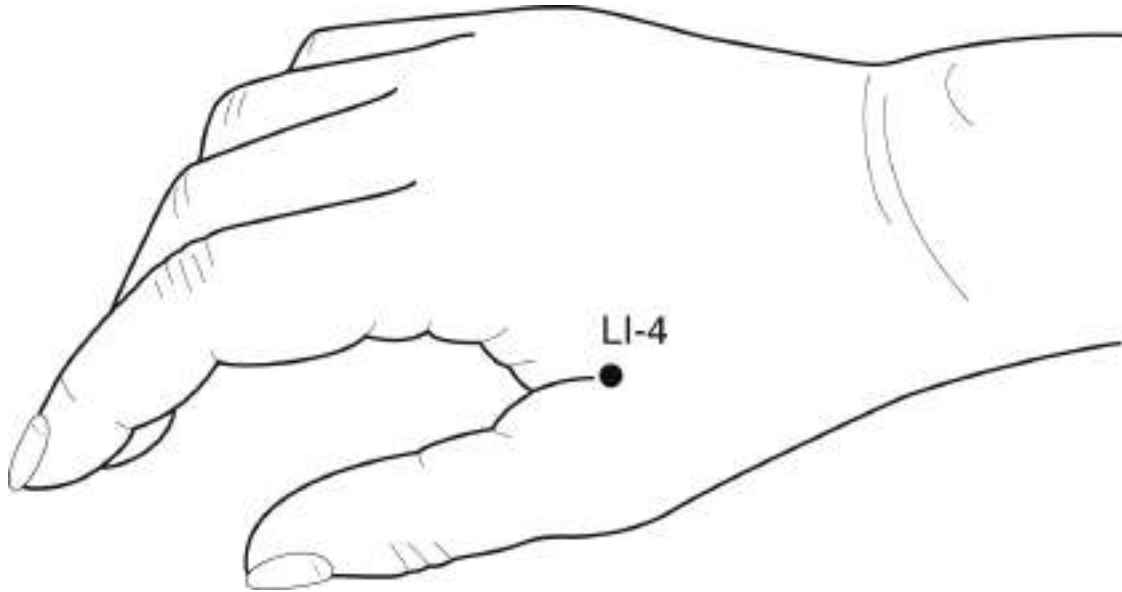

FIG. 110.8 The large intestine 4 (LI4) acupuncture point.

Large Intestine 4

The LI4 point is located in the body of the first interosseus muscle in the hand, between the first and second metacarpal bones. This point is usually tender, and patients can easily perform acupressure to this point bilaterally on themselves ([Fig. 110.8](#)).

Trigger Points in the Cervical Region

People with headaches tend to have stiff posterior cervical muscles. Massage, heat, chiropractic and osteopathic manipulation, acupressure, trigger point injections, and acupuncture can all help release the muscle spasm.

Gallbladder 20

The GB20 point is located at the base of the skull, posteriorly, between the insertions of the sternocleidomastoid and the trapezius muscles. Start by placing the thumb and index finger of one hand on the mastoid processes and then slide them posteriorly. Your fingertips will “fall into” two depressions at the base of the skull. Superiorly, you will feel the skull. On the either side of your fingers, you will feel the sternocleidomastoid or trapezius muscles ([Fig. 110.9](#)).

FIG. 110.9 The gallbladder 20 (GB20) acupuncture point.

Palpate all the muscles of the posterior neck from the base of the skull

down to the shoulders. Any tender points or areas of spasm should be addressed with massage, acupuncture, or acupressure.

Local Points

Frontal Headaches

For frontal headaches, including sinus, tension, and migraine, the GV24.5 may be used. This point is located on the glabella between the eyebrows ([Fig. 110.10](#)).

Sinus Headaches

- Bladder 2: The BL2 point is located at the frontal notch, just medial to the supraorbital foramen (see [Fig. 110.10](#)). Insert the needle from above.
- Stomach 2: The ST2 point is located lateral to the nose in a depression where the infraorbital foramen is found. Needle this point starting laterally, aim toward the medial canthus of the eye, and insert the needle subcutaneously (see [Fig. 110.10](#)).

FIG. 110.10 Acupuncture points governor vessel 24.5 (GV24.5), bladder 2 (BL2), and stomach 2 (ST2).

Tension Headaches

- Temporal muscle tender points: Palpate the muscles of the scalp carefully, and perform acupressure or acupuncture at any tender areas or regions of spasm found, especially in the temporal region.

Migraines and Cluster Headaches

Migraines and cluster headaches are complicated to treat with acupuncture. Follow the same principles of general relaxation points, then cervical points, and then GV24.5. After these procedures, search for any tender points on the scalp. If needling tender points on the scalp does not provide satisfactory relief, a more systemic approach with acupuncture may be more successful. Such an in-depth approach is beyond the scope of this chapter.

During an Acupuncture Treatment

Needles stay in place for approximately 30 minutes. Patients should be relaxing in a comfortable room with the lights low and perhaps some calming music in the background. Distractions should be minimized.

Remove acupuncture needles as follows:

1. Place one finger on the skin next to the needle.
2. While holding your finger in place, use the other hand to gently pull the needle out.
3. Sometimes a drop of blood may be released. Applying pressure is not necessary; simply dab the blood away with sterile gauze.

Posttreatment Home Program

Patients are instructed to moderate their activity for 24 hours after a treatment. They should avoid very hot or very cold foods or liquids, consumption of alcohol, sexual activity, and other physically demanding activities. They should also drink plenty of water and get adequate sleep.

Patients can continue to perform acupressure on themselves starting 24 hours after the treatment. A good approach is to stimulate GV20, LI4, and local neck and head points twice a day or as needed.

Ideally, acupuncture is integrated into a regimen of headache trigger avoidance, healthful diet, exercise, and stress reduction as well as possible medication therapy. Acupressure is a great way to empower patients to take control of their own symptoms.

What to Look for in an Acupuncturist

A physician acupuncturist should have completed training in one of the programs approved by the American Board of Medical Acupuncture. Board certification in medical acupuncture identifies individuals who have completed at least 200 hours of training, passed a board examination, practiced at least 2 years, and performed at least 500 acupuncture treatments.

A nonphysician acupuncturist should be licensed. The letters “L.Ac.” should follow a licensed acupuncturist’s name. In addition, the National Certification Commission for Acupuncture and Oriental Medicine has a database of certified acupuncturists (see the [Key Web Resources](#)).

Conclusion

- Training for physicians to learn acupuncture is available through several continuing medical education programs.
- Acupuncture is useful for treating headaches, and patients can be taught acupressure to empower them to take control of their own health.
- In treating headaches: (1) start with general relaxation points (GV20, LI4), (2) release trigger points in the posterior cervical region (GB20 and any tender points), and (3) depending on the type of headache, use local points.
- For referral, look for a physician acupuncturist, licensed acupuncturist, or chiropractor with documented training and, ideally, certification in acupuncture.

CHAPTER 111

Acupuncture for Nausea and Vomiting

Aaron J. Michelfelder, MD

Overview

For an overview of acupuncture, its mechanism of action, its safety, and training as well as techniques for performing acupuncture and acupressure, please see [Chapter 110](#).

Extensive data are available concerning the use of acupuncture and acupressure for nausea and vomiting, especially with regard to the following causes or types of these conditions:

- Postoperative status
- Chemotherapy
- Pregnancy
- Motion sickness

Postoperative Nausea and Vomiting

In 1997, the National Institutes of Health (NIH) convened a panel of nonadvocate scientists to assess the current evidence concerning acupuncture and its efficacy. At that time, the panel concluded that clear evidence indicated that acupuncture was effective for adult postoperative and chemotherapy-induced nausea and vomiting.¹ Since then, six studies have also demonstrated its efficacy in preventing postoperative nausea and vomiting in children.²⁻⁴ A 2004 Cochrane Review of 26 trials involving 3347 children and adults showed that in comparison with controls, acupuncture, with and without electrical stimulation, and acupressure were effective in decreasing the incidence

of postoperative nausea and vomiting.⁵ When compared, acupuncture and acupressure were equivalent to antiemetic drugs in preventing vomiting but were actually better in preventing nausea.⁵ A Cochrane meta-analysis including 40 trials with a total of 4858 participants looked specifically at stimulation of the wrist acupuncture point pericardium 6 (PC6) for preventing postoperative nausea and vomiting.⁶ The reviewers found that acupuncture and acupressure at the PC6 acupoint significantly reduced the risk of postoperative nausea and vomiting when compared with sham in both children and adults. The reviewers also found that PC6 stimulation was equivalent to antiemetic drugs.⁶ Another meta-analysis of 21 studies from 1996 to 2009 showed that acupuncture reduced nausea but not vomiting when compared with antiemetic prophylaxis alone.⁷

Chemotherapy-Induced Nausea and Vomiting

As previously stated, the 1997 NIH Acupuncture Consensus Panel concluded that acupuncture was effective for chemotherapy-induced nausea and vomiting. Dundee and Yang⁸ found that acupressure was effective for decreasing nausea in hospitalized patients but worked much better when the acupressure bands were stimulated every hour. In an attempt to make this effect stronger, these investigators performed acupuncture with electrical stimulation in 105 patients, all of whom had had nausea and/or vomiting after an earlier chemotherapy treatment. This treatment prevented nausea and/or vomiting in 66% of patients and only 6% did not have any benefit from the acupuncture.⁸ A meta-analysis of 11 studies including 1247 patients found that self-administered acupressure prevented chemotherapy-induced nausea and vomiting, and electroacupuncture also had a positive effect.⁹ The reviewers concluded that these studies suggested a biological effect of acupuncture in preventing and treating chemotherapy-induced nausea and vomiting.⁹

Pregnancy-Related Nausea and Vomiting

The data for the use of acupuncture in pregnancy-related nausea and vomiting are equivocal.¹⁰ A Cochrane Review of available studies found limited evidence to support the use of wrist and ear acupressure or

acustimulation to treat pregnancy-related nausea and vomiting and cited the need for higher-quality, more focused studies in this area.¹¹

Motion Sickness

Several devices, including those for acupressure and electrical stimulation, have been approved by the U.S. Food and Drug Administration for the prevention of motion sickness. Hu et al.¹² reported that acupressure reduced the symptoms of motion sickness and decreased abnormal gastric myoelectric activity and tachyarrhythmia. However, Miller and Muth,¹³ who tested two available acupressure and acustimulation bands for the prevention of motion sickness, found that the devices delayed the onset of, but did not prevent, the sickness.¹⁰

FIG. 111.1 The master of the heart (MH6; also called pericardium 6 [PC6 or P6]) acupuncture point.

Acupuncture and acupressure are effective for postoperative and chemotherapy-induced nausea and vomiting, but data are equivocal for pregnancy-induced nausea and vomiting as well as for motion sickness. Acupuncture, with or without electrical stimulation, and acupressure appear to be equivalent to antiemetic drugs for the prevention of nausea and vomiting.

Acupuncture Points for Nausea and Vomiting

Naming of acupuncture points and techniques for performing acupuncture and acupressure is discussed in [Chapter 110](#).

Three main points are relevant to this discussion: (1) master of the heart 6, also called PC 6 (MH6, PC6, or P6), (2) stomach 36 (ST36), and (3) liver 3 (LV3).

Master of the Heart 6

MH6 is located on the anterior surface of the wrist, approximately three fingerbreadths proximal to the distal wrist crease. It lies between the tendons of the flexor carpi radialis and palmaris longus muscles. Because the median nerve can be very superficial, insert the needle only a few millimeters under the skin, starting proximally, and direct it very superficially toward the hand. Warn the patient that if he or she feels a shooting or shock-like sensation into the hand, it is nothing harmful, and slightly withdraw without removing the needle tip from the skin and then redirect the needle more superficially ([Fig. 111.1](#)).

Stomach 36

ST36 is a depression in the anterolateral aspect of the shin, between the tibialis anterior and extensor digitorum longus muscles. You can find this point by placing your thumb on the anterior border of the tibia and sliding superiorly. Where the tibia starts to fan out near the patella (tibial tuberosity), allow your thumb to travel laterally until it encounters a depression approximately six fingerbreadths below the patella and one fingerbreadth lateral to the tibial tuberosity. The needle is inserted perpendicular to the skin, approximately 1–2 cm deep, and is stimulated

with clockwise and counterclockwise twisting ([Fig. 111.2](#)).

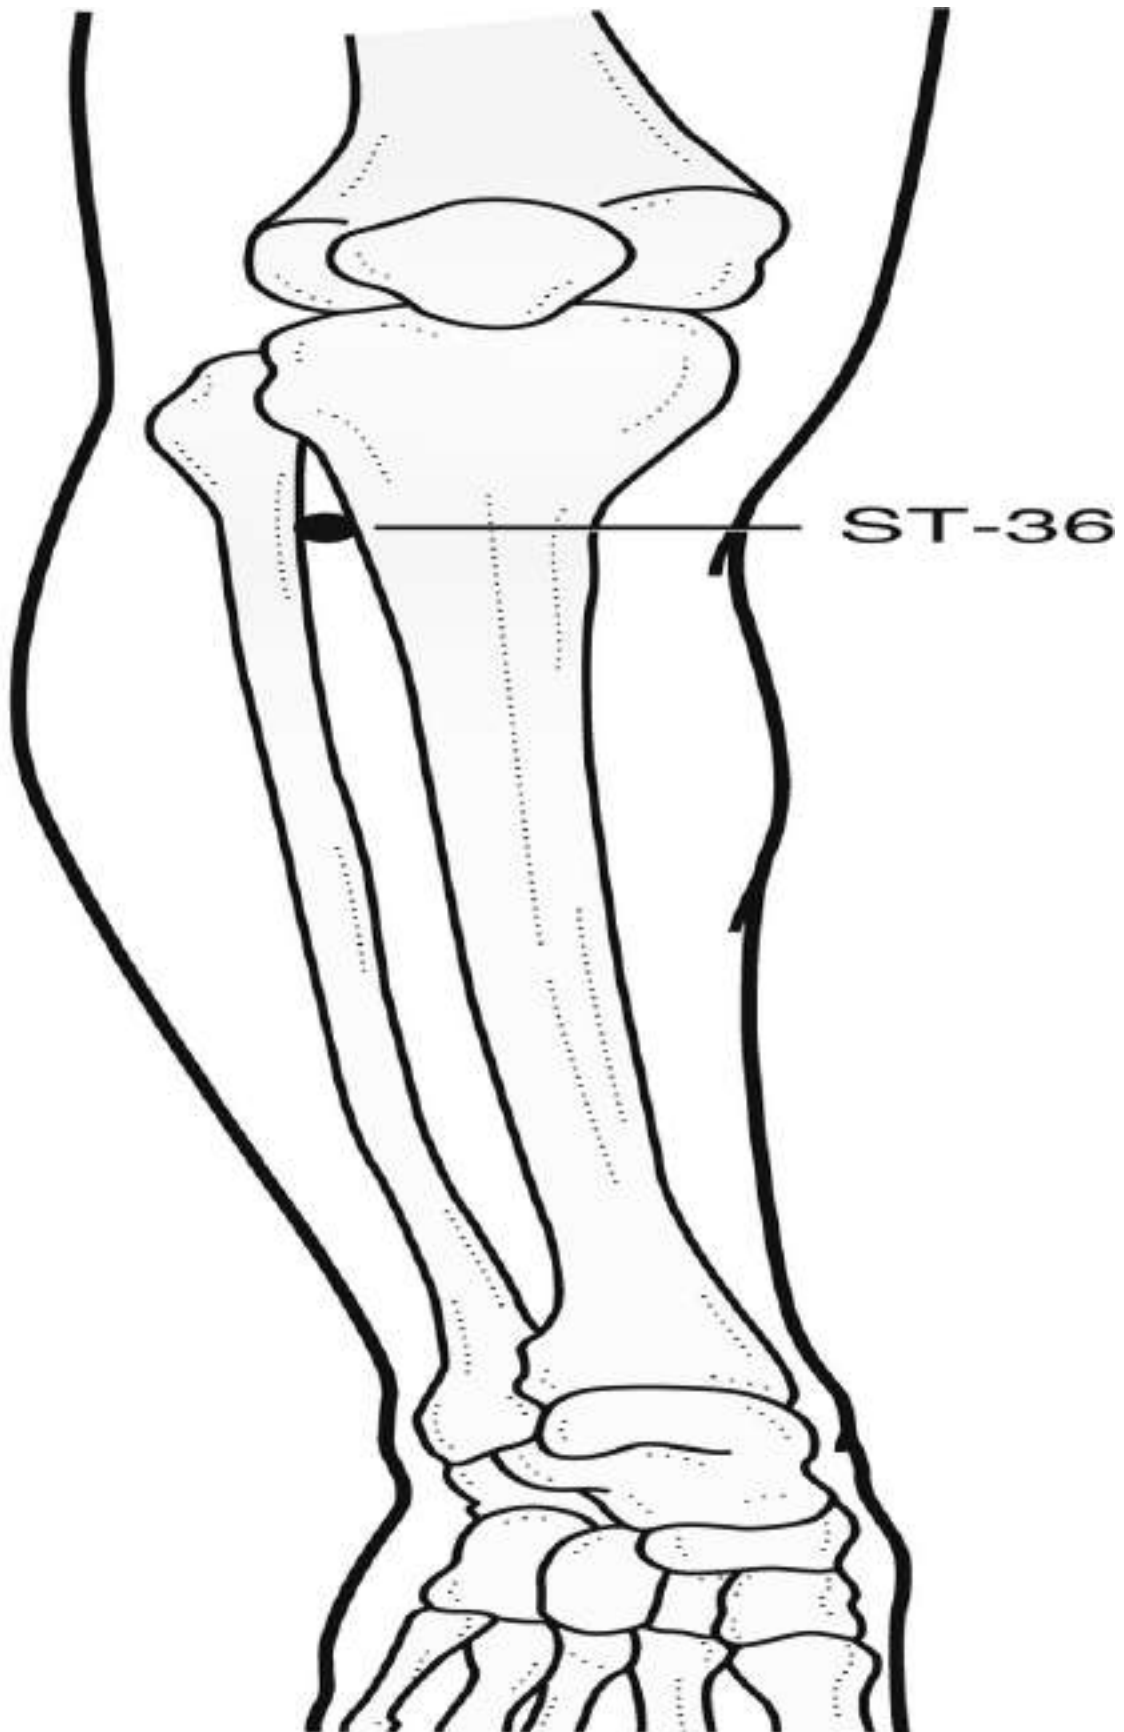

FIG. 111.2 The stomach 36 (ST36) acupuncture point.

Liver 3

LV3, also a very important point for the treatment of nausea and vomiting, is located on the dorsum of the foot between the first and second metatarsal bones. If you place a finger between the first and second toes and slide it up the foot between the first two metatarsal bones, LV3 is the last place where you can access the underlying muscle between those two bones. The needle is directed toward the tip of the calcaneus and is inserted to a depth of approximately 1 cm ([Fig. 111.3](#)).

Practical Use of These Points

To prevent nausea, stimulate the MH6 point, either with acupressure (using a finger, a commercially available acupressure band, or an acustimulator) or acupuncture. To treat nausea and vomiting, start with MH6 and then add ST36 with stimulation and LV3 in dispersion (see [Chapter 110](#) for the distinction between stimulation and dispersion).

During an Acupuncture Treatment

For the prevention of nausea, needles should be placed at least 30 minutes before the antiemetic effect is needed and continued for as long as required. For the treatment of nausea and vomiting, needles should stay in for as long as needed. Patients should be relaxing in a comfortable room with the lights low and perhaps some calming music in the background. Distractions should be minimized.

FIG. 111.3 The liver 3 (LV3) acupuncture point.

Remove acupuncture needles as follows:

1. Place one finger on the skin next to the needle.
2. While holding your finger in place, use the other hand to pull the needle out gently.
3. Sometimes a drop of blood may be released. Applying pressure is not necessary; simply dab the blood away with sterile gauze.

Posttreatment Home Program

Patients are instructed to moderate their activity for 24 hours after a treatment. They should avoid very hot or very cold foods and liquids, consumption of alcohol, sexual activity, and other physically demanding activities. They should also drink plenty of water and get adequate sleep.

Patients can continue to perform acupressure on themselves whenever needed. Acupressure is a great way to empower patients to take control of their own symptoms.

What to Look for in an Acupuncturist

A physician acupuncturist should have completed training in one of the programs approved by the American Board of Medical Acupuncture. Board certification in medical acupuncture identifies individuals who have completed at least 200 hours of training, passed a board examination, practiced for at least 2 years, and performed at least 500 acupuncture treatments.

A nonphysician acupuncturist should be licensed. The letters “L.Ac.” should follow a licensed acupuncturist’s name. In addition, the National Certification Commission for Acupuncture and Oriental Medicine has a database of certified acupuncturists (see the [Key Web Resources](#)).

Conclusion

- Acupuncture has been shown to be effective for the prevention and treatment of postoperative and chemotherapy-induced nausea and vomiting. Acupuncture may be helpful for the prevention of pregnancy-induced nausea and vomiting as well as motion sickness.

- For the prevention of nausea, stimulate the MH6 point with acupuncture, acupressure, or electrical stimulation.
- To treat nausea and vomiting, use MH6, but also add ST36 with stimulation (clockwise and counterclockwise twisting action) and LV3 in dispersion (needle left alone).
- For more information about learning acupuncture, visit the American Academy of Medical Acupuncture Web site (see the [Key Web Resources](#)).

CHAPTER 112

Prolotherapy for Chronic Musculoskeletal Pain

David Rabago, MD, Bobby Nourani, DO, and Michael J. Weber, MD

Introduction and History

Prolotherapy is an injection-based therapy for chronic musculoskeletal pain conditions.¹ Originally termed “sclerotherapy” because of the early use of scar-forming sclerosants or procedures, prolotherapy has been used in a form recognizable to contemporary medical practitioners for at least 80 years; the earliest report appeared in the peer-reviewed allopathic literature in 1937 for temporomandibular joint syndrome.² Modern applications and contemporary injection techniques were formalized by George Hackett, a general surgeon in the United States, based on clinical experience.³ “Sclerotherapy” was replaced by “prolotherapy” (from “proliferant therapy”) based on the observation that newer injectants did not cause scar formation, rather ligamentous tissue sometimes exhibited a larger cross-sectional area after prolotherapy injection in animal models.³ Because of the purported effects of prolotherapy on degenerative tissue, including revitalization and reorganization, it has also been categorized as a “regenerative” injection therapy by some researchers.⁴

The term prolotherapy has evolved from sclerotherapy and some now refer to this as “regenerative” injection therapy. Prolo = proliferant.

The popularity of prolotherapy appears to be increasing among patients and physicians; however, data on the prevalence of its use are limited. The current number of medical providers who offer

prolotherapy is not known but is likely several hundred in the United States based on attendance at continuing medical education (CME) conferences and physician listings on relevant websites.

What Is Prolotherapy?

Prolotherapy commonly consists of several injection sessions conducted every 2–6 weeks over the course of several months. Hypertonic dextrose is the most common injectant; this chapter will refer to the basic science and clinical effects of prolotherapy using dextrose injection. During an individual prolotherapy session, a dextrose solution is injected at sites of tender ligament and tendon attachments and in adjacent joint spaces.⁵ Injected solutions are hypothesized to cause local irritation, with subsequent inflammation and anabolic tissue healing,^{6,7} improving joint stability, biomechanics, function, and ultimately, decreasing pain.^{3,8} A pain control mechanism at the tissue level is not well elucidated; however, it is likely multifactorial, involving effects in multiple tissue types and plane, and associated with both the physical injection procedure and biological effects of the injectant.

Basic Science

Animal model studies suggest an injectant-specific biological effect and have focused on inflammation and ligamentous size and strength. Dextrose has been reported to produce a local inflammatory response in a rat knee ligament model.⁹ Injured medial collateral rat ligaments that were injected with dextrose had a significantly larger cross-sectional area than both noninjured and injured saline-injected controls.¹⁰ In a rabbit model, flexor retinaculum tissue showed greater strength (load absorption) and tissue thickness than in saline-injected controls.¹¹ More recent evidence has suggested that dextrose has a pain-specific sensorineural mechanism associated with neuroinflammation, currently understood to play a role in osteoarthritic pain.¹²⁻¹⁴ Clinically, dextrose may reduce pain via a sensorineural mechanism in patients with stable knee cartilage volume.¹⁵ Patients with Achilles tendinopathy who received dextrose prolotherapy injections that targeted sensory nerves and exercise reported improvement compared with exercise alone ($P = .007$).¹⁶ Both reports suggest that injected dextrose acts on relevant chronic pain receptors to reduce neurogenic inflammation and decrease

subsequent pain; however, these are preliminary reports, and the specific mechanism is unknown.

In addition to treatment of weakened ligaments and tendons and intraarticular joint space, recent attention has been given to the healing of fascia as a potential contributing mechanism in prolotherapy.¹⁷ Fascia, the network of connective tissue found throughout the body, surrounds muscles, nerves, and organs, creating a complex support apparatus for structure and form, and a mode of transmission for tension forces. Growing evidence suggests that fascial integrity is essential to the proper function of the organism as a whole. Repetitive motion injuries such as tendinopathy and other traumatic injury disrupt fascial integrity; damage is reported to play a role in chronic pain, myofascial disorders, trigger points, and fibrotic scar formation.¹⁸⁻²¹ A solution with proliferant properties, such as dextrose, injected into dysfunctional fascial layers may have a number of potential effects, including reorganization of collagen, improved fascial glide between layers, decreased tension between neuromuscular structures, and overall decreased burden of compensatory patterns, all of which could improve function and thereby reduce pain.

Clinical Research

Throughout the twentieth century, practitioners of prolotherapy reported clinical findings. As prolotherapy is primarily practiced and taught outside of academia, the scientific literature is clinically focused and contains few randomized clinical trials (RCTs). A systematic review of prolotherapy for all indications found 42 published reports from 1937–2005.¹ Thirty-six were case reports or case series and reported positive findings in patients with chronic, painful musculoskeletal conditions refractory to then-current best care. Methodological strength varied widely and was generally consistent with publication date. Older reports document injectants and methods no longer used. While these pragmatic studies often lacked control groups and randomization, their strength lies in the assessment of prolotherapy in clinical settings experienced by patients and included the clinician's ability to select the patient and to individually tailor the injection protocol. Most of the participants assessed were treated for low back pain (LBP). However, other indications included in these early studies included knee osteoarthritis (OA), shoulder dislocation, neck strain, costochondritis, lateral epicondylitis, and fibromyalgia.¹

The publication rate and methodological quality of studies assessing prolotherapy for clinical indications have increased since the mid-1980s ([Fig. 112.1](#)).

Prolotherapy has been best assessed for three distinct sets of conditions: OA, tendinopathy, and LBP. Each is a cause of significant pain and disability and is often refractory to best-practice therapies. Finding new effective therapies for these conditions can have an impact on both individual patient care and overall public health. The following section gives a brief description of studies assessing prolotherapy in these clinical indications, and the level of evidence associated with each condition ([Table 112.1](#)).

Osteoarthritis

Prolotherapy has been assessed as a treatment for finger and knee OA. In early studies by Reeves et al., participants with symptomatic finger or knee OA were randomized to either prolotherapy with 10% dextrose and lidocaine or control injections with lidocaine and bacteriostatic water on the basis of clinical and radiological criteria.^{22,23} Intervention participants in the finger OA trial reported significantly improved “pain with movement” and “flexion range” scores compared with control participants. Intervention participants in the knee OA trial, assessed using a 0–100 visual analog scale (VAS) and compared with control participants, reported significant improvements in pain at rest, walking, and while using stairs. Provocative findings in both studies included improved radiological features of OA on plain radiographs, including decreased joint space narrowing and osteophyte grade in the finger study, and increased patellofemoral cartilage thickness in the knee study. While these techniques are limited in their ability to quantify such variables, they suggest the need for further study.

PROLOTHERAPY RESEARCH PUBLICATIONS BY DECADE

FIG. 112.1 The number of published clinical studies on prolotherapy since 1937.

Building on the work of Reeves et al., two groups conducted more rigorous trials of prolotherapy for knee OA, an essential element of which has been the use of the validated Western Ontario McMaster University Osteoarthritis Index (WOMAC, 0–100 points) scale, the recommended self-reported outcome in knee OA research. The WOMAC features subscales of pain, stiffness, and function; the minimal clinical important difference (MCID) on the WOMAC for knee OA is approximately 12 points.^{24,25}

Rabago et al. conducted an open-label pilot study that assessed prolotherapy in participants with mild-to-severe knee OA. Methodological elements, effect size of prolotherapy on the WOMAC, and overall feasibility of a more rigorous study were established.²⁶ Participants reported a 15.9 ± 2.5 -point improvement in aggregate WOMAC scores, which were balanced between the three subscales. Shortly thereafter, Dumais et al. corroborated these findings in a

crossover study in which participants who received physical therapy and prolotherapy were compared with those who received physical therapy alone.²⁷ At 16 weeks, prolotherapy was added to the physical therapy group, and the change on the aggregate WOMAC scale, attributed to prolotherapy alone, was 11.9 points.

These studies set the stage for an RCT by Rabago et al. that compared prolotherapy with at-home exercise and blinded saline injection. In this multiply blinded, rigorously reported study, prolotherapy participants reported significantly improved scores compared with both control groups at 9, 24, and 52 weeks, culminating in a 15.3-point improvement on the WOMAC scale, nearly twice that of the controls.²⁸ These are the most robust data favoring prolotherapy and suggest that prolotherapy, performed by a trained operator, results in safe, substantial, and sustained improvement on knee-specific quality-of-life indicators. A subsequent open-label prospective study followed participants for an average of 2.5 years and reported continued improvement of an average of 20.9 ± 2.8 points.²⁹ Consistent with clinical observation, approximately 80% of participants had improved status compared with their baseline status; 20% worsened, consistent with the natural history of knee OA. No study has identified baseline predictive markers of success with prolotherapy. A recent systematic review and meta-analysis reported that prolotherapy resulted in significant, clinically important improvement of knee OA without adverse events and concurred with these findings.³⁰

TABLE 112.1

Strength of Evidence for Prolotherapy as a Treatment for Chronic Musculoskeletal Conditions: Osteoarthritis (OA), Tendinopathy, and Low Back Pain Using the Strength of Recommendation Taxonomy (SORT) Criteria⁵⁷

Key Clinical Recommendation on Prolotherapy	Evidence Rating	Reference(s)
Hand and finger OA: may be effective based on one RCT of modest quality	B	22
Knee osteoarthritis: effective for knee OA based on two strong RCTs; moderately strong methodological quality	A	23,26-29
Lateral epicondylitis: likely effective based on strong positive data in small RCTs	A	34,35,37
Achilles tendinopathy: may be effective based on a high-quality prospective case series and pilot-level RCT	B	16,39
Hip adductor: may be effective based on a high-quality prospective case series	B	58
Plantar fasciitis: may be effective based on a high-quality prospective case series	B	59
Patellar: may be effective based on a high-quality prospective case series	B	60
Osgood-Schlatter disease: may be effective based on one high-quality RCT	B	38

Nonspecific LBP: may be effective; conflicting results in several RCTs	C	40-43
Coccygodynia: may be effective based on a prospective case series	B	47
Sacroiliac joint dysfunction: may be effective in patients with documented failure of load transfer (disability) at the sacroiliac joint based on a prospective case series	B	46
Degenerative disk disease	B	49

Compared with home exercise and blinded saline injection therapy for osteoarthritis of the knee, prolotherapy resulted in significantly improved pain, stiffness, and function, almost twice that of the controls, with 80% of participants having improvement.²⁸

Tendinopathies

Several studies support the use of prolotherapy for chronic, painful overuse tendon conditions formerly called “tendonitis,” which are now more correctly termed “tendinosis” or “tendinopathy” to reflect existing, underlying pathophysiology.³¹ Tendinopathies are discussed as a group because the current understanding of overuse tendinopathies identifies them as sharing a primarily noninflammatory etiology, association with repetitive motion overuse injury, and painful degenerative tissue. The purported mechanism of prolotherapy is well matched to the current understanding of overuse tendinopathy, and it has been assessed as a treatment for five tendon disorders: lateral epicondylitis, hip adductor, Achilles, plantar, patellar, and Osgood-Schlatter tendinopathies.

Lateral Epicondylitis (“Tennis Elbow”)

While many nonsurgical therapies have been tested for lateral epicondylitis (LE) refractory to conservative measures, none have been shown to be uniformly effective in the long term.³²⁻³⁴ Three pilot-level RCTs suggest that prolotherapy is effective for LE. In a two-arm study comparing prolotherapy with masked-allocation saline injections, Scarpone et al. assessed 20 adults (10 per group) with at least 6 months of severe painful LE refractory to rest, nonsteroidal antiinflammatory medications (NSAIDs), and corticosteroid injections.³⁵ Prolotherapy participants reported, on a 0–10 point VAS, significantly decreased resting pain scores at 8 and 16 weeks, from 5.1 ± 0.8 points at baseline to 0.5 ± 0.4 at 16 weeks, versus from 4.5 ± 1.7 to 3.5 ± 1.5 points in controls. Prolotherapy participants also showed significantly improved isometric strength compared with controls, and grip strength compared to baseline

status. These clinical improvements seen in prolotherapy subjects were maintained at 52 weeks. These data were corroborated by Rabago et al., who conducted a pilot study of size using the Patient-Rated Tennis Elbow Evaluation, a validated primary outcome.³⁶ Both studies suggest efficacy but are limited by the small sample size. Data from both studies were used to establish methods for an ongoing, more definitive study.³⁷ A third small RCT compared prolotherapy with corticosteroid injections. At 6 months, participants in both groups reported substantial improvement, but methodological issues, including a small sample size, precluded conclusions in favor of either therapy.³⁸

Achilles Tendinopathy

Maxwell et al. conducted a well-designed case series (N = 36) to assess whether prolotherapy injected under ultrasound guidance would decrease pain and change ultrasound-based parameters of tendon thickness, hypoechogenicity, and neovascularity.³⁹ At 52 weeks, participants reported improvement in VAS-assessed pain severity by 88%, 84%, and 78% during rest, “usual” activity, and sport, respectively. Tendon thickness decreased significantly; however, other ultrasound-based criteria were not correlated with self-reported outcomes, suggesting that a causal relationship between ultrasound-imaged tissue characteristics and the degree of clinical improvement remains unclear. Prolotherapy has been assessed in multidisciplinary tendinopathy care. Participants in an Achilles tendinopathy study responded earlier and with improved cost-effectiveness when physiotherapy and prolotherapy were combined compared with either treatment alone.¹⁶

Osgood-Schlatter Disease

This tendinopathy of the patellar tendon at the tibial tubercle is common in children ages 9–17 years old engaged in kicking sports. While it has been historically understood as a self-limited condition that resolves with growth, the condition can become chronic, and morbidity associated with pain and loss of sport is substantial. Topol et al. assessed dextrose prolotherapy using the benchmark criterion “return to asymptomatic sport” and the 0- to 7-point Nirschl Pain Phase Scale (NPPS).⁴⁰ Prolotherapy was compared with blinded saline injections and usual care at 3 months; participants in the saline group were offered prolotherapy, and all participants were followed for 1 year. At 3 months, participant athletes receiving dextrose injections reported asymptomatic sport more

frequently than knees treated with control injections ($P < .01$) or usual care ($P < .001$). At 1 year, asymptomatic sport remained more common in dextrose-treated knees than in injection control ($P = .024$) or usual care ($P < .0001$) knees. NPPS score changes between groups at 1 year were consistent with these relationships.

Low Back Pain

Generalized LBP. Four RCTs evaluated prolotherapy for generalized, nonsurgical LBP; three used a nondextrose agent known as phenol–glycerin–glucose (P2G) as the injectant,⁴¹⁻⁴³ and the fourth used dextrose and is discussed here.⁴⁴ Each study used a protocol involving injections to the ligamentous attachments of the L4-S1 spinous processes, sacrum, and ilium. While outcome measures varied, a common measure was the percentage of participants reporting greater than 50% improvement in pain/disability scores at 6 months.

Study participants in a trial by Yelland et al.,⁴⁴ the largest and most methodologically rigorous of the LBP RCTs, were randomized to one of four intervention groups: dextrose and physical therapy, dextrose and “normal activity,” saline injections and physical therapy, or saline injections and “normal activity.” By 12 months, participants in each group reported improved pain (26%–44%) and disability (30%–44%) scores; a majority of participants (55%) reported that improvements in both pain and disability had been worth the effort of undergoing the intervention, and the percentage of subjects who reached at least 50% pain reduction ranged from 36% to 46%. Changes in outcome scores favored dextrose participants, but not by statistically significant margins, suggesting the study was underpowered.

Interpretation of the LBP RCT data is challenging and methodological problems with each trial have been noted,⁴⁵ including the use of a nonstandard, minimal injection protocol in the trial of Yelland et al., which may have rendered the intervention less effective than the conventional protocol, which features more injections and more injectant. While a recent systematic review⁴⁶ found insufficient evidence to recommend prolotherapy for nonspecific LBP, the clinical trial data offer generally promising, early investigational results and suggest the need for well-designed, sufficiently powered research. In the context of anecdotal clinical success and the promising aspects of initial RCTs for nonspecific LBP, researchers have begun to assess prolotherapy in patients with more narrowly focused diagnoses of LBP and loss of

function in an effort to determine which underlying pathology may be most responsive to prolotherapy. Cusi et al. assessed 25 participants with symptomatic sacroiliac joint dysfunction refractory to 6 months or more of physical therapy and with documented failure of load transfer (disability) at the sacroiliac joint.⁴⁷ Compared with baseline, pain and disability scores on three multidimensional outcome measures were significantly improved at the 26-month follow-up in excess of the MCID. Khan et al. assessed 37 subjects with refractory coccygodynia.⁴⁸ Average pain scores dramatically improved from 8.5 to 2.5 points at 2 months, far in excess of the reported MCID for chronic pain.⁴⁹ In an especially novel study, Miller et al. assessed prolotherapy for leg pain in patients who had moderate-to-severe degenerative disk disease diagnosed by computed tomography,⁵⁰ who failed physical therapy, and who had substantial but temporary pain relief with two fluoroscopically guided epidural steroid injections. After an average of 3.5 sessions of biweekly, fluoroscopically guided injections to the relevant disk space with 25% dextrose with bupivacaine, 43% of responders showed a significant, sustained treatment response of a 71% improvement in pain score. VAS scores for responders were 8.9 ± 1.4 , 2.5 ± 2.0 , and 2.6 ± 2.2 points at baseline, 2, and 18 months, respectively. While these three recent studies of prolotherapy for “specific” LBP were uncontrolled, they suggest the need for future RCTs with more focused clinical indications of axial pain and disability.

These studies in OA, tendinopathy, and LBP suggest that prolotherapy is an appropriate therapy for patients refractory to conservative care with these conditions, and set the stage for further research involving functional radiological and biomarker assessments in addition to dissemination and implementation research including cost-effectiveness.

Contraindications

Absolute contraindications to prolotherapy with dextrose are few; they include acute skin or joint infection, active rheumatological flare, allergy to corn or topical analgesics, and use of immunosuppressive medications. Relative contraindications include acute gouty arthritis, acute fracture, and bleeding disorders or use of anticoagulants.

Common Side Effects

The main risk for prolotherapy is pain and mild bleeding or bruising as an outcome of needle trauma. Patients may report pain, tissue “fullness,” and occasional numbness at the injection site at the time of injections. These are typically self-limited. Anecdotally reported postinjection pain during the first 72 hours after injections is relatively common; clinical trials have reported that approximately 10% of participants experience such flares.²⁸ They are typically self-limited and respond well to acetaminophen (500–650 mg every 4 hours as needed). Rarely, postinjection pain may require treatment with opioid medication. NSAIDs are not routinely used after the procedure. Most patients with pain flares experience diminution of pain within 5–7 days after injections; regular activities can be resumed at this time.

Adverse Events

While prolotherapy has been reported as safe in clinical trials, the injection in ligaments, tendons, and joints raises safety concerns. Theoretical risks include lightheadedness, allergic reaction, infection, or neurological (nerve) damage. Injections should be performed using universal precautions, and the patient should be prone if possible. Dextrose is extremely safe; it is approved by the Food and Drug Administration (FDA) for intravenous treatment of hypoglycemia and for caloric supplementation.⁵¹ A small number of significant prolotherapy-related complications have been reported associated with perispinal injections. They employed very concentrated solutions, which are no longer conventionally used, and included five cases of neurological impairment from spinal cord irritation⁵²⁻⁵⁴ and one death in 1959 following prolotherapy with zinc sulfate for LBP.⁵² In a survey of 95 clinicians using prolotherapy, there were 29 reports of pneumothoraces after prolotherapy for back and neck pain, two of which required hospitalization for a chest tube, and 14 cases of allergic reactions, none of which were classified as serious.⁵⁵ A more recent assessment survey of practicing prolotherapists concluded that adverse events were no more common in prolotherapy than in other spinal injection procedures.⁵⁶ No serious side effects or adverse events were reported for prolotherapy when used for peripheral joint indications.⁵⁶

Practical Considerations

Prolotherapy is not governed by any general oversight body, and the procedures are not typically part of medical school or residency curricula. Safe practice of prolotherapy requires specialized training. Differences in technique exist between practitioners depending on the training venue. In the United States, prolotherapy is taught via peer learning and in conference, workshop, and formal CME settings. Prolotherapy is typically performed by MDs or DOs who have undergone such training. Performing prolotherapy for patients is best done in consultation with physicians who are experienced with these procedures. Two organizations, the Hackett Hemwall Patterson Foundation and the American Association of Orthopaedic Medicine, provide a majority of the formal coursework and training in the United States. Physicians interested in learning more about prolotherapy have access to a variety of resources (see the [Key Web Resources](#)). A growing number of fellowships in sports and rehabilitation medicine also provide training. The University of Wisconsin Prolotherapy Education and Research Lab (UW PEARL; <http://www.fammed.wisc.edu/prolotherapy/>) provides an academic portal for those interested in prolotherapy.

A Case Example: Lateral Epicondylitis

A 48-year-old construction worker presents to the author's clinic with 5 months of lateral elbow pain consistent with LE. The symptoms have not responded to conservative therapy.

During a consultation for treatment of tennis elbow with prolotherapy, the physician confirms the diagnosis and reviews prior treatments including trials of medication, physical medicine, and other conservative approaches. A physical exam is performed and includes all lateral elbow soft tissue-supporting structures. If the patient appears to be a good candidate for prolotherapy, the risks and benefits of prolotherapy are discussed, as well as alternative treatments. If there is no contraindication and the patient desires to proceed, we offer a trial of dextrose prolotherapy.

We ask that patients stop all NSAIDs and other antiinflammatory medications for 2 weeks prior to treatment. The day before and of treatment, we suggest that patients drink plenty of water and eat a light meal 1–2 hours prior to treatment and take acetaminophen or other non-NSAID-containing prescribed pain medication.

On the day of the procedure, a 15% dextrose solution is prepared in a

10-mL syringe using 2 mL of 1% lidocaine without epinephrine, 3 mL of 50% dextrose, and 5 mL of bacteriostatic 0.9% sodium chloride solution for extraarticular injections. For intraarticular injections, in a 5-mL syringe, a 25% dextrose solution is prepared using 2.5 mL of 1% lidocaine without epinephrine and 2.5 mL of 50% dextrose.

The patient is positioned supine with the elbow flexed at 90 degrees with the forearm in pronation and resting on his or her abdomen. The lateral elbow is cleaned with 70% denatured alcohol. Using an surgical marking pen or other appropriate marker, the bony and soft-tissue anatomy are outlined, including the lateral epicondyle, common extensor tendon, attachment of the extensor carpi radialis longus, annular ligament along the radial head, lateral (radial) collateral ligament, and the site of intraarticular injection (Figs. [112.2](#)–[112.5](#)). Next, the areas tender to palpation are marked with attention to the radial nerve. The marked area is then cleaned with a solution of chlorhexidine gluconate and allowed to dry. With a 30-G, 0.5-inch needle on a 5-mL syringe, anesthetic skin wheals with 1% lidocaine without epinephrine are placed at areas of tenderness prior to dextrose injection.

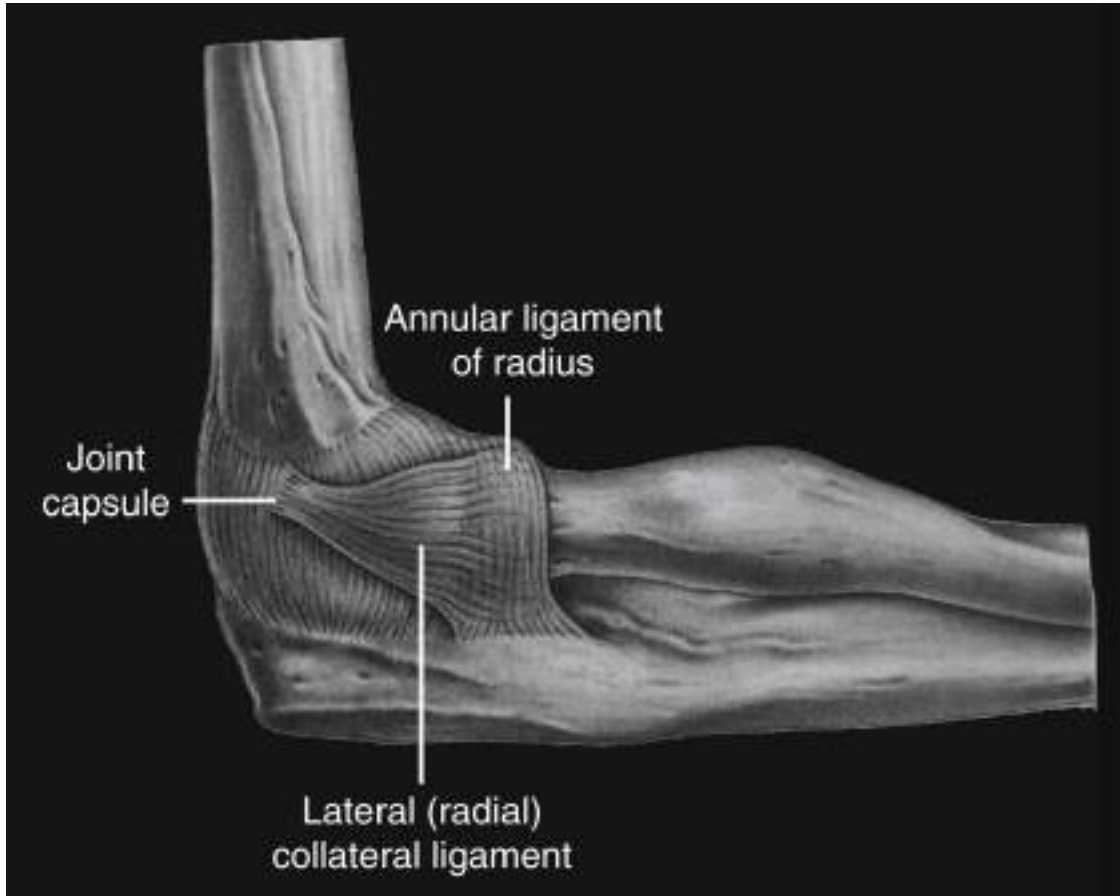

FIG. 112.2 Lateral view. Capsular ligaments of the elbow.

FIG. 112.3 Topical anatomy, lateral elbow. Commonly treated prolotherapy tender points.

For the intraarticular injection, we use a 27-G \times 1 $\frac{1}{4}$ " needle and inject 2–3 mL of the 25% dextrose solution. For extraarticular injections, we use a 27-G \times 1 $\frac{1}{4}$ " needle and inject 0.5–2 mL of the 15% dextrose solution on bone in a peppering fashion. Care is taken to avoid injection through skin markings. Injections are most often placed using a "needle touching bone" peppering technique at the attachments of the common extensor tendon and the annular ligament using a total of 2–3 mL of solution.

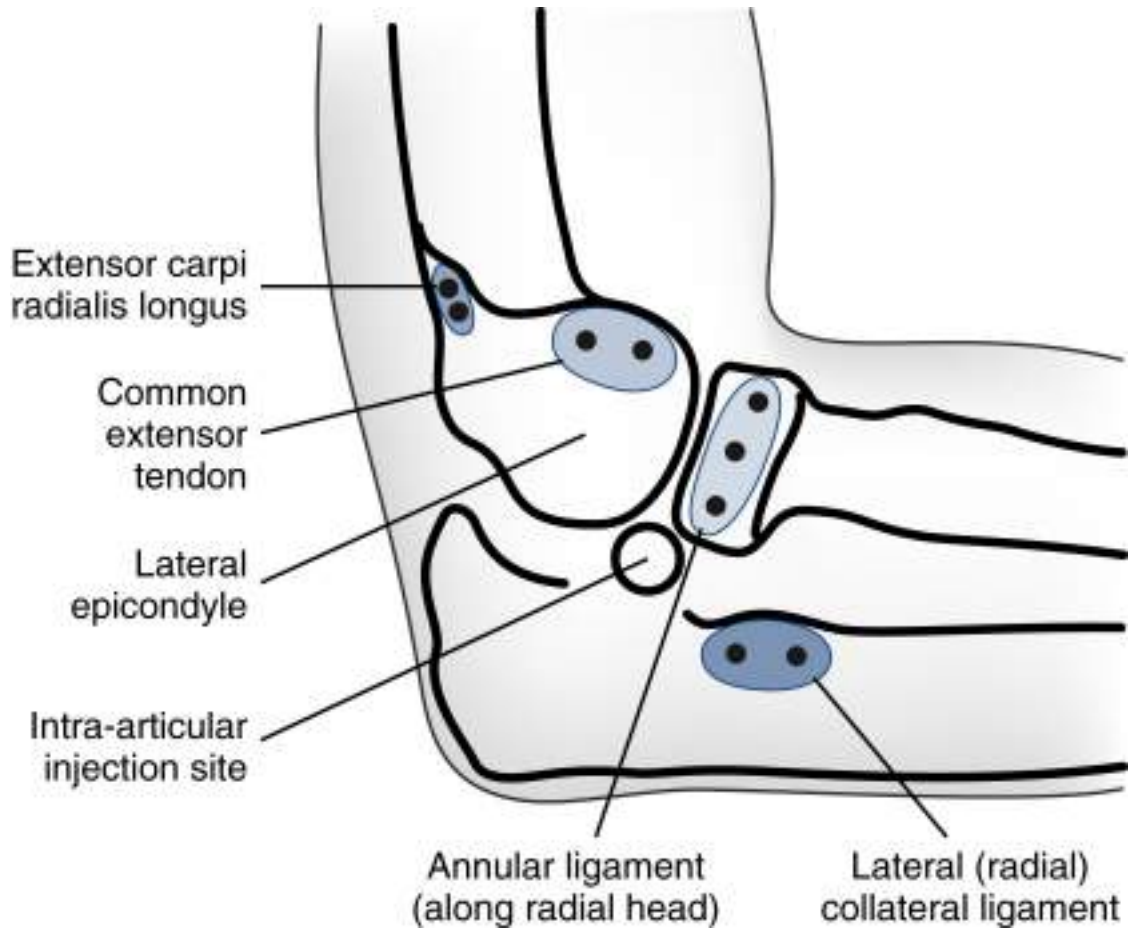

FIG. 112.4 Prolotherapy tender points. Structure identification.

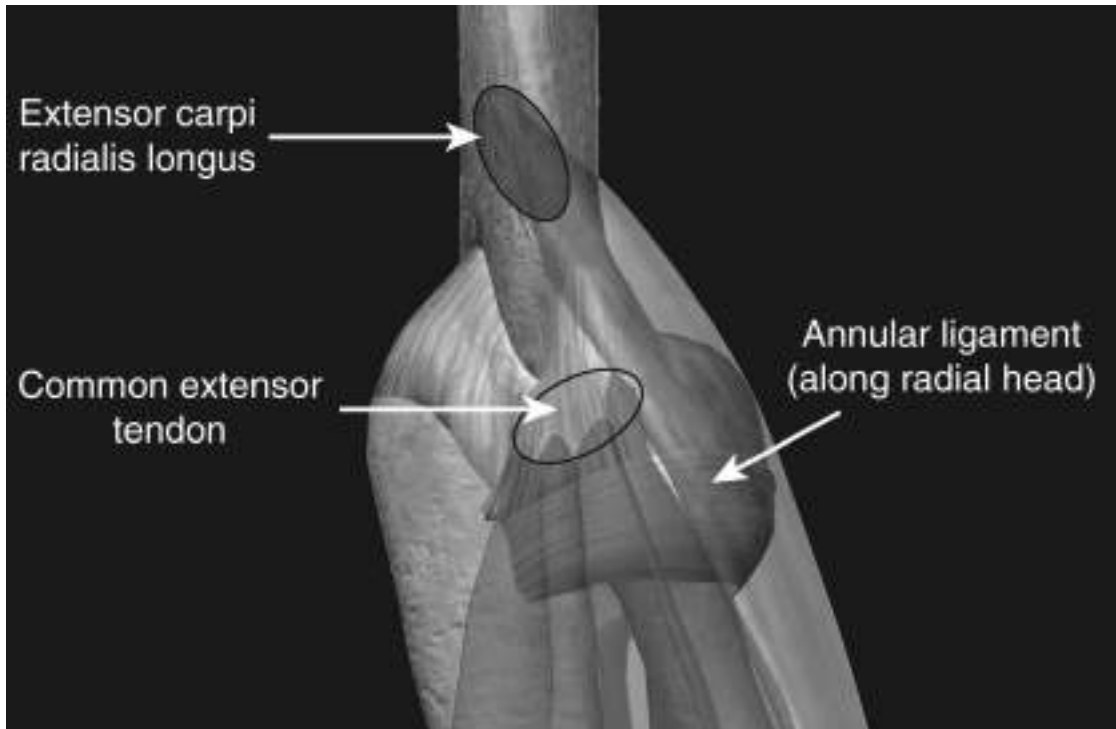

FIG. 112.5 Anteroposterior (AP) view. Elbow anatomy.

Patients typically notice a marked reduction in pain immediately after treatment. After the local anesthetic wears off, patients often notice an increase in stiffness and pain lasting 1–3 days. Pain relief and improved function typically occur 2–6 weeks after treatment. In the posttreatment period, we advise that the patient uses acetaminophen for pain and avoids all NSAIDs for 4 weeks. Heat may be used for soreness; ice is avoided for the first 1–2 weeks as not to inhibit the proliferative response; patients may gradually increase activity to normal levels over the course of approximately 3 days with avoidance of strenuous activities for 1–2 weeks.

Prolotherapy treatments are spaced 3–6 weeks apart. Though some patients see resolution of pain after one treatment, we generally anticipate 3–5 treatments for clinically significant reductions in pain and function. At each visit, an interval history is obtained and physical exam is performed. If the patient does not report improvement after three prolotherapy sessions, alternative interventions are pursued.

Insurance Coverage

Some third-party payers cover prolotherapy for the indications

discussed, but most patients pay out of pocket. Referrals are made in a similar manner to those for more conventional procedures. An initial consultation, including a relevant history and physical, is performed by the prolotherapist to determine if the patient is a candidate for prolotherapy.

CHAPTER 113

Nasal Irrigation for Upper Respiratory Conditions

David Rabago, MD, Supriya Hayer, MD, and Aleksandra Zgierska, MD, PhD

Nasal irrigation (NI) is an adjunctive therapy for upper respiratory conditions. The most common form of the procedure bathes the nasal cavity with saline (SNI) delivered as a spray or liquid. SNI originated thousands of years ago in the Ayurvedic medical tradition of India.¹ In the West, several administration devices, indications, and solution types for NI were described in the *Lancet* in 1902.² The current prevalence of SNI use is not known; however, its popularity has increased over time in the context of studies reporting positive effects in several upper respiratory conditions and due to publicity in news and popular media outlets, including the Oprah Winfrey Show (May 2007) and National Public Radio.³ The most common method of liquid SNI uses the so-called “neti pot” and has the advantage of gravity-based administration. Other ways to deliver saline to the nasal cavity include hand-operated squeeze bottle and electrically or battery-powered products. SNI recommendation by physicians is common; in a survey of 330 family physicians, 87% reported recommending SNI to their patients for one or more conditions.⁴

The Science

The exact mechanism of SNI action is not known. SNI may improve the nasal mucosa’s immune response to infectious agents, inflammatory mediators, and irritants through several reported physiologic effects, including the direct cleansing of irrigation,⁵⁻⁷ the removal of inflammatory mediators,^{8,9} and improved mucociliary function, demonstrated by increased ciliary beat frequency.^{10,11} Chronic sinus

symptoms (lasting longer than 12 weeks) is the most common indication for SNI.⁴ Based on positive results in clinical and functional outcomes, the Cochrane Collaboration concluded that SNI is an appropriate adjunctive therapy for the symptoms of chronic rhinosinusitis (CRS).¹²⁻¹⁵ Users of liquid SNI also reported significantly decreased antibiotic and nasal spray use.¹² Clinical results have been corroborated for liquid, but not for nasal spray, SNI.¹⁵ Data for the prevention or treatment of other indications, including irritant rhinitis,^{16,17} viral upper respiratory tract infection (URI),¹⁸⁻²⁰ allergic rhinitis,²¹⁻²³ and postoperative care for endoscopic sinus surgery,²⁴ is positive, although less rigorous. Nasal irrigation has been recommended by content experts for mild to moderate rhinitis of pregnancy,²⁵ acute rhinosinusitis,²⁶ sinonasal sarcoid,²⁷ and Wegener's granulomatosis²⁸ ([Table 113.1](#)).

Technique Variations

SNI can be performed using positive pressure (spray or squirt bottle) or “gravity-based” pressure (a vessel with a nasal spout) devices ([Fig. 113.1](#) in the patient handout). Each is available over the counter. Saline is instilled in one nostril and allowed to drain out of the other. While liquid and spray saline have both been assessed, liquid NI is reported to be substantially more effective than spray for chronic sinus symptoms¹⁵ and allergic rhinitis.^{9,21} Uniform recommendations regarding liquid saline versus spray and other use-related variables are less evidence-based for other indications. Ideal salinity of SNI for any given condition is not known; 0.9%–3% saline solutions have been most often used. Optimal pH and temperature are likewise not known, although saline mixed with clean water at room temperature has been most often used in clinical trials. Each may be patient specific²² and has been reported as safe within the ranges used in the cited studies. In the United States, after two cases of tap-water contamination by *Naegleria fowleri*, which may have been associated with SNI use, and fatal infections in two patients in Louisiana,³⁹ the U.S. Food and Drug Administration (FDA) issued guidelines recommending the use of distilled, sterile, or boiled-then-cooled water for irrigation (FDA Consumer Update, 2012).

Gravity liquid irrigation using a neti pot appears to be more effective than nasal spray irrigation for reducing antibiotic use in patients with

recurring sinus infections.

Irrigant Variations

In addition to saline, other irrigants have also been studied and evaluated to determine their efficacy. One such irrigant, xylitol, is a naturally occurring nonabsorbable sugar. Although it has a shorter clinical history, nasal irrigation with xylitol (XNI) has also been reported to be effective in alleviating symptoms associated with CRS.⁴⁰ Fluticasone is a corticosteroid that effectively manages CRS symptoms.²⁹ Traditionally used as a spray, recent studies using fluticasone as an irrigant have shown greater improvement in CRS symptoms.⁴¹ While irrigation with saline is considered as standard care for many upper respiratory conditions, both xylitol and corticosteroid irrigants are not.

TABLE 113.1

Recommended Indications for Saline Nasal Irrigation Among Adults

Key Clinical Recommendation	Evidence Rating	Reference
Nasal irrigation is effective adjunctive treatment for symptoms of chronic rhinosinusitis.	A	1, 14, 15, 22, 29, 43
Nasal irrigation may be effective adjunctive treatment for symptoms of several other conditions based on limited trial evidence: Irritant rhinitis/congestion, allergic rhinitis, viral upper respiratory congestion, postoperative care for endoscopic sinus surgery.	B	16-24, 30-35
Nasal irrigation has been recommended by content experts for mild to moderate rhinitis of pregnancy, acute rhinosinusitis, sinonasal sarcoid, and Wegener's granulomatosis.	C	25-28, 36-38

A, consistent, good-quality patient-oriented evidence; B, inconsistent or limited-quality patient-oriented evidence; C, consensus, disease-oriented evidence, usual practice, expert opinion, or case series.

Pediatric Use

NI has also been shown to be effective in pediatric CRS as a first-line treatment as well as for recurring nasal symptoms. Generally, once daily NI over a 6-week period has been shown to be most effective, leading to symptom resolution while minimizing need for sinus surgery.^{37,41,42}

Recommended Dose for Treatment and

Prevention

The effective dose of SNI for the treatment of chronic sinus symptoms in randomized controlled settings has been reported to be once¹² or twice¹⁵ daily. Long-term use is less well known, but SNI use by subjects with chronic sinus symptoms in one study stabilized at approximately three times a week for the prevention of symptoms.⁴³ Recommendations for acute rhinosinusitis, URI, and rhinitis are more difficult to make. Nasal irrigation once daily or spray saline up to three times daily has been reported to be safe.^{20,44}

Safety

SNI appears safe within the aforementioned water quality recommendations. No study evaluating SNI has reported any adverse events. Nasal irrigation is associated with frequent, minor side effects that are self-limited or resolve with practice or adjustment of the procedure.^{12,15,22,45} Minor side effects include a sense of discomfort and nervousness with the first use of liquid SNI.²² Side effects noted by less than 10% of SNI users included self-limited ear fullness, stinging of the nasal mucosa, and epistaxis (rare)^{12,15,45} that were ameliorated by technique modification and salinity adjustment²² and did not cause discontinuation of SNI by subjects.^{12,15}

Be sure to use clean, filtered water for nasal irrigation.

Practical Use of Sni

SNI has been identified as “an important component in the management of most sinonasal conditions and is effective and underutilized.”⁴⁶ Most interested patients with appropriate conditions would be considered as candidates for a trial of SNI. Examples of inappropriate patients include those with the potential to leak saline to unwanted tissue planes or spaces (e.g., incompletely healed facial trauma), neurological or musculoskeletal problems that could facilitate aspiration, or patients who otherwise cannot perform the procedure. SNI is considered safe, appropriate adjunctive treatment for symptoms associated with CRS. SNI

may also be an effective adjunctive treatment for mild-to-moderate viral URIs, allergic rhinitis, and rhinitis of pregnancy. SNI has not been evaluated for acute rhinosinusitis.

Portions of this chapter have appeared in two prior publications: Rabago D, Zgierska A, Mundt M, et al. Efficacy of daily hypertonic saline nasal irrigation among patients with sinusitis: A randomized controlled trial. *J Fam Pract.* 2002;51(12):1049-1055; and Rabago D, Zgierska A. Saline nasal irrigation for upper respiratory conditions. *American Fam Physician* 2009;80(10): 21-22, 1117-1119.

Key Web Resources

Further information, including detailed patient handouts with instructions for making and adjusting salt water using bulk ingredients (in English and Spanish), instructional videos and links, scientific reports, and a radio story by National Public Radio (NPR) can be found at this link.

<http://www.fammed.wisc.edu/research/pas/projects/nasal-irrigation>

Patient Handout: Using Saline Nasal Irrigation for Upper Respiratory Conditions

Chronic sinus symptoms (nasal congestion, runny nose or post nasal drip) are very common and have several potential causes and treatments. Saline nasal irrigation is a therapy you can do at home in addition to your current care plan for sinus symptoms. This technique improves symptoms by rinsing the area behind the nose with salt water. This handout describes how to perform SNI using a nasal cup, also known as a "neti pot".

What you will need: A nasal cup, distilled water and pre-packaged salt are commercially available at many pharmacies.

There are 3 steps to saline nasal irrigation.

Step 1: Mix the solution

- If you are using a pre-packaged salt, simply prepare the salt water as indicated on the packaging using lukewarm distilled or sterile water and put 4 fluid ounces (100 mL) in the nasal cup. If you plan to mix your own salt water using bulk ingredients, please see the website below for detailed instructions.

Step 2: Position the nasal cup (Please see pictures)

- Lean over a sink so you are looking directly into the basin.
- Rotate your head slightly and gently insert the spout of the nasal irrigation pot into the upper nostril so that it forms a comfortable seal. Do not press the spout against the "middle", or septum, of the nose.

Step 3: Irrigate the nose

- Breathe through your mouth, raise the nasal irrigation pot so that the solution enters the upper nostril. The solution will soon drain from the lower nostril.
- When the nasal pot is empty, gently exhale through both nostrils to clear them of excess solution and mucus. Gently blow your nose into a tissue.
- Repeat the procedure for the other nostril.

Nasal cup care: Mix new solution when you plan to irrigate your nose, discard extra salt water immediately. Wash nasal pot after irrigation.

Troubleshooting: You may notice some drainage of salt water up to 30 minutes after nasal irrigation; this is normal. Many users of nasal irrigation carry tissues. If stinging or burning occur, try decreasing the salt content by half; you may also adjust the temperature of the water slightly. Do not use very hot or very cold water. Nasal irrigation can also be done in the shower.

Want more information? A more detailed patient handout (including a version in Spanish), instructions for making and adjusting salt water using bulk ingredients, instructional videos and links, scientific reports and a radio story by National Public Radio (NPR) are at: <http://www.fammed.wisc.edu/research/pas/projects/nasal-irrigation>

CHAPTER 114

Integrating Spiritual Assessment and Care

Gregory A. Plotnikoff, MD, MTS, Daniel Wolpert, MDiv, MA, and Douglas E. Dandurand, PhD, MDiv, MA, MAS

Spiritual and religious practices such as prayer represent the most prevalent complementary therapies in the United States. In recent years, more than twice as many U.S. adults have reported preferring prayer over herbal medicines for health and healing.¹ In recent decades, nearly 80% of U.S. adults reported that religion, to a large extent, helps patients and families cope with illness.² Nearly 75% of the public have reported that praying for someone else can help cure his or her illness; furthermore, 56% of adults have stated that faith has helped them recover from illness, injury, or disease.³ Whole-person medical care, by definition, integrates the spiritual dimensions of the patient and his or her family.

Spirituality may or may not involve formal religion. Over the past 40 years, the religious landscape in the United States has changed dramatically. The percentage of people who identify with no religion has risen to more than 20% of the population.⁴ Within the Christian tradition, church attendance and participation has dramatically declined. The phrase “spiritual but not religious” has gained enormous traction and popularity within the culture. Furthermore, practices such as meditation, yoga, and other traditional spiritual disciplines have gained popularity, as have New Age spirituality, pagan spirituality, and earth-based spirituality, among others. At the other end of the religious spectrum, fundamentalism has also seen a rise in popularity, particularly in certain parts of the country. Given these changes, it is helpful for clinicians to understand their spiritual and religious context as well as the meanings of some of these terms.

Spirituality and religion are means by which human beings relate to all

that which is “Other” than themselves: the rest of the natural world, other people, and even their internal unfamiliar states. Although there are many different rubrics used to define these terms ([Table 114.1](#)), religion is generally an organized collective set of practices, dogmas, and rules that describe or talk about our relationship to the greater universe, whereas spirituality tends to define a set of practices that help us to relate directly to that greater universe. Thus a person may attend many religious services that are about God yet also may have no sense that they are relating directly to God. On the other hand, persons who meditate regularly may feel that they have a rich relationship with God and may also define themselves as not being religious. These sometimes subtle, but significant, differences can have important ramifications for a person when he or she is ill or facing a life crisis.

In clinical settings, both spiritual support as well as spiritual distress demand professional attention. Spiritual beliefs are frequently important in medical decisions.⁵ Spiritual well-being is closely linked to successful coping,⁶ faster recovery,⁷ and higher quality of life.⁸ Many patients may want help with meaning, hope, or overcoming fears⁹; unmet spiritual needs, spiritual pain, or unresolved spiritual struggles are associated with despair,¹⁰ increased mortality,¹¹ poorer outcomes from posttraumatic stress disorder (PTSD),¹² and unnecessarily increased use of health care resources.¹³ The latter point is crucial for both primary and subspecialty care as this challenges every clinician to expand his or her differential diagnosis to consider patients requiring frequent appointments for ambiguous or nonspecific symptoms (see [Fig. 114.1](#)). Compared to patients with less physical or psychological problems, patients who report more concerns are likely to also have more spiritual concerns and greater distress related to these concerns. Patients with such distress often have abuse histories, including the possibility of spiritual abuse. They often carry a diagnosis of major depression and generalized anxiety disorders.¹⁴ The clinically relevant point is that to address physical or psychological distress, a consideration of the patient’s spiritual context can help the clinician identify rational, nonpharmacological responses. Although more data is needed, several randomized controlled trials suggest that spiritual practices and interventions determine treatment choices in a number of clinical situations such as anxiety,¹⁵ cancer,¹⁶ or addiction.¹⁷

American adults consistently report that it is good for doctors to talk to patients about spirituality.^{18,19} In 2004, 83% percent of 921 primary care patients surveyed in Ohio reported that they wanted physicians to ask

about spiritual beliefs in certain circumstances such as serious illness or the loss of loved ones.²⁰ In response to the accumulating data on the importance of spirituality and health, even the Joint Commission for the Accreditation of Healthcare Organizations (JCAHO) now requires that patient spirituality be addressed as a part of routine inpatient care.²¹ However, despite patient interest and needs, a nation-wide survey of 1,732,562 patients reported very low ratings of satisfaction with the emotional and spiritual aspects of care received.²²

Integrative clinicians should be prepared to inquire and engage patients in discussions on spirituality. Ignoring the patient’s source of meaning, purpose, richness, and direction places the clinician at a risk of providing inefficient, ineffective, and unsatisfactory care.²³ The challenge is to identify the best means for addressing a patient’s spiritual concern.

Multiple mnemonics exist to guide clinicians in their interviews with patients. These include FICA,²⁴ HOPE,²⁵ and SPIRIT,²⁶ which are outlined in [Table 114.2](#). These mnemonics highlight content and provide questions that may lead to important insights into care for the patient and his or her family. However, even before an intake interview, a new patient intake form can honor religious or spiritual concerns. At the Penny George Institute for Health and Healing, we have woven these three helpful questions into the intake form.

TABLE 114.1

Three Dimensions of Spirituality: Head, Heart, and Hand

Cognitive Experiential		Behavioral
Beliefs	Love, compassion, altruism, forgiveness	Duties: daily behavior, moral obligations
Values	Connection, relationship with: self, others, community, environment, nature, the transcendent	Choices: life choices, medical choices
Ideals	Inner energy, strength, resilience	Specific practices: prayer, meditation, yoga, chanting, rituals, diet, nature walks, etc.
Meaning	Inner peace, comfort, support	Participation in religious community
Purpose	Hope	
Truth	Faith (trust)	
Wisdom	Transcendence	
Faith (belief)		

From Anandarajah G. The 3 H and BMSEST models for spirituality in multicultural whole-person medicine. *Ann Fam Med*. 2008;6:448-458.

1. We recognize that it is often difficult to discuss distressing experiences. As you feel comfortable, please describe any traumatic situations you may have experienced (e.g., abuse, loss of a loved one, divorce, separation, or fire).

2. Of the many forms of stress that individuals can experience (environmental, physical, emotional/spiritual, pharmaceutical, or dietary), are there any in particular that affect your life? Please describe.
3. Please describe your spiritual history, including information about your current practices or routines.

In the context of an intentionally holistic intake form, these questions are perceived as nonthreatening. Each question allows the patient to choose how much information to share. The clinician can review responses before meeting the patient. This previsit review is time efficient and allows the clinician to consider appropriate integration of spiritual assessment and care when creating a customized action plan for the patient. To support this clinical competency, this chapter identifies five practical goals for every clinician. Addressing of these five goals results in three practical outcomes: (1) improved diagnostic accuracy, (2) appropriately focused and directed resources, and (3) a strengthened therapeutic alliance.

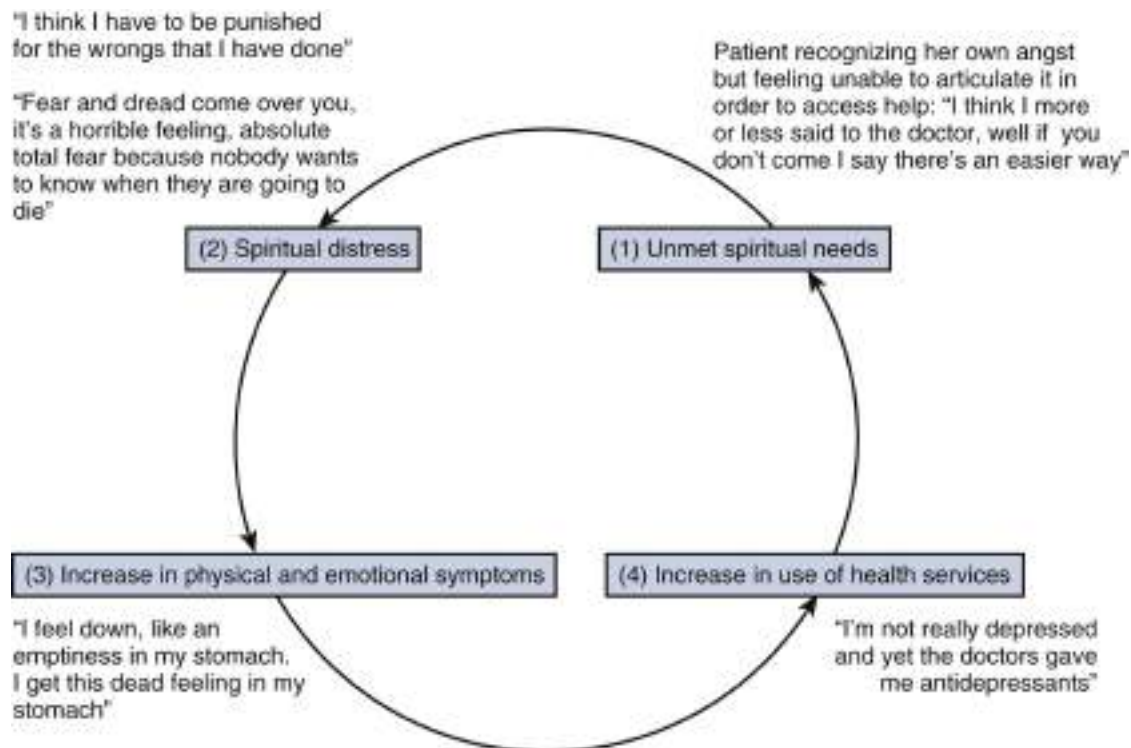

FIG. 114.1 Unmet spiritual need cycle may result in an increased demand and service use.

(Redrawn from Grant L, Murray SA, Sheikh A. Spiritual dimensions of dying in pluralist societies. *BMJ*. 2010;341:c4859.)

The Five Clinical Goals of Spiritual Assessment and Care

Clinical Goal One: Anticipate the Presence of Religious and Spiritual Concerns in Both Adult and Pediatric Care

Spiritual and religious concerns in clinical care range from rituals or practices, such as prayer, to complex crises, such as despair. Every illness is a potential spiritual crisis and also may have, in part or in whole, a spiritual cause. This is true for the patient and his or her family as well as for the care team. These crises can be found in both acute and chronic care settings but may most easily be seen with end-of-life care; common spiritual/religious concerns at that time include the following:

- Not being forgiven by God
- Not reconciling with others
- Dying alone or cutoff from God
- Not having a blessing from a family member or clergy person
- Wondering whether anyone will miss you or remember you over time²⁷

TABLE 114.2

Spiritual Assessment Tools

FICA—Pulchaski

F: Faith or belief—What is your faith or belief?

I: Importance and influence—Is it important in your life?
How?

C: Community—Are you part of a religious community?

A: Awareness and addressing—What would you want me as your physician to be aware of? How would you like me to address these issues in your care?

HOPE—Anandarajah

H: Hope—What are your sources of hope, meaning, strength, peace, love, and connectedness?

- O: Organization**—Do you consider yourself a part of an organized religion?
- P: Personal spirituality and practices**—What aspects of your spirituality or spiritual practices do you find most helpful?
- E: Effects**—How do your beliefs affect the kind of medical care you would like me to provide?

SPIRIT—Maugans

- S: Spiritual belief system**—What is your formal religious affiliation?
- P: Personal spirituality**—Describe the beliefs and practices of your religion or spiritual system that you personally accept/do not accept.
- I: Integration within a spiritual community**—Do you belong to a spiritual or religious group or community? What importance does this group have for you?
- R: Ritualized practices and restrictions**—Are there specific practices that you carry out as a part of your religion/spirituality (e.g., prayer and meditation)? What significance do these practices or restrictions have to you?
- I: Implications for medical care**—What aspects of your religion/spirituality would you like me to keep in mind as I care for you?
- T: Terminal events planning**—As we plan for your care near the end of life, how does your faith impact on your decisions?

Spiritual concerns can arise at any time in life. To recognize religious and spiritual concerns in others, one should be able to recognize them in oneself. Whole-person health care means proactively engaging in spiritual life as opposed to waiting for a crisis to enlighten that awareness. Hence, all clinicians are challenged to develop self-awareness of their own spiritual history and perspectives.²⁸ In clinical care, the goal is to not to react to one's own spiritual needs or beliefs, but to acknowledge and bracket them and then respond to the patient's

spiritual concerns. This capacity to respond to the patient rather than to one's own emotional needs is termed being present.

Both culture and spirituality can be implicit and unconscious. Both patients and clinicians can be blind to the effects of their own perspective in clinical interviewing and decision making. For this reason, health care professionals should begin by conducting cultural and spiritual assessments of themselves before performing them on patients. The most effective interviewing allows the patient's deeply held implicit and unconscious beliefs to be understood, acknowledged, and affirmed by the clinician. The clinical challenge is to create a safe and conducive setting where spiritual concerns can be recognized and shared.

One hallmark of spirituality in clinical care is deep listening. The challenge is for health care professionals to step out of their role as answer givers and into their role as listeners. When we listen deeply to our patients, we honor them and their experience. We thus encourage them to listen deeply to themselves.

When patients believe that they will not be judged and that someone will listen and not try to fix, dismiss, or deny their concerns, they will often freely share their most private concerns. The sense of being heard is itself frequently therapeutic.

From an ethical viewpoint, clinicians should maintain respect for their patients' beliefs and recognize patients' vulnerability to their own attitudes. No practitioner should impose his or her own religious, or antireligious, beliefs on patients.^{29,30} All practitioners need to recognize that their answers are their answers only.

This is particularly relevant within the field of integrative medicine at this point in its development. For a number of reasons, integrative medicine tends to identify with non-Judeo-Christian spiritualities and practices. Statues of Buddha, pictures of the Tao, and symbols of other non-Western religions regularly adorn integrative medicine clinics. In certain areas of the country, these icons may represent the views of the majority of patients, but in many areas, they do not. Recognizing this bias and understanding that all religions have sources for deep spiritual healing are in the best interests of patients.

To invite the patient to share his or her spiritual and religious concerns does not require specifically religious or spiritual questions. Good open-ended questions include the following:

- How else do you hurt?
- Serious illness can affect lives in many unexpected ways. How has this illness affected your life?
- What do you miss the most or fear the most as a result of this illness?
- What are some of the things you wish you could talk about? Is there anyone you wish you could talk to?
- What's most important to you right now?

The answers to such questions frequently reflect the patient's spiritual values and worldview in addition to identifying important connections that have been disrupted. At the same time, clinicians should not be afraid to directly address religious beliefs, practices, and issues.

Clinical Goal Two: Comprehend How Patients Want Their Religious and/or Spiritual Beliefs and Community to Be Seen as Resources for Strength and Recovery

Faith and related religious worldviews sometimes are considered medically relevant only when they obstruct the implementation of scientifically sound biomedical care.³¹ However, this attitude is profoundly naïve. Every religion and cultural tradition has teachings, practices, and rituals that facilitate spiritual healing.³²

The challenge is not to seek omnicultural and spiritual competency but to develop a humility that allows patients to teach about what is important to them.

Patients often display many clues that can be keys to the beginning of a conversation. For example, "Mrs. Xiong, I see that you have white and red strings tied around your wrist. Could you please teach me about their importance to you?" Such questioning would lead the health care professional into a deeper understanding of the patient's worldview and sources of strength. Such questioning would also prevent profound patient harm by accidental cutting and removal of sacred objects to make way for an intravenous (IV) line placement or other biomedical intervention.

Three related open-ended questions include the following:

- As your doctor, what do you most want me to know about you as a

(religious or spiritual) person?

- In the past, from where have you drawn the strength to cope with difficult situations?
- How can I be most helpful to you regarding your spiritual concerns and practices?

The principal guideline in any such questioning is to listen to understand rather than to express agreement or disagreement.

Clinical Goal Three: Understand Better Your Patients' Subjective Experiences and Subjective Understanding of (Ultimate) Reality

Every effective health care professional is broadly familiar with the religious worldviews of the cultural groups within their patient population. Patients and their families can teach about the specifics. This is important because there is a significant danger in extrapolating the truth for one patient of one cultural group and making it the truth for all such patients. This constitutes practice by stereotype (e.g., this patient is Hmong; therefore...). The challenge is to understand what *this* illness means for *this* patient.³³

The consideration of seven concepts and questions by clinicians can help generate clinically relevant questions and guide understanding among them. These include, how does this patient (and/or family) understand:

1. Ultimate health?
2. Affliction and suffering?
3. The different parts of a person (e.g., location of the soul, meaning in this life and the next)?
4. The patient's illness/sickness or disease (i.e., is there a nonscientific diagnosis such as loss of soul)?
5. Necessary interventions or forms of care (e.g., specific foods, rituals, herbs)?
6. Who is seen as qualified to address the different parts that need healing?
7. Efficacy or healing?

Given the frequently implicit and unconscious nature of the answers to these questions, these seven questions should be seen only as prompts or guides. Health care professionals should ask themselves if they could answer these questions for their patients on the basis of their

interview(s). Doing so directs interviewing toward the clinically relevant meaning of the illness to the patient. The response to an open-ended question such as “What do you fear most about surgery?” can lead to a dialogue that may help answer these questions. Should this reveal a spiritual concern that cannot be addressed medically, further questioning may help identify the interventions that are needed and professionals who should perform them.

Clinical Goal Four: Determine What Impact, Positive or Negative, Your Patients’ Spiritual Orientation Has on Their Health Problems and Perceived Needs

Although spirituality is frequently seen in a positive light, there is, of course, a shadow side. The *Diagnostic and Statistical Manual (DSM-5)* includes an axis IV concern—a religious or spiritual problem.^{34,35} Examples cited include distressing experiences that involve loss or questioning of faith, problems associated with conversion to a new faith, or questioning of other spiritual values that may not necessarily be related to an organized church or religious institution.

When patients are asked about their sources of support, it is possible that what worked previously is not perceived to be working at present. Spiritual distress is often exacerbated when a patient’s understanding of his or her spiritual life and spiritual support conflicts with the religious beliefs of his or her faith tradition. For example, if the Source of Life (God) is feared or understood as punishing, the person in distress has nowhere to turn and thus is at high risk for panic and despair. This often surfaces among patients after hearing the diagnosis of a life-threatening or life-changing illness.

In such cases, traditional spiritual sources of support, such as teachings, practices, and rituals, may paradoxically be barriers to spiritual well-being. For this reason, health care professionals are at a risk of creating a sense of shame or guilt by denying, dismissing, or silencing doubts or theological challenges. Examples of valid spiritual suffering include the following:

Spiritual Alienation

“Where is God now when I need Him the most?”

“Why isn’t He listening?”

Spiritual Anxiety

“Will I ever be forgiven?”

“Am I going to die a horrible death?”

Spiritual Guilt

“I deserve this.”

“I am being punished by God.”

“I didn’t pray hard enough.”

Spiritual Anger

“I’m mad at God.”

“I blame God for this.”

“I hate God.”

Spiritual Loss

“I feel empty.”

“I don’t care anymore.”

Spiritual Despair

“There’s no way God could ever care for me.”

“I’m just a corpse waiting to happen.”¹⁶

When spirituality is understood as including connections with one’s self, others, nature, and God or a higher power, spiritual suffering can be seen as resulting from the loss of such connections—betrayal by one’s body, loss of social roles, dependence on technology, and theological doubt or loss of faith. Healing, therefore, is the process of resolving such broken connections and recovering one’s wholeness. The focus of healing is the human experience of illness and its associated suffering. Healing can occur in any dimension: physical, emotional, social, and spiritual. Healing as the resolution of brokenness may or may not include curing a disease. One can cure a heart attack but not heal the broken heart. Healing is never quick or easy.

Frequently, when patients are diagnosed with a life-threatening or life-changing illness, they turn toward their God and pray for healing. Healing, in its truest sense of making whole, means personal (spiritual) growth and development through embracing the illness (or any other presenting issue) and discovering God as a source of love in it.

“Healing” and “cure” are terms and intentions that, for many, if not most, are used interchangeably and synonymously. Therefore, when one prays for healing, one might more truly be praying for cure. This lack of distinction between healing and curing is crucial for clinicians to understand because it addresses the patient’s understanding of his or her relationship to God or Source of Life. If a person prays for cure—and cure is not always a possibility—that person sets him or herself up for an experience of disconnect with God, experiencing their God as an

abandoning one. This experience needs to be considered in the differential diagnosis of spiritual distress or despair.

Spiritual healing begins with the recognition and acknowledgment of spiritual pain. For this reason, the American Academy of Hospice and Palliative Medicine's mnemonic LET GO can be quite helpful ([Table 114.3](#)).³⁶ The challenge here is to respond not as an expert with the answer(s) but as a fellow human being also struggling to make sense of tragedy. Listening, acknowledging, and validating are means of connecting at a deep level and are the most profound means of strengthening the therapeutic alliance. This connection between clinician and patient is the foundation for healing. Without this connection, without first listening comfortably to the patient at a deep level, referral of patients to those with expertise in pastoral care and counseling may be perceived as abandonment by patients.

TABLE 114.3**Spiritual Suffering Response Mnemonic**

LET GO—American Academy of Hospice and Palliative Medicine

L—Listen to the patient's story.

E—Encourage the search for meaning.

T—Tell of your concern and acknowledge the pain of loss.

G—Generate hope whenever possible.

O—Own your own limitations, seek competence, and refer when appropriate.

Generating hope whenever possible does not mean creating fake scenarios or deceiving patients. It means identifying what is important to the patient and working to achieve that. What constitutes hope and its shadow side, despair, keeps changing throughout the course of an illness. For this reason, first asking and then acting to address what is most important for the patient today (or for a given time period) is an important, concrete, and constructive means of addressing hope.

As with any medical referral, pastoral experts are available for assistance in understanding complex or difficult cases. Referrals can enhance the quality of care, and, frequently, the patient's quality of life.

Clinical Goal Five: Determine Appropriate Referrals to Chaplains, Clergy, or Traditional Healers for Spiritual Care

Many spiritual concerns are addressed as a variation on the questions "Why? Why me? Why now?" Clearly, multiple members of the health care team can recognize the many varieties of such spiritual concerns in clinical settings. However, even if time allows, these are not the questions that should be answered by health care professionals. To do so is to risk harming patients. For every such question, the best answers are found rather than given. The health care professional's role is to help give voice to such questions and to support the patient's search for answers.

Today, there is no need for any member of the health care team to be a self-sufficient virtuoso. This is especially true when Clinical Pastoral Education (CPE)-trained chaplains are available in hospital settings. Chaplains offer well-tuned skills in listening for and responding to spiritual concerns in acute care settings. Furthermore, they can help identify when a spiritual guide (director) or a culture's spiritual healer (e.g., priest, pipe holder, or shaman) may be the most appropriate professional for a patient's spiritual concerns.

Professionally trained spiritual directors (guides) serve in outpatient settings. This allows the spiritual director to enter a long-term or more expansive relationship with the patient. Spiritual direction is emphatically not about giving preformed or formulaic answers. Spiritual directors are trained in the art of meeting the person where he or she is experiencing life. Spiritual direction ideally addresses integration of the *all* of life without judgment.

Spiritual direction is a method of healing conversation that allows people to listen deeply within their spiritual life as they understand it. For some, this means a sacred time to become more whole or aware. For others, it means deepening their relationship with God. Spiritual direction is not dependent on religion and can occur independently of one's religious beliefs, including not having any religious beliefs. Spiritual direction helps clients to attend to the spirit "part" of who they

are, to see the longer arch and journey of their life, and to connect with their innate health and wisdom. Spiritual direction supports healing because we humans are most healthy when our body, mind, and spirit are balanced and nonanxious.

Spiritual direction can be especially helpful for people who:

- feel stuck in their lives and have a general sense of “dis-ease” that they cannot get beyond or alleviate.
- have been suffering for many years with medical and/or psychological difficulties and do not yet see the deeper patterns and threads of both their suffering and potential for health.
- have been suffering from illnesses that may have spiritual abuse or exposure to very negative church or theological messages as their root cause.
- understand or realize that their difficulties would be helped by a deeper relationship with God/Higher Power.
- feel burdened by a difficult diagnosis or a challenging chronic illness in themselves or a loved one.

Both inpatient and outpatient care plans should identify a patient’s spiritual resources, spiritual needs, and preferred spiritual care provider. Truly integrative medicine requires that a relationship be built between the clinician and available chaplain and spiritual direction services, leading to the establishment of a network of local consultants and patient- or family-preferred spiritual care providers who can offer assistance.

Therapeutic Review

There are three practical outcomes of integration of spiritual assessment and care into clinical settings: (1) improved diagnostic accuracy, (2) appropriately focused and directed resources, and (3) a strengthened therapeutic alliance. To achieve these outcomes, clinicians should consider integrating these eight summary points:

1. Intake questions and mnemonics exist to guide the inclusion of spirituality in clinical care. Expand the social history.
2. Spiritual needs can arise at any time or place. Anticipate them.
3. Spiritual healing begins with recognition and acknowledgment of spiritual pain. Listen intentionally.
4. Spirituality is about questions, not answers. Help voice the questions.
5. The best answers are found rather than given. Support the search.

6. Care plans should include patients' spiritual needs, resources, and preferred spiritual care providers. Identify them.
7. Every religious tradition has teachings, practices, and rituals that are potential resources of strength and recovery. Integrate these into the care plan, as appropriate.
8. Every illness is a potential spiritual crisis. Refer to pastoral care specialists (chaplains, clergy, and spiritual directors) for assistance.

CHAPTER 115

Therapeutic Homeopathy

Paul E. Bergquist, MD

Why homeopathy?

“When I was a medical student I felt sure that any one of us would have been ashamed to be caught looking into a homeopathic book by a professor. We had to sneer at homeopathy by word of command. Such was the school opinion then, and I imagine similar [sentiments]...exist in the medical schools today.”¹

So spoke William James, philosopher and physician, in 1898, when he made a plea to the Massachusetts legislature to support homeopathy. Medical practitioners today are no less skeptical about homeopathy than they were a century ago. Homeopathy is just as implausible, irrational, and misunderstood today as it was then.

How is it possible that homeopathic remedies containing infinitesimal amounts of active substances can cure illness? Proponents of homeopathy believe that the use of microdoses stimulates human defense and homeostatic self-regulatory mechanisms to resolve illness. Cure is possible in many acute and chronic diseases, some of which have little or no chance of cure in regular medicine. Despite a relative lack of scientific data to support its theory, homeopathy has been used safely and effectively by millions of people worldwide for more than 2 centuries.

What is Homeopathy?

Homeopathy is derived from the Greek words for “like” and “suffering.”

The guiding principle “likes cure likes” has its origins in ancient Egyptian medicine, as well as in Hippocratic medicine of the ancient Greeks; however, the practice of homeopathy was codified by Samuel Hahnemann, a 17th-century German medical doctor. Disillusioned with the medical practices of those days, which included bloodletting, purging, cathartics, and cupping, Hahnemann decided to experiment with medicinal substances on himself.

He started with quinine, an herbal medicine known at that time to cure malaria:

“I took by way of experiment...four drams of good China (quinine). My feet, fingers, at first became cold; I grew languid and drowsy; then my heart began to palpitate, and my pulse grew hard and small; intolerable anxiety, trembling, prostration throughout all my limbs; then pulsation, in the head, redness of my cheeks, thirst, and, in short, all those symptoms which are ordinarily characteristic of intermittent fever, make their appearance. This paroxysm lasted two or three hours each time, and recurred if I repeated this dose, not otherwise; I discontinued it and was in good health again.”²

This was the first proving of a homeopathic medicine and led Hahnemann to formulate the Law of Similars, which states that a remedy can cure a disease if it produces similar symptoms in a healthy person. Hahnemann also found that symptoms of poisoning by a drug were often the same as those of the disease cured by the drug. Hahnemann and his followers went on to prove hundreds of plant, mineral, animal and disease substances. These symptoms were cataloged in homeopathic materia medicas, which today include more than 2000 remedies. Each remedy has a full profile of mental, emotional, and physical pathological symptoms. Homeopathic remedies are compiled in the Homoeopathic Pharmacopoeia of the United States, which is recognized by the U.S. Food and Drug Administration.

How are Homeopathic Remedies Prepared?

Because many remedies are toxic in their crude form, Hahnemann attenuated the remedies by serial dilution and succussion, a process whereby the solution is struck on a pad a given number of times between

dilutions. This process eliminated almost all the side effects of the crude substance. A 12 C potency, for example, is prepared by diluting 1 drop of the crude tincture in 99 drops of an alcohol–water solution, succussing it, and then taking a drop of that diluted solution and diluting it in another 99 drops of alcohol–water solution; this process is repeated 12 times to reach the 12 C, or 12 centesimal, potency. The decimal (X or D) potencies are diluted on a 1:9 scale and considered less potent. Beyond a 12 C or 24X dilution, the Avogadro’s rule designates that not a single molecule of the original substance should remain in the solution. Paradoxically, however, in clinical practice, the higher the number of dilutions and successions, the more potent the remedy. French scientists Jacques Benveniste et al.³ were able to demonstrate mast cell degranulation using a homeopathic dilution of immunoglobulin E antibodies in a laboratory setting, where even at very high dilutions, not a single molecule of immunoglobulin E remained in the solution. Because of its implausibility, their study, published in the scientific journal *Nature*, was rejected by the scientific community. However, the study was repeated 10 years later in a rigorous pan-European trial published in 1999. Again, the investigators demonstrated statistically significant results showing activity of hyperdilute solutions.⁴

TABLE 115.1
Common Homeopathic Potencies

Common Potencies	Serial Cycles (of Dilution and Succussion)	Usual Dosing Method
6X	1:10 dilution 6 cycles	3–5 pellets every 5 min—every hour for acute illness
12X	1:10 dilution 12 cycles	3–5 pellets every 15 min—every 2 h for acute illness
30X	1:10 dilution 30 cycles	3–5 pellets every 1–8 h for subacute illness
6 C	1:100 dilution 6 cycles	3–5 pellets every 5 min—every hour for acute illness
12 C	1:100 dilution 12 cycles	3–5 pellets four times daily in acute case or 5 pellets daily in chronic case
30 C	1:100 dilution 30 cycles	3–5 pellets three times daily in acute case, or daily for 10 days in subacute case
200 C	1:100 dilution 200 cycles	5 pellets every hour or daily in very acute case, 10 pellets once in chronic case
1 M	1:100 dilution 1000 cycles	5 pellets every hour in severe acute case, 10 pellets once in chronic case
10 M	1:100 dilution 10,000 cycles	5 pellets every hour in severe acute case, 10 pellets once in chronic case
50 M	1:100 dilution 50,000 cycles	5 pellets daily in severe acute case, 10 pellets once in chronic case
CM	1:100 dilution 100,000 cycles	5 pellets daily in severe acute case, 10 pellets once in chronic case

[Table 115.1](#) lists the common homeopathic potencies and their usual dosing methods.

How do Homeopathic Remedies Work?

The exact mechanism by which homeopathic remedies work is unknown. The clinical success of homeopathy is often attributed to the placebo effect. Reilly and Taylor et al.⁵⁻⁸ conducted four double-blind, placebo-controlled trials of homeopathy in the treatment of allergies and found that homeopathy was significantly more effective than placebo. These researchers concluded that either homeopathy works or the clinical trial method itself was flawed. Since 1980, more than 190 controlled and 115 randomized trials of data were reported, the results of which again suggest that homeopathy is more than a placebo-based approach.⁹⁻¹⁴

Transfer of bioelectrical wave signatures from medicinal substances to water in hyperdilute solutions has been posited as a possible mechanism of the action of homeopathic remedies.¹⁵ French virologist and Nobel Laureate Luc Montagnier and his coworkers¹⁶ published a study showing that dilute solutions containing the DNA of pathogenic bacteria and viruses (including human immunodeficiency virus [HIV]) “could emit low-frequency radio waves” that induced surrounding water molecules to become arranged into nanostructures.¹⁷ Once induced, these water molecules could then also emit radio waves. These investigators suggested that water could retain these properties even after the original DNA-containing solutions were ultradiluted to the point where no molecules of the original DNA remained (much like a diluted and potentized homeopathic remedy).¹⁶

How are Homeopathic Medicines Prescribed?

When the body is threatened by harmful external forces, such as trauma, toxins, bacteria, and viruses, it produces symptoms such as fever, cough, and pain. These symptoms often reflect certain innate purposes: to inactivate bacteria or viruses, to carry off irritating byproducts of diseases, and to force the individual to rest and recuperate. Although these symptoms may be uncomfortable for the patient, they represent a healthy reaction of the body’s defense mechanisms. They are also the

only true guides to individual manifestations of the disease.

The homeopath, recognizing the individual as body, mind, and spirit, takes an extensive history of all physical, mental, and emotional symptoms. The location, quality, severity, frequency, and time of aggravation of symptoms are discovered. Underlying causes such as trauma, bereavement, change of job, abuse, and physiological change (pregnancy, teething, menarche, and menopause) are important. Amelioration or aggravation of symptoms, fears and phobias, food cravings and aversions, sex drive, and energy level are all considered. Body habitus, physiognomy, mannerisms, behavior, and psychological symptoms are examined. The homeopath is especially interested in unusual or strange, rare, and peculiar symptoms.

The homeopath builds a complete picture of the pathological features of a person in the course of taking the history and then attempts to find a remedy that most closely matches the whole picture of symptoms. In an acute case, acute symptoms are primarily taken into account. In a chronic case, in what is often called *constitutional prescribing*, all symptoms, past and present, may help the homeopath find the right remedy.

BOX 115.1 Examples of *Materia Medica*s

- Allen JT. *Encyclopedia of Materia Medica*. New York: Boericke & Tafel; 1879 [reprint: New Delhi: B. Jain Publishing; 1988].
- Boericke W. *Materia Medica Pocket Guide and Reference Works*. New Delhi: B. Jain Publishing; 2004 [reprint].
- Encyclopedia Homeopathica and Reference Works (www.wholehealthnow.com/homeopathy_software/index.html): example of a computer program that contains hundreds of materia medicas from the past to the present, with programs designed to access the symptoms and remedies from the entire homeopathic database.
- Hahnemann S. *Materia Medica Pura* (contains original proving symptoms). New Delhi: B. Jain Publishing; 2002 [reprint].
- Morrison R. *Desktop Guide*. Nevada City, CA: Hahnemann Clinic Publishing; 1993.

- Vermeulen F. *Concordant Materia Medica*. Haarlem, The Netherlands: Merlijn; 1994.

BOX 115.2 Examples of Repertories

Homeopathic repertories are books that help guide the most appropriate remedy.

- Kent JT. *Kent's Repertory*. Calcutta (Kolkata): Sett Dey; 1974.
- Radar (www.wholehealthnow.com/homeopathy_software/index.html): a computer program that contains multiple repertories and helps the homeopath choose remedies.
- Schroyens F. *Synthesis 9.1*. London: Homeopathic Book Publishers; 2002.
- Van Zandvoort R. *Complete Repertory*. Leidschendam, The Netherlands: Institute for Research in Homeopathic Information and Symptomatology; 1998.

The process of finding the correct remedy can be the most challenging aspect of the clinical practice of homeopathy. A homeopathic repertory of symptoms and the homeopathic materia medica are the two essential references for practicing homeopaths (Boxes [115.1](#) and [115.2](#)). After the most important symptoms are elicited, a repertory of symptoms is consulted to see which remedies address all or most of the important symptoms in the case. Those remedies are studied more closely in one or more of the materia medicas, which are encyclopedias of remedy characteristics and symptoms. The remedy that appears to match the pathological features and essential nature of the case most accurately is given to the patient. Several remedies may match the case closely enough to stimulate the natural homeostatic mechanisms of the body to move toward cure. If the remedy chosen is not a close match to the case, it will do nothing for the symptoms.

Remedy Prescription

In acute illnesses, the remedy is usually given in lower potencies, such as 12 C or 30 C, three to five pellets by mouth every 5–60 minutes. If the remedy does not help the symptoms after four or five doses, a different remedy should be chosen. In less acute illnesses, the remedy can be given three or four times a day for 1–2 days. If no improvement is noted, a different remedy is chosen. Once improvement is noted, the remedy is given only when symptoms recur. In chronic illnesses, a higher potency, such as 200 C, is used once at the beginning of a treatment. Symptoms are monitored over the next 1–2 months. If improvement is followed by relapse, the remedy is repeated once. If no improvement is noted, a different remedy is chosen. A patient who is taking other medications may need a daily dose of a lower potency (e.g., 12 C) after the initial 200 C to counter the interfering effects of the other medications.

Aggravation and Antidote

Aggravation of a patient's existing symptoms can occasionally occur when a chronic problem is treated using a homeopathic remedy. This is particularly true for skin problems and diseases or disorders that have been treated with steroids. Usually, the aggravating symptoms resolve within 5–10 days, and the resolution should be followed by gradual

improvement beyond the initial baseline condition if the correct remedy has been chosen.

If a patient experiences improvement of chronic symptoms and then has a sudden relapse after trauma, surgery, dental trauma, emotional grief, or severe illness or after initiating coffee, camphor, chamomile, steroids, or other regular allopathic medications, the remedy effects are said to be *antidoted*. These influences or substances do not always antidote the effects of a remedy.

[Box 115.3](#) contains a list of several reputable homeopathic pharmacies.

TABLE 115.2
Remedies for Teething

Remedy ^a	Indication	Better from/in	Worse from/in
Calcarea carbonica	Constipation, delayed teething, milk intolerance	Heat	Cold, wet, dairy products
Chamomile	Irritability, screaming, capriciousness	Being carried, rocked hard, car ride	Night, heat, being held still
Pulsatilla	Weepiness, whining	Gentle rocking, being held	Overheated, stuffy room
Nux vomica	Irritability, burping, gas	Nap, evening	Morning

^a All doses 12 C–30 C; three pellets given every hour as needed in the cheek. If no improvement is seen after four to five doses, choose another remedy.

TABLE 115.3
Remedies for Colic

Remedy ^a	Indication	Better from/in	Worse from/in
Chamomile	Irritability, being cross	Being carried, being rocked hard	Open air, night
Calcarea carbonica	Sweaty head, plumpness	Dry, warm	Cold, wet
Colocynthis	Doubling up, distended abdomen	Firm pressure, heat, bending legs up	Anger, eating, drinking

^a All doses 12 C–30 C; three pellets given every hour as needed in the cheek. If no improvement is seen after four to five doses, choose another remedy.

For which Conditions can Homeopathic Treatments be Used?

Many conditions, chronic and acute, can be effectively treated with a homeopathic approach. These include pediatric problems, such as recurrent otitis media,¹⁸⁻²¹ pharyngitis, attention-deficit hyperactivity disorder,²² enuresis,²³ constipation, diarrhea,²⁴ asthma, allergic rhinitis, eczema,^{6,25,26} juvenile arthritis, chronic bronchitis, and recurrent pneumonia. Adult problems well treated by homeopathy include anxiety,²⁷ bruising and ecchymosis from trauma and surgery,²⁸⁻³⁰ poisonings,³¹ anemia,³² acquired immunodeficiency syndrome/HIV infection,^{33,34} insomnia,^{35,36} vertigo,³⁷ tinnitus,³⁸ depression,^{27,39,40} bipolar disorder, headaches,⁴¹ gastroesophageal reflux disease, colitis, Sjögren's syndrome,⁴² rheumatoid arthritis,^{43,44} heart disease,⁴⁵ multiple sclerosis (management and arrest of progression), diabetic polyneuropathy,⁴⁶ perimenopausal symptoms,^{47,48} fibromyalgia,^{49,50} chronic fatigue syndrome,⁵¹ infertility,⁵² dysmenorrhea,^{53,54} postoperative ileus,⁵⁵ chronic or recurrent urinary tract infection, trigeminal neuralgia,⁵⁶ psoriasis,⁵⁷ numerous other dermatological conditions,^{58,59} influenza,^{60,61} snoring,⁶² and chronic cough. Traditionally, homeopathy has been used effectively for the treatment of epidemics; during cholera and severe influenza epidemics, homeopathy was significantly more effective than any of the allopathic approaches to management.

In a study funded by the Cuban government, Bracho et al.⁶³ created a homeopathic preparation of four strains of *Leptospira* and administered it to 2.3 million people at high risk during an epidemic of leptospirosis in Cuba. A significant decrease in the disease incidence was observed in the intervention regions. No decrease was noted in the regions where no remedy was administered. The epidemic was controlled, and the incidence of leptospirosis fell below the usual levels.⁶³

Classical homeopaths use constitutional prescribing for chronic diseases and complicated cases. Although most health care practitioners will choose not to prescribe constitutionally, homeopathy may be used in a cookbook fashion to achieve results in many acute illnesses and some chronic illnesses. Tables [115.2](#) through [115.5](#) list some of the commonly used remedies for various problems.⁶⁴

Otitis Media

Acute and chronic recurrent otitis media responds well to homeopathic remedies.²⁰ Acute otitis media often improves without treatment over 3–5 days. Antibiotics can often be avoided, and the appropriate homeopathic remedy sometimes speeds healing and prevents recurrence ([Table 115.6](#)).

Sinusitis

Several remedies are appropriate for acute sinusitis⁶⁵ ([Table 115.7](#)). Chronic or recurrent sinusitis can be treated by referral to a classical homeopath for constitutional treatment.

Allergies, Asthma, and Atopic Eczema

Allergic rhinitis, asthma, and atopic eczema can be cured over several years using a constitutional homeopathic approach. Referral of a patient with such a problem to a trained homeopath is recommended. Asthma and eczema symptoms are not always easily palliated, and a constitutional homeopathic approach, with or without steroid and bronchodilator inhalers and minimal use of steroid creams, is recommended. Allergic rhinitis symptoms can also be alleviated in a palliative manner.⁸ [Table 115.8](#) lists some of the more common remedies for palliation of these problems.^{66,67}

TABLE 115.4

Remedies for Severe Brain Injury and Mild Traumatic Brain Injury^a

Severe acute head trauma ^b	Arnica	30 M–180 M (DM)	5 pellets (or 10 if labored respiration) every 15 min in the first 12–24 h, then every day for 18–30 days Decrease frequency of dose as patient improves Continue through stabilized status
Chronic effects of head trauma (posttraumatic brain injury)	Suggest constitutional homeopathic therapy (e.g., Arsenic, Calcarea Carbonica, Coffea, Thuillosea, Natrum Sulphuricum, Opium Sillit)	300 C–1 M	3 pellets once; repeated as necessary if improvement is followed by relapse

^a Homeopathic remedies have been used for acute severe concussion and intracranial hemorrhage as adjunctive therapy to neurosurgical approaches and in posttraumatic brain injury for speeding rehabilitation.⁵⁸

^b Homeopathic treatment would be an adjunctive therapy to a hospital intensive care unit protocol for treatment of head injury.

TABLE 115.5

Remedies for Acute Injury and Emergencies

Indication	Remedy	Potency	Dose
Shock	Aconite	200 C or up to 50 M	5 pellets PO every 5 min, every day
Shock with fear	Aconite	200 C or up to 50 M	5 pellets PO every 5 min, every day
Head injury	Aconite	200 C or up to 50 M	As mentioned earlier; the more severe the trauma, the more frequently repeated and the higher the potency
Blow to spine or whiplash	Ilyoglossum	200 C or up to 50 M	5 pellets PO every 5 min, every day
Trauma with bleeding, bruising, contusions, lacerations	Aconite Ilyoglossum	30 C or up to 200 C 30 C or up to 200 C	As mentioned earlier; remedies may be given concurrently
Eye injury	Aconite	30 C-200 C	Five pellets PO every 5 min, every day
Black eye	Lobelia	30 C-200 C	As mentioned earlier
Cut nerves, crush injuries	Ilyoglossum, Aconite	30 C-200 C	As mentioned earlier; may be given concurrently
Fracture	Aconite, Sparganium, Lobelia	200 C	5 pellets of each daily for 10-14 days
Fracture wounds	Lobelia	30 C-200 C	5 pellets PO every 5 min, every day, depending on the severity
Itch, bee stings	Apis, Lobelia	As mentioned earlier	As mentioned earlier
Muscle, ligament, and joint sprains and strains	Aconite, Ruta	30 C-200 C	5 pellets PO three times daily for 10-14 days
Chronic sprains or strains	Rhus toxicodendron	30 C or 200 C	5 pellets daily for 7-10 days or 10 pellets one dose once
Burns	Colechia	Topical oil, lotion	Apply to burn
First degree	Urtica urens	30 C	5 pellets PO every 5 min pm
	Cucurbita	30 C	5 pellets PO every 5 min pm
Second degree	Urtica urens	30 C-200 C	5 pellets PO every 5 min pm
	Ilyoglossum	30 C-200 C, topical	Tincture dilute 1:5 in water
Third degree	Carbom, Hypericum	30 C-200 C	5 pellets PO every 5 min pm
Sunburn	Belladonna	30 C	5 pellets PO every 5 min pm
Heatstroke: hot, red, dry	Antimonium Crudum, Belladonna	30 C-200 C	5 pellets every 15 min pm
Throbbing headache	Gelsemium	30 C-200 C	As mentioned earlier
Fluoridic tears	Phosphorus	30 C-200 C	5 pellets PO three times daily pm
Epistaxis	Phosphorus	30 C-200 C	5 pellets PO every 5 min pm
Blood, fluid loss	China Officinalis	30 C-200 C	As mentioned earlier
Dental extraction with blood loss	Phosphorus	30 C-200 C	As mentioned earlier
Syncope, collapse	Carbo Vegetabilis	30 C-200 C	5 pellets PO every 5 min pm
Food poisoning	American Aloe	30 C	5 pellets PO every 5 min pm
Muzzic, vomiting	Ipecac	30 C	5 pellets PO every 5 min pm

PO, Orally; pm, as needed.

TABLE 115.6
Remedies for Otitis Media

Remedy*	Indications	Better known	Worse known
Aconite	Sudden onset, high fever, restlessness, being hot, dry, thirsty, no benefit	Open ear, red	Night, warm room, noise, cold wind, wetting, touch
Belladonna	Red face, being hot, right ear, throbbing pain, high fever	Sitting up, weeping up in warm room	Light, getting head wet or cold, looking, 5 am-3 pm
Coleocephala	Thick discharge from ear, decreased hearing	Warm, dryness, lying, massage	Cold, wet, exertion, resting, milk
Chromolaena	Being warm, remaining in pain, pushing people away	Being carried rapidly, warm weather	Wind, 30 pm-10 am, looking, cold, being looked at
Ferrous Phosphorus	Early stages, gradual onset, pallor	Cold applications, touch, cold drinks	Night, motion, noise, right side, warm drinks
Ilyoglossum	Great sensitivity to pain, fits of screaming	Warmth, water applications	Staring to be examined, cold, drafts of air
Lachesis	Rare, extreme pain, left ear, pharyngitis	Open ear, discharge, loosening clothes	After birth of child, coldness, wind, tight clothes
Mercanturium	Sickly child status, prostration, facial discharge, salivation at night, pain in ear	Rest, nursing	Night, warmth of bed, being too hot or too cold, being held
Pulsatilla	Weepiness, irritability, thick yellow discharge, left ear	Wanting to be held, carried, or swaddled, open ear, lying on painful side	Twilight, after eating, warm stuffy room, left side, lo-rick food
Silica	Constipation, being chilly, repeated earache with watery or cheesy discharge, watery film	Rest (that's going easily), warmth, covering up	Milk, wetting, cold air, night, crawling feet, touch

* All remedies are 12 C or 30 C; three pellets are given every 5 min—every hour as needed until better. If no improvement is seen after four to five doses, choose another remedy.

TABLE 115.7
Remedies for Sinusitis

Remedy ^a	Indication ^b	Better results	Worse results
Artemisia alba	Burning nasal discharge, redness, anxiety	Warm drinks, hot applications, food, lying head up	Midnight or after, cold, exertion, tea, draft, tobacco
Asper Sulphur	Pain at root of nose, sensitivity, instability, stuffy nose, later stage	Warmth, wrapping up, eating	Cold draft in air, touch, lying on painful side
Hydrastis	Thick, yellow discharge from posterior nares, watery tears, bloody crusts	Peculiar, warm wraps, dry weather, rest	Inhaling cold air, night, open air, motion
Kali Bichromicum	Much concern about remedy, pain in maxillary and bridge of nose, thick stringy discharge, stuffy nose	Hot, pressure, motion	Cold, damp air, reclining, 2-3 min., alcohol, after sleep
Mercatus Vivus	Rare sneezes, tears, bloody discharge, hoarse, bad breath	Moderate compresses, rest, morning	Night, excesses of temperature, heat, drafts, lying on right side
Natron Muraticum	Floes white nasal discharge, violent sneezing	Rest, open air, lying on right side, massage	Humid air, morning, exertion, exertion, consolation, touch
Nux Vomica	Sniffing, sneezing, lacrimation, anger, falling offily, sneezing on waking	Rest, allowing discharge freely, hot drinks, coverings	Uncovering, coffee, alcohol, drugs, rooming, exertion, pressure of clothes
Pulsatilla	Ripe cold with yellow mucus, loss of smell, weepiness, dizziness	Garlic ointment, open air, wrapping, massage	Warm and stuffy rooms, back, rich fatty food, time before or during meals
Silica	Dry nose crusts, sensitive nasal bones	Warmth, warm wraps, warm, wet weather	Cold air, cold, light, confinement, talking, mental exertion

^a All remedies are three pellets, 12 C or 30 C, given every 2–4 h as needed until better.

^b If no improvement is seen after four to five doses, choose another remedy.

TABLE 115.8
Remedies for Allergic Rhinitis

Remedy ^a	Indication ^b	Better Results	Worse Results
Allium Cepa	Itchy eye tearing, sneezing, mucorizing nasal discharge	Open air, cold rooms, cold water, motion	Warm rooms, wet feet, evening, spring, damp weather
Artemisia Alba	Burning eye and nasal discharge, hot mucus, feeling chilly, redness	Hot, hot applications, hot drinks, motion, lying with head elevated	Midnight or after, sight or smell of food, cold drafts, alcohol
Azorealis	Itching inside nose, palate, or ear canal; salivation with runny nose	Steam for some foods, drinking	Demerol
Azra Triphylla	Rare sneezes in nostrils, exorbitant discharge, stuffy nose, mouth breathing	Warmth	Talking, exercise of voice, cold, wet wind
Euphrasia	Profuse burning tears, bland nasal discharge, eyes filled with tears, red eyes	Winking, wiping eyes, draft, open air, coffee	Night, lying down, wind, sunlight, warmth, odors
Galgamia Glauca ^c	Sneezing, itches, cold sores, skin itchy, eyelid edema		Weather changes
Natron Iboristicum	Watery white nasal discharge, cold nose, sneezing, scratched lip, headache	Fresh air, cool bath, steam, sweating, sleeping outside	Heat, sun, light, 9-11 a.m., time after meals, warm room, ammonia, grief, loss
Nux Vomica	Violent sneezing in spells, daytime runny nose with nighttime stuffiness	Indoors, warmth, hot drinks	Drafts, cold air, drafts, coffee, stimulants, alcohol, exercise
Selwella	Sneezing in spells, exhaustion, itching in nose, red burning eyelids, dry nostrils	Warmth, warm drinks, open air, eating	Cold air, cold drafts, odors (especially flowers), sneezing
Wyrtika	Intermittent itching of upper palate, dry mouth	Choking palate, swallowing of air	Afternoon, eating, exertion, motion
Homeopathic combination remedies	Many over-the-counter preparations available, can be used for generic rhinitis symptoms		
These do not mix readily ^d	Used if false mite allergy is proven		

^a All remedies are three pellets, 12 C–30 C, every 2–4 h as needed until better.

^b Data from Lewith GT, Watkins AD, Hyland ME, et al. Use of ultramolecular potencies of allergen to treat asthmatic people allergic to house dust mite: double blind randomized controlled clinical trial. *BMJ*. 2002;324:520–523.

Chronic Cough

For cough that persists after all other causes—such as infection, asthma, allergies, neoplasms, chronic obstructive pulmonary disease, and gastroesophageal reflux disease—have been ruled out and empirical therapy has failed, the homeopath can prescribe Ignatia 200 C once or Ignatia 30 C daily for 7 days. If emotional trauma or loss precedes the cough, this remedy is especially indicated.

Cancer

Homeopathic remedies are used in cancer to stimulate the immune system and for palliation of symptoms.⁶⁸⁻⁷⁰ They can also be used to reduce the side effects of cancer treatment.

Calendula 30 C or Fluoric acid 30 C at a dose of five pellets every 4 hours daily or calendula ointment applied two times a day after radiation treatment has been found to be highly effective for prevention of grade 2 or higher acute dermatitis in patients with breast cancer.⁷¹ Radiation-induced itching in such patients can also be treated using several other remedies, including Causticum, Ignatia, Kali bichromicum, Psorinum, Rhus toxicodendron, and Gamma ray.⁷²

Radium bromatum 30 C, five pellets once or three times daily, can be used against other side effects of radiation therapy, such as Lhermitte sign, nonhealing burns or ulcers, postradiation pain and myalgias, fatigue, and other skin problems.

Gastrointestinal Disorders

[Table 115.9](#) lists common remedies for gastrointestinal disorders.^{24,73}

Obstetrics

Homeopathic remedies are well suited to pregnancy. The remedies have no side effects and can be safely prescribed for various prenatal difficulties, including miscarriage, morning sickness, heartburn, headaches, constipation, induction and management of labor,⁷⁴ and preeclampsia, as well as postpartum problems such as hemorrhage,⁷⁵ mastitis, depression, and newborn nursing difficulties⁷⁶ ([Table 115.10](#)).

Conclusion

Homeopathy is a safe and effective tool that can be integrated into a practicing clinician's armamentarium as either a first-line therapy or an adjunctive treatment. It is relatively free of adverse side effects, enhances the body's ability to restore balance, is curative in some diseases that would otherwise only be managed or palliated, speeds healing in adjunctive approaches, and is inexpensive. Homeopathy has survived the ultimate test of any medical therapy—the test of time in the field of

clinical practice. Perhaps elucidation of an underlying mechanism of action that can be understood in scientific terms will impart a more prominent role to homeopathy in clinical practice in the future.

TABLE 115.9
Remedies for Acute Gastrointestinal Disorders

Remedy ^a	Indications ^b	Better from ^c	Worse from ^c
Arctium- Album	Diarrhea, vomiting, distress for small sips, cramping, blood in stool or mucus	Heat, warm drinks, lying with head up, company, rest	Eating, spoiled food, cold drinks, spicy food, right side, cold
Carbo- Vegetabilis	Bloating stool, burning pains, blood in stool or mucus	Belching, flatus, warmth, rest, rubbing	Drinking liquids, coffee
Croton Tiglium	Drinking watery diarrhea, vesic for rash, food gurgling, skinning eruptions	Time after sleep, gentle rubbing	Drinking or eating food or meat, touch, motion, summer, washing
Carbo- Vegetabilis	Feeling chilly, indigestion, gas, bloating, belching	Belching, lying, cold, bending over double	Eating, evening, lying down, wine, warmth, rest bed
China	Gas that will not come up or down, belching that gives no relief, indigestion	Burping double, hand pressure, open air, warmth	Light touch, slight eating, drinks, every other day
Colocynthis	Vomiting, diarrhea, with severe cramps, doubling up with pain	Warmth, pressure, rest, after stool	Anger, indigestion, drinks, taking cold
Gelsemium	Green or white diarrhea, heaviness of limbs and eyelids, tremor	Motion, profuse urination, bending forward, sweating	10 a.m., manipulation, thinking of alcohol, emotion, draft, humid weather
Ipecac	Comma-like nausea and vomiting, increased salivation	Rest, open air, pressure, cold drinks, motion	Foal smells, vomiting, warmth of room, overeating
Lycopodium	Indigestion, bloating, vomiting gas, heartburn, craving for meat	After midnight, warm food and drink, warming, getting cool	Lying on right side, 4–8 a.m., cold drinks, warm room, pressure of clothes
Nux-Vomica	Constipation, vomiting, nausea	Feeding, sup, warmth, wrapping head, hot drinks	Overindulgence, morning, spicy food, stimulants, exercise, cold open air
Phosphorus	Vomiting, faintness, thirst for cold water	Cold, sitting, sleep, cold food and water, drink	Warm food and drink, touch, evening, light, wind, odors, emotion
Podophyllum	Painless gurgling diarrhea, mucus, flatus, offensive odor	Massage over liver, lying on abdomen	Morning, rubbing, hot weather, eating, drinking, milk
Pulsatilla	Indigestion, heartburn, acceptance	Open air, motion, cold applications	Eat fatty food, time after eating, warm room
Sulfa	Constipation, diarrhea, burning anus with itching, large hard stool	Open air, lying on right side, dry heat, walking, drawing up limbs	Belching, standing, warmth of bed, being overheat, suppression symptoms

^a All remedies are three pellets, 12 C–30 C, every 2–4 h as needed until better.

^b Data from Jacobs J, Jonas WB, Jimenez-Perez M, Crothers D. Homeopathy for childhood diarrhea: combined and meta-analysis from three randomized, controlled clinical trials. *Pediatr Infect Dis J.* 2003;22:229–234.

TABLE 115.10
Remedies for Obstetrics

Indication	Remedy	Potency	Dose
Induction of labor	Cadophyllum with Blue Cohosh tincture or capsule	30 C–200 C, one dropperful or one capsule alternating with Cadophyllum every 2 h	5 pellets every 2 h for five doses Repeat next day if no labor If no labor after 2 days, wait for several days before repeating
Turning a breech baby	Pulsatilla	30 C–CM	5 pellets one dose
Weak, exhausted labor, rigid or poor contractions	Gelsemium	30 C	5 pellets every 5–30 min for four doses
Ineffected labor, lack of dilation, no progress	Cadophyllum	30 C	5 pellets every 5–30 min for four doses
Arrested labor with shooting pains and cramps in thighs	Clivia-floja	30 C	5 pellets every 5–30 min for four doses
Block labor, occup posterior position	Kali Carbomates	30 C	5 pellets every 5–30 min for four doses
Frustrating, desire for cool air, labor with poor progress, acceptance	Pulsatilla	30 C	5 pellets every 5–30 min for four doses
Fear, anxiety during labor	Aconite	30 C	5 pellets every 5–30 min as needed
Retained placenta	Castoreo, Saja	30 C	5 pellets every 5–30 min for two doses if one remedy If no results, try the other remedy

Table Continued

Indication	Remedy	Potency	Dose
Completion of a miscarriage	Cimicifuga	200 C-1 M	5 pellets once, with tinctures
	Take with tinctures of Blue and Black Cohosh	1 dropful of each	Orally every 2-4 h until bleeding slows and tissue passes

Key Web Resources

American Institute of Homeopathy (AIH): This is the principal professional organization of licensed medical practitioners who are practicing homeopathy. The Institute publishes a quarterly journal for practitioner members.	http://www.homeopathyusa.org
National Center for Homeopathy (NCH): This national organization of lay and professional homeopaths is one of the primary homeopathic associations in the United States. It is dedicated to providing information on practitioners training in homeopathy and dissemination of homeopathic educational materials and resources.	http://www.nationalcenterforhomeopathy.org
Homeopathic Educational Services: Homeopathic Educational Services is a web outlet for homeopathic books, tapes, manuals, software, and educational materials. This site also includes the Homeopathic Family Medicine eBook, by Dana Ulfman, MPH, a review of homeopathic treatment for numerous clinical problems with associated literature references.	http://www.homeopathic.com
What's Health: New homeopathy software. This computer program contains repertories and materia medica designed to help match a remedy to specific symptoms from the entire homeopathic database.	http://www.whatshealth.com/homeopathy_software/index.html

Key Resources for Further Study

Coulter H. <i>Divided Legacy</i> . Washington, DC: McGrath; 1973.	A comprehensive history of homeopathy.
Datta ML. <i>The Truth of Homeopathy</i> . York, UK: University of York; 2001.	A review of all the clinical research conducted on homeopathy from the early 1800s.
Hansen P. <i>The Homeopaths: Doctors of Children</i> . Berkeley, CA: North Atlantic Books; 1991.	A review of some of the most often used remedies for a variety of common pediatric illnesses.
Morrison E. <i>Desktop Companion in Physical Pathology</i> . Nevada City, CA: Haberman Clinic Publishing; 1998.	A concise desk reference written for physicians to aid in remedy selection for a group of common disorders.
Perry M, Hriedelb T. <i>Homeopathic Medicine at Home: Natural Remedies for Everyday Ailments and Minor Injuries</i> . Los Angeles: Jeremy P. Tarboro; 1998.	A resource for patients and practitioners in choosing remedies for common acute ailments at home.
Perla S. <i>Homeopathy for the Modern Pregnant Woman and Her Baby</i> . Berkeley, CA: Benchmark Homeopathic; 1997.	A practical guide for using homeopathy in obstetric and neonatal care.
Ramsteinman AL, Coulter C. <i>A Homeopathic Approach to Cancer</i> . St. Louis: Quality Medical; 2001.	A homeopathic adjunctive approach to the treatment of cancer.
Satharan R. <i>Sea of Remedies: Miasmata: Homeopathic Methods</i> ; 1997.	A description of the constitutional natures of a selected group of remedies by an experienced homeopath.
Ulfman D. <i>Homeopathic Family Medicine eBook</i> . Homeopathic Educational Services: www.homeopathic.com ; 2015.	A review of homeopathic treatment for a wide variety of clinical problems with associated literature references.

CHAPTER 116

Biofield Therapies

J. Adam Rindfleisch, MPhil, MD

We are not just surrounded by energy and vibration; we *are* energy and vibration. One of the best-known of all physics equations, $e = mc^2$, points to a link between energy and matter. Matter is mostly composed of space that contains (or perhaps gives rise to) a smattering of subatomic particles/waves that influence one another through mysterious forces of attraction and repulsion. The nature of the interconnections of energy, physical reality, and consciousness is one of the great mysteries of our times. Quantum physics offers some tantalizing hints about these relationships, but we still have a great deal to learn.

How do these concepts of physics—vibrations, fields, and energy—inform healing? Dozens, if not hundreds, of different cultures and traditions have terms referring to life energy, which includes vital forces that are closely linked to consciousness and animate everything that is alive. Terms used to name this force include chi, prana, pneuma, fohat, mana, and orgone. Throughout human history, people from different cultures and civilizations spanning the globe have suggested that it is possible to both perceive and manipulate this life force. In fact, what we refer to as our “conventional medicine” is something of a historical and geographical anomaly in the grander scheme. The term “biofield therapy” was coined in a 1992 National Institutes of Health (NIH) report,¹ but energy medicine therapies are not new; they have been practiced for millennia. It is important that integrative clinicians be familiar with them.

This chapter reviews key concepts of energy medicine and describes some of the most commonly used biofield therapies. Key research findings related to these healing approaches are summarized here and ways for clinicians to work collaboratively with energy medicine practitioners are suggested. The final section describes exercises you can try yourself.

One caveat: Energy medicine is perhaps one of the most mysterious and controversial of all forms of therapy. An energy medicine practitioner once stated that as an African American, homosexual woman who practices reiki, she has been unpleasantly surprised to find that the most discrimination she has encountered in her adult life has not been linked to race, sexual orientation, or being a female, but rather to her energy medicine practice. Even for some of the most objective scientists, the topic of energy medicine strikes a highly emotional chord. A 1998 volume of JAMA went so far as to conclude that findings from a child's school science project (which investigated one Therapeutic Touch (TT) practitioner's ability to sense the presence of the child's hands) offered "unrefuted evidence that the claims of TT are groundless and that further professional use is unjustified."²

As integrative medicine providers explore the use of these therapies, the concept of "scope of practice" takes on a new meaning. At some point, every integrative provider has to determine his or her stance regarding the validity and utility of these approaches. Patients will most certainly inquire about them. Whatever you decide about how biofield therapies fit (or do not fit) into your practice, you should be able to discuss them knowledgeably with your patients.

A second caveat: A textbook chapter can offer only a taste of this varied and complex array of therapies. Trying to understand energy medicine solely by reading about it is akin to trying to grasp Beethoven's work by reading his biography instead of listening to his compositions or getting a sense of Van Gogh's *Starry Night* without being able to look at it. In other words, you are strongly encouraged to learn and explore through direct experience!

Truly learning about human energetic therapies requires one to experience them firsthand.

Defining Energy Medicine

The National Center for Complementary and Alternative Medicine, now the National Center for Complementary and Integrative Health (NCCIH), originally classified human energetic therapies as one of five main categories of complementary medicine.³ They further classified them based on whether the energy being manipulated by practitioners

was measurable (“veritable”) as opposed to subtle (“putative”). Because of political pressures, the NCCIH has scaled back on its support to biofield research or coverage of energy medicine in its web materials. Because there is some debate on whether certain types of subtle energy can be measured, the distinction between veritable and putative may not be as helpful. In a well-done 2015 review of clinical studies of energy medicine featured in a themed edition of *Global Advances in Health and Medicine*, biofield therapies were defined as “noninvasive, practitioner-mediated therapies that explicitly work with the biofield of both the practitioner and client to stimulate a healing response in the client.”⁴ The biofield was defined in the same article as “endogenously generated fields, which may play a significant role in information transfer processes that contribute to an individual’s state of mental, emotional, physical, and spiritual well-being.”

According to 2002–12 data from the Centers for Disease Control, a consistent 0.5% of the U.S. population had used some form of energy medicine in the past year.³ The 2012 National Health Interview Survey found that more than 3.7 million U.S. adults have visited an energy medicine practitioner at some point and 1.5 million reported receiving a biofield therapy in the past year.⁵ Surveys may underestimate the use of energy medicine because practitioners of other modalities, such as massage therapists, chiropractors, and naturopathic doctors, commonly blend energy medicine into their practices without labeling what they are doing as energy medicine per se. Research is limited on the use of energy medicine in hospitals, but a 2005 study reported that more than 50 U.S. hospitals and clinics formally offered energy medicine.⁶

Many different schools, or styles, of human energetic therapies exist, especially if one includes the various shamanic techniques that have arisen in many of the world’s indigenous cultures. *The Encyclopedia of Energy Medicine* identifies nearly 50 popular approaches used in the United States.⁷

Although various approaches to energy medicine may work with different aspects, or parts, of the energy field or may enlist different techniques for manipulating or maneuvering energy, most share some common aspects, including the following:⁸

- They assume the presence of an energetic anatomy or pattern that has an influence on health. Examples include the chakra system, the aura, and the meridian system used in acupuncture. Some schools of thought propose the existence of several different layers, or levels, of the energy body, each with unique characteristics. Because the chakra

system is intrinsic to most techniques and is often referenced by integrative medicine practitioners, it is described in more detail in [Table 116.1](#).

- Patterns in the energy body may precede or cause physical problems. They may also be linked to emotional, mental, social, or spiritual issues.
- Most energy practitioners enlist one or more methods of perceiving the energy field. For example, some practitioners claim to see it, some feel it through touch, some enlist the use of pendulums or other dowsing techniques to assess it, and some report being guided by intuition or direct knowing. Many enlist the assistance of “helper” energies in their work.
- Many healers have experienced a health crisis (taken the healer’s journey) themselves that precipitated their foray into energy healing.
- Energy is said to respond to intention. Practitioners may manipulate energy through any number of means, which may include healing rituals, hands-on techniques, visualization exercises, or nonlocal (distant) healing practices.

[Table 116.2](#) lists various forms of human energetic therapies, with key websites for each.

Although styles and forms of biofield therapies are myriad, many of them share common elements.

TABLE 116.1
The Chakras

Chakra Name(s) ^a	Location in the Body	Color	Associated Issues
Five (root)	Base of spine	Red	Physical health and security, materialism, body awareness
Second	Lower abdomen, just below navel/loins	Orange	Emotions, especially lower ones (fear, reproduction, creativity (in some traditions))
Third	Solar plexus (just below navel)	Yellow	Mental well-being, logic, will, sense of control
Fourth	Heart area, but in midline rather than to the left	Green (sometimes rose)	Connections to others, relationships, forgiveness, compromise
Fifth	Throat	Blue (sometimes turquoise)	Self-expression, creative pursuits, speaking one’s truth
Sixth (third eye)	Center of forehead	Indigo or violet	Vision, perception, intuition, dreams
Seventh (crown)	Top and center of scalp	Purple or white	Spirituality, connection with a higher power, unity
Eighth and higher	Very sparsely among traditions; some describe as eighth chakra 6–12 inches over the seventh chakra and a ninth chakra 8–12 inches below the first	Violet (the one below the first is said to be brown)	Variable; eighth chakra sometimes described as a pain where the foundations of an individual begin to disintegrate; in some traditions, linked to the collective consciousness or past lives; ninth chakra may be tied to gambling.

For more information on how energetic anatomy is conceptualized in different traditions, see the various websites listed in [Table 116.2](#).

^a Names, numbers of chakras, and locations vary among different traditions. In Indian traditions,

each chakra from 1 to 7 has an associated sound (lam, vam, ram, yam, ham, am, and om, respectively), as well as a musical key (the first starts with C and the others follow up the scale). Each chakra is linked to different glands as well; this often guides how energy medicine practitioners work with different conditions. In some traditions, the glands are, from chakras 1 to 7, the adrenals, gonads, pancreas, thymus, thyroid, pituitary, and pineal, respectively. Some traditions ascribe adrenals to the third and some link the prostate to the first.

TABLE 116.2

Energy Healing Modalities: Descriptions and Key Websites^a

Energy Modality	Description and Related Website ^a
Acupuncture and acupressure	Needles are inserted into points said to be located along different meridians, or energy channels, within the body. In electroacupuncture, electricity is passed through the needles. http://www.yinyanghouse.com/ . Look at the “Theory” section on the website.
Barbara Brennan School of Healing	This approach focuses on energy healing according to detailed descriptions of energy anatomy and flow. Many schools of healing are based on the experiences or techniques of a specific individual, and this is one example. http://www.barbarabrennan.com/
Crystal therapy and gem therapy	Minerals are used to influence the energy field. Different stones are believed to have specific vibrational properties. http://www.livescience.com/40347-crystal-healing.html
Emotional freedom techniques and thought field therapy	These methods were created by Gary Craig and Roger Callahan, respectively. Tapping of various meridian points is said to release stored negative emotional energy. http://www.emofree.com/ and http://www.rogercallahan.com/index.php (highly commercial)
Energy psychology	Offered by mental health professionals who combine various forms of psychotherapy with energy medicine approaches. http://www.energypsych.org
Eye movement desensitization and reprocessing (EMDR)	Rapid alternation of eye movements from left to right and tapping of specific groups of points on the body are used in various patterns to release energy-based problems. http://www.emdr.com/
Flower essences	Various flower extracts are said to influence people according to the nature or energy of the extracts’ plants of origin, http://www.bachcentre.com/ . See the remedies section.
Healing touch	Developed in the 1980s by Janet Mentgen, RN, this method is based on principles used in therapeutic touch and other such techniques. Extensive instruction and training are required for certification. See the “Research/Integrative Health” section. http://www.healingtouchinternational.org/
Homeopathy	Created by Samuel Hahnemann in 1796, this approach uses highly diluted solutions said to hold the vibrational principle of a given remedy, which is carefully tailored after a detailed evaluation of a person’s symptoms. http://www.homeopathic.org/
Jin shin jyutsu	Developed by Jiru Murai in the early 1900s and brought to the West by Mary Burmeister in the 1960s, this method focuses on the use of 26 safety energy locks to unlock energy flow. http://www.jsjinc.net/
Johrei	Founded by Mokichi Okada, who envisioned a “paradise on earth” brought about through energetic detoxification and adherence to seven key principles. Does not involve direct physical touch. http://www.johreifoundation.org
Matrix energetics	This system of “consciousness technology” was created by Richard Bartlett, DC, ND. It holds that anyone can be a healer through manipulating the matrix of information that is the foundation on which a person’s reality is built. http://www.matrixenergetics.com/
Polarity therapy	Based on the work of Randolph Stone, this approach combines diet, exercise, and other techniques to optimize the health of the energy field. http://www.polaritytherapy.org/
Pranic healing	Systematized by Choa Kok Sui and tied to Arhatic yoga, this method involves visualizing colors and directing them through different techniques. http://www.pranichealing.org/
Qigong	This technique enlists various precise body movements to alter one’s capacity to store and manipulate qi, or energy. http://www.qigonginstitute.org/main_page/main_page.php
Quantum-touch	In this system created by Richard Gordon, energy is directed through intention, breathwork, and other techniques, with a strong focus on musculoskeletal issues, among others. http://www.quantumtouch.com/
Reflexology	Certain parts of the feet, believed to be correlated with various body parts, are massaged or treated with essential oils. http://www.reflexology-usa.org/
Reiki	This technique originated in Japan with Mikao Usui. Trainees are given attunements said to allow them to

	pass universal healing energy through them to others. Many different schools exist. http://www.reiki.org
Shamanic healing	This modality is often classed as spiritual, rather than energetic. The healer intuitively determines the source of a health problem and enlists rituals, helpful spirits, journeys to the spirit world, or other techniques to bring about healing. Hundreds of shamanic traditions exist. https://www.shamanism.com
Therapeutic touch	This technique was developed in the 1970s by Dolores Krieger, a nurse, and Dora Kunz. Gentle touch is used to influence the biofield. http://www.therapeutictouch.org/
Zero balancing	Created by Fritz Smith, MD, in the 1970s, this method holds that gentle touch and traction can balance energy at a "zero point," a place where the energetic and physical bodies are aligned. http://www.zerobalancing.com

This list is by no means comprehensive. For instance, prayer and spiritual healing are also classified by some investigators as human energetic therapies. All websites accessed 12.15.15.

^a Table based, in part, on data from Rindfleisch JA. Biofield therapies: energy medicine and primary care. *Prim Care*. 2010;27:165–179.

Energy Medicine Research

Through technology, we routinely perceive and manipulate various forms of energy. Our smartphones and televisions can pick up precise frequencies from among thousands that bounce through the atmosphere. Western medicine relies on energetic properties of the body to obtain electrocardiograms (ECGs), electroencephalograms (EEGs), magnetic resonance imaging (MRI) scans, computed tomography (CT) scans, x-ray studies, and many other tests. All these devices are powered by electricity, another form of energy.

Research has shown that human energetic therapies can positively influence outcomes in numerous circumstances, but much remains to be learned about the mechanism of action, the differences among different energy modalities in their effect, and the best ways to integrate these approaches into other types of healing practices.

We are aware that energy fields of different individuals interact. When people are near one another, each one's EEG patterns can reflect in the others; to use the quantum physics term, their patterns entrain.⁹ A 1994 study reported that, for some pairs of people who knew each other and had a certain degree of rapport, one person's brain seemed to instantaneously relay information to another's over a distance.¹⁰ This was the case even when the people were in different rooms and one of those rooms was an electromagnetically impenetrable (Faraday) chamber. Investigators reported that flashing lights viewed by one subject influenced the EEG for the ophthalmic region of the brain of his or her

partner in the sealed room.⁹ This study was heavily criticized, but a 2004 study reported similar findings.¹⁰

What is the status of energy medicine research? The current body of research on human energetic therapies is relatively small but steadily growing, and some fascinating discoveries have been made.

The following three important suppositions related to energetic therapies need to be validated for energy medicine to be considered plausible from a scientific standpoint:

1. Subtle energy exists, and it has scientifically validated mechanisms of action through which it influences biological systems.
2. People can perceive and manipulate this energy.
3. Manipulating this energy has clinically important, beneficial effects on health.

Fascinating studies have explored suppositions 1 and 2, with remarkable results that raise more questions than they answer. Quantum biology, biophoton emissions studies, macroscopic quantum effects, and an array of novel measurement devices have offered insights into the mechanism of action of energy therapies.^{11,12} Other research indicates that test subjects can influence random number generators and gather information about distant, unseen objects or events that will occur in the near future better than what would be predicted by chance alone.^{9,13}

As for the supposition 3 that energy therapies have clinically meaningful effects, the body of research is slowly growing. For instance, a study conducted in Hawaii found that 11 energy practitioners were able to alter brain activity on functional MRI scans. They were asked to select someone with whom they felt a close connection, and then, once they were separated from their partners by hundreds of miles, they were asked to send “distant intentionality” at random 2-minute intervals. The recipients were blinded to the timing of these transmissions. Functional MRI findings indicated that activity levels in several areas of the brains of the recipients changed precisely at the time the healers were sending their intentions ($p = .0000127$).¹⁴

A 2014 review was unable to pinpoint any specific physiological changes in biofield therapists, such as alterations in biomarker levels in their blood, related to being in a “healing state.”¹⁵

[Table 116.3](#) summarizes some of the key clinical studies of the effectiveness of human energetic therapies focusing primarily on meta-analyses and systematic reviews.^{4,16-43} The most commonly studied therapies are healing touch, reiki, and therapeutic touch.

Guidelines for Making an Energy Medicine Referral

The keys to making an appropriate referral to an energy medicine practitioner are in many ways similar to those when one refers to any sort of nonbiomedical or “complementary,” practitioner:

1. Know the practice and the practitioner. This not only includes knowing in general about the nature of the modality practiced but also means being aware of the practitioner’s qualifications and training. How willing is the practitioner to work collaboratively with Western medicine practitioners? Both innate talent and the amount of experience influence a given healer’s effectiveness.⁸ The best way to get to know providers is to experience their practice as a client.

2. Know when to refer. Many energy medicine practitioners suggest that any patient-related concern is “fair game” when someone is referred for energy work. However, keep in mind that not all providers work according to the Western medicine diagnostic categories. Trust your instincts as the referral provider. According to many practitioners, biofield therapies are especially worthy of consideration for the following:

- People with generally heightened sensitivity. These people are often uncomfortable with crowds; highly intuitive; finely attuned to the feelings of others; or very sensitive to foods, medications, or environmental pathogens.
- People with a history of severe emotional traumas
- People with pain (physical or otherwise)
- People with fatigue or a sense that they can never “keep their energy in.” This can include those who are constantly giving to or supporting others and not taking time for their own needs.

TABLE 116.3

Summary of Key Systematic Reviews, Meta-Analyses, and Randomized Controlled Trials Relating to the Clinical Efficacy of Human Energetic Therapies

Focus of Studies	Findings
General Reviews	<ul style="list-style-type: none"> A 2001 review reported that more than 30 trials have now been done focusing on energy medicine and pain.³⁴ Although energy medicine seems to decrease pain intensity, the review noted that therapeutic effects are less clear when certain pain measurement instruments are used. The same review stated that more than 15 studies of biofield therapies for cancer exist, mostly focused on the treatment of pain (too symptoms).³⁵ Results were most favorable when depression and fatigue were measured, but only a few studies found benefits. A 2011 review concluded that energy medicine had no benefit in the treatment of pain based on the findings of 6 quantitative and 2 qualitative studies,³⁶ and a 2018 review came to the same conclusion.³⁷ A 2003 review of 38 published observational studies published from 2004–13 concluded research “supports the use of biofield therapies in relieving pain, improving QOL, and well-being, and reducing psychological symptoms in cancer.”³⁸ A 2003 review of biofield therapy studies that focused on noncancer subjects (plants and soil cultures) found that biofield therapies led to a significant improvement in seedling relative to controls.³⁹ A 2008 systematic review of 67 studies concluded that biofield therapies “...are promising complementary interventions for relieving pain intensity in oncology populations, reducing anxiety for hospitalized populations, and reducing agitated behaviors in dementia beyond what may be expected from standard treatment or nonspecific effects. Effects on long-term clinical outcomes are less clear, and more systematic research is needed.”⁴⁰ A 2008 Cochrane Review evaluated findings for 1153 patients in 5 healing touch, 35 therapeutic touch, and 5 reiki trials to determine whether touch therapies were helpful for pain. Pain was reduced by an average of 0.67 points on the 10-point pain rating scale, with a 95% confidence interval of -1.16 to -0.15. The investigators concluded that “touch therapies may have a modest effect on pain relief.”⁴¹ A 2003 research survey reviewed 2209 published reports related to spiritual healing, energy, medicine, and the effects of natural vibrations. Findings were summarized as follows:⁴² <ul style="list-style-type: none"> 79% of 130 studies on the link between religio-spiritual practices and health showed positive findings, but the overall study quality was poor. Nearly all the research was observational. 11 out of 16 trials of energy healing involving 1132 people reported positive effects (Cohen’s D-effect of 0.6). Overall research quality was judged as fair (based on a 3–4 out of 5) based on a combined Therapeutic Touch.
Healing Touch	<ul style="list-style-type: none"> A 2001 systematic review of 5 out of 112 reviewed studies concluded that “Though the studies support the potential of manual effects versus of Healing Touch in improving health-related quality of life in chronic disease management, more studies are required given that even the studies included with high-quality scores had limitations.”⁴³ A trial conducted in 2011 found that a combination of Healing Touch and guided imagery reduced PTSD symptoms in a group of 122 returning active duty soldiers personnel.⁴⁴ A 2004 review concluded that although 38 available studies of Healing Touch did not allow for generalised conclusions, the technique holds promise.⁴⁵ A 2009 pilot study found that Healing Touch lowered stress and improved heart rate variability in 9 pediatric oncology patients.⁴⁶ Vitality, pain, and physical functioning was improved in a group of 78 women with gynecological cancers who were undergoing radiation therapy.⁴⁷ Healing Touch decreased anxiety and length of stay in patients recovering from coronary bypass surgery, but it led to an change in pain medication or analgesic use or oral fibulation incidence.⁴⁸
Reiki	<ul style="list-style-type: none"> A 2003 Cochrane review found that there was insufficient evidence to confirm whether or not Reiki is beneficial in people above the age of 16 years with anxiety or depression.⁴⁹ A 2004 review compiled evidence from 12 articles that met criteria and concluded that Reiki has beneficial effects to pain and anxiety.⁵⁰ A 2011 randomized controlled trial found that reiki had a significant positive effect on the mood of anxious or depressed students that lasted for 5 weeks.⁵¹ A 2009 review that included 12 studies found that 9 of these reported significant therapeutic effects of Reiki, but 11 of the 12 studies were ranked as poor quality based on the Jadad score.⁵² A 2006 study conducted in a Yale University cardiology ward found that heart rate variability and positive emotional status improved markedly with the provision of Reiki to patients, as compared with patients in the control group or those who listened to music in music.⁵³ Review of study data through 2007 concluded that the benefit of Reiki “remains unproven.”⁵⁴ A review by Vainio in 2007 held that the Reiki literature includes one of four studies with significant findings for stress and depression, one study with significant findings for acute pain, and one of three studies that showed benefit for chronic pain.⁵⁵
Therapeutic Touch	<ul style="list-style-type: none"> A 2004 Cochrane Review found therapeutic touch not helpful for acute musculoskeletal.⁵⁶ A 2013 study found that therapeutic touch improved pain and fatigue in a study of 80 patients undergoing chemotherapy.⁵⁷ A 2006 study of 21 postoperative patients found that therapeutic touch significantly decreased pain, cortisol, and normal saline fluid levels.⁵⁸ A 2007 Cochrane Review did not find any good-quality studies to assess the general effect of therapeutic touch on anxiety.⁵⁹ A 2008 review concluded that therapeutic touch does reduce pain and anxiety in patients with cancer.⁶⁰ Therapeutic touch was found to decrease behavioral symptoms in people with dementia.⁶¹ In a subsequent study of a group of 64 residential patients, this technique was found to decrease self-esteem and cortisol variability significantly.⁶²

- Those who seem “starved for energy.” This group includes those patients who leave a provider completely drained at the end of a visit.
- Anyone who lacks focus or seems “ungrounded.”
- Patients suffering from an array of nonspecific or unrelated complaints or whose symptoms cannot be easily explained from a biomedical perspective
- Patients whose chief complaints have something of a supernatural or paranormal bent. Again, the integrative providers’ belief system will guide how they approach such concerns.

3. Be aware of safety concerns. Energy medicine has a very low risk of negative effects or outcomes, although one must use caution about relying on human energetic therapies to the exclusion of conventional, potentially lifesaving interventions, especially during life-threatening emergencies or when dealing with severe physical trauma. In addition, patients with psychosis may not do well with energetic approaches.

The use of energy medicine can be considered to maintain health or to treat practically any condition, with minimal adverse effects. Caution is recommended for use in people with a history of psychosis or when it could lead to a delay in potentially life-saving allopathic interventions.

4. Obtain feedback from the recipients of the care. Are people getting better after you refer them? Is healing occurring?

Incorporating Energy Medicine Approaches Into One's Own Practice

As with any approach to healing, practitioners must find appropriate mentorship when adopting new techniques. However, energy medicine is an approach that can be attempted by anyone. Many practitioners teach the family members or friends of an ill person techniques that they can practice with their loved ones themselves.

The exercises in this chapter are starting points. As you gain experience, create your own, tailoring to the needs of your specific practice. Explore and have fun!

As you experiment with these exercises, keep in mind that a health care provider should not “take on” the energy of others nor is it appropriate for him or her to feel that personal energy is lost during energy work with another person. Always ask for permission before doing one of these exercises with someone. Be sure to allow the recipient of the practice to have sufficient time to recover afterward; some people move into a trancelike state as they work with these techniques. Persons familiar with interactive guided imagery and mindfulness practices will note that many energy exercises contain elements of both.

The following four practices can be readily incorporated into a patient encounter:

1. Sensing the biofield
2. Grounding
3. Charging up your energy
4. Setting appropriate boundaries
5. Draining away a symptom

Sensing the Biofield

According to energy medicine practitioners, the biofield may be perceived in a variety of ways. While it is not clear whether people who claim to see energy actually experience their visuals due to photons

striking their retinas or kinesthetic people sense an actual vibration or temperature change that triggers their sense of touch, it is nevertheless common for people to report that they interpret their awareness of energy medicine through one or more senses or through emotions and feelings. That said, some people report that they have a “direct knowing” of information that does not come through one of their five senses.

- With light levels low, face your partner while they sit in front of a monochromatic background. Look past them to a focal point a few feet behind them. Note any senses, especially in your peripheral vision, of light distortions (blurriness), colors, or sparks.
- Next, tune into your sense of hearing. As you face your partner, do you notice any sounds, hear words or music, or pick up on any other auditory imagery?
- Take your partner’s hands in yours. What do you notice through your sense of touch? People who sense energy through touch often report temperature changes, vibrations, or tingling.
- Bring your attention to your heart area. What do you notice as you focus on your emotions? What is your partner feeling, or what feelings arise for you?
- Take time to share your impressions with your partner. Trade places, and have them do the same for you.

Grounding

This exercise can be used when people seem overly distracted by their emotions or too much “in their head,” thinking about an issue but not remaining aware in other ways. Grounding can be helpful for bringing someone into the present moment or into a more enhanced awareness of their physical state. It is also good for people who tend to go off on tangents in conversation. This exercise can be useful for providers before, between, or following encounters with patients. Caution: Some people cope with pain or suffering by not being grounded; this exercise may be stressful to them.

- Remove your footwear as able. Socks are permissible.
- Sit up or lie straight. If possible, the soles of your feet should be kept in contact with the floor.
- Keep your legs and arms uncrossed, if possible.
- After a few slow, deep breaths, bring all your attention to the soles of the feet. Imagine the breath moving in and out through them. Continue until this feels comfortable. If you feel any resistance, simply

note it and continue to breathe.

- Feel, visualize, or imagine the outward breath that the feet are extending into the ground like the roots of the tree, slowly spreading through the soil. Sense how these roots add stability and a sense of connection with the earth.
- With each inward breath, feel, visualize, or imagine energy flowing into the feet through those roots, the way that nutrients and water flow into a tree. Let the energy move into the body up through the feet and to wherever it is needed.
- Continue this exercise for at least 20 breaths.
- It may be helpful to follow this exercise with an overall body scan, in which a person is asked to tune in sequentially, without judging or analyzing, to various parts of the body. (e.g., “Focus on your left toes... then your left foot...then the ankle...knee...thigh”)

Charging Up Your Energy

Many variations of this exercise exist. It can be done by anyone who is feeling fatigued or weary as well as by someone intending to share energy with another person. The best approach always is to maintain your own energy level and allow additional energy to flow through to others without ever feeling that you are losing your own energy in the process.

- In a place that feels safe, assume a comfortable position and close your eyes. You may find it helpful to place your hands on your lap, with the palms facing upward.
- Bring your awareness to the breath, and take several deep breaths.
- When you inhale, begin by imagining white light moving in through the soles of the feet and up through the body to the heart.
- After the flow from the feet to the heart can be perceived, do the same with the top of the head, and imagine white light moving in, down through the center of the head, neck, and chest, to the heart.
- Continue this process, and allow the heart to fill and overflow with the white light. Thinking about whatever fills your heart with the strongest sense of joy, compassion, love, or enthusiasm is often helpful.
- Once the heart feels full, it should remain so through the rest of the exercise. Repeat the previous steps if the heart does not continue to feel full.
- As the heart overflows, send the white light (or, if preferred, the feeling of love or compassion) from the heart and down the arms into the

hands. This energy is ready to be shared with another part of your own body by placing the palms over wherever extra energy is desired. It may also be shared with another person, with permission.

Setting Appropriate Boundaries

This exercise is especially helpful to people who feel overwhelmed by the energy, emotions, or simply the physical presence of others. It may be useful for people with fibromyalgia, whose senses are heightened to a point of causing dysfunction, or for people with chronic fatigue, whose energy seems to leak out of them in a way they cannot control. This practice may also be useful for people who feel as though others are somehow draining their energy. It can help a person feel less defensive or adversarial.

- Ideally, this exercise should be done at a time and place where you feel safe enough to close your eyes.
- Take a moment to tune in to how you feel, right now. Do you feel drained? Tired? Overwhelmed? Where in the body do you have these feelings? Where do you feel vulnerable?
- After several deep breaths, imagine yourself surrounded by a clear, bright, white, force field. This force field surrounds you like a protective bubble that allows in only what you choose and deflects anything that is unnecessary or harmful away from you.
- Strengthen the force field in any places where you feel vulnerable.
- If desired, you can choose to maintain the knowledge of whatever bounces off the force field; understand that you can do this without it affecting you emotionally or energetically.
- Imagine white light radiating from a point at the exact center of the bubble of force that clears out anything that does not belong inside the bubble.
- Enhance the force field further by using additional imagery, sounds, or feelings that you associate with strength and well-being. Pause after adding each extra layer, and focus on the breath.
- With practice, a person can rapidly move through this exercise before entering an uncomfortable environment or facing a challenging interpersonal encounter. This exercise can also be good to be use on first awakening or when retiring for the night.

Draining Away a Symptom

Healing touch and other human energetic therapies often use this technique in various forms. This exercise can be helpful when a symptom can be localized to a specific area of the body. For example, a pain drain can be used for headaches or joint pain. Practitioners can also ask those experiencing emotional pain about where in the body they feel it the most.

- Close your eyes and focus on the part of the body where you feel the pain, discomfort, or imbalance most strongly.
- Describe what you notice there. Does it have a color? Is it an image? A memory? What sound do you hear when you tune into this area? What is the temperature of this area, and how does it feel compared with the rest of your body?
- Take some time to focus your awareness on the discomfort. This can be distressing, given that we may spend time trying to avoid, ignore, or control our symptoms. Just observe. Stay as neutral as possible.
- Now, focus on how the area should be. At its healthiest, how does it look, sound, and feel? Take time to develop a strong sense of this. Again, stay objective.
- With each exhalation, envision the symptom—all that you noticed about it—being exhaled. Some people let it leave with the breath, and others release it into the ground through the bottoms of their feet. Some people release it in the form of emotions that arise. For others, it just seems to fade away.
- With each inhalation, breathe in your sense of how the part of your body receiving your attention can feel at its healthiest, at its most whole. Draw in the imagery related to health that you generated for this location. This can come in with the breath, through the top of the head, through the bottoms of the feet, or in any other way that seems appropriate.

As a provider present with someone doing this exercise, you can often enhance the experience by placing your hand on or near the part of the patient's body that is receiving attention. If it seems appropriate, you may envision sending what is required through yourself. Use the steps outlined in the grounding exercise to ensure that you are not giving your own energy, but rather letting it flow into and through you, as though you are an antenna. Similarly, if you, the provider, feel comfortable doing so, you may feel or see the symptom being released from the person being healed into your hands. If this occurs, simply intend that whatever is released be deflected away from both the patient and you into the ground.

If you choose to try energy medicine exercises with those who seek your care, feel free to experiment. Shape these or other exercises as you find appropriate, and develop some of your own.

If you find the foregoing exercises helpful, you may want to consider some of the following resources, which offer other useful exercises and ways of conceptualizing human energetic therapies:

CHAPTER 117

Creating a Greener Clinic

The Impact of Global Warming on Health

Rian Podein, MD, and Michael Hernke, PhD

Global warming and climate change are transforming ecosystems on an extraordinary scale and at an extraordinary pace, resulting in what some consider to be the greatest public health disaster facing us today.^{1,2} The etiology of climate change has been identified and reported by the Intergovernmental Panel on Climate Change, concluding with strong evidence that most of the global warming that has occurred during the past 50 years is attributable to human activities and specifically to the consumption of fossil fuels, producing carbon dioxide and other greenhouse gases (GHGs).³ Because of the familiarity and predominance of carbon dioxide among the GHGs, it is often used as a representative, or surrogate, for estimating, monitoring, and reporting GHG emissions. Reporting of carbon dioxide emissions can be expressed as the specific carbon dioxide quantity (e.g., tons per year) if this is the only GHG emission measured. When other GHG emissions are taken into account, the result may be expressed in terms of the global warming potential (GWP). GWP is a measure of how much a given mass of GHG is estimated to contribute to global warming relative to the same mass of carbon dioxide over a given time, facilitating measurements in units of carbon dioxide equivalents.⁴ All sectors of society, including health care, contribute to the increasing accumulation of atmospheric GHG. In many countries, the health care sector is responsible for consuming significant amounts of goods and services and is an important contributor to gross domestic products. In general, the more a health care system consumes,

the greater the amount of carbon emissions associated with the consumption and thus greater the size of its carbon footprint. Carbon emission estimates have been completed for the United States and the National Health System (NHS) in England. The U.S. health care system emits more than 434 million tons of carbon dioxide annually, which represents 7% of the total annual U.S. carbon emissions; the NHS England carbon emissions amount to a total of 18 million tons per year, which represents 3.2% of total carbon emissions in England.^{5,6}

GHG emissions are represented by the quantity of emitted carbon dioxide measured in tons. Global warming potential incorporates all gases and is a measure of how much a given mass of GHG is estimated to contribute to global warming relative to the same mass of carbon dioxide over time.

The public health consequences of GHG accumulation and climate change are already present, and future projections are alarming. The direct effects of climate change on human health have been reported through a multitude of pathways, including temperature-related illnesses and deaths, extreme weather, air pollution, allergic diseases, infectious diseases, malnutrition, and displaced populations.⁷ The global burden of disease morbidity and mortality attributable to the human-caused portion of climate change is significant, with approximately 5 million disability-adjusted life years per year and more than 150,000 lives annually, with projections to more than double by 2030.⁸

Whereas the health care sector can play a key role in helping societies adapt to the effects of climate change and the risk it poses to human health, the role of mitigation has more recently emerged. This was demonstrated by a World Health Organization mandate for member states to develop “programs for health systems that will contribute to reducing their own GHG emissions.”⁹ Individual, organizational, and national motivations for reducing GHG emissions may vary, but health care practitioners and health care organizations must be motivated to do no harm, and it is therefore incumbent on us to reduce, with the goal to eliminate, the carbon footprint of medicine and health care.

The U.S. health care system emits more than 434 million tons of carbon dioxide annually, which represents 7% of the total annual U.S. carbon

emissions. The NHS England carbon emissions amount to a total of 18 million tons per year, which represents 3.2% of the total carbon emissions in England.

A Primer on Life Cycle Assessment

Quantification of the carbon emissions of a health system, hospital, or clinic is important to approximate the overall impact toward climate change, to identify strategies for carbon reduction, and to clarify the potential value of mitigation efforts. Life cycle assessment (LCA) is a technique that can be used for this process. LCA evaluates the environmental impacts precipitated by a product or a service (i.e., health care) from sourcing materials through end of life. LCA is composed of three stages:

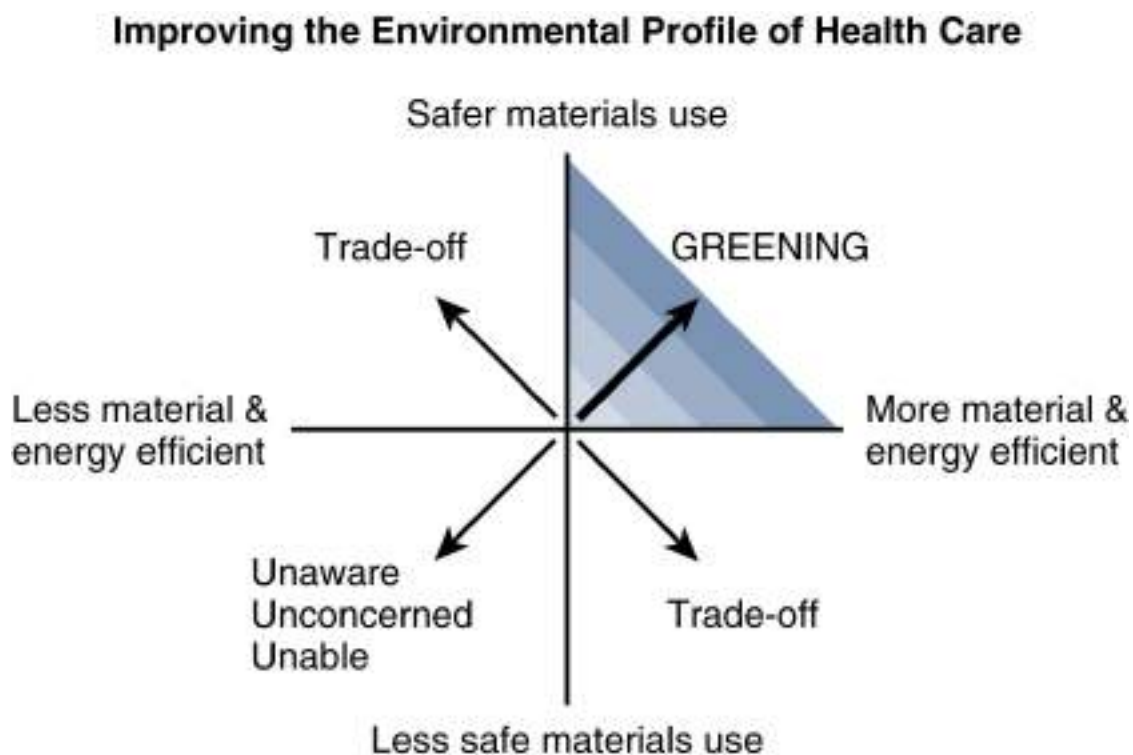

FIG. 117.1 Improving the environmental profile of health care. (Hernke MT. Customer-focus across the lifecycle. Presented at: *10th International Greening of Industry Network Conference: Corporate Social Responsibility—Governance for Sustainability*; June 23-26, 2002; Göteborg, Sweden.)

1. Identify and quantify environmental loads—energy and materials usage, emissions, and waste.
2. Assess and evaluate potential environmental impacts associated with the loads.
3. Assess the opportunities for improvement.

LCA considers all processes over the life cycle—extraction and processing, manufacturing, transport and distribution, use, reuse, maintenance, recycling, and final disposal.^{10,11}

A product life cycle can be seen as a linear progression that starts with the extraction of raw materials, such as ore and oil, which are processed into basic materials, such as aluminum and plastics. Finished materials then compose parts and components, such as a car body, which along with other components are assembled into final products. A life cycle also includes the use phase and the end-of-life activities, such as disassembly and recycling. Transportation and distribution between life cycle phases are also considered.

Activities across a life cycle require material and energy resources and generate wastes and emissions, including GHG. LCA gathers information about the quantity of these resources and wastes produced at each life cycle stage. Thus, the effect of manufacturing an automobile would include not only the impacts at the final assembly facility but also the impact from mining metal ores; making electronic parts, windows, and parts that are needed to build the car; and of course, the emissions precipitated from driving.

LCA provides a fairly complete picture within the scope of investigation of a product's or service's known environmental impacts. It lets you see which parts of a product or facility life cycle most negatively affect the environment and thus helps prioritize improvements or select alternative products and services to achieve safer and more efficient energy and materials use ([Fig. 117.1](#)). LCA approaches alone do not provide a vision of health care in a sustainable society, a task for which broader science-based principles are useful and have been described elsewhere.¹²

The U.S. and England health sector carbon footprint estimates, mentioned previously, were calculated using the LCA technique. Their findings identified not only the total GHG emissions but also that the three greatest areas of carbon emissions within health care can be attributed to building energy use, pharmaceuticals, and travel, each of which accounted for about 22% of emissions in the England study ([Fig. 117.2](#)).⁶ In the United States, building energy use and prescription drugs

accounted for about 20% and 15% of emissions, respectively; emissions attributable to travel were not considered.^{5,13}

Energy Use

Energy use to heat, cool, and power medical facilities is highly intensive and expensive, and it is one of the largest contributors to health care sector's carbon footprint using nonrenewable fossil energy sources. Fortunately, this area offers many opportunities for improving efficiency.

A variety of calculator tools use energy consumption information to enable health care facilities to estimate their GHG (including carbon dioxide) emissions, to compare energy use with similar buildings nationwide, to estimate the health impacts and medical costs due to power plant emissions from the consumed energy, and to obtain third-party recognition and verification for energy consumption benchmarks (see [Key Web Resources](#)).

Energy consumption and carbon tracking tools can help people and organizations monitor efforts to reduce energy consumption and resultant carbon emissions. Major targets for energy use mitigation include conserving energy, making operations more energy efficient, and purchasing renewable energy or installing renewable energy infrastructure ([Box 117.1](#)).

New health care facilities can reduce their energy use and subsequent carbon emissions by incorporating energy efficiency and renewable energy into their design and construction. To facilitate this goal, the U.S. Green Building Council has created the Leadership in Energy and Environmental Design (LEED) program for the health care industry, a best practices guide for more sustainable building design, construction, and operations.¹⁴ LEED is a certification system providing third-party verification that a building was designed and built with a focus on energy savings, water efficiency, carbon dioxide emissions reduction, improved indoor environmental quality, and stewardship of resources and sensitivity to their impacts.

LEED is perhaps the most well-known green building standard but certainly not the only one worth considering. Retzlaff¹⁵ and Haapio and Viitaniemi¹⁶ reviewed LEED and other green building standards to help users understand their substantial differences and merits with respect to various sustainability dimensions, such as the relative emphasis on energy use and indoor air quality, and other facility goals, such as community or civic use.

When health care facilities, organizations, and national systems reduce their energy use or increase the contribution of renewable energies, cobenefits in addition to carbon reduction and climate change mitigation are realized through direct public health benefits and economic savings. For example, the health effects due to pollution from fossil fuel emissions, especially from coal combustion, include cardiovascular disease, cancer, stroke, and respiratory disease as well as asthma and delayed neurological development in children.¹⁷⁻¹⁹ In addition, the cost of fossil fuels is bound to increase over time as supply decreases, thereby positioning energy conservation, efficiency, and alternative energy measures to provide for long-term financial benefits.

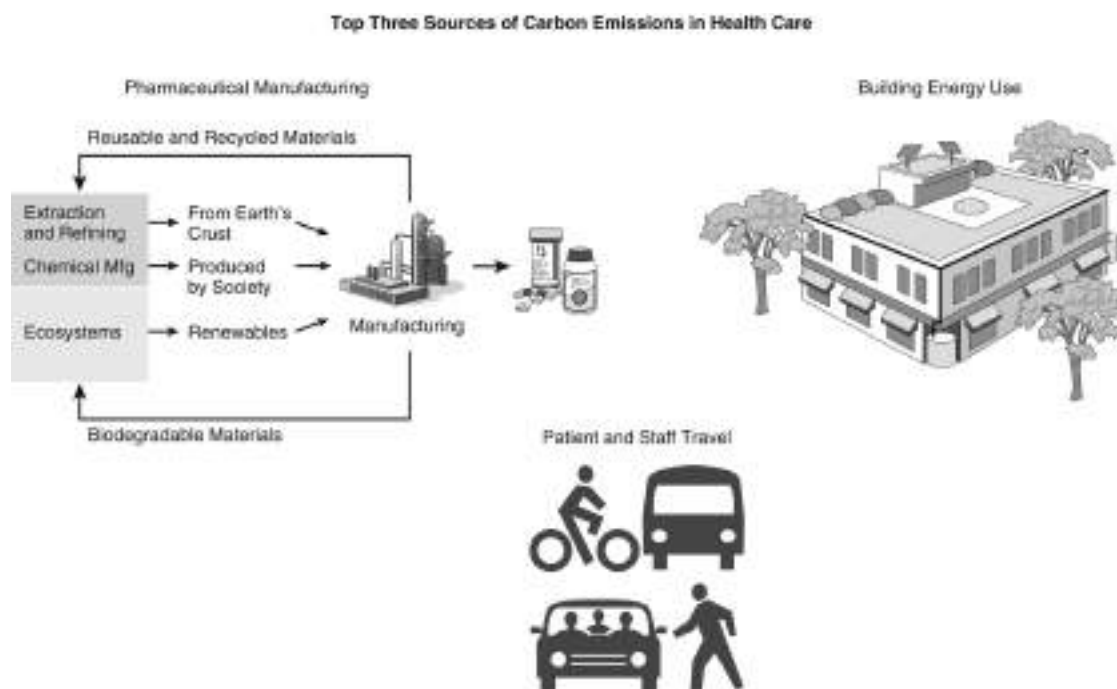

FIG. 117.2 The three greatest areas of carbon emissions within health care.

Health systems have been encouraged to respond to the challenge of climate change by addressing their own energy consumption and to lead by example: "The health sector is one of the most trusted and respected sections of the society, and it is also one of the largest employer and consumer of energy. This presents both a responsibility and an opportunity to be an 'early mover' to achieve climate-neutrality in its own operations and to demonstrate that this can go hand-in-hand with improved effectiveness and cost savings."²⁰

Pharmaceuticals

Pharmaceutical medications are also one of the largest contributors to the health care's carbon footprint; most of such emissions result directly from the energy used in pharmaceutical production in the manufacturing plants.⁶ There has been a steady increase in the demand for pharmaceutical interventions and the use of prescription medications within modern medicine. Annual global spending on medicines is expected to reach nearly \$1.2 trillion in 2016, with the United States, the single largest market, accounting for 31% of total spending.²¹

If health care continues to increase its reliance on and use of pharmaceutical medications, its contribution to the carbon footprint will also continue to increase in addition to significant public health and ecological consequences. Medication-related errors at all points of care, including prescription of medications, dispensing by pharmacists, and unintentional nonadherence on the part of patients, are a major contributor to avoidable patient morbidity, mortality, and cost.²² Ecologically, pharmaceutical medications are being excreted and discarded into the environment at a rate faster than they can degrade, causing them to accumulate in waterways and drinking water. The majority of waterways tested in the United States now show traces of common medications such as acetaminophen, hormones, blood pressure medicine, codeine, and antibiotics, with mounting concerns regarding their deleterious effects on aquatic organisms.²³ Strikingly, a vast array of these pharmaceuticals, including antibiotics, anticonvulsants, mood stabilizers, and sex hormones, have found their way into the drinking water supplies throughout the United States.²⁴ Because of multiple concerns, including ongoing pharmaceutical use in large amounts, environmental accumulation, resistance of some pharmaceutical parent compounds or active metabolites to biodegradation, newer drugs with poorly understood modes of biochemical actions, potential for ecological harm, and potential for unknown subtle effects from long-term exposures to low concentrations of bioactive compounds, pharmaceuticals have been named by the Environmental Protection Agency as one of the top five "emerging" contaminants affecting human and ecological health.²⁵

Integrative medicine, with its incorporation of nonpharmaceutical complementary and alternative medicine interventions, is a proven approach that can reduce health care's reliance on pharmaceuticals.^{26,27} Compared with pharmaceutical interventions alone, an integrative

medicine approach often holds the potential to be as effective or even better, to be less expensive, and to pose limited or even positive side effects. One such example is the treatment and prevention of migraine headaches. Acupuncture has demonstrated benefit for the acute treatment of migraine headaches and could therefore be considered in association with or instead of pharmaceuticals.²⁸ For migraine headache prophylaxis, acupuncture is at least as effective as or possibly more effective than pharmaceutical drug treatment, has fewer adverse effects, and can be cost effective.²⁸⁻³⁰ In addition, another nonpharmaceutical intervention, biofeedback, has been shown to be equally efficacious compared with the commonly used pharmaceutical propranolol for migraine headache prevention.³¹

BOX 117.1 Energy Operations: Opportunity for Action

Make Building Operations More Energy Efficient

Dedicate personnel and programs to energy conservation, establish baseline energy consumption, install retrofits and institute operational changes, and track progress. Projects may range from minor improvements to capital projects that target a facility's major energy-using systems. Hospitals may bring in an energy use reduction consultant, while Group Purchasing Organizations (GPOs) may make available a contract for energy use reduction consulting. Sample strategies:

- Switch incandescent light bulbs for compact fluorescents and light-emitting diodes (LEDs); install solar parking-lot lighting.
- Install occupancy sensor switches in offices and other intermittent use areas.
- Upgrade at least one major piece of mechanical infrastructure equipment (e.g., boiler, chiller, hot water heater) with the most energy efficient available technology.
- Turn down thermostats slightly (a small lowering, one to two degrees, of temperature can have a big impact).

Install On-Site Renewable Energy Capability

Solar photovoltaic panels can generate a portion of your facility's required electricity or power a solar thermal hot water heating system.

Installing a combined heat and power (CHP) facility on-site can also reduce greenhouse gas emissions and reduce expenses on energy. CHP systems generate power and heat from a single fuel source, significantly increasing energy efficiency. See the EPA's Combined Heat and Power Partnership.

Purchase Energy Efficient Products

Where Energy Star-qualified or Federal Energy Management Program-designated products are available, hospitals should buy only these products. Group Purchasing Organizations (GPOs) should make these products available on contract. See http://www.eere.energy.gov/femp/pdfs/eep_productfactsheet.pdf for a list of eligible products.

Reduce “Standby” Energy Use

Computers and other electronic equipment use energy even when they are turned off or on standby. It is estimated that standby power consumption is responsible for 1% of the world's carbon dioxide emissions. When possible, plug a computer and related devices into a power strip, then turn off the strip when the equipment is not in use—power strips do not draw power. Another energy-saving tool is a software system that manages the power usage of networked systems.

Buy Green Power

Offset 50% or 100% of your power use by purchasing electricity generated renewably.

From Addressing Climate Change in the Health Care Setting. Opportunities for Action. Practice Greenhealth and Health Care Without Harm, 2009.

Efforts within the practice of medicine and health care to facilitate pharmaceutical reductions are crucial for the goal of reducing carbon emissions and for providing optimal quality patient care. A couple of areas warrant an increased focus for change. First, providers, organizations, and health systems would benefit by addressing the great imbalance of resources currently provided for disease treatment and away from wellness promotion and disease prevention. The benefits of addressing this issue would reduce the need for pharmaceutical and nonpharmaceutical interventions alike. Second, support for the education of health professional students and providers regarding the role of an

integrative medicine approach is already under way, with an increasing presence of complementary and alternative medicine electives in medical schools, integrative medicine curriculum within medical residency programs, integrative medicine fellowships, and continuing medical education programs, all of which will contribute to an increasing base of providers who will have the knowledge and training to consider nonpharmacological interventions when appropriate.

Procurement and Transportation

Other noteworthy areas for carbon mitigation efforts within health care include food procurement and on-road transportation. According to the National Academy of Sciences, outside of direct energy use, these have been identified as the two biggest lifestyle factors when it comes to the net contribution to climate change.³²

Environmentally preferable purchasing (EPP) is the act of purchasing products and services whose environmental impacts have been considered and found to be less damaging to the environment and human health compared with competing products or services that serve the same purpose. Although EPP can be used for all products and services, one emerging example within health care is the purchase of more local, healthy, and sustainable foods. Most foods travel an average of 1500 miles from “farm to plate,” with significant GHG emissions as a result of transportation and fossil fuel use.³³ More locally produced foods reduce the “food miles” of a product, with a resultant reduction in the amount of carbon and GHG emissions. In addition, there are the cobenefits of reduced air and water pollution associated with long-distance transport. More specifically, one of the leading contributors to the food system climate change is recognized to be meat consumption and production, responsible for nearly one-fifth of the total global GHG emissions.³⁴ Some health care organizations have acted by significantly reducing their meat offerings. Notably, the British NHS has instituted vegetarian menus and reduced meat offerings in all of the nation’s public hospitals to reduce its carbon footprint.³⁵ Inspired by the Meatless Monday project, a nonprofit initiative in association with the Johns Hopkins Bloomberg School of Public Health, numerous health care organizations within the United States have endorsed a voluntary 1-day per week meatless menu (to learn more, visit www.meatlessmonday.com). The United Nations climate chief has validated the utility of these efforts, stating that having a meat-free day

every week is the biggest single contribution people could make to curbing climate change in their personal lives.³⁶

People should have one meat-free day a week if they want to make a personal and effective sacrifice that would help tackle climate change. Rajendra Pachauri, Chair of the United Nations Intergovernmental Panel on Climate Change (originally published in *The Guardian*, September 7, 2008.)

Supporting more sustainable food procurement products, including reduced meat consumption, provides health care organizations an opportunity to model healthy eating patterns for patients, reduces carbon and GHG emissions, and offers health benefits too. The regular consumption of meat products increases the risk of chronic diseases, especially some of the leading causes of death, such as cardiovascular disease, stroke, diabetes, and some cancers.

Road transportation in the form of staff and patients driving automobiles plays a significant role in health care's carbon footprint. Health care organizations have the opportunity to encourage staff and patients to shift from sedentary automobile travel to a more active and healthy travel, such as walking, cycling, and public transport. In addition to reducing carbon and GHG emissions, these more active transportation methods provide exercise, reduce fatal accidents, increase social contact, and reduce air pollution.³⁷

Consideration should be given to senior-level creation of an active travel plan for the organization, incentives for staff and patients for active travel, establishment of monitoring metrics, routine review of organizational travel needs and alternatives (e.g., teleconferencing), and moving health care delivery closer to the home. Efforts to reduce carbon emissions, including those related to transportation, have the potential to save money, benefit population health, and reduce health inequalities. In fact, many efforts that improve health also contribute to more sustainable development and vice versa. This may be illustrated as a virtuous cycle, a condition in which a favorable circumstance or result gives rise to another that subsequently supports the first, as demonstrated for transportation ([Fig. 117.3](#)).

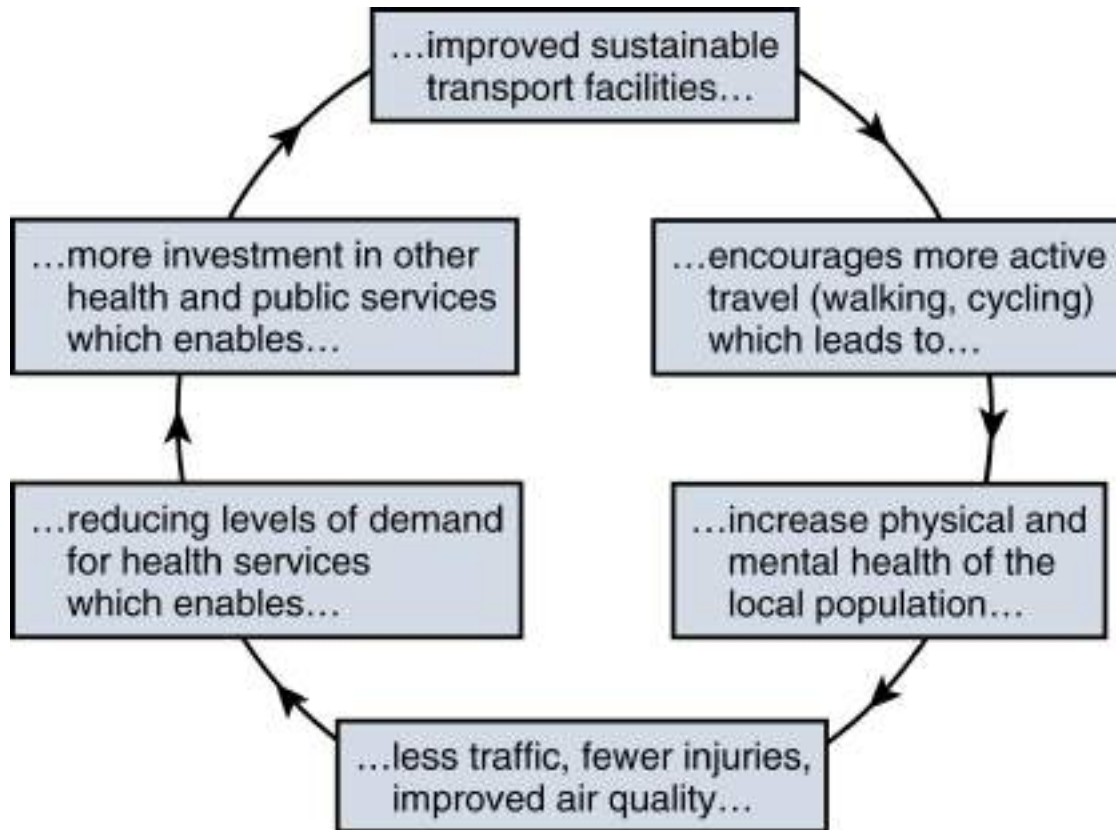

FIG. 117.3 Virtuous cycle for transportation. (From *Saving carbon, improving health* . NHS Carbon Reduction Strategy for England, January 2009.)

Conclusion

In 1987, the United Nations published a report that provided guiding principles for sustainable development.

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. World Commission on Environment and Development (originally published in *Our Common Future*. New York: Oxford University Press; 1987.)

The more recent Millennium Ecosystem Assessment, an extensive assessment of the consequences of ecosystem change for human well-being, has highlighted our global unsustainability according to this

principle, concluding that human actions are depleting the Earth's natural capital, putting such strain on the environment that the ability of the planet's ecosystems to sustain future generations can no longer be taken for granted.³⁸ Reducing carbon and GHG emissions is a critical component in mitigating the consequences of global climate change and for moving toward a more sustainable society. The common mission of health care professionals and their institutions to facilitate health and to reduce suffering along with good societal standing positions them well to model carbon reduction practices. To transition toward a reduced carbon medical practice and health care system, we may look to prior successes, such as addressing global health interdependence by promoting peace and nuclear disarmament and antismoking advocacy. With climate change, the stakes are high for global catastrophes, as they are with nuclear weapons. In addition, the scientific evidence supports the risks of exposure to secondhand smoke, and the evidence for global warming and climate change is unequivocal that secondhand carbon is harmful too.

CHAPTER 118

Integrative Medicine for the Underserved

Richard McKinney, MD, and Jeffrey Geller, MD

Introduction

Integrative medicine most often involves provision of high-cost one-on-one consultation. Delivery models now exist that allow dramatic cost reduction, making the challenge of providing this care to underserved populations less daunting. Linked and group visits support financial sustainability even in today's revenue-based health care systems. As the shift toward capitated payment and improved health outcomes continues, other models will become highly valued, particularly for the many issues not well addressed by conventional medicine.

Characteristics of integrative medicine make it especially effective in working with the underserved, a group largely living in poverty. It should also be noted that nearly a third of the poor are already using complementary medicine, typically without any real guidance.¹ The time seems right to bring integrative medicine to the underserved! In this chapter we will address the following:

1. Discuss factors suggesting how to approach this population
2. Provide specific examples of low-cost, effective integrative approaches
3. Discuss the challenges inherent in providing these services
4. Share current delivery models that meet those challenges
5. Briefly address the issues of provider self-care versus burnout

Health Inequities

A long list of chronic illnesses disproportionately affect the poor, with

the incidence of chronic pain, mental illness, coronary disease, diabetes, and toxin exposure each between one and a half to eight times their incidence in the general population.²⁻⁴ As the focus of conventional medicine has moved excessively toward surgeries and pharmaceuticals, it leaves integrative medicine with much to offer to patients with chronic illness. Many of these health issues resist conventional care, at least as it is most often delivered today, yet respond robustly to integrative approaches, and many of these can be provided at low cost. Many of the interventions described in other chapters are inexpensive and capable of producing real and sustainable relief or healing. See [Table 118.3](#) for a detailed listing.

Chronic pain, one of the most common reasons people of all backgrounds seek integrative care, provides a dramatic example of this. The evidence for the association of higher rates of chronic pain with a lower socioeconomic status (SES) is robust. This population is more likely to develop chronic pain, to be more disabled by it, and to experience a more serious impact of it on their lives. Individuals with a lower SES who are experiencing chronic pain are more disabled and distressed, even when controlling for confounding variables.⁵ Ironically, expensive interventions, such as surgery, procedures, and medications, are covered in insurance plans despite little evidence of cost efficacy.⁶⁻⁸ Meanwhile, less-expensive, effective integrative medicine strategies, such as acupuncture, massage, tai chi, osteopathic adjustment, chiropractic treatment, herbal, and behavioral interventions, are not covered in insurance and therefore are rarely available to this group.

Social Determinants of Health (SDH)

Integrative health has long considered the whole person—body, mind, and spirit—and has worked to encourage fundamental changes in behavior that support health. Caring effectively for patients with limited resources and working to improve the health of the most vulnerable population demands even more efforts. It is clear that health starts in our neighborhoods and communities and not in our clinics. Beyond that, it is not only the decisions all of us make in our daily lives that determine our health but also the environment in which we live, work, and play and the gifts or limitations that the environment provides us with on a daily basis. This collection of issues is referred to as the SDH, which the World Health Organization describes as follows:

These circumstances are shaped by the distribution of money, power, and resources at global, national, and local levels. The social determinants of health are mostly responsible for health inequities—the unfair and avoidable differences in health status seen within and between countries.

The SDH include a wide array of influences, ranging from the availability of resources to meeting daily needs (e.g., food insecurity and affordable housing), accessibility of health care, educational and economic opportunities, community safety versus exposure to violence, quality of education and availability of job training, and social norms and culture. They principally revolve around policies and mores, often implicitly race related, that enforce social inequity. The disproportionate disease burden of the economically disadvantaged is largely a consequence of the SDH, serving as stark examples of how the social determinants promote disease, impede health, and make our jobs more difficult. Most simply put, being poor is an independent risk factor for excess mortality.⁹ See [Key Web Resources](#) in the following text for the link to the federal Healthy People 2020 program to address SDH. For many of us, these issues demand our involvement outside of the exam room and beyond the work we do every day.

If we consider **health inequities**—the unfair and avoidable differences in health status and disease burden between social classes—a societal disease, then the **social determinants of health** represent the pathophysiology, or perhaps the pathosociology, causing them.

The External Environment of Poverty: Those with a lower SES comprise a complex population whose members experience significant barriers in accessing effective health care and substantial challenges in making healthy changes in lifestyle choices. The social and physical environment of poverty is such that compared with the more affluent, many of our patients live in a very different world. Adler and Newman have described that individuals most affected by poverty are often primarily focused on the survival needs of shelter, safety, and food.¹⁰ The limited time, energy, and resources available for attention to health, esteem, and social connectedness are only a few of the many reasons they experience greater stress and more frequent depression. Substandard housing results in greater exposure to toxins in an environment that may require nearly constant vigilance and impede restful sleep. Increased

exposure to violence and difficulty in finding safe spaces for exercise and play contribute to social isolation and to more sedentary lifestyles. Limited access to nutritious food lowers the consumption of fiber, fresh fruits, and vegetables.¹⁰ Collectively, these issues result in such major differences in health among people living in communities only a few miles apart that Jason Coburn, writing for the *RWJF Human Capital Blog*, suggests that a person's zip code is a better predictor of life expectancy than a full genetic analysis, quoting differences of more than 13 years in life expectancy for neighborhoods only a few miles apart from one another.¹¹ Reduced family and community coherence often produces a surprising degree of social isolation in the poorest of the poor.¹⁰ The estimated impact of this single factor on mortality "ranges between 1.9 to almost 5 times greater than those with better social connections."¹⁰

Although some of these issues do involve choice, it would be a mistake to consider them simply "lifestyle choices." Behaviors such as cigarette use, high-fat diets, and lack of exercise "are shaped and constrained by social and physical environments linked to SES."¹² Focusing on health behavior is potentially problematic because it can risk "blaming the victim" if the behavior is viewed in this fashion. In addition, health promotion efforts that are not targeted at the poor are likely to increase SES disparities because they are used more readily by those with more resources to act on the information. Changes in rates of smoking, which fell far more quickly among the more educated following the surgeon general's report on smoking, were a dramatic example of health promotion efforts resulting in the current SES gradient in smoking.¹⁰ Awareness of these concerns suggests more attention to the promotion of universal access to the resources needed to engage in health-promoting behavior.¹⁰

The Internal Environment of Poverty: It is not surprising that the sum of these external environment issues creates huge differences in what might be termed the internal environment—the amalgamation of personal beliefs; attitudes; interpretations; the stories one tells oneself; and the balance of stress, calm, and distress. By affecting lifestyle choices, stress impacts health both directly and indirectly. Even as each of these factors contribute to increased stress in the lives of those with lower SES, our patients are often simultaneously dealing with economic strain, poor paying and insecure employment in jobs with little sense of control, and neighborhoods rife with drug dealing and violence.^{13,14}

Christine Bonathan, a clinical and research psychologist with the UK National Health Service, has conservatively described the consequences

of such an internal environment: “Social threats raise anxiety and stress, and the consequences of perhaps feeling socially inferior, living in a less socially cohesive neighborhood with a more imminent sense of threat combined with poorer education, and resulting poorer job opportunities are likely to interact with the psychological factors known to increase the risk of negative health outcomes.”⁵ It is likely that individuals raised in such an environment may frequently self-identify as victims of their upbringing. Those with a victim mentality are generally reluctant to believe that their own decisions can truly improve their health and happiness. Integrative approaches may help these individuals shift their personal narrative from a victim to that of a hero’s journey, having survived such a terrible childhood with remarkable positive traits like generosity or compassion or integrity. It is the authors’ experience that such a shift may help patients come to believe in their abilities to actually improve both their situation and health. Our counsel can then find fertile soil.

The Importance of Preventive Care: People living in poverty likely have dramatically less support should they lose work or need care for an injury. An effective emphasis on prevention is likely to yield greater benefits for this population. Early detection of poor lifestyle factors, such as stress, sleep loss, poor diet, and decreased exercise, should be taken seriously and addressed as often as possible, taking care to relate them to the patient’s own values. Early detection allows more time to plan and implement meaningful changes.

Why Integrative Care is Especially Valuable with the Underserved

As a group, integrative practitioners spend more time than conventional providers learning about their patients and patient perspectives on the issues they present with. This practice and perspective help them relate to their patients differently. They typically do a better job of meeting the patient where they are at and more commonly seek out and deal with the root causes of issues. In doing so, a wider range of approaches is employed and the least toxic, suitable option is chosen whenever possible. Integrative providers are often more skilled at facilitating and nurturing behavior change and at helping patients deal with conflicting values and ambivalent feelings to succeed in making real changes in lifestyle choices. Because lifestyle is the source of so many chronic

diseases and small changes in lifestyle can produce such big changes in health, we can excel at caring for chronic conditions.

Although there are substantial challenges in providing care to this population, the authors' experience in working with the most vulnerable include pleasant surprises as well. We have more frequently encountered "beginner's mind" among the poor than in other consumers of integrative care, with this attitude including a more open willingness to genuinely try out our suggestions. Lifestyle changes are difficult challenges for all of us; this seems especially true for the poor, to whom these suggestions from well-meaning and usually more affluent providers appear to come from a different world. We have found that the same individuals very often listen quite well to their peers. Peer-to-peer learning is inherent to group visits, often making them a more effective agent of change than care delivered one on one. Huge degrees of social isolation and loneliness are often found among the poorest of the poor¹⁵ and can be directly reduced by participation in group programs.¹⁶

Facilitating Behavioral Change

It is recognized that many behaviors that may be adaptive for immediate survival may not be best for long-term health. Behavior change must be approached both carefully and sensitively. For example, working the midnight shift may be the only way a person can support their family, but it causes unhealthy behaviors: eating at irregular hours, loss of sleep, and isolation from other family members who keep a more normal schedule. It is often only through relationship, empathy, and consistent communication and understanding that a willingness to change behavior (i.e., get a new job) can actually emerge. Even then, a longer process is required to consider long-term goals (i.e., training for a new job) while simultaneously addressing short-term health and financial issues. This may necessitate several years of working with the same patient. It most often requires the development of insight, an awareness of the resources available to the patient, and the collaborative consideration of slow, consistent, positive steps rather than large or sudden changes.

Assessing patient priorities is a crucial part of understanding their circumstances and behavior. Securing housing, finding a job, or caring for family may far surpass their focus on preventive health or even the treatment of symptomatic issues. Supporting a person just by listening and building a relationship may sometimes be the most important service that can be offered (see [Chapter 4](#)).

Provider Characteristics for Healing the Underserved

Additional characteristics of style and attitude help determine provider's effectiveness, whether integrative or conventional. The desire to meet the patient where they are at and to understand their perspective provides an important beginning. Active listening with compassion and respect combined with a genuine effort toward acceptance without judgment is also important. Honoring patient autonomy by providing friendly, compassionate, and collaborative care is a clear statement of respect. Because individuals from vulnerable populations are not often offered this respect, they respond better than most once they recognize that it is sincere. Looking for and addressing root causes of difficulties with a strategy based on hope and strength is essential. "Addressing self-confidence and other emotional triggers that affect change and support the client's ability to embrace and sustain positive change"¹⁷ then goes far (see [Chapter 3](#)).

Most of us are able to achieve and maintain these attitudes more easily when working with clients who are more like ourselves. The same characteristics may require greater attention on our part when working with patients from quite different backgrounds. More often than not, these efforts are ultimately uniquely productive. The ability to motivate patients to change is largely related to provider style and the ability to create and maintain collaborative relationships.¹⁷

The techniques of **motivational interviewing** have proven especially valuable with the economically disadvantaged, likely *because they are not often treated collaboratively in a respectful fashion*. They respond well when they encounter a provider who listens well and treats them as partners. "The paradox of change" is often quoted as a maxim of this work —"When people feels accepted for who they are and what they do, no matter how unhealthy, it allows them the freedom to consider the change rather than the need to defend against it"¹⁸ (see [Chapter 101](#)).

Motivational interviewing has proven to be a powerful method of patient-centered communication that strengthens motivation for change and reduces resistance by exploring and helping to resolve ambivalence. Sign up for a training program near you at <http://www.motivationalinterviewing.org/>.

Affordable Approaches and Sustainable Programs

Every community has different strengths and weaknesses. It is wise to take the time to identify what resources already exist in the community. A sample listing can be seen in [Table 118.2](#). Be aware that an increasing number of unconventional practitioners are devoting substantial time and energies to the care of the disadvantaged. Many may be happy to collaborate and extend service options.

A general program might include a number of approaches. Appropriate selection always requires attention to affordability and sustainability. [Tables 118.1](#) and [118.4](#) offer some ideas that may be helpful toward reaching a cost-effective practice. In keeping with the form and function of this book, an organized guide to low-cost services by the type of intervention is provided.

Examples of Affordable Services by Intervention Type

Biochemical

We already know that many of the poor are already using supplements, vitamins, and botanicals and doing so without guidance.¹ It is helpful to discuss the patient's budget *before* making recommendations and to limit recommended products to two or three, or a total that is affordable to the patient. Some botanicals, supplements, and vitamins are now covered by health insurance, making them more affordable to those with insurance (e.g., vitamin D, magnesium, niacin, B12, folate, fish oil, and probiotics). Other botanicals, pharmaceuticals, and supplements may need to be purchased out of pocket. Cumin, ginger, cinnamon, and similar salutogenic herbs are usually available at local groceries, as are teas, such as mint, chamomile, and ginger, which when wisely chosen may provide therapeutic benefit. Food recommendations are often more practical than supplements, and providing vitamins in the form of fresh or frozen vegetables through food can be more effective, acceptable, and sustainable than separate purchases. When supplements or vitamins are needed, less expensive substitutions may be of benefit. An inexpensive chain-store brand multivitamin is almost always a better choice than no

vitamin, and several eBusinesses offer substantial savings on better quality items. **Cost-saving substitutions** can also make supplement use more affordable. Examples include gelatin for glucosamine, live-culture yogurt or yeast as a probiotic, sunlight for vitamin D, frozen broccoli or spinach for folate, and Red Star yeast for *Saccharomyces boulardii*.

TABLE 118.1
Low-Cost Alternative Treatments for Common Health Conditions

General	Heterogeneity: symptom specific
Probiotics	Substituting red star yeast for <i>Saccharomyces boulardii</i>
Diet/Nutrition	Healthier foods, more veggies, antiinflammatory, food sources of probiotic and prebiotic (fish oil)
Lifestyle changes	Motivational interviewing approach to ambivalence/resistance
Arthritis	Substituting Knox gelatin for glucosamine, tai chi or other exercise, warm compresses, acupressure points near affected joint, and antiinflammatory diet.
ENT	Sinusitis: saline lavage, steam with oil of eucalyptus for sinusitis, acupressure points
DERM	Shingles: capsules to topical cream
	Dermatitis: aloe vera, consumption of cooling tea
	Small, localized infections: honey (sterile), garlic paste
	Fungal infection: topical tea tree oil
Endocrine	Diabetic dietary changes, increased exercise, sleep, hygiene, and gynecom
Cardiological	Hypertension: garlic, sour milk, soft music, sleep, and hygiene
Lifestyle changes	Motivational interviewing, group medical visits
GI	Upper GI tract: DGL, Swedish bitters, arugula, chamomile, peppermint tea
GERD	Elevating head of the bed, liquid calcium or Cal-Mag, trial of lemon juice or cider vinegar 30 minutes prior to meals
Nausea	Fresh ginger tea, chamomile tea, peppermint tea for sores; use of sea bands or other pressure at acupressure point
Bloating	Fennel, anise, or caraway seeds
Indigestion	Swedish bitters, use of sour foods such as arugula as substitutes for bitters; fennel tea or seeds
IBS, diarrhea predom or mixed	Peppermint oil in enteric coated capsules 0.2 mL or 200 mg
	Ginger rhizome/ground ginger for constipation dominant IBS
Constipation	Gastrocolic reflex, ground flax seeds, bran or high-fiber diet, power pudding, egglessauce, stewed prunes, and bean (in equal parts; 2–4 tsp, daily)
Diarrhea, symptom control	Strong tea (green tea being the best, oolong tea second best, and black tea the last)
Gynecology	Bacterial vaginosis and urinary tract infection (UTI) prevention: probiotics
	Bacterial vaginosis or candida vaginitis: boric acid
UTI prevention	Cranberry, D-mannose
Pelvic floor dysfunction	Yoga, osteopathic manual medicine
Urinary incontinence	Yoga
Neurological	
Table Continued	
Migraine	Magnesium, riboflavin; biofeedback with hand warming
Psychological	Anxiety: EFT, support, exercise taught in group settings, Inositol, skullcap, passionflower, chamomile, kava tea, avoiding caffeine
Depression	St. John's wort, fish oil, nutrition, exercise, and group visits (support)
Insomnia	Teas including valerian, chamomile, lemon balm, skullcap, lavender, and melatonin
Toxin reduction	
Household cleaning	White vinegar, mix 1 tsp liquid soap, 1 tsp borax or baking soda, dash of white vinegar or lemon juice in 1 qt water
Window cleaner	¼ cup white vinegar in 1 qt warm water; use squeegee for best results
Oven cleaner	Baking soda, soap and water used with a copper scrubber

DERM, dermatological; DGL, deglycyrrhizinated licorice; EFT, emotional freedom techniques; ENT, ear, nose, and throat; GERD, gastroesophageal reflux disease; GI, gastrointestinal; Gyn,

gynecological; *IBS*, irritable bowel syndrome; *liq*, liquid; *Mg*, magnesium; *tbsp*, tablespoon; *tsp*, teaspoon; *qt*, quart.

TABLE 118.2**Identifying Available Resources in Your Community or Practice**

Promotion of programs to

Improve access to better quality food

Teach consumers how to prepare healthy food & save money

Creating partnerships with local groups geared toward health

Space at YMCA, church

Sharing programs with a meditation center or food pantry

Food bank with unsold produce from local farmers market

Community gardens where patients can participate

Discounted membership at a local Y or gym

Sliding-scale services at schools training integrative health practitioners

Wild-crafting classes

Collaborating with other health practitioners working within community

There is generally less competition and more collaboration in this setting.

Working with a local bodega to carry specific nutraceuticals, foods, vitamins, spices, etc., at a reduced cost—may benefit the business by bringing local health-conscious consumers into their store.

TABLE 118.3**Mind-Body Modalities for the Underserved**

Used in either short individual visits or group visits
Journaling (gratitude, diet survey, etc.)
Breathing techniques (4-7-8 method, alternate nostril, etc.)
Brief meditation techniques (soft music, short scripts, etc.)
Mindfulness techniques (body scan, etc.)
Appropriate for group visits or longer individual visits
Guided imagery
Massage
Hypnosis
Meditation
Yoga
Laughter as medicine groups
Tai chi
Qigong

Biomechanical

Acupuncture, massage, and osteopathy are not often practiced in underserved communities. Because most of this work is out-of-pocket expense to the patient, group visits (shared experience) or linked visit (physician supported) approaches are usually the most sustainable. In addition, some options may be covered by insurance. For example, a physical therapist or osteopath in a hospital may provide osteopathic manual medicine and massage as part of their care, and most insurers cover limited chiropractic services with insurance copayment.

Bioenergetic

Many nurses and clinicians are trained in reiki, acupressure, and healing touch. They, or other community practitioners, may be delighted to find a setting where they can provide these services. Group visits lend themselves to these forms of healing, allowing a nonclinician healer to participate as well.

TABLE 118.4

Ideas for Group Program Activities

Stress Reduction

Prompting awareness: Realization you are not alone
Group programs focused on stress reduction
Support: friendship / validation of feelings
Laughter: sharing common experiences
Breathing exercises

Nutrition/Food as Medicine

Health-center-sponsored farmers markets

Demonstration Cooking and Tastings

Community Gardens

Integrative medicine delivered in group sessions
Meditation
Yoga
Qigong
Massage
Acupuncture
Hypnosis

Condition-Specific Education

Activities incorporated into group sessions
Exercise: walking / dance / aerobics / strength training
Art: singing / painting / drawing / collage
Writing: poetry / children's books / journaling
One-on-one integrative medicine consultations: short visits
working with the patient to develop a plan

Mind-Body Therapy

These are some of the most used therapies for the underserved as they can be adapted easily to address issues of stress. Those which do not require props are generally more practical and more easily utilized than others. Organized groups can meet regularly at a park to practice tai chi, qigong, yoga, or to work cooperatively in a community garden. Breathing, meditative, or mindful techniques can be simply imparted in

just minutes and incorporated into a variety of other activities. If there are local meditation-focused organizations, they may have much to offer. Each are discussed in other chapters of this book.

Lifestyle

Lifestyle choices are most limited by the decreased number of healthy options, safety, and resources in a poor community. Group visits and linked visit models can offer exercise, yoga, or other classes that can become part of a participant's daily life while addressing loneliness, depression, and stress. Many organized groups meet for shared meals, activities, or daily walking.

Characteristics of Successful Integrative Programs for the Underserved

Finding ways to sustainably deliver integrative care to economically disadvantaged clients involves a number of challenges. Programs need to be accessible, efficient, inexpensive, and demonstrate more rapid efficacy. The meeting location should ideally be convenient to the population being served and perhaps close to mass transit stops. Clinical problems to be addressed should be selected carefully. Programs focused on issues that cause both substantial human suffering and a heavy financial cost to the health care system will be viewed more favorably. Approaches with a better evidence of effectiveness are more likely to produce the impressive results necessary to gain support from both patients and clinicians. Rapid efficacy deserves particular attention, especially for new and less mature programs. Providing services with rapid pay-off helps build support for other slower-acting efforts that may ultimately be of great importance. Efficient programs serve more people quickly and lower overhead, allowing sustainability through the production of revenue. Cultural competence and humility is required throughout—ideas on what is healthy and healing vary.

An Example of a Sustainable Alternative Medicine Hospital Practice

When introducing services provided on-site by licensed acupuncturists at the San Francisco General Hospital, reasoning from these characteristics led us to select chronic pain as our focus. Due to limited capacity, only those dealing with chronic pain for less than 6 years were chosen for the pilot, expecting that results would be more robust and more rapid among this group than among those with a 15- or 20-year history. Because licensed acupuncturists (LAc) are still unable to produce revenue in the safety net system, linked visits with a doctor provided limited revenue. A research effort was organized simultaneously that focused on the acceptability of this service by the patients and on changes in their quality of life and ability to function in daily life. We are also collecting stories because these personal anecdotes are particularly valuable in building support. The pilot is now underway. In the future, we hope to also assess the effect on the frequency of physician and emergency department visits and ideally on the total cost of care for participating individuals to build a convincing case for the business model. We specifically chose to collect data expected to demonstrate both clinical and cost effectiveness as a method of securing support for future programs.

Example of Group Visit at a Federally Qualified Community Health Center

At the Greater Lawrence Family Health Center in Lawrence, Massachusetts, it was discovered that group medical visits are especially well-suited for vulnerable communities, providing both economic and clinical advantages. These groups use an empowerment model designed to reduce loneliness, which also produces improvements in health outcomes.^{16,19} By maximizing **group delivery** of appropriate services and deemphasizing one-on-one visits, productivity was maintained as new integrative services were offered. A single licensed clinician, when paired with a medical assistant trained to help run groups and an instructor, would interact with 8–40 patients simultaneously and bill for many of them. Such programs allowed us to offer longer visits and improved access to health care and thus increased provider productivity. They simultaneously provided the patient with experiences of stress reduction, social connection, and peer-to-peer learning. We ultimately have been able to offer 50 group visits each week with yoga, exercise, meditation, functional medicine, art, games, cooking, and other activities to treat the

many chronic illnesses, including heart disease, addiction, childhood obesity, diabetes, and chronic pain, in our community.

Achieving Buy-In from Administration

Although we now have sufficient data demonstrating both the clinical and cost effectiveness of *selected* integrative approaches,²⁰ “selling” a new program to a health system decision maker often remains an uphill battle. Although clinic and hospital administrators share the same concerns, different issues tend to dominate. A healthy bottom line for financial operations is a necessity for continued operations to serve the mission of the organization. Because clinic administrators are typically dealing with smaller budgets, program changes are proportionately larger, so their first concern is typically financial. The greater time required for one-on-one integrative health visits is not usually accompanied by any increase in revenue. Incorporating group programs, with a realistic billing model, may allow much greater success. Hospital administrators, dealing with a much larger budget, are often more concerned about liability, but in each case, you’ll want to be prepared to address costs and revenues. Other vital concerns beyond finance and liability are competence, confidentiality, accountability, and professionalism; each must be addressed directly. Although grant and philanthropic support may be required for start-up costs, care should be exercised while using them for operational expenses—the money eventually runs out. It is vitally important to create financially sustainable programs either by creating revenue or by adding significant value to your organization.

Producing Revenue While Including Noncovered Services

Despite the aim of the Affordable Care Act (ACA), alternative and many preventative services still lack coverage by most insurers in most states. In today’s environment, we principally recognize two models for creating revenue.

The Linked Visit

The linked visit provides a brief but meaningful encounter with a conventional provider regarding a billable diagnosis. This visit is then

linked to a visit with an alternative provider who can provide appropriate services for the same diagnosis at no additional charge. The conventional provider goes on to see other patients in an efficient manner. These shorter conventional visits result in higher productivity and revenue than usual for that one provider. The difference can be used to provide a modest revenue stream that allows costs to be offset or possibly met.

Group medical visits and linked medical visits can be a financially sustainable way to provide a wider array of integrative care. These practices target the SDH by reducing stress, loneliness, and depression and promoting healthy behaviors while increasing hope and nurturing a spirit of empowerment.

The Group Visit

The group visit provides a longer and more efficient encounter as 8–40 participants can be seen simultaneously. It is becoming a predominant delivery model for alternative treatment experiences ([Table 118.4](#)).²¹ The longer duration of group visits allows more thorough participant education about alternative therapies (see [Table 118.3](#)). Shared appointments and group medical visits seem the most promising approaches to build financial sustainability for alternative services, with one-on-one visits continuing but substantially minimized. This allows for coordinated interprofessional programs, with the team-based care extending the reach of the most highly paid and costly professionals. Costs per individual are minimized despite the longer sessions that are the heart of the program. Surprises come from the more open-minded attitude the groups promote among participants and from the magic of peer-to-peer learning. Hearing confirmation from a member of your own community that an approach you've never before heard of may be effective is very different than hearing it from a strangely dressed and privileged physician, who is clearly from a different planet. Behavioral or lifestyle changes can be more strongly supported in groups than in other settings. The other bonus of group work, particularly in the open model of empowered groups, is the dramatic way in which groups can foster community, sense of belonging, and friendships.²¹⁻²⁴ In this setting, most patients ultimately prefer to minimize their one-on-one time with the doctor, fearing that they will miss something in the group session going

on simultaneously.

The group experience can result in higher access to health care, stress reduction, emotional support, and sharing of best practices between peers. These are all highly efficient pathways to health. Most effective group sessions have a check-in period, an educational experience, and an activity portion that is relevant to the particular group. Beginning each session with an unhurried check-in round builds community. Allowing at least an hour for education or demonstrations provides time for peer-to-peer discussion. Don't forget to add music—nearly every group is helped by it. Groups do best when they are consistently scheduled, are in an easily accessible location, are covered by insurance, provide value to the attendees, and actively solicit guidance from group participants. Most group meetings last at least an hour, and groups can meet monthly, bimonthly, weekly, or biweekly. Some have a drop-in format, whereas others have prescribed attendees and meeting criteria. Groups can be used as therapy for patients with heart disease, diabetes, chronic pain (fibromyalgia, headaches, and back pain), pregnancy, addiction (smoking and heroin), obesity (adults, children, and families), developmental delay, and high utilization of services. Many of our patients suffer with depression, loneliness, social isolation, posttraumatic stress, anxiety, and social stressors. Services offered in groups can address these issues, both physical and psychosocial, by offering a variety of services: acupuncture, hypnosis, meditation, yoga, qigong, dance, yoga, aerobics, strength training, low-impact exercise, exercise of different levels, support, art, writing, demo cooking and tastings, shared meals, planned outings and trips, community gardens, and condition-specific education and training sessions.

Provider Burnout and Self-Care

The underserved and their caregivers both need unique types of support, and the provider's self-care is a crucial issue deserving explicit attention. The need for services far exceeds supply, and burnout ultimately makes services even less available. Adopting the mindset of a well-paced runner is essential—this is not a sprint but a marathon. A proactively chosen mix of more and less generously reimbursed services, perhaps in a mix of integrative and conventional care, may allow maximized professional satisfaction while maintaining personal balance. We will accomplish far more by pacing ourselves to stay involved with a disadvantaged client or community for a longer time, providing consistent care, rather than by

burning ourselves out by taking on huge amounts each month. Change takes time.

Taking care of your own needs is vital. Working in an underserved community requires patience and creativity as we strive to overcome the barriers to health that our patients encounter. Creativity most often requires a place of freedom in the mind that allows us to make connections that otherwise may be missed. It takes time to develop different perspectives and to continue the journey of learning as a healer.

The challenge of providing integrative care to vulnerable populations is huge, so are the rewards. It is a marathon and not a sprint. Good self-care is essential for all—providers and staff.

Outside the Exam Room: Activism

Whether the ACA is ever fully implemented or not, the swing toward capitated payments seems destined to continue. At some point, additional services will likely cease to add incremental income. These changes will increasingly dictate the use of cost-effective ways to promote population health, with a focus on cost savings.²⁶ Advancing patients' health, improving their experience of care, and saving money—the triple aim—will then be paramount, and the time even more ripe for the approaches that we have discussed, among others. Now is the time to help generate the data to support such a shift. When the time comes, changes will include substantial analysis of our health systems. It is up to us to collect and provide the data that the decision makers will need and use to choose health options wisely.

For many of us, the issues related to the SDH, health equity, and appropriateness of care for the most vulnerable demand our political involvement outside of the exam room. Affecting the SDH is a major challenge but also an area where we can make a difference, most effectively by working with the community. Some movement toward reimbursement of alternative therapies has already begun nationally. The Joint Commission now recommends that organizations provide nonpharmacological therapies as first-line treatment for pain and chronic pain for accreditation and names these nonpharmacological approaches to include osteopathy, acupuncture, and mind-body therapies.²⁵ By supporting organizations working toward these ends, we can stay

informed, help our organizations be prepared, and serve as leaders in the field.

A person with short grey hair, wearing a dark jacket, is seen from behind, sitting on a wooden bench. They are looking out over a vast, open landscape of rolling hills under a cloudy sky. Numerous birds are flying in the air, scattered across the upper half of the image. The overall mood is contemplative and serene.

Renegade:

Adjective

'Having rejected tradition: Unconventional.'

Merriam-Webster Dictionary

Acquiescence to tyranny is the death of the spirit

You may be 38 years old, as I happen to be. And one day, some great opportunity stands before you and calls you to stand up for some great principle, some great issue, some great cause. And you refuse to do it because you are afraid ... You refuse to do it because you want to live longer ... You're afraid that you will lose your job, or you are afraid that you will be criticised or that you will lose your popularity, or you're afraid that somebody will stab you, or shoot at you or bomb your house; so you refuse to take the stand.

Well, you may go on and live until you are 90, but you're just as dead at 38 as you would be at 90. And the cessation of breathing in your life is but the belated announcement of an earlier death of the spirit.

Martin Luther King

**How the few control the many and always have – the many do
whatever they're told**

'Forward, the Light Brigade!'
Was there a man dismayed?
Not though the soldier knew
Someone had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

Cannon to right of them,
Cannon to left of them,
Cannon in front of them
Volleyed and thundered;
Stormed at with shot and shell,
Boldly they rode and well,
Into the jaws of Death,
Into the mouth of hell
Rode the six hundred

Alfred Lord Tennyson (1809-1892)

The mist is lifting slowly
I can see the way ahead
And I've left behind the empty streets
That once inspired my life
And the strength of the emotion
Is like thunder in the air
'Cos the promise that we made each other
Haunts me to the end

The secret of your beauty
And the mystery of your soul
I've been searching for in everyone I meet
And the times I've been mistaken
It's impossible to say
And the grass is growing
Underneath our feet

The words that I remember
From my childhood still are true
That there's none so blind
As those who will not see
And to those who lack the courage
And say it's dangerous to try
Well they just don't know
That love eternal will not be denied

I know you're out there somewhere
Somewhere, somewhere
I know you're out there somewhere

Somewhere you can hear my voice
I know I'll find you somehow
Somehow, somehow
I know I'll find you somehow
And somehow I'll return again to you

The Moody Blues

Are you a gutless wonder - or a Renegade Mind?

Monuments put from pen to paper,
Turns me into a gutless wonder,
And if you tolerate this,
Then your children will be next.
Gravity keeps my head down,
Or is it maybe shame ...

Manic Street Preachers

Rise like lions after slumber
In unvanquishable number.
Shake your chains to earth like dew
Which in sleep have fallen on you.
Ye are many – they are few.

Percy Shelley

CHAPTER ONE

I'm thinking' – Oh, but *are* you?

Think for yourself and let others enjoy the privilege of doing so too
Voltaire

French-born philosopher, mathematician and scientist René Descartes became famous for his statement in Latin in the 17th century which translates into English as: 'I think, therefore I am.'

On the face of it that is true. Thought reflects perception and perception leads to both behaviour and self-identity. In that sense 'we' are what we think. But who or what is doing the thinking and is thinking the only route to perception? Clearly, as we shall see, 'we' are not always the source of 'our' perception, indeed with regard to humanity as a whole this is rarely the case; and thinking is far from the only means of perception. Thought is the village idiot compared with other expressions of consciousness that we all have the potential to access and tap into. This has to be true when we *are* those other expressions of consciousness which are infinite in nature. We have forgotten this, or, more to the point, been manipulated to forget.

These are not just the esoteric musings of the navel. The whole foundation of human control and oppression is control of perception. Once perception is hijacked then so is behaviour which is dictated by perception. Collective perception becomes collective behaviour and collective behaviour is what we call human society. Perception is all and those behind human control know that which is

why perception is the target 24/7 of the psychopathic manipulators that I call the Global Cult. They know that if they dictate perception they will dictate behaviour and collectively dictate the nature of human society. They are further aware that perception is formed from information received and if they control the circulation of information they will to a vast extent direct human behaviour. Censorship of information and opinion has become globally Nazi-like in recent years and never more blatantly than since the illusory 'virus pandemic' was triggered out of China in 2019 and across the world in 2020. Why have billions submitted to house arrest and accepted fascistic societies in a way they would have never believed possible? Those controlling the information spewing from government, mainstream media and Silicon Valley (all controlled by the same Global Cult networks) told them they were in danger from a 'deadly virus' and only by submitting to house arrest and conceding their most basic of freedoms could they and their families be protected. This monumental and provable lie became the *perception* of the billions and therefore the *behaviour* of the billions. In those few words you have the whole structure and modus operandi of human control. Fear is a perception – False Emotion Appearing Real – and fear is the currency of control. In short ... get them by the balls (or give them the impression that you have) and their hearts and minds will follow. Nothing grips the dangly bits and freezes the rear-end more comprehensively than fear.

World number 1

There are two 'worlds' in what appears to be one 'world' and the prime difference between them is knowledge. First we have the mass of human society in which the population is maintained in coldly-calculated ignorance through control of information and the 'education' (indoctrination) system. That's all you really need to control to enslave billions in a perceptual delusion in which what are perceived to be *their* thoughts and opinions are ever-repeated mantras that the system has been downloading all their lives through 'education', media, science, medicine, politics and academia

in which the personnel and advocates are themselves overwhelmingly the perceptual products of the same repetition. Teachers and academics in general are processed by the same programming machine as everyone else, but unlike the great majority they never leave the 'education' program. It gripped them as students and continues to grip them as programmers of subsequent generations of students. The programmed become the programmers – the programmed programmers. The same can largely be said for scientists, doctors and politicians and not least because as the American writer Upton Sinclair said: 'It is difficult to get a man to understand something when his salary depends upon his not understanding it.' If your career and income depend on thinking the way the system demands then you will – bar a few free-minded exceptions – concede your mind to the Perceptual Mainframe that I call the Postage Stamp Consensus. This is a tiny band of perceived knowledge and possibility 'taught' (downloaded) in the schools and universities, pounded out by the mainstream media and on which all government policy is founded. Try thinking, and especially speaking and acting, outside of the 'box' of consensus and see what that does for your career in the Mainstream Everything which bullies, harasses, intimidates and ridicules the population into compliance. Here we have the simple structure which enslaves most of humanity in a perceptual prison cell for an entire lifetime and I'll go deeper into this process shortly. Most of what humanity is taught as fact is nothing more than programmed belief. American science fiction author Frank Herbert was right when he said: 'Belief can be manipulated. Only knowledge is dangerous.' In the 'Covid' age belief is promoted and knowledge is censored. It was always so, but never to the extreme of today.

World number 2

A 'number 2' is slang for 'doing a poo' and how appropriate that is when this other 'world' is doing just that on humanity every minute of every day. World number 2 is a global network of secret societies and semi-secret groups dictating the direction of society via

governments, corporations and authorities of every kind. I have spent more than 30 years uncovering and exposing this network that I call the Global Cult and knowing its agenda is what has made my books so accurate in predicting current and past events. Secret societies are secret for a reason. They want to keep their hoarded knowledge to themselves and their chosen initiates and to hide it from the population which they seek through ignorance to control and subdue. The whole foundation of the division between World 1 and World 2 is *knowledge*. What number 1 knows number 2 must not. Knowledge they have worked so hard to keep secret includes (a) the agenda to enslave humanity in a centrally-controlled global dictatorship, and (b) the nature of reality and life itself. The latter (b) must be suppressed to allow the former (a) to prevail as I shall be explaining. The way the Cult manipulates and interacts with the population can be likened to a spider's web. The 'spider' sits at the centre in the shadows and imposes its will through the web with each strand represented in World number 2 by a secret society, satanic or semi-secret group, and in World number 1 – the world of the seen – by governments, agencies of government, law enforcement, corporations, the banking system, media conglomerates and Silicon Valley (Fig 1 overleaf). The spider and the web connect and coordinate all these organisations to pursue the same global outcome while the population sees them as individual entities working randomly and independently. At the level of the web governments *are* the banking system *are* the corporations *are* the media *are* Silicon Valley *are* the World Health Organization working from their inner cores as one unit. Apparently unconnected countries, corporations, institutions, organisations and people are on the *same team* pursuing the same global outcome. Strands in the web immediately around the spider are the most secretive and exclusive secret societies and their membership is emphatically restricted to the Cult inner-circle emerging through the generations from particular bloodlines for reasons I will come to. At the core of the core you would get them in a single room. That's how many people are dictating the direction of human society and its transformation

through the 'Covid' hoax and other means. As the web expands out from the spider we meet the secret societies that many people will be aware of – the Freemasons, Knights Templar, Knights of Malta, Opus Dei, the inner sanctum of the Jesuit Order, and such like. Note how many are connected to the Church of Rome and there is a reason for that. The Roman Church was established as a revamp, a rebranding, of the relocated 'Church' of Babylon and the Cult imposing global tyranny today can be tracked back to Babylon and Sumer in what is now Iraq.

Figure 1: The global web through which the few control the many. (Image Neil Hague.)

Inner levels of the web operate in the unseen away from the public eye and then we have what I call the cusp organisations located at the point where the hidden meets the seen. They include a series of satellite organisations answering to a secret society founded in London in the late 19th century called the Round Table and among them are the Royal Institute of International Affairs (UK, founded in 1920); Council on Foreign Relations (US, 1921); Bilderberg Group (worldwide, 1954); Trilateral Commission (US/worldwide, 1972); and the Club of Rome (worldwide, 1968) which was created to exploit environmental concerns to justify the centralisation of global power to 'save the planet'. The Club of Rome instigated with others the human-caused climate change hoax which has led to all the 'green

new deals' demanding that very centralisation of control. Cusp organisations, which include endless 'think tanks' all over the world, are designed to coordinate a single global policy between political and business leaders, intelligence personnel, media organisations and anyone who can influence the direction of policy in their own sphere of operation. Major players and regular attenders will know what is happening – or some of it – while others come and go and are kept overwhelmingly in the dark about the big picture. I refer to these cusp groupings as semi-secret in that they can be publicly identified, but what goes on at the inner-core is kept very much 'in house' even from most of their members and participants through a fiercely-imposed system of compartmentalisation. Only let them know what they need to know to serve your interests and no more. The structure of secret societies serves as a perfect example of this principle. Most Freemasons never get higher than the bottom three levels of 'degree' (degree of knowledge) when there are 33 official degrees of the Scottish Rite. Initiates only qualify for the next higher 'compartment' or degree if those at that level choose to allow them. Knowledge can be carefully assigned only to those considered 'safe'. I went to my local Freemason's lodge a few years ago when they were having an 'open day' to show how cuddly they were and when I chatted to some of them I was astonished at how little the rank and file knew even about the most ubiquitous symbols they use. The mushroom technique – keep them in the dark and feed them bullshit – applies to most people in the web as well as the population as a whole. Sub-divisions of the web mirror in theme and structure transnational corporations which have a headquarters somewhere in the world dictating to all their subsidiaries in different countries. Subsidiaries operate in their methodology and branding to the same centrally-dictated plan and policy in pursuit of particular ends. The Cult web functions in the same way. Each country has its own web as a subsidiary of the global one. They consist of networks of secret societies, semi-secret groups and bloodline families and their job is to impose the will of the spider and the global web in their particular country. Subsidiary networks control and manipulate the national political system, finance, corporations, media, medicine, etc. to

ensure that they follow the globally-dictated Cult agenda. These networks were the means through which the 'Covid' hoax could be played out with almost every country responding in the same way.

The 'Yessir' pyramid

Compartmentalisation is the key to understanding how a tiny few can dictate the lives of billions when combined with a top-down sequence of imposition and acquiescence. The inner core of the Cult sits at the peak of the pyramidal hierarchy of human society (Fig 2 overleaf). It imposes its will – its agenda for the world – on the level immediately below which acquiesces to that imposition. This level then imposes the Cult will on the level below them which acquiesces and imposes on the next level. Very quickly we meet levels in the hierarchy that have no idea there even is a Cult, but the sequence of imposition and acquiescence continues down the pyramid in just the same way. 'I don't know why we are doing this but the order came from "on-high" and so we better just do it.' Alfred Lord Tennyson said of the cannon fodder levels in his poem *The Charge of the Light Brigade*: 'Theirs not to reason why; theirs but to do and die.' The next line says that 'into the valley of death rode the six hundred' and they died because they obeyed without question what their perceived 'superiors' told them to do. In the same way the population capitulated to 'Covid'. The whole hierarchical pyramid functions like this to allow the very few to direct the enormous many.

Eventually imposition-acquiescence-imposition-acquiescence comes down to the mass of the population at the foot of the pyramid. If they acquiesce to those levels of the hierarchy imposing on them (governments/law enforcement/doctors/media) a circuit is completed between the population and the handful of super-psychopaths in the Cult inner core at the top of the pyramid. Without a circuit-breaking refusal to obey, the sequence of imposition and acquiescence allows a staggeringly few people to impose their will upon the entirety of humankind. We are looking at the very sequence that has subjugated billions since the start of 2020. Our freedom has not been taken from us. Humanity has given it

away. Fascists do not impose fascism because there are not enough of them. Fascism is imposed by the population acquiescing to fascism. Put another way allowing their perceptions to be programmed to the extent that leads to the population giving their freedom away by giving their perceptions – their mind – away. If this circuit is not broken by humanity ceasing to cooperate with their own enslavement then nothing can change. For that to happen people have to critically think and see through the lies and window dressing and then summon the backbone to act upon what they see. The Cult spends its days working to stop either happening and its methodology is systematic and highly detailed, but it can be overcome and that is what this book is all about.

Figure 2: The simple sequence of imposition and compliance that allows a handful of people at the peak of the pyramid to dictate the lives of billions.

The Life Program

Okay, back to world number 1 or the world of the ‘masses’. Observe the process of what we call ‘life’ and it is a perceptual download from cradle to grave. The Cult has created a global structure in which perception can be programmed and the program continually topped-up with what appears to be constant confirmation that the program is indeed true reality. The important word here is ‘appears’.

This is the structure, the fly-trap, the Postage Stamp Consensus or Perceptual Mainframe, which represents that incredibly narrow band of perceived possibility delivered by the 'education' system, mainstream media, science and medicine. From the earliest age the download begins with parents who have themselves succumbed to the very programming their children are about to go through. Most parents don't do this out of malevolence and mostly it is quite the opposite. They do what they believe is best for their children and that is what the program has told them is best. Within three or four years comes the major transition from parental programming to full-blown state (Cult) programming in school, college and university where perceptually-programmed teachers and academics pass on their programming to the next generations. Teachers who resist are soon marginalised and their careers ended while children who resist are called a problem child for whom Ritalin may need to be prescribed. A few years after entering the 'world' children are under the control of authority figures representing the state telling them when they have to be there, when they can leave and when they can speak, eat, even go to the toilet. This is calculated preparation for a lifetime of obeying authority in all its forms. Reflex-action fear of authority is instilled by authority from the start. Children soon learn the carrot and stick consequences of obeying or defying authority which is underpinned daily for the rest of their life. Fortunately I daydreamed through this crap and never obeyed authority simply because it told me to. This approach to my alleged 'betters' continues to this day. There can be consequences of pursuing open-minded freedom in a world of closed-minded conformity. I spent a lot of time in school corridors after being ejected from the classroom for not taking some of it seriously and now I spend a lot of time being ejected from Facebook, YouTube and Twitter. But I can tell you that being true to yourself and not compromising your self-respect is far more exhilarating than bowing to authority for authority's sake. You don't have to be a sheep to the shepherd (authority) and the sheep dog (fear of not obeying authority).

The perceptual download continues throughout the formative years in school, college and university while script-reading 'teachers', 'academics' 'scientists', 'doctors' and 'journalists' insist that ongoing generations must be as programmed as they are. Accept the program or you will not pass your 'exams' which confirm your 'degree' of programming. It is tragic to think that many parents pressure their offspring to work hard at school to download the program and qualify for the next stage at college and university. The late, great, American comedian George Carlin said: 'Here's a bumper sticker I'd like to see: We are proud parents of a child who has resisted his teachers' attempts to break his spirit and bend him to the will of his corporate masters.' Well, the best of luck finding many of those, George. Then comes the moment to leave the formal programming years in academia and enter the 'adult' world of work. There you meet others in your chosen or prescribed arena who went through the same Postage Stamp Consensus program before you did. There is therefore overwhelming agreement between almost everyone on the basic foundations of Postage Stamp reality and the rejection, even contempt, of the few who have a mind of their own and are prepared to use it. This has two major effects. Firstly, the consensus confirms to the programmed that their download is really how things are. I mean, everyone knows that, right? Secondly, the arrogance and ignorance of Postage Stamp adherents ensure that anyone questioning the program will have unpleasant consequences for seeking their own truth and not picking their perceptions from the shelf marked: 'Things you must believe without question and if you don't you're a dangerous lunatic conspiracy theorist and a harebrained nutter'.

Every government, agency and corporation is founded on the same Postage Stamp prison cell and you can see why so many people believe the same thing while calling it their own 'opinion'. Fusion of governments and corporations in pursuit of the same agenda was the definition of fascism described by Italian dictator Benito Mussolini. The pressure to conform to perceptual norms downloaded for a lifetime is incessant and infiltrates society right

down to family groups that become censors and condemners of their own 'black sheep' for not, ironically, being sheep. We have seen an explosion of that in the 'Covid' era. Cult-owned global media unleashes its propaganda all day every day in support of the Postage Stamp and targets with abuse and ridicule anyone in the public eye who won't bend their mind to the will of the tyranny. Any response to this is denied (certainly in my case). They don't want to give a platform to expose official lies. Cult-owned-and-created Internet giants like Facebook, Google, YouTube and Twitter delete you for having an unapproved opinion. Facebook boasts that its AI censors delete 97-percent of 'hate speech' before anyone even reports it. Much of that 'hate speech' will simply be an opinion that Facebook and its masters don't want people to see. Such perceptual oppression is widely known as fascism. Even Facebook executive Benny Thomas, a 'CEO Global Planning Lead', said in comments secretly recorded by investigative journalism operation Project Veritas that Facebook is 'too powerful' and should be broken up:

I mean, no king in history has been the ruler of two billion people, but Mark Zuckerberg is ... And he's 36. That's too much for a 36-year-old ... You should not have power over two billion people. I just think that's wrong.

Thomas said Facebook-owned platforms like Instagram, Oculus, and WhatsApp needed to be separate companies. 'It's too much power when they're all one together'. That's the way the Cult likes it, however. We have an executive of a Cult organisation in Benny Thomas that doesn't know there is a Cult such is the compartmentalisation. Thomas said that Facebook and Google 'are no longer companies, they're countries'. Actually they are more powerful than countries on the basis that if you control information you control perception and control human society.

I love my oppressor

Another expression of this psychological trickery is for those who realise they are being pressured into compliance to eventually

convince themselves to believe the official narratives to protect their self-respect from accepting the truth that they have succumbed to meek and subservient compliance. Such people become some of the most vehement defenders of the system. You can see them everywhere screaming abuse at those who prefer to think for themselves and by doing so reminding the compliers of their own capitulation to conformity. 'You are talking dangerous nonsense you Covidiot!!' Are you trying to convince me or yourself? It is a potent form of Stockholm syndrome which is defined as: 'A psychological condition that occurs when a victim of abuse identifies and attaches, or bonds, positively with their abuser.' An example is hostages bonding and even 'falling in love' with their kidnappers. The syndrome has been observed in domestic violence, abused children, concentration camp inmates, prisoners of war and many and various Satanic cults. These are some traits of Stockholm syndrome listed at goodtherapy.org:

- Positive regard towards perpetrators of abuse or captor [see 'Covid'].
- Failure to cooperate with police and other government authorities when it comes to holding perpetrators of abuse or kidnapping accountable [or in the case of 'Covid' cooperating with the police to enforce and defend their captors' demands].
- Little or no effort to escape [see 'Covid'].
- Belief in the goodness of the perpetrators or kidnappers [see 'Covid'].
- Appeasement of captors. This is a manipulative strategy for maintaining one's safety. As victims get rewarded – perhaps with less abuse or even with life itself – their appeasing behaviours are reinforced [see 'Covid'].
- Learned helplessness. This can be akin to 'if you can't beat 'em, join 'em'. As the victims fail to escape the abuse or captivity, they may start giving up and soon realize it's just easier for everyone if they acquiesce all their power to their captors [see 'Covid'].

- Feelings of pity toward the abusers, believing they are actually victims themselves. Because of this, victims may go on a crusade or mission to 'save' [protect] their abuser [see the venom unleashed on those challenging the official 'Covid' narrative].
- Unwillingness to learn to detach from their perpetrators and heal. In essence, victims may tend to be less loyal to themselves than to their abuser [*definitely* see 'Covid'].

Ponder on those traits and compare them with the behaviour of great swathes of the global population who have defended governments and authorities which have spent every minute destroying their lives and livelihoods and those of their children and grandchildren since early 2020 with fascistic lockdowns, house arrest and employment deletion to 'protect' them from a 'deadly virus' that their abusers' perceptually created to bring about this very outcome. We are looking at mass Stockholm syndrome. All those that agree to concede their freedom will believe those perceptions are originating in their own independent 'mind' when in fact by conceding their reality to Stockholm syndrome they have by definition conceded any independence of mind. Listen to the 'opinions' of the acquiescing masses in this 'Covid' era and what gushes forth is the repetition of the official version of everything delivered unprocessed, unfiltered and unquestioned. The whole programming dynamic works this way. I must be free because I'm told that I am and so I think that I am.

You can see what I mean with the chapter theme of 'I'm thinking – Oh, but *are* you?' The great majority are not thinking, let alone for themselves. They are repeating what authority has told them to believe which allows them to be controlled. Weaving through this mentality is the fear that the 'conspiracy theorists' are right and this again explains the often hysterical abuse that ensues when you dare to contest the official narrative of anything. Denial is the mechanism of hiding from yourself what you don't want to be true. Telling people what they want to hear is easy, but it's an infinitely greater challenge to tell them what they would rather not be happening.

One is akin to pushing against an open door while the other is met with vehement resistance no matter what the scale of evidence. I don't want it to be true so I'll convince myself that it's not. Examples are everywhere from the denial that a partner is cheating despite all the signs to the reflex-action rejection of any idea that world events in which country after country act in exactly the same way are centrally coordinated. To accept the latter is to accept that a force of unspeakable evil is working to destroy your life and the lives of your children with nothing too horrific to achieve that end. Who the heck wants that to be true? But if we don't face reality the end is duly achieved and the consequences are far worse and ongoing than breaking through the walls of denial today with the courage to make a stand against tyranny.

Connect the dots – but how?

A crucial aspect of perceptual programming is to portray a world in which everything is random and almost nothing is connected to anything else. Randomness cannot be coordinated by its very nature and once you perceive events as random the idea they could be connected is waved away as the rantings of the tinfoil-hat brigade. You can't plan and coordinate random you idiot! No, you can't, but you can hide the coldly-calculated and long-planned behind the *illusion* of randomness. A foundation manifestation of the Renegade Mind is to scan reality for patterns that connect the apparently random and turn pixels and dots into pictures. This is the way I work and have done so for more than 30 years. You look for similarities in people, modus operandi and desired outcomes and slowly, then ever quicker, the picture forms. For instance: There would seem to be no connection between the 'Covid pandemic' hoax and the human-caused global-warming hoax and yet they are masks (appropriately) on the same face seeking the same outcome. Those pushing the global warming myth through the Club of Rome and other Cult agencies are driving the lies about 'Covid' – Bill Gates is an obvious one, but they are endless. Why would the same people be involved in both when they are clearly not connected? Oh, but they

are. Common themes with personnel are matched by common goals. The 'solutions' to both 'problems' are centralisation of global power to impose the will of the few on the many to 'save' humanity from 'Covid' and save the planet from an 'existential threat' (we need 'zero Covid' and 'zero carbon emissions'). These, in turn, connect with the 'dot' of globalisation which was coined to describe the centralisation of global power in every area of life through incessant political and corporate expansion, trading blocks and superstates like the European Union. If you are the few and you want to control the many you have to centralise power and decision-making. The more you centralise power the more power the few at the centre will have over the many; and the more that power is centralised the more power those at the centre have to centralise even quicker. The momentum of centralisation gets faster and faster which is exactly the process we have witnessed. In this way the hoaxed 'pandemic' and the fakery of human-caused global warming serve the interests of globalisation and the seizure of global power in the hands of the Cult inner-circle which is behind 'Covid', 'climate change' and globalisation. At this point random 'dots' become a clear and obvious picture or pattern.

Klaus Schwab, the classic Bond villain who founded the Cult's Gates-funded World Economic Forum, published a book in 2020, *The Great Reset*, in which he used the 'problem' of 'Covid' to justify a total transformation of human society to 'save' humanity from 'climate change'. Schwab said: 'The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world.' What he didn't mention is that the Cult he serves is behind both hoaxes as I show in my book *The Answer*. He and the Cult don't have to reimagine the world. They know precisely what they want and that's why they destroyed human society with 'Covid' to 'build back better' in their grand design. Their job is not to imagine, but to get humanity to imagine and agree with their plans while believing it's all random. It must be pure coincidence that 'The Great Reset' has long been the Cult's code name for the global imposition of fascism and replaced previous code-names of the 'New World

Order' used by Cult frontmen like Father George Bush and the 'New Order of the Ages' which emerged from Freemasonry and much older secret societies. New Order of the Ages appears on the reverse of the Great Seal of the United States as 'Novus ordo seclorum' underneath the Cult symbol used since way back of the pyramid and all seeing-eye (Fig 3). The pyramid is the hierarchy of human control headed by the illuminated eye that symbolises the force behind the Cult which I will expose in later chapters. The term 'Annuit Coeptis' translates as 'He favours our undertaking'. We are told the 'He' is the Christian god, but 'He' is not as I will be explaining.

Figure 3: The all-seeing eye of the Cult 'god' on the Freemason-designed Great Seal of the United States and also on the dollar bill.

Having you on

Two major Cult techniques of perceptual manipulation that relate to all this are what I have called since the 1990s Problem-Reaction-Solution (PRS) and the Totalitarian Tiptoe (TT). They can be uncovered by the inquiring mind with a simple question: Who benefits? The answer usually identifies the perpetrators of a given action or happening through the concept of 'he who most benefits from a crime is the one most likely to have committed it'. The Latin 'Cue bono?' – Who benefits? – is widely attributed to the Roman orator and statesman Marcus Tullius Cicero. No wonder it goes back so far when the concept has been relevant to human behaviour since

history was recorded. Problem-Reaction-Solution is the technique used to manipulate us every day by covertly creating a problem (or the illusion of one) and offering the solution to the problem (or the illusion of one). In the first phase you create the problem and blame someone or something else for why it has happened. This may relate to a financial collapse, terrorist attack, war, global warming or pandemic, anything in fact that will allow you to impose the 'solution' to change society in the way you desire at that time. The 'problem' doesn't have to be real. PRS is manipulation of perception and all you need is the population to believe the problem is real. Human-caused global warming and the 'Covid pandemic' only have to be *perceived* to be real for the population to accept the 'solutions' of authority. I refer to this technique as NO-Problem-Reaction-Solution. Billions did not meekly accept house arrest from early 2020 because there was a real deadly 'Covid pandemic' but because they perceived – believed – that to be the case. The antidote to Problem-Reaction-Solution is to ask who benefits from the proposed solution. Invariably it will be anyone who wants to justify more control through deletion of freedom and centralisation of power and decision-making.

The two world wars were Problem-Reaction-Solutions that transformed and realigned global society. Both were manipulated into being by the Cult as I have detailed in books since the mid-1990s. They dramatically centralised global power, especially World War Two, which led to the United Nations and other global bodies thanks to the overt and covert manipulations of the Rockefeller family and other Cult bloodlines like the Rothschilds. The UN is a stalking horse for full-blown world government that I will come to shortly. The land on which the UN building stands in New York was donated by the Rockefellers and the same Cult family was behind Big Pharma scalpel and drug 'medicine' and the creation of the World Health Organization as part of the UN. They have been stalwarts of the eugenics movement and funded Hitler's race-purity expert' Ernst Rudin. The human-caused global warming hoax has been orchestrated by the Club of Rome through the UN which is

manufacturing both the 'problem' through its Intergovernmental Panel on Climate Change and imposing the 'solution' through its Agenda 21 and Agenda 2030 which demand the total centralisation of global power to 'save the world' from a climate hoax the United Nations is itself perpetrating. What a small world the Cult can be seen to be particularly among the inner circles. The bedfellow of Problem-Reaction-Solution is the Totalitarian Tiptoe which became the Totalitarian Sprint in 2020. The technique is fashioned to hide the carefully-coordinated behind the cover of apparently random events. You start the sequence at 'A' and you know you are heading for 'Z'. You don't want people to know that and each step on the journey is presented as a random happening while all the steps strung together lead in the same direction. The speed may have quickened dramatically in recent times, but you can still see the incremental approach of the Tiptoe in the case of 'Covid' as each new imposition takes us deeper into fascism. Tell people they have to do this or that to get back to 'normal', then this and this and this. With each new demand adding to the ones that went before the population's freedom is deleted until it disappears. The spider wraps its web around the flies more comprehensively with each new diktat. I'll highlight this in more detail when I get to the 'Covid' hoax and how it has been pulled off. Another prime example of the Totalitarian Tiptoe is how the Cult-created European Union went from a 'free-trade zone' to a centralised bureaucratic dictatorship through the Tiptoe of incremental centralisation of power until nations became mere administrative units for Cult-owned dark suits in Brussels.

The antidote to ignorance is knowledge which the Cult seeks vehemently to deny us, but despite the systematic censorship to that end the Renegade Mind can overcome this by vociferously seeking out the facts no matter the impediments put in the way. There is also a method of thinking and perceiving – *knowing* – that doesn't even need names, dates, place-type facts to identify the patterns that reveal the story. I'll get to that in the final chapter. All you need to know about the manipulation of human society and to what end is still out there – *at the time of writing* – in the form of books, videos

and websites for those that really want to breach the walls of programmed perception. To access this knowledge requires the abandonment of the mainstream media as a source of information in the awareness that this is owned and controlled by the Cult and therefore promotes mass perceptions that suit the Cult. Mainstream media lies all day, every day. That is its function and very reason for being. Where it does tell the truth, here and there, is only because the truth and the Cult agenda very occasionally coincide. If you look for fact and insight to the BBC, CNN and virtually all the rest of them you are asking to be conned and perceptually programmed.

Know the outcome and you'll see the journey

Events seem random when you have no idea where the world is being taken. Once you do the random becomes the carefully planned. Know the outcome and you'll see the journey is a phrase I have been using for a long time to give context to daily happenings that appear unconnected. Does a problem, or illusion of a problem, trigger a proposed 'solution' that further drives society in the direction of the outcome? Invariably the answer will be yes and the random – *abracadabra* – becomes the clearly coordinated. So what is this outcome that unlocks the door to a massively expanded understanding of daily events? I will summarise its major aspects – the fine detail is in my other books – and those new to this information will see that the world they thought they were living in is a very different place. The foundation of the Cult agenda is the incessant centralisation of power and all such centralisation is ultimately in pursuit of Cult control on a global level. I have described for a long time the planned world structure of top-down dictatorship as the Hunger Games Society. The term obviously comes from the movie series which portrayed a world in which a few living in military-protected hi-tech luxury were the overlords of a population condemned to abject poverty in isolated 'sectors' that were not allowed to interact. 'Covid' lockdowns and travel bans anyone? The 'Hunger Games' pyramid of structural control has the inner circle of the Cult at the top with pretty much the entire

population at the bottom under their control through dependency for survival on the Cult. The whole structure is planned to be protected and enforced by a military-police state (Fig 4).

Here you have the reason for the global lockdowns of the fake pandemic to coldly destroy independent incomes and livelihoods and make everyone dependent on the 'state' (the Cult that controls the 'states'). I have warned in my books for many years about the plan to introduce a 'guaranteed income' – a barely survivable pittance – designed to impose dependency when employment was destroyed by AI technology and now even more comprehensively at great speed by the 'Covid' scam. Once the pandemic was played and lockdown consequences began to delete independent income the authorities began to talk right on cue about the need for a guaranteed income and a 'Great Reset'. Guaranteed income will be presented as benevolent governments seeking to help a desperate people – desperate as a direct result of actions of the same governments. The truth is that such payments are a trap. You will only get them if you do exactly what the authorities demand including mass vaccination (genetic manipulation). We have seen this theme already in Australia where those dependent on government benefits have them reduced if parents don't agree to have their children vaccinated according to an insane health-destroying government-dictated schedule. Calculated economic collapse applies to governments as well as people. The Cult wants rid of countries through the creation of a world state with countries broken up into regions ruled by a world government and super states like the European Union. Countries must be bankrupted, too, to this end and it's being achieved by the trillions in 'rescue packages' and furlough payments, trillions in lost taxation, and money-no-object spending on 'Covid' including constant all-medium advertising (programming) which has made the media dependent on government for much of its income. The day of reckoning is coming – as planned – for government spending and given that it has been made possible by printing money and not by production/taxation there is inflation on the way that has the

potential to wipe out monetary value. In that case there will be no need for the Cult to steal your money. It just won't be worth anything (see the German Weimar Republic before the Nazis took over). Many have been okay with lockdowns while getting a percentage of their income from so-called furlough payments without having to work. Those payments are dependent, however, on people having at least a theoretical job with a business considered non-essential and ordered to close. As these business go under because they are closed by lockdown after lockdown the furlough stops and it will for everyone eventually. Then what? The 'then what?' is precisely the idea.

Figure 4: The Hunger Games Society structure I have long warned was planned and now the 'Covid' hoax has made it possible. This is the real reason for lockdowns.

Hired hands

Between the Hunger Games Cult elite and the dependent population is planned to be a vicious military-police state (a fusion of the two into one force). This has been in the making for a long time with police looking ever more like the military and carrying weapons to match. The pandemic scam has seen this process accelerate so fast as

lockdown house arrest is brutally enforced by carefully recruited fascist minds and gormless system-servers. The police and military are planned to merge into a centrally-directed world army in a global structure headed by a world government which wouldn't be elected even by the election fixes now in place. The world army is not planned even to be human and instead wars would be fought, primarily against the population, using robot technology controlled by artificial intelligence. I have been warning about this for decades and now militaries around the world are being transformed by this very AI technology. The global regime that I describe is a particular form of fascism known as a technocracy in which decisions are not made by clueless and co-opted politicians but by unelected technocrats – scientists, engineers, technologists and bureaucrats. Cult-owned-and-controlled Silicon Valley giants are examples of technocracy and they already have far more power to direct world events than governments. They are with their censorship *selecting* governments. I know that some are calling the 'Great Reset' a Marxist communist takeover, but fascism and Marxism are different labels for the same tyranny. Tell those who lived in fascist Germany and Stalinist Russia that there was a difference in the way their freedom was deleted and their lives controlled. I could call it a fascist technocracy or a Marxist technocracy and they would be equally accurate. The Hunger Games society with its world government structure would oversee a world army, world central bank and single world cashless currency imposing its will on a microchipped population (Fig 5). Scan its different elements and see how the illusory pandemic is forcing society in this very direction at great speed. Leaders of 23 countries and the World Health Organization (WHO) backed the idea in March, 2021, of a global treaty for 'international cooperation' in 'health emergencies' and nations should 'come together as a global community for peaceful cooperation that extends beyond this crisis'. Cut the Orwellian bullshit and this means another step towards global government. The plan includes a cashless digital money system that I first warned about in 1993. Right at the start of 'Covid' the deeply corrupt Tedros

Adhanom Ghebreyesus, the crooked and merely gofer 'head' of the World Health Organization, said it was possible to catch the 'virus' by touching cash and it was better to use cashless means. The claim was ridiculous nonsense and like the whole 'Covid' mind-trick it was nothing to do with 'health' and everything to do with pushing every aspect of the Cult agenda. As a result of the Tedros lie the use of cash has plummeted. The Cult script involves a single world digital currency that would eventually be technologically embedded in the body. China is a massive global centre for the Cult and if you watch what is happening there you will know what is planned for everywhere. The Chinese government is developing a digital currency which would allow fines to be deducted immediately via AI for anyone caught on camera breaking its fantastic list of laws and the money is going to be programmable with an expiry date to ensure that no one can accrue wealth except the Cult and its operatives.

Figure 5: The structure of global control the Cult has been working towards for so long and this has been enormously advanced by the 'Covid' illusion.

Serfdom is so smart

The Cult plan is far wider, extreme, and more comprehensive than even most conspiracy researchers appreciate and I will come to the true depths of deceit and control in the chapters 'Who controls the

Cult?’ and ‘Escaping Wetiko’. Even the world that we know is crazy enough. We are being deluged with ever more sophisticated and controlling technology under the heading of ‘smart’. We have smart televisions, smart meters, smart cards, smart cars, smart driving, smart roads, smart pills, smart patches, smart watches, smart skin, smart borders, smart pavements, smart streets, smart cities, smart communities, smart environments, smart growth, smart planet ... smart *everything* around us. Smart technologies and methods of operation are designed to interlock to create a global Smart Grid connecting the entirety of human society including human minds to create a centrally-dictated ‘hive’ mind. ‘Smart cities’ is code for densely-occupied megacities of total surveillance and control through AI. Ever more destructive frequency communication systems like 5G have been rolled out without any official testing for health and psychological effects (colossal). 5G/6G/7G systems are needed to run the Smart Grid and each one becomes more destructive of body and mind. Deleting independent income is crucial to forcing people into these AI-policed prisons by ending private property ownership (except for the Cult elite). The Cult’s Great Reset now openly foresees a global society in which no one will own any possessions and everything will be rented while the Cult would own literally everything under the guise of government and corporations. The aim has been to use the lockdowns to destroy sources of income on a mass scale and when the people are destitute and in unrepayable amounts of debt (problem) Cult assets come forward with the pledge to write-off debt in return for handing over all property and possessions (solution). Everything – literally everything including people – would be connected to the Internet via AI. I was warning years ago about the coming Internet of Things (IoT) in which all devices and technology from your car to your fridge would be plugged into the Internet and controlled by AI. Now we are already there with much more to come. The next stage is the Internet of Everything (IoE) which is planned to include the connection of AI to the human brain and body to replace the human mind with a centrally-controlled AI mind. Instead of perceptions

being manipulated through control of information and censorship those perceptions would come direct from the Cult through AI. What do you think? You think whatever AI decides that you think. In human terms there would be no individual 'think' any longer. Too incredible? The ravings of a lunatic? Not at all. Cult-owned crazies in Silicon Valley have been telling us the plan for years without explaining the real motivation and calculated implications. These include Google executive and 'futurist' Ray Kurzweil who highlights the year 2030 for when this would be underway. He said:

Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations.

As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

The sales-pitch of Kurzweil and Cult-owned Silicon Valley is that this would make us 'super-human' when the real aim is to make us post-human and no longer 'human' in the sense that we have come to know. The entire global population would be connected to AI and become the centrally-controlled 'hive-mind' of externally-delivered perceptions. The Smart Grid being installed to impose the Cult's will on the world is being constructed to allow particular locations – even one location – to control the whole global system. From these prime control centres, which absolutely include China and Israel, anything connected to the Internet would be switched on or off and manipulated at will. Energy systems could be cut, communication via the Internet taken down, computer-controlled driverless autonomous vehicles driven off the road, medical devices switched off, the potential is limitless given how much AI and Internet connections now run human society. We have seen nothing yet if we allow this to continue. Autonomous vehicle makers are working with law enforcement to produce cars designed to automatically pull over if they detect a police or emergency vehicle flashing from up to 100 feet away. At a police stop the car would be unlocked and the

window rolled down automatically. Vehicles would only take you where the computer (the state) allowed. The end of petrol vehicles and speed limiters on all new cars in the UK and EU from 2022 are steps leading to electric computerised transport over which ultimately you have no control. The picture is far bigger even than the Cult global network or web and that will become clear when I get to the nature of the 'spider'. There is a connection between all these happenings and the instigation of DNA-manipulating 'vaccines' (which aren't 'vaccines') justified by the 'Covid' hoax. That connection is the unfolding plan to transform the human body from a biological to a synthetic biological state and this is why synthetic biology is such a fast-emerging discipline of mainstream science. 'Covid vaccines' are infusing self-replicating synthetic genetic material into the cells to cumulatively take us on the Totalitarian Tiptoe from Human 1.0 to the synthetic biological Human 2.0 which will be physically and perceptually attached to the Smart Grid to one hundred percent control every thought, perception and deed. Humanity needs to wake up and *fast*.

This is the barest explanation of where the 'outcome' is planned to go but it's enough to see the journey happening all around us. Those new to this information will already see 'Covid' in a whole new context. I will add much more detail as we go along, but for the minutiae evidence see my mega-works, *The Answer*, *The Trigger* and *Everything You Need to Know But Have Never Been Told*.

Now – how does a Renegade Mind see the 'world'?

CHAPTER TWO

Renegade Perception

It is one thing to be clever and another to be wise

George R.R. Martin

A simple definition of the difference between a programmed mind and a Renegade Mind would be that one sees only dots while the other connects them to see the picture. Reading reality with accuracy requires the observer to (a) know the planned outcome and (b) realise that everything, but *everything*, is connected.

The entirety of infinite reality is connected – that’s its very nature – and with human society an expression of infinite reality the same must apply. Simple cause and effect is a connection. The effect is triggered by the cause and the effect then becomes the cause of another effect. Nothing happens in isolation because it *can’t*. Life in whatever reality is simple choice and consequence. We make choices and these lead to consequences. If we don’t like the consequences we can make different choices and get different consequences which lead to other choices and consequences. The choice and the consequence are not only connected they are indivisible. You can’t have one without the other as an old song goes. A few cannot control the world unless those being controlled allow that to happen – cause and effect, choice and consequence. Control – who has it and who doesn’t – is a two-way process, a symbiotic relationship, involving the controller and controlled. ‘They took my freedom away!!’ Well, yes, but you also gave it to them. Humanity is

subjected to mass control because humanity has acquiesced to that control. This is all cause and effect and literally a case of give and take. In the same way world events of every kind are connected and the Cult works incessantly to sell the illusion of the random and coincidental to maintain the essential (to them) perception of dots that hide the picture. Renegade Minds know this and constantly scan the world for patterns of connection. This is absolutely pivotal in understanding the happenings in the world and without that perspective clarity is impossible. First you know the planned outcome and then you identify the steps on the journey – the day-by-day apparently random which, when connected in relation to the outcome, no longer appear as individual events, but as the proverbial *chain* of events leading in the same direction. I'll give you some examples:

Political puppet show

We are told to believe that politics is 'adversarial' in that different parties with different beliefs engage in an endless tussle for power. There may have been some truth in that up to a point – and only a point – but today divisions between 'different' parties are rhetorical not ideological. Even the rhetorical is fusing into one-speak as the parties eject any remaining free thinkers while others succumb to the ever-gathering intimidation of anyone with the 'wrong' opinion. The Cult is not a new phenomenon and can be traced back thousands of years as my books have documented. Its intergenerational initiatives have been manipulating events with increasing effect the more that global power has been centralised. In ancient times the Cult secured control through the system of monarchy in which 'special' bloodlines (of which more later) demanded the right to rule as kings and queens simply by birthright and by vanquishing others who claimed the same birthright. There came a time, however, when people had matured enough to see the unfairness of such tyranny and demanded a say in who governed them. Note the word – *governed* them. Not served them – *governed* them, hence government defined as 'the political direction and control exercised over the

actions of the members, citizens, or inhabitants of communities, societies, and states; direction of the affairs of a state, community, etc.' Governments exercise control over rather than serve just like the monarchies before them. Bizarrely there are still countries like the United Kingdom which are ruled by a monarch *and* a government that officially answers to the monarch. The UK head of state and that of Commonwealth countries such as Canada, Australia and New Zealand is 'selected' by who in a *single family* had unprotected sex with whom and in what order. Pinch me it can't be true. Ouch! Shit, it is. The demise of monarchies in most countries offered a potential vacuum in which some form of free and fair society could arise and the Cult had that base covered. Monarchies had served its interests but they couldn't continue in the face of such widespread opposition and, anyway, replacing a 'royal' dictatorship that people could see with a dictatorship 'of the people' hiding behind the concept of 'democracy' presented far greater manipulative possibilities and ways of hiding coordinated tyranny behind the illusion of 'freedom'.

Democracy is quite wrongly defined as government selected by the population. This is not the case at all. It is government selected by *some* of the population (and then only in theory). This 'some' doesn't even have to be the majority as we have seen so often in first-past-the-post elections in which the so-called majority party wins fewer votes than the 'losing' parties combined. Democracy can give total power to a party in government from a minority of the votes cast. It's a sleight of hand to sell tyranny as freedom. Seventy-four million Trump-supporting Americans didn't vote for the 'Democratic' Party of Joe Biden in the distinctly dodgy election in 2020 and yet far from acknowledging the wishes and feelings of that great percentage of American society the Cult-owned Biden government set out from day one to destroy them and their right to a voice and opinion. Empty shell Biden and his Cult handlers said they were doing this to 'protect democracy'. Such is the level of lunacy and sickness to which politics has descended. Connect the dots and relate them to the desired outcome – a world government run by self-appointed technocrats and no longer even elected

politicians. While operating through its political agents in government the Cult is at the same time encouraging public disdain for politicians by putting idiots and incompetents in theoretical power on the road to deleting them. The idea is to instil a public reaction that says of the technocrats: 'Well, they couldn't do any worse than the pathetic politicians.' It's all about controlling perception and Renegade Minds can see through that while programmed minds cannot when they are ignorant of both the planned outcome and the manipulation techniques employed to secure that end. This knowledge can be learned, however, and fast if people choose to get informed.

Politics may at first sight appear very difficult to control from a central point. I mean look at the 'different' parties and how would you be able to oversee them all and their constituent parts? In truth, it's very straightforward because of their structure. We are back to the pyramid of imposition and acquiescence. Organisations are structured in the same way as the system as a whole. Political parties are not open forums of free expression. They are hierarchies. I was a national spokesman for the British Green Party which claimed to be a different kind of politics in which influence and power was devolved; but I can tell you from direct experience – and it's far worse now – that Green parties are run as hierarchies like all the others however much they may try to hide that fact or kid themselves that it's not true. A very few at the top of all political parties are directing policy and personnel. They decide if you are elevated in the party or serve as a government minister and to do that you have to be a yes man or woman. Look at all the maverick political thinkers who never ascended the greasy pole. If you want to progress within the party or reach 'high-office' you need to fall into line and conform. Exceptions to this are rare indeed. Should you want to run for parliament or Congress you have to persuade the local or state level of the party to select you and for that you need to play the game as dictated by the hierarchy. If you secure election and wish to progress within the greater structure you need to go on conforming to what is acceptable to those running the hierarchy

from the peak of the pyramid. Political parties are perceptual gulags and the very fact that there are party 'Whips' appointed to 'whip' politicians into voting the way the hierarchy demands exposes the ridiculous idea that politicians are elected to serve the people they are supposed to represent. Cult operatives and manipulation has long seized control of major parties that have any chance of forming a government and at least most of those that haven't. A new party forms and the Cult goes to work to infiltrate and direct. This has reached such a level today that you see video compilations of 'leaders' of all parties whether Democrats, Republicans, Conservative, Labour and Green parroting the same Cult mantra of 'Build Back Better' and the 'Great Reset' which are straight off the Cult song-sheet to describe the transformation of global society in response to the Cult-instigated hoaxes of the 'Covid pandemic' and human-caused 'climate change'. To see Caroline Lucas, the Green Party MP that I knew when I was in the party in the 1980s, speaking in support of plans proposed by Cult operative Klaus Schwab representing the billionaire global elite is a real head-shaker.

Many parties – one master

The party system is another mind-trick and was instigated to change the nature of the dictatorship by swapping 'royalty' for dark suits that people believed – though now ever less so – represented their interests. Understanding this trick is to realise that a single force (the Cult) controls all parties either directly in terms of the major ones or through manipulation of perception and ideology with others. You don't need to manipulate Green parties to demand your transformation of society in the name of 'climate change' when they are obsessed with the lie that this is essential to 'save the planet'. You just give them a platform and away they go serving your interests while believing they are being environmentally virtuous. America's political structure is a perfect blueprint for how the two or multi-party system is really a one-party state. The Republican Party is controlled from one step back in the shadows by a group made up of billionaires and their gofers known as neoconservatives or Neocons.

I have exposed them in fine detail in my books and they were the driving force behind the policies of the imbecilic presidency of Boy George Bush which included 9/11 (see *The Trigger* for a comprehensive demolition of the official story), the subsequent 'war on terror' (war of terror) and the invasions of Afghanistan and Iraq. The latter was a No-Problem-Reaction-Solution based on claims by Cult operatives, including Bush and British Prime Minister Tony Blair, about Saddam Hussein's 'weapons of mass destruction' which did not exist as war criminals Bush and Blair well knew.

Figure 6: Different front people, different parties – same control system.

The Democratic Party has its own 'Neocon' group controlling from the background which I call the 'Democons' and here's the penny-drop – the Neocons and Democons answer to the same masters one step further back into the shadows (Fig 6). At that level of the Cult the Republican and Democrat parties are controlled by the same people and no matter which is in power the Cult is in power. This is how it works in almost every country and certainly in Britain with Conservative, Labour, Liberal Democrat and Green parties now all on the same page whatever the rhetoric may be in their feeble attempts to appear different. Neocons operated at the time of Bush through a think tank called The Project for the New American Century which in September, 2000, published a document entitled *Rebuilding America's Defenses: Strategies, Forces, and Resources*

For a New Century demanding that America fight ‘multiple, simultaneous major theatre wars’ as a ‘core mission’ to force regime-change in countries including Iraq, Libya and Syria. Neocons arranged for Bush (‘Republican’) and Blair (‘Labour Party’) to front-up the invasion of Iraq and when they departed the Democons orchestrated the targeting of Libya and Syria through Barack Obama (‘Democrat’) and British Prime Minister David Cameron (‘Conservative Party’). We have ‘different’ parties and ‘different’ people, but the same unfolding script. The more the Cult has seized the reigns of parties and personnel the more their policies have transparently pursued the same agenda to the point where the fascist ‘Covid’ impositions of the Conservative junta of Jackboot Johnson in Britain were opposed by the Labour Party because they were not fascist enough. The Labour Party is likened to the US Democrats while the Conservative Party is akin to a British version of the Republicans and on both sides of the Atlantic they all speak the same language and support the direction demanded by the Cult although some more enthusiastically than others. It’s a similar story in country after country because it’s all centrally controlled. Oh, but what about Trump? I’ll come to him shortly. Political ‘choice’ in the ‘party’ system goes like this: You vote for Party A and they get into government. You don’t like what they do so next time you vote for Party B and they get into government. You don’t like what they do when it’s pretty much the same as Party A and why wouldn’t that be with both controlled by the same force? Given that only two, sometimes three, parties have any chance of forming a government to get rid of Party B that you don’t like you have to vote again for Party A which ... you don’t like. This, ladies and gentlemen, is what they call ‘democracy’ which we are told – wrongly – is a term interchangeable with ‘freedom’.

The cult of cults

At this point I need to introduce a major expression of the Global Cult known as Sabbatian-Frankism. Sabbatian is also spelt as Sabbatean. I will summarise here. I have published major exposés

and detailed background in other works. Sabbatian-Frankism combines the names of two frauds posing as 'Jewish' men, Sabbatai Zevi (1626-1676), a rabbi, black magician and occultist who proclaimed he was the Jewish messiah; and Jacob Frank (1726-1791), the Polish 'Jew', black magician and occultist who said he was the reincarnation of 'messiah' Zevi and biblical patriarch Jacob. They worked across two centuries to establish the Sabbatian-Frankist cult that plays a major, indeed central, role in the manipulation of human society by the Global Cult which has its origins much further back in history than Sabbatai Zevi. I should emphasise two points here in response to the shrill voices that will scream 'anti-Semitism': (1) Sabbatian-Frankists are NOT Jewish and only pose as such to hide their cult behind a Jewish façade; and (2) my information about this cult has come from Jewish sources who have long realised that their society and community has been infiltrated and taken over by interloper Sabbatian-Frankists. Infiltration has been the foundation technique of Sabbatian-Frankism from its official origin in the 17th century. Zevi's Sabbatian sect attracted a massive following described as the biggest messianic movement in Jewish history, spreading as far as Africa and Asia, and he promised a return for the Jews to the 'Promised Land' of Israel. Sabbatianism was not Judaism but an inversion of everything that mainstream Judaism stood for. So much so that this sinister cult would have a feast day when Judaism had a fast day and whatever was forbidden in Judaism the Sabbatians were encouraged and even commanded to do. This included incest and what would be today called Satanism. Members were forbidden to marry outside the sect and there was a system of keeping their children ignorant of what they were part of until they were old enough to be trusted not to unknowingly reveal anything to outsiders. The same system is employed to this day by the Global Cult in general which Sabbatian-Frankism has enormously influenced and now largely controls.

Zevi and his Sabbatians suffered a setback with the intervention by the Sultan of the Islamic Ottoman Empire in the Middle East and what is now the Republic of Turkey where Zevi was located. The

Sultan gave him the choice of proving his 'divinity', converting to Islam or facing torture and death. Funnily enough Zevi chose to convert or at least appear to. Some of his supporters were disillusioned and drifted away, but many did not with 300 families also converting – only in theory – to Islam. They continued behind this Islamic smokescreen to follow the goals, rules and rituals of Sabbatianism and became known as 'crypto-Jews' or the 'Dönme' which means 'to turn'. This is rather ironic because they didn't 'turn' and instead hid behind a fake Islamic persona. The process of appearing to be one thing while being very much another would become the calling card of Sabbatianism especially after Zevi's death and the arrival of the Satanist Jacob Frank in the 18th century when the cult became Sabbatian-Frankism and plumbed still new depths of depravity and infiltration which included – still includes – human sacrifice and sex with children. Wherever Sabbatians go paedophilia and Satanism follow and is it really a surprise that Hollywood is so infested with child abuse and Satanism when it was established by Sabbatian-Frankists and is still controlled by them? Hollywood has been one of the prime vehicles for global perceptual programming and manipulation. How many believe the version of 'history' portrayed in movies when it is a travesty and inversion (again) of the truth? Rabbi Marvin Antelman describes Frankism in his book, *To Eliminate the Opiate*, as 'a movement of complete evil' while Jewish professor Gershom Scholem said of Frank in *The Messianic Idea in Judaism*: 'In all his actions [he was] a truly corrupt and degenerate individual ... one of the most frightening phenomena in the whole of Jewish history.' Frank was excommunicated by traditional rabbis, as was Zevi, but Frank was undeterred and enjoyed vital support from the House of Rothschild, the infamous banking dynasty whose inner-core are Sabbatian-Frankists and not Jews. Infiltration of the Roman Church and Vatican was instigated by Frank with many Dönme 'turning' again to convert to Roman Catholicism with a view to hijacking the reins of power. This was the ever-repeating modus operandi and continues to be so. Pose as an advocate of the religion, culture or country that you want to control and then

manipulate your people into the positions of authority and influence largely as advisers, administrators and Svengalis for those that appear to be in power. They did this with Judaism, Christianity (Christian Zionism is part of this), Islam and other religions and nations until Sabbatian-Frankism spanned the world as it does today.

Sabbatian Saudis and the terror network

One expression of the Sabbatian-Frankist Dönme within Islam is the ruling family of Saudi Arabia, the House of Saud, through which came the vile distortion of Islam known as Wahhabism. This is the violent creed followed by terrorist groups like Al-Qaeda and ISIS or Islamic State. Wahhabism is the hand-chopping, head-chopping 'religion' of Saudi Arabia which is used to keep the people in a constant state of fear so the interloper House of Saud can continue to rule. Al-Qaeda and Islamic State were lavishly funded by the House of Saud while being created and directed by the Sabbatian-Frankist network in the United States that operates through the Pentagon, CIA and the government in general of whichever 'party'. The front man for the establishment of Wahhabism in the middle of the 18th century was a Sabbatian-Frankist 'crypto-Jew' posing as Islamic called Muhammad ibn Abd al-Wahhab. His daughter would marry the son of Muhammad bin Saud who established the first Saudi state before his death in 1765 with support from the British Empire. Bin Saud's successors would establish modern Saudi Arabia in league with the British and Americans in 1932 which allowed them to seize control of Islam's major shrines in Mecca and Medina. They have dictated the direction of Sunni Islam ever since while Iran is the major centre of the Shiite version and here we have the source of at least the public conflict between them. The Sabbatian network has used its Wahhabi extremists to carry out Problem-Reaction-Solution terrorist attacks in the name of 'Al-Qaeda' and 'Islamic State' to justify a devastating 'war on terror', ever-increasing surveillance of the population and to terrify people into compliance. Another insight of the Renegade Mind is the streetwise understanding that

just because a country, location or people are attacked doesn't mean that those apparently representing that country, location or people are not behind the attackers. Often they are *orchestrating* the attacks because of the societal changes that can be then justified in the name of 'saving the population from terrorists'.

I show in great detail in *The Trigger* how Sabbatian-Frankists were the real perpetrators of 9/11 and not '19 Arab hijackers' who were blamed for what happened. Observe what was justified in the name of 9/11 alone in terms of Middle East invasions, mass surveillance and control that fulfilled the demands of the Project for the New American Century document published by the Sabbatian Neocons. What appear to be enemies are on the deep inside players on the same Sabbatian team. Israel and Arab 'royal' dictatorships are all ruled by Sabbatians and the recent peace agreements between Israel and Saudi Arabia, the United Arab Emirates (UAE) and others are only making formal what has always been the case behind the scenes. Palestinians who have been subjected to grotesque tyranny since Israel was bombed and terrorised into existence in 1948 have never stood a chance. Sabbatian-Frankists have controlled Israel (so the constant theme of violence and war which Sabbatians love) and they have controlled the Arab countries that Palestinians have looked to for real support that never comes. 'Royal families' of the Arab world in Saudi Arabia, Bahrain, UAE, etc., are all Sabbatians with allegiance to the aims of the cult and not what is best for their Arabic populations. They have stolen the oil and financial resources from their people by false claims to be 'royal dynasties' with a genetic right to rule and by employing vicious militaries to impose their will.

Satanic 'illumination'

The Satanist Jacob Frank formed an alliance in 1773 with two other Sabbatians, Mayer Amschel Rothschild (1744-1812), founder of the Rothschild banking dynasty, and Jesuit-educated fraudulent Jew, Adam Weishaupt, and this led to the formation of the Bavarian Illuminati, firstly under another name, in 1776. The Illuminati would

be the manipulating force behind the French Revolution (1789-1799) and was also involved in the American Revolution (1775-1783) before and after the Illuminati's official creation. Weishaupt would later become (in public) a Protestant Christian in archetypal Sabbatian style. I read that his name can be decoded as Adam-Weishaupt or 'the first man to lead those who know'. He wasn't a leader in the sense that he was a subordinate, but he did lead those below him in a crusade of transforming human society that still continues today. The theme was confirmed as early as 1785 when a horseman courier called Lanz was reported to be struck by lightning and extensive Illuminati documents were found in his saddlebags. They made the link to Weishaupt and detailed the plan for world takeover. Current events with 'Covid' fascism have been in the making for a very long time. Jacob Frank was jailed for 13 years by the Catholic Inquisition after his arrest in 1760 and on his release he headed for Frankfurt, Germany, home city and headquarters of the House of Rothschild where the alliance was struck with Mayer Amschel Rothschild and Weishaupt. Rothschild arranged for Frank to be given the title of Baron and he became a wealthy nobleman with a big following of Jews in Germany, the Austro-Hungarian Empire and other European countries. Most of them would have believed he was on their side.

The name 'Illuminati' came from the Zohar which is a body of works in the Jewish mystical 'bible' called the Kabbalah. 'Zohar' is the foundation of Sabbatian-Frankist belief and in Hebrew 'Zohar' means 'splendour', 'radiance', 'illuminated', and so we have 'Illuminati'. They claim to be the 'Illuminated Ones' from their knowledge systematically hidden from the human population and passed on through generations of carefully-chosen initiates in the global secret society network or Cult. Hidden knowledge includes an awareness of the Cult agenda for the world and the nature of our collective reality that I will explore later. Cult 'illumination' is symbolised by the torch held by the Statue of Liberty which was gifted to New York by French Freemasons in Paris who knew exactly what it represents. 'Liberty' symbolises the goddess worshipped in

Babylon as Queen Semiramis or Ishtar. The significance of this will become clear. Notice again the ubiquitous theme of inversion with the Statue of 'Liberty' really symbolising mass control (Fig 7). A mirror-image statute stands on an island in the River Seine in Paris from where New York Liberty originated (Fig 8). A large replica of the Liberty flame stands on top of the Pont de l'Alma tunnel in Paris where Princess Diana died in a Cult ritual described in *The Biggest Secret*. Lucifer 'the light bringer' is related to all this (and much more as we'll see) and 'Lucifer' is a central figure in Sabbatian-Frankism and its associated Satanism. Sabbatians reject the Jewish Torah, or Pentateuch, the 'five books of Moses' in the Old Testament known as Genesis, Exodus, Leviticus, Numbers, and Deuteronomy which are claimed by Judaism and Christianity to have been dictated by 'God' to Moses on Mount Sinai. Sabbatians say these do not apply to them and they seek to replace them with the Zohar to absorb Judaism and its followers into their inversion which is an expression of a much greater global inversion. They want to delete all religions and force humanity to worship a one-world religion – Sabbatian Satanism that also includes worship of the Earth goddess. Satanic themes are being more and more introduced into mainstream society and while Christianity is currently the foremost target for destruction the others are planned to follow.

Figure 7: The Cult goddess of Babylon disguised as the Statue of Liberty holding the flame of Lucifer the 'light bringer'.

Figure 8: Liberty's mirror image in Paris where the New York version originated.

Marx brothers

Rabbi Marvin Antelman connects the Illuminati to the Jacobins in *To Eliminate the Opiate* and Jacobins were the force behind the French Revolution. He links both to the Bund der Gerechten, or League of the Just, which was the network that inflicted communism/Marxism on the world. Antelman wrote:

The original inner circle of the Bund der Gerechten consisted of born Catholics, Protestants and Jews [Sabbatian-Frankist infiltrators], and those representatives of respective subdivisions formulated schemes for the ultimate destruction of their faiths. The heretical Catholics laid plans which they felt would take a century or more for the ultimate destruction of the church; the apostate Jews for the ultimate destruction of the Jewish religion.

Sabbatian-created communism connects into this anti-religion agenda in that communism does not allow for the free practice of religion. The Sabbatian 'Bund' became the International Communist Party and Communist League and in 1848 'Marxism' was born with the Communist Manifesto of Sabbatian assets Karl Marx and Friedrich Engels. It is absolutely no coincidence that Marxism, just a different name for fascist and other centrally-controlled tyrannies, is being imposed worldwide as a result of the 'Covid' hoax and nor that Marxist/fascist China was the place where the hoax originated. The reason for this will become very clear in the chapter 'Covid: The calculated catastrophe'. The so-called 'Woke' mentality has hijacked

traditional beliefs of the political left and replaced them with far-right make-believe 'social justice' better known as Marxism. Woke will, however, be swallowed by its own perceived 'revolution' which is really the work of billionaires and billionaire corporations feigning being 'Woke'. Marxism is being touted by Wokers as a replacement for 'capitalism' when we don't have 'capitalism'. We have cartelism in which the market is stitched up by the very Cult billionaires and corporations bankrolling Woke. Billionaires love Marxism which keeps the people in servitude while they control from the top. Terminally naïve Wokers think they are 'changing the world' when it's the Cult that is doing the changing and when they have played their vital part and become surplus to requirements they, too, will be targeted. The Illuminati-Jacobins were behind the period known as 'The Terror' in the French Revolution in 1793 and 1794 when Jacobin Maximillian de Robespierre and his Orwellian 'Committee of Public Safety' killed 17,000 'enemies of the Revolution' who had once been 'friends of the Revolution'. Karl Marx (1818-1883), whose Sabbatian creed of Marxism has cost the lives of at least 100 million people, is a hero once again to Wokers who have been systematically kept ignorant of real history by their 'education' programming. As a result they now promote a Sabbatian 'Marxist' abomination destined at some point to consume them. Rabbi Antelman, who spent decades researching the Sabbatian plot, said of the League of the Just and Karl Marx:

Contrary to popular opinion Karl Marx did not originate the Communist Manifesto. He was paid for his services by the League of the Just, which was known in its country of origin, Germany, as the Bund der Geächteten.

Antelman said the text attributed to Marx was the work of other people and Marx 'was only repeating what others already said'. Marx was 'a hired hack – lackey of the wealthy Illuminists'. Marx famously said that religion was the 'opium of the people' (part of the Sabbatian plan to demonise religion) and Antelman called his books, *To Eliminate the Opiate*. Marx was born Jewish, but his family converted to Christianity (Sabbatian modus operandi) and he

attacked Jews, not least in his book, *A World Without Jews*. In doing so he supported the Sabbatian plan to destroy traditional Jewishness and Judaism which we are clearly seeing today with the vindictive targeting of orthodox Jews by the Sabbatian government of Israel over 'Covid' laws. I don't follow any religion and it has done much damage to the world over centuries and acted as a perceptual straightjacket. Renegade Minds, however, are always asking *why* something is being done. It doesn't matter if they agree or disagree with what is happening – *why* is it happening is the question. The 'why?' can be answered with regard to religion in that religions create interacting communities of believers when the Cult wants to dismantle all discourse, unity and interaction (see 'Covid' lockdowns) and the ultimate goal is to delete all religions for a one-world religion of Cult Satanism worshipping their 'god' of which more later. We see the same 'why?' with gun control in America. I don't have guns and don't want them, but why is the Cult seeking to disarm the population at the same time that law enforcement agencies are armed to their molars and why has every tyrant in history sought to disarm people before launching the final takeover? They include Hitler, Stalin, Pol Pot and Mao who followed confiscation with violent seizing of power. You know it's a Cult agenda by the people who immediately race to the microphones to exploit dead people in multiple shootings. Ultra-Zionist Cult lackey Senator Chuck Schumer was straight on the case after ten people were killed in Boulder, Colorado in March, 2121. Simple rule ... if Schumer wants it the Cult wants it and the same with his ultra-Zionist mate the wild-eyed Senator Adam Schiff. At the same time they were calling for the disarmament of Americans, many of whom live a long way from a police response, Schumer, Schiff and the rest of these pampered clowns were sitting on Capitol Hill behind a razor-wired security fence protected by thousands of armed troops in addition to their own armed bodyguards. Mom and pop in an isolated home? They're just potential mass shooters.

Zion Mainframe

Sabbatian-Frankists and most importantly the Rothschilds were behind the creation of 'Zionism', a political movement that demanded a Jewish homeland in Israel as promised by Sabbatai Zevi. The very symbol of Israel comes from the German meaning of the name Rothschild. Dynasty founder Mayer Amschel Rothschild changed the family name from Bauer to Rothschild, or 'Red-Shield' in German, in deference to the six-pointed 'Star of David' hexagram displayed on the family's home in Frankfurt. The symbol later appeared on the flag of Israel after the Rothschilds were centrally involved in its creation. Hexagrams are not a uniquely Jewish symbol and are widely used in occult ('hidden') networks often as a symbol for Saturn (see my other books for why). Neither are Zionism and Jewishness interchangeable. Zionism is a political movement and philosophy and not a 'race' or a people. Many Jews oppose Zionism and many non-Jews, including US President Joe Biden, call themselves Zionists as does Israel-centric Donald Trump. America's support for the Israel government is pretty much a gimme with ultra-Zionist billionaires and corporations providing fantastic and dominant funding for both political parties. Former Congresswoman Cynthia McKinney has told how she was approached immediately she ran for office to 'sign the pledge' to Israel and confirm that she would always vote in that country's best interests. All American politicians are approached in this way. Anyone who refuses will get no support or funding from the enormous and all-powerful Zionist lobby that includes organisations like mega-lobby group AIPAC, the American Israel Public Affairs Committee. Trump's biggest funder was ultra-Zionist casino and media billionaire Sheldon Adelson while major funders of the Democratic Party include ultra-Zionist George Soros and ultra-Zionist financial and media mogul, Haim Saban. Some may reel back at the suggestion that Soros is an Israel-firster (Sabbatian-controlled Israel-firster), but Renegade Minds watch the actions not the words and everywhere Soros donates his billions the Sabbatian agenda benefits. In the spirit of Sabbatian inversion Soros pledged \$1 billion for a new university network to promote 'liberal values and tackle intolerance'. He made the announcement during his annual speech

at the Cult-owned World Economic Forum in Davos, Switzerland, in January, 2020, after his 'harsh criticism' of 'authoritarian rulers' around the world. You can only laugh at such brazen mendacity. How *he* doesn't laugh is the mystery. Translated from the Orwellian 'liberal values and tackle intolerance' means teaching non-white people to hate white people and for white people to loathe themselves for being born white. The reason for that will become clear.

The 'Anti-Semitism' fraud

Zionists support the Jewish homeland in the land of Palestine which has been the Sabbatian-Rothschild goal for so long, but not for the benefit of Jews. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. This is nothing more than a Sabbatian protection racket to stop legitimate investigation and exposure of their agendas and activities. The official definition of 'anti-Semitism' has more recently been expanded to include criticism of Zionism – a *political movement* – and this was done to further stop exposure of Sabbatian infiltrators who created Zionism as we know it today in the 19th century. Renegade Minds will talk about these subjects when they know the shit that will come their way. People must decide if they want to know the truth or just cower in the corner in fear of what others will say. Sabbatians have been trying to label me as 'anti-Semitic' since the 1990s as I have uncovered more and more about their background and agendas. Useless, gutless, fraudulent 'journalists' then just repeat the smears without question and on the day I was writing this section a pair of unquestioning repeaters called Ben Quinn and Archie Bland (how appropriate) outright called me an 'anti-Semite' in the establishment propaganda sheet, the London *Guardian*, with no supporting evidence. The

Sabbatian Anti-Semitism Industry said so and who are they to question that? They wouldn't dare. Ironically 'Semitic' refers to a group of languages in the Middle East that are almost entirely Arabic. 'Anti-Semitism' becomes 'anti-Arab' which if the consequences of this misunderstanding were not so grave would be hilarious. Don't bother telling Quinn and Bland. I don't want to confuse them, bless 'em. One reason I am dubbed 'anti-Semitic' is that I wrote in the 1990s that Jewish operatives (Sabbatians) were heavily involved in the Russian Revolution when Sabbatians overthrew the Romanov dynasty. This apparently made me 'anti-Semitic'. Oh, really? Here is a section from *The Trigger*:

British journalist Robert Wilton confirmed these themes in his 1920 book *The Last Days of the Romanovs* when he studied official documents from the Russian government to identify the members of the Bolshevik ruling elite between 1917 and 1919. The Central Committee included 41 Jews among 62 members; the Council of the People's Commissars had 17 Jews out of 22 members; and 458 of the 556 most important Bolshevik positions between 1918 and 1919 were occupied by Jewish people. Only 17 were Russian. Then there were the 23 Jews among the 36 members of the vicious Cheka Soviet secret police established in 1917 who would soon appear all across the country.

Professor Robert Service of Oxford University, an expert on 20th century Russian history, found evidence that ['Jewish'] Leon Trotsky had sought to make sure that Jews were enrolled in the Red Army and were disproportionately represented in the Soviet civil bureaucracy that included the Cheka which performed mass arrests, imprisonment and executions of 'enemies of the people'. A US State Department Decimal File (861.00/5339) dated November 13th, 1918, names [Rothschild banking agent in America] Jacob Schiff and a list of ultra-Zionists as funders of the Russian Revolution leading to claims of a 'Jewish plot', but the key point missed by all is they were not 'Jews' – they were Sabbatian-Frankists.

Britain's Winston Churchill made the same error by mistake or otherwise. He wrote in a 1920 edition of the *Illustrated Sunday Herald* that those behind the Russian revolution were part of a 'worldwide conspiracy for the overthrow of civilisation and for the reconstitution of society on the basis of arrested development, of envious malevolence, and impossible equality' (see 'Woke' today because that has been created by the same network). Churchill said there was no need to exaggerate the part played in the creation of Bolshevism and in the actual bringing about of the Russian

Revolution 'by these international and for the most part atheistical Jews' ['atheistical Jews' = Sabbatians]. Churchill said it is certainly a very great one and probably outweighs all others: 'With the notable exception of Lenin, the majority of the leading figures are Jews.' He went on to describe, knowingly or not, the Sabbatian modus operandi of placing puppet leaders nominally in power while they control from the background:

Moreover, the principal inspiration and driving power comes from the Jewish leaders. Thus Tchitcherin, a pure Russian, is eclipsed by his nominal subordinate, Litvinoff, and the influence of Russians like Bukharin or Lunacharski cannot be compared with the power of Trotsky, or of Zinovieff, the Dictator of the Red Citadel (Petrograd), or of Krassin or Radek – all Jews. In the Soviet institutions the predominance of Jews is even more astonishing. And the prominent, if not indeed the principal, part in the system of terrorism applied by the Extraordinary Commissions for Combatting Counter-Revolution has been taken by Jews, and in some notable cases by Jewesses.

What I said about seriously disproportionate involvement in the Russian Revolution by Jewish 'revolutionaries' (Sabbatians) is provable fact, but truth is no defence against the Sabbatian Anti-Semitism Industry, its repeater parrots like Quinn and Bland, and the now breathtaking network of so-called 'Woke' 'anti-hate' groups with interlocking leaderships and funding which have the role of discrediting and silencing anyone who gets too close to exposing the Sabbatians. We have seen 'truth is no defence' confirmed in legal judgements with the Saskatchewan Human Rights Commission in Canada decreeing this: 'Truthful statements can be presented in a manner that would meet the definition of hate speech, and not all truthful statements must be free from restriction.' Most 'anti-hate' activists, who are themselves consumed by hatred, are too stupid and ignorant of the world to know how they are being used. They are far too far up their own virtue-signalling arses and it's far too dark for them to see anything.

The 'revolution' game

The background and methods of the 'Russian' Revolution are straight from the Sabbatian playbook seen in the French Revolution

and endless others around the world that appear to start as a revolution of the people against tyrannical rule and end up with a regime change to more tyrannical rule overtly or covertly. Wars, terror attacks and regime overthrows follow the Sabbatian cult through history with its agents creating them as Problem-Reaction-Solutions to remove opposition on the road to world domination. Sabbatian dots connect the Rothschilds with the Illuminati, Jacobins of the French Revolution, the 'Bund' or League of the Just, the International Communist Party, Communist League and the Communist Manifesto of Karl Marx and Friedrich Engels that would lead to the Rothschild-funded Russian Revolution. The sequence comes under the heading of 'creative destruction' when you advance to your global goal by continually destroying the status quo to install a new status quo which you then also destroy. The two world wars come to mind. With each new status quo you move closer to your planned outcome. Wars and mass murder are to Sabbatians a collective blood sacrifice ritual. They are obsessed with death for many reasons and one is that death is an inversion of life. Satanists and Sabbatians are obsessed with death and often target churches and churchyards for their rituals. Inversion-obsessed Sabbatians explain the use of inverted symbolism including the *inverted* pentagram and *inverted* cross. The inversion of the cross has been related to targeting Christianity, but the cross was a religious symbol long before Christianity and its inversion is a statement about the Sabbatian mentality and goals more than any single religion.

Sabbatians operating in Germany were behind the rise of the occult-obsessed Nazis and the subsequent Jewish exodus from Germany and Europe to Palestine and the United States after World War Two. The Rothschild dynasty was at the forefront of this both as political manipulators and by funding the operation. Why would Sabbatians help to orchestrate the horrors inflicted on Jews by the Nazis and by Stalin after they organised the Russian Revolution? Sabbatians hate Jews and their religion, that's why. They pose as Jews and secure positions of control within Jewish society and play the 'anti-Semitism' card to protect themselves from exposure

through a global network of organisations answering to the Sabbatian-created-and-controlled globe-spanning intelligence network that involves a stunning web of military-intelligence operatives and operations for a tiny country of just nine million. Among them are Jewish assets who are not Sabbatians but have been convinced by them that what they are doing is for the good of Israel and the Jewish community to protect them from what they have been programmed since childhood to believe is a Jew-hating hostile world. The Jewish community is just a highly convenient cover to hide the true nature of Sabbatians. Anyone getting close to exposing their game is accused by Sabbatian place-people and gofers of 'anti-Semitism' and claiming that all Jews are part of a plot to take over the world. I am not saying that. I am saying that Sabbatians – the *real* Jew-haters – have infiltrated the Jewish community to use them both as a cover and an 'anti-Semitic' defence against exposure. Thus we have the Anti-Semitism Industry targeted researchers in this way and most Jewish people think this is justified and genuine. They don't know that their 'Jewish' leaders and institutions of state, intelligence and military are not controlled by Jews at all, but cultists and stooges of Sabbatian-Frankism. I once added my name to a pro-Jewish freedom petition online and the next time I looked my name was gone and text had been added to the petition blurb to attack me as an 'anti-Semite' such is the scale of perceptual programming.

Moving on America

I tell the story in *The Trigger* and a chapter called 'Atlantic Crossing' how particularly after Israel was established the Sabbatians moved in on the United States and eventually grasped control of government administration, the political system via both Democrats and Republicans, the intelligence community like the CIA and National Security Agency (NSA), the Pentagon and mass media. Through this seriously compartmentalised network Sabbatians and their operatives in Mossad, Israeli Defense Forces (IDF) and US agencies pulled off 9/11 and blamed it on 19 'Al-Qaeda hijackers' dominated by men from, or connected to, Sabbatian-ruled Saudi

Arabia. The '19' were not even on the planes let alone flew those big passenger jets into buildings while being largely incompetent at piloting one-engine light aircraft. 'Hijacker' Hani Hanjour who is said to have flown American Airlines Flight 77 into the Pentagon with a turn and manoeuvre most professional pilots said they would have struggled to do was banned from renting a small plane by instructors at the Freeway Airport in Bowie, Maryland, just *six weeks* earlier on the grounds that he was an incompetent pilot. The Jewish population of the world is just 0.2 percent with even that almost entirely concentrated in Israel (75 percent Jewish) and the United States (around two percent). This two percent and globally 0.2 percent refers to *Jewish* people and not Sabbatian interlopers who are a fraction of that fraction. What a sobering thought when you think of the fantastic influence on world affairs of tiny Israel and that the Project for the New America Century (PNAC) which laid out the blueprint in September, 2000, for America's war on terror and regime change wars in Iraq, Libya and Syria was founded and dominated by Sabbatians known as 'Neocons'. The document conceded that this plan would not be supported politically or publicly without a major attack on American soil and a Problem-Reaction-Solution excuse to send troops to war across the Middle East. Sabbatian Neocons said:

... [The] process of transformation ... [war and regime change] ... is likely to be a long one, absent some catastrophic and catalysing event – like a new Pearl Harbor.

Four months later many of those who produced that document came to power with their inane puppet George Bush from the long-time Sabbatian Bush family. They included Sabbatian Dick Cheney who was officially vice-president, but really de-facto president for the entirety of the 'Bush' government. Nine months after the 'Bush' inauguration came what Bush called at the time 'the Pearl Harbor of the 21st century' and with typical Sabbatian timing and symbolism 2001 was the 60th anniversary of the attack in 1941 by the Japanese Air Force on Pearl Harbor, Hawaii, which allowed President Franklin Delano Roosevelt to take the United States into a Sabbatian-

instigated Second World War that he said in his election campaign that he never would. The evidence is overwhelming that Roosevelt and his military and intelligence networks knew the attack was coming and did nothing to stop it, but they did make sure that America's most essential naval ships were not in Hawaii at the time. Three thousand Americans died in the Pearl Harbor attacks as they did on September 11th. By the 9/11 year of 2001 Sabbatians had widely infiltrated the US government, military and intelligence operations and used their compartmentalised assets to pull off the 'Al-Qaeda' attacks. If you read *The Trigger* it will blow your mind to see the utterly staggering concentration of 'Jewish' operatives (Sabbatian infiltrators) in essential positions of political, security, legal, law enforcement, financial and business power before, during, and after the attacks to make them happen, carry them out, and then cover their tracks – and I do mean *staggering* when you think of that 0.2 percent of the world population and two percent of Americans which are Jewish while Sabbatian infiltrators are a fraction of that. A central foundation of the 9/11 conspiracy was the hijacking of government, military, Air Force and intelligence computer systems in real time through 'back-door' access made possible by Israeli (Sabbatian) 'cyber security' software. Sabbatian-controlled Israel is on the way to rivalling Silicon Valley for domination of cyberspace and is becoming the dominant force in cyber-security which gives them access to entire computer systems and their passcodes across the world. Then add to this that Zionists head (officially) Silicon Valley giants like Google (Larry Page and Sergey Brin), Google-owned YouTube (Susan Wojcicki), Facebook (Mark Zuckerberg and Sheryl Sandberg), and Apple (Chairman Arthur D. Levinson), and that ultra-Zionist hedge fund billionaire Paul Singer has a \$1 billion stake in Twitter which is only nominally headed by 'CEO' pothead Jack Dorsey. As cable news host Tucker Carlson said of Dorsey: 'There used to be debate in the medical community whether dropping a ton of acid had permanent effects and I think that debate has now ended.' Carlson made the comment after Dorsey told a hearing on Capitol Hill (if you cut through his bullshit) that he

believed in free speech so long as he got to decide what you can hear and see. These 'big names' of Silicon Valley are only front men and women for the Global Cult, not least the Sabbatians, who are the true controllers of these corporations. Does anyone still wonder why these same people and companies have been ferociously censoring and banning people (like me) for exposing any aspect of the Cult agenda and especially the truth about the 'Covid' hoax which Sabbatians have orchestrated?

The Jeffrey Epstein paedophile ring was a Sabbatian operation. He was officially 'Jewish' but he was a Sabbatian and women abused by the ring have told me about the high number of 'Jewish' people involved. The Epstein horror has Sabbatian written all over it and matches perfectly their modus operandi and obsession with sex and ritual. Epstein was running a Sabbatian blackmail ring in which famous people with political and other influence were provided with young girls for sex while everything was being filmed and recorded on hidden cameras and microphones at his New York house, Caribbean island and other properties. Epstein survivors have described this surveillance system to me and some have gone public. Once the famous politician or other figure knew he or she was on video they tended to do whatever they were told. Here we go again ...when you've got them by the balls their hearts and minds will follow. Sabbatians use this blackmail technique on a wide scale across the world to entrap politicians and others they need to act as demanded. Epstein's private plane, the infamous 'Lolita Express', had many well-known passengers including Bill Clinton while Bill Gates has flown on an Epstein plane and met with him four years after Epstein had been jailed for paedophilia. They subsequently met many times at Epstein's home in New York according to a witness who was there. Epstein's infamous side-kick was Ghislaine Maxwell, daughter of Mossad agent and ultra-Zionist mega-crooked British businessman, Bob Maxwell, who at one time owned the *Daily Mirror* newspaper. Maxwell was murdered at sea on his boat in 1991 by Sabbatian-controlled Mossad when he became a liability with his

business empire collapsing as a former Mossad operative has confirmed (see *The Trigger*).

Money, money, money, funny money ...

Before I come to the Sabbatian connection with the last three US presidents I will lay out the crucial importance to Sabbatians of controlling banking and finance. Sabbatian Mayer Amschel Rothschild set out to dominate this arena in his family's quest for total global control. What is freedom? It is, in effect, choice. The more choices you have the freer you are and the fewer your choices the more you are enslaved. In the global structure created over centuries by Sabbatians the biggest decider and restrictor of choice is ... money. Across the world if you ask people what they would like to do with their lives and why they are not doing that they will reply 'I don't have the money'. This is the idea. A global elite of multi-billionaires are described as 'greedy' and that is true on one level; but control of money – who has it and who doesn't – is not primarily about greed. It's about control. Sabbatians have seized ever more control of finance and sucked the wealth of the world out of the hands of the population. We talk now, after all, about the 'One-percent' and even then the wealthiest are a lot fewer even than that. This has been made possible by a money scam so outrageous and so vast it could rightly be called the scam of scams founded on creating 'money' out of nothing and 'loaning' that with interest to the population. Money out of nothing is called 'credit'. Sabbatians have asserted control over governments and banking ever more completely through the centuries and secured financial laws that allow banks to lend hugely more than they have on deposit in a confidence trick known as fractional reserve lending. Imagine if you could lend money that doesn't exist and charge the recipient interest for doing so. You would end up in jail. Bankers by contrast end up in mansions, private jets, Malibu and Monaco.

Banks are only required to keep a fraction of their deposits and wealth in their vaults and they are allowed to lend 'money' they don't have called 'credit'. Go into a bank for a loan and if you succeed

the banker will not move any real wealth into your account. They will type into your account the amount of the agreed 'loan' – say £100,000. This is not wealth that really exists; it is non-existent, fresh-air, created-out-of-nothing 'credit' which has never, does not, and will never exist except in theory. Credit is backed by nothing except wind and only has buying power because people think that it has buying power and accept it in return for property, goods and services. I have described this situation as like those cartoon characters you see chasing each other and when they run over the edge of a cliff they keep running forward on fresh air until one of them looks down, realises what's happened, and they all crash into the ravine. The whole foundation of the Sabbatian financial system is to stop people looking down except for periodic moments when they want to crash the system (as in 2008 and 2020 ongoing) and reap the rewards from all the property, businesses and wealth their borrowers had signed over as 'collateral' in return for a 'loan' of fresh air. Most people think that money is somehow created by governments when it comes into existence from the start as a debt through banks 'lending' illusory money called credit. Yes, the very currency of exchange is a *debt* from day one issued as an interest-bearing loan. Why don't governments create money interest-free and lend it to their people interest-free? Governments are controlled by Sabbatians and the financial system is controlled by Sabbatians for whom interest-free money would be a nightmare come true. Sabbatians underpin their financial domination through their global network of central banks, including the privately-owned US Federal Reserve and Britain's Bank of England, and this is orchestrated by a privately-owned central bank coordination body called the Bank for International Settlements in Basle, Switzerland, created by the usual suspects including the Rockefellers and Rothschilds. Central bank chiefs don't answer to governments or the people. They answer to the Bank for International Settlements or, in other words, the Global Cult which is dominated today by Sabbatians.

Built-in disaster

There are so many constituent scams within the overall banking scam. When you take out a loan of thin-air credit only the amount of that loan is theoretically brought into circulation to add to the amount in circulation; but you are paying back the principle plus interest. The additional interest is not created and this means that with every 'loan' there is a shortfall in the money in circulation between what is borrowed and what has to be paid back. There is never even close to enough money in circulation to repay all outstanding public and private debt including interest. Coldly weaved in the very fabric of the system is the certainty that some will lose their homes, businesses and possessions to the banking 'lender'. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts it becomes painfully obvious that there is not enough money to service all debt and interest. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts and it becomes painfully obvious – as in 2008 and currently – that there is not enough money to service all debt and interest. Sabbatian banksters have been leading the human population through a calculated series of booms (more debt incurred) and busts (when the debt can't be repaid and the banks get the debtor's tangible wealth in exchange for non-existent 'credit'). With each 'bust' Sabbatian bankers have absorbed more of the world's tangible wealth and we end up with the One-percent. Governments are in bankruptcy levels of debt to the same system and are therefore owned by a system they do not control. The Federal Reserve, 'America's central bank', is privately-owned and American presidents only nominally appoint its chairman or woman to maintain the illusion that it's an arm of government. It's not. The 'Fed' is a cartel of private banks which handed billions to its associates and friends after the crash of 2008 and has been Sabbatian-controlled since it was manipulated into being in 1913 through the covert trickery of Rothschild banking agents Jacob Schiff and Paul

Warburg, and the Sabbatian Rockefeller family. Somehow from a Jewish population of two-percent and globally 0.2 percent (Sabbatian interlopers remember are far smaller) ultra-Zionists headed the Federal Reserve for 31 years between 1987 and 2018 in the form of Alan Greenspan, Bernard Bernanke and Janet Yellen (now Biden's Treasury Secretary) with Yellen's deputy chairman a Israeli-American dual citizen and ultra-Zionist Stanley Fischer, a former governor of the Bank of Israel. Ultra-Zionist Fed chiefs spanned the presidencies of Ronald Reagan ('Republican'), Father George Bush ('Republican'), Bill Clinton ('Democrat'), Boy George Bush ('Republican') and Barack Obama ('Democrat'). We should really add the pre-Greenspan chairman, Paul Adolph Volcker, 'appointed' by Jimmy Carter ('Democrat') who ran the Fed between 1979 and 1987 during the Carter and Reagan administrations before Greenspan took over. Volcker was a long-time associate and business partner of the Rothschilds. No matter what the 'party' officially in power the United States economy was directed by the same force. Here are members of the Obama, Trump and Biden administrations and see if you can make out a common theme.

Barack Obama ('Democrat')

Ultra-Zionists Robert Rubin, Larry Summers, and Timothy Geithner ran the US Treasury in the Clinton administration and two of them reappeared with Obama. Ultra-Zionist Fed chairman Alan Greenspan had manipulated the crash of 2008 through deregulation and jumped ship just before the disaster to make way for ultra-Zionist Bernard Bernanke to hand out trillions to Sabbatian 'too big to fail' banks and businesses, including the ubiquitous ultra-Zionist Goldman Sachs which has an ongoing revolving door operation between itself and major financial positions in government worldwide. Obama inherited the fallout of the crash when he took office in January, 2009, and fortunately he had the support of his ultra-Zionist White House Chief of Staff Rahm Emmanuel, son of a terrorist who helped to bomb Israel into being in 1948, and his ultra-Zionist senior adviser David Axelrod, chief strategist in Obama's two

successful presidential campaigns. Emmanuel, later mayor of Chicago and former senior fundraiser and strategist for Bill Clinton, is an example of the Sabbatian policy after Israel was established of migrating insider families to America so their children would be born American citizens. 'Obama' chose this financial team throughout his administration to respond to the Sabbatian-instigated crisis:

Timothy Geithner (ultra-Zionist) Treasury Secretary; Jacob J. Lew, Treasury Secretary; Larry Summers (ultra-Zionist), director of the White House National Economic Council; Paul Adolph Volcker (Rothschild business partner), chairman of the Economic Recovery Advisory Board; Peter Orszag (ultra-Zionist), director of the Office of Management and Budget overseeing all government spending; Penny Pritzker (ultra-Zionist), Commerce Secretary; Jared Bernstein (ultra-Zionist), chief economist and economic policy adviser to Vice President Joe Biden; Mary Schapiro (ultra-Zionist), chair of the Securities and Exchange Commission (SEC); Gary Gensler (ultra-Zionist), chairman of the Commodity Futures Trading Commission (CFTC); Sheila Bair (ultra-Zionist), chair of the Federal Deposit Insurance Corporation (FDIC); Karen Mills (ultra-Zionist), head of the Small Business Administration (SBA); Kenneth Feinberg (ultra-Zionist), Special Master for Executive [bail-out] Compensation. Feinberg would be appointed to oversee compensation (with strings) to 9/11 victims and families in a campaign to stop them having their day in court to question the official story. At the same time ultra-Zionist Bernard Bernanke was chairman of the Federal Reserve and these are only some of the ultra-Zionists with allegiance to Sabbatian-controlled Israel in the Obama government. Obama's biggest corporate donor was ultra-Zionist Goldman Sachs which had employed many in his administration.

Donald Trump ('Republican')

Trump claimed to be an outsider (he wasn't) who had come to 'drain the swamp'. He embarked on this goal by immediately appointing ultra-Zionist Steve Mnuchin, a Goldman Sachs employee for 17

years, as his Treasury Secretary. Others included Gary Cohn (ultra-Zionist), chief operating officer of Goldman Sachs, his first Director of the National Economic Council and chief economic adviser, who was later replaced by Larry Kudlow (ultra-Zionist). Trump's senior adviser throughout his four years in the White House was his sinister son-in-law Jared Kushner, a life-long friend of Israel Prime Minister Benjamin Netanyahu. Kushner is the son of a convicted crook who was pardoned by Trump in his last days in office. Other ultra-Zionists in the Trump administration included: Stephen Miller, Senior Policy Adviser; Avrahm Berkowitz, Deputy Adviser to Trump and his Senior Adviser Jared Kushner; Ivanka Trump, Adviser to the President, who converted to Judaism when she married Jared Kushner; David Friedman, Trump lawyer and Ambassador to Israel; Jason Greenblatt, Trump Organization executive vice president and chief legal officer, who was made Special Representative for International Negotiations and the Israeli-Palestinian Conflict; Rod Rosenstein, Deputy Attorney General; Elliot Abrams, Special Representative for Venezuela, then Iran; John Eisenberg, National Security Council Legal Adviser and Deputy Council to the President for National Security Affairs; Anne Neuberger, Deputy National Manager, National Security Agency; Ezra Cohen-Watnick, Acting Under Secretary of Defense for Intelligence; Elan Carr, Special Envoy to monitor and combat anti-Semitism; Len Khodorkovsky, Deputy Special Envoy to monitor and combat anti-Semitism; Reed Cordish, Assistant to the President, Intragovernmental and Technology Initiatives. Trump Vice President Mike Pence and Secretary of State Mike Pompeo, both Christian Zionists, were also vehement supporters of Israel and its goals and ambitions.

Donald 'free-speech believer' Trump pardoned a number of financial and violent criminals while ignoring calls to pardon Julian Assange and Edward Snowden whose crimes are revealing highly relevant information about government manipulation and corruption and the widespread illegal surveillance of the American people by US 'security' agencies. It's so good to know that Trump is on the side of freedom and justice and not mega-criminals with

allegiance to Sabbatian-controlled Israel. These included a pardon for Israeli spy Jonathan Pollard who was jailed for life in 1987 under the Espionage Act. Aviem Sella, the Mossad agent who recruited Pollard, was also pardoned by Trump while Assange sat in jail and Snowden remained in exile in Russia. Sella had 'fled' (was helped to escape) to Israel in 1987 and was never extradited despite being charged under the Espionage Act. A Trump White House statement said that Sella's clemency had been 'supported by Benjamin Netanyahu, Ron Dermer, Israel's US Ambassador, David Friedman, US Ambassador to Israel and Miriam Adelson, wife of leading Trump donor Sheldon Adelson who died shortly before. Other friends of Jared Kushner were pardoned along with Sholom Weiss who was believed to be serving the longest-ever white-collar prison sentence of more than 800 years in 2000. The sentence was commuted of Ponzi-schemer Eliyahu Weinstein who defrauded Jews and others out of \$200 million. I did mention that Assange and Snowden were ignored, right? Trump gave Sabbatians almost everything they asked for in military and political support, moving the US Embassy from Tel Aviv to Jerusalem with its critical symbolic and literal implications for Palestinian statehood, and the 'deal of the Century' designed by Jared Kushner and David Friedman which gave the Sabbatian Israeli government the green light to substantially expand its already widespread program of building illegal Jewish-only settlements in the occupied land of the West Bank. This made a two-state 'solution' impossible by seizing all the land of a potential Palestinian homeland and that had been the plan since 1948 and then 1967 when the Arab-controlled Gaza Strip, West Bank, Sinai Peninsula and Syrian Golan Heights were occupied by Israel. All the talks about talks and road maps and delays have been buying time until the West Bank was physically occupied by Israeli real estate. Trump would have to be a monumentally ill-informed idiot not to see that this was the plan he was helping to complete. The Trump administration was in so many ways the Kushner administration which means the Netanyahu administration which means the Sabbatian administration. I understand why many opposing Cult fascism in all its forms gravitated to Trump, but he

was a crucial part of the Sabbatian plan and I will deal with this in the next chapter.

Joe Biden ('Democrat')

A barely cognitive Joe Biden took over the presidency in January, 2021, along with his fellow empty shell, Vice-President Kamala Harris, as the latest Sabbatian gofers to enter the White House. Names on the door may have changed and the 'party' – the force behind them remained the same as Zionists were appointed to a stream of pivotal areas relating to Sabbatian plans and policy. They included: Janet Yellen, Treasury Secretary, former head of the Federal Reserve, and still another ultra-Zionist running the US Treasury after Mnuchin (Trump), Lew and Geithner (Obama), and Summers and Rubin (Clinton); Anthony Blinken, Secretary of State; Wendy Sherman, Deputy Secretary of State (so that's 'Biden's' Sabbatian foreign policy sorted); Jeff Zients, White House coronavirus coordinator; Rochelle Walensky, head of the Centers for Disease Control; Rachel Levine, transgender deputy health secretary (that's 'Covid' hoax policy under control); Merrick Garland, Attorney General; Alejandro Mayorkas, Secretary of Homeland Security; Cass Sunstein, Homeland Security with responsibility for new immigration laws; Avril Haines, Director of National Intelligence; Anne Neuberger, National Security Agency cybersecurity director (note, cybersecurity); David Cohen, CIA Deputy Director; Ronald Klain, Biden's Chief of Staff (see Rahm Emanuel); Eric Lander, a 'leading geneticist', Office of Science and Technology Policy director (see Smart Grid, synthetic biology agenda); Jessica Rosenworcel, acting head of the Federal Communications Commission (FCC) which controls Smart Grid technology policy and electromagnetic communication systems including 5G. How can it be that so many pivotal positions are held by two-percent of the American population and 0.2 percent of the world population administration after administration no matter who is the president and what is the party? It's a coincidence? Of course it's not and this is why Sabbatians have built their colossal global web of interlocking 'anti-

hate' hate groups to condemn anyone who asks these glaring questions as an 'anti-Semite'. The way that Jewish people horrifically abused in Sabbatian-backed Nazi Germany are exploited to this end is stomach-turning and disgusting beyond words.

Political fusion

Sabbatian manipulation has reversed the roles of Republicans and Democrats and the same has happened in Britain with the Conservative and Labour Parties. Republicans and Conservatives were always labelled the 'right' and Democrats and Labour the 'left', but look at the policy positions now and the Democrat-Labour 'left' has moved further to the 'right' than Republicans and Conservatives under the banner of 'Woke', the Cult-created far-right tyranny. Where once the Democrat-Labour 'left' defended free speech and human rights they now seek to delete them and as I said earlier despite the 'Covid' fascism of the Jackboot Johnson Conservative government in the UK the Labour Party of leader Keir Starmer demanded even more extreme measures. The Labour Party has been very publicly absorbed by Sabbatians after a political and media onslaught against the previous leader, the weak and inept Jeremy Corbyn, over made-up allegations of 'anti-Semitism' both by him and his party. The plan was clear with this 'anti-Semite' propaganda and what was required in response was a swift and decisive 'fuck off' from Corbyn and a statement to expose the Anti-Semitism Industry (Sabbatian) attempt to silence Labour criticism of the Israeli government (Sabbatians) and purge the party of all dissent against the extremes of ultra-Zionism (Sabbatians). Instead Corbyn and his party fell to their knees and appeased the abusers which, by definition, is impossible. Appeasing one demand leads only to a new demand to be appeased until takeover is complete. Like I say – 'fuck off' would have been a much more effective policy and I have used it myself with great effect over the years when Sabbatians are on my case which is most of the time. I consider that fact a great compliment, by the way. The outcome of the Labour Party capitulation is that we now have a Sabbatian-controlled

Conservative Party 'opposed' by a Sabbatian-controlled Labour Party in a one-party Sabbatian state that hurtles towards the extremes of tyranny (the Sabbatian cult agenda). In America the situation is the same. Labour's Keir Starmer spends his days on his knees with his tongue out pointing to Tel Aviv, or I guess now Jerusalem, while Boris Johnson has an 'anti-Semitism czar' in the form of former Labour MP John Mann who keeps Starmer company on his prayer mat.

Sabbatian influence can be seen in Jewish members of the Labour Party who have been ejected for criticism of Israel including those from families that suffered in Nazi Germany. Sabbatians despise real Jewish people and target them even more harshly because it is so much more difficult to dub them 'anti-Semitic' although in their desperation they do try.

CHAPTER THREE

The Pushbacker sting

Until you realize how easy it is for your mind to be manipulated, you remain the puppet of someone else's game

Evita Ochel

I will use the presidencies of Trump and Biden to show how the manipulation of the one-party state plays out behind the illusion of political choice across the world. No two presidencies could – on the face of it – be more different and apparently at odds in terms of direction and policy.

A Renegade Mind sees beyond the obvious and focuses on outcomes and consequences and not image, words and waffle. The Cult embarked on a campaign to divide America between those who blindly support its agenda (the mentality known as 'Woke') and those who are pushing back on where the Cult and its Sabbatians want to go. This presents infinite possibilities for dividing and ruling the population by setting them at war with each other and allows a perceptual ring fence of demonisation to encircle the Pushbackers in a modern version of the Little Big Horn in 1876 when American cavalry led by Lieutenant Colonel George Custer were drawn into a trap, surrounded and killed by Native American tribes defending their land of thousands of years from being seized by the government. In this modern version the roles are reversed and it's those defending themselves from the Sabbatian government who are surrounded and the government that's seeking to destroy them. This trap was set years ago and to explain how we must return to 2016

and the emergence of Donald Trump as a candidate to be President of the United States. He set out to overcome the best part of 20 other candidates in the Republican Party before and during the primaries and was not considered by many in those early stages to have a prayer of living in the White House. The Republican Party was said to have great reservations about Trump and yet somehow he won the nomination. When you know how American politics works – politics in general – there is no way that Trump could have become the party's candidate unless the Sabbatian-controlled 'Neocons' that run the Republican Party wanted that to happen. We saw the proof in emails and documents made public by WikiLeaks that the Democratic Party hierarchy, or Democons, systematically undermined the campaign of Bernie Sanders to make sure that Sabbatian gofer Hillary Clinton won the nomination to be their presidential candidate. If the Democons could do that then the Neocons in the Republican Party could have derailed Trump in the same way. But they didn't and at that stage I began to conclude that Trump could well be the one chosen to be president. If that was the case the 'why' was pretty clear to see – the goal of dividing America between Cult agenda-supporting Wokers and Pushbackers who gravitated to Trump because he was telling them what they wanted to hear. His constituency of support had been increasingly ignored and voiceless for decades and profoundly through the eight years of Sabbatian puppet Barack Obama. Now here was someone speaking their language of pulling back from the incessant globalisation of political and economic power, the exporting of American jobs to China and elsewhere by 'American' (Sabbatian) corporations, the deletion of free speech, and the mass immigration policies that had further devastated job opportunities for the urban working class of all races and the once American heartlands of the Midwest.

Beware the forked tongue

Those people collectively sighed with relief that at last a political leader was apparently on their side, but another trait of the Renegade Mind is that you look even harder at people telling you

what you want to hear than those who are telling you otherwise. Obviously as I said earlier people wish what they want to hear to be true and genuine and they are much more likely to believe that than someone saying what they don't want to hear and don't want to be true. Sales people are taught to be skilled in eliciting by calculated questioning what their customers want to hear and repeating that back to them as their own opinion to get their targets to like and trust them. Assets of the Cult are also sales people in the sense of selling perception. To read Cult manipulation you have to play the long and expanded game and not fall for the Vaudeville show of party politics. Both American parties are vehicles for the Cult and they exploit them in different ways depending on what the agenda requires at that moment. Trump and the Republicans were used to be the focus of dividing America and isolating Pushbackers to open the way for a Biden presidency to become the most extreme in American history by advancing the full-blown Woke (Cult) agenda with the aim of destroying and silencing Pushbackers now labelled Nazi Trump supporters and white supremacists.

Sabbatians wanted Trump in office for the reasons described by ultra-Zionist Saul Alinsky (1909-1972) who was promoting the Woke philosophy through 'community organising' long before anyone had heard of it. In those days it still went by its traditional name of Marxism. The reason for the manipulated Trump phenomenon was laid out in Alinsky's 1971 book, *Rules for Radicals*, which was his blueprint for overthrowing democratic and other regimes and replacing them with Sabbatian Marxism. Not surprisingly his to-do list was evident in the Sabbatian French and Russian 'Revolutions' and that in China which will become very relevant in the next chapter about the 'Covid' hoax. Among Alinsky's followers have been the deeply corrupt Barack Obama, House Speaker Nancy Pelosi and Hillary Clinton who described him as a 'hero'. All three are Sabbatian stooges with Pelosi personifying the arrogant corrupt idiocy that so widely fronts up for the Cult inner core. Predictably as a Sabbatian advocate of the 'light-bringer' Alinsky features Lucifer on the dedication page of his book as the original radical who gained

his own kingdom ('Earth' as we shall see). One of Alinsky's golden radical rules was to pick an individual and focus all attention, hatred and blame on them and not to target faceless bureaucracies and corporations. *Rules for Radicals* is really a Sabbatian handbook with its contents repeatedly employed all over the world for centuries and why wouldn't Sabbatians bring to power their designer-villain to be used as the individual on which all attention, hatred and blame was bestowed? This is what they did and the only question for me is how much Trump knew that and how much he was manipulated. A bit of both, I suspect. This was Alinsky's Trump technique from a man who died in 1972. The technique has spanned history:

Pick the target, freeze it, personalize it, polarize it. Don't try to attack abstract corporations or bureaucracies. Identify a responsible individual. Ignore attempts to shift or spread the blame.

From the moment Trump came to illusory power everything was about him. It wasn't about Republican policy or opinion, but all about Trump. Everything he did was presented in negative, derogatory and abusive terms by the Sabbatian-dominated media led by Cult operations such as CNN, MSNBC, *The New York Times* and the Jeff Bezos-owned *Washington Post* – 'Pick the target, freeze it, personalize it, polarize it.' Trump was turned into a demon to be vilified by those who hated him and a demi-god loved by those who worshipped him. This, in turn, had his supporters, too, presented as equally demonic in preparation for the punchline later down the line when Biden was about to take office. It was here's a Trump, there's a Trump, everywhere a Trump, Trump. Virtually every news story or happening was filtered through the lens of 'The Donald'. You loved him or hated him and which one you chose was said to define you as Satan's spawn or a paragon of virtue. Even supporting some Trump policies or statements and not others was enough for an assault on your character. No shades of grey were or are allowed. Everything is black and white (literally and figuratively). A Californian I knew had her head utterly scrambled by her hatred for Trump while telling people they should love each other. She was so totally consumed by

Trump Derangement Syndrome as it became to be known that this glaring contradiction would never have occurred to her. By definition anyone who criticised Trump or praised his opponents was a hero and this lady described Joe Biden as 'a kind, honest gentleman' when he's a provable liar, mega-crook and vicious piece of work to boot. Sabbatians had indeed divided America using Trump as the fall-guy and all along the clock was ticking on the consequences for his supporters.

In hock to his masters

Trump gave Sabbatians via Israel almost everything they wanted in his four years. Ask and you shall receive was the dynamic between himself and Benjamin Netanyahu orchestrated by Trump's ultra-Zionist son-in-law Jared Kushner, his ultra-Zionist Ambassador to Israel, David Friedman, and ultra-Zionist 'Israel adviser', Jason Greenblatt. The last two were central to the running and protecting from collapse of his business empire, the Trump Organisation, and colossal business failures made him forever beholding to Sabbatian networks that bailed him out. By the start of the 1990s Trump owed \$4 billion to banks that he couldn't pay and almost \$1 billion of that was down to him personally and not his companies. This mega-disaster was the result of building two new casinos in Atlantic City and buying the enormous Taj Mahal operation which led to crippling debt payments. He had borrowed fantastic sums from 72 banks with major Sabbatian connections and although the scale of debt should have had him living in a tent alongside the highway they never foreclosed. A plan was devised to lift Trump from the mire by BT Securities Corporation and Rothschild Inc. and the case was handled by Wilber Ross who had worked for the Rothschilds for 27 years. Ross would be named US Commerce Secretary after Trump's election. Another crucial figure in saving Trump was ultra-Zionist 'investor' Carl Icahn who bought the Taj Mahal casino. Icahn was made special economic adviser on financial regulation in the Trump administration. He didn't stay long but still managed to find time to make a tidy sum of a reported \$31.3 million when he sold his

holdings affected by the price of steel three days before Trump imposed a 235 percent tariff on steel imports. What amazing bits of luck these people have. Trump and Sabbatian operatives have long had a close association and his mentor and legal adviser from the early 1970s until 1986 was the dark and genetically corrupt ultra-Zionist Roy Cohn who was chief counsel to Senator Joseph McCarthy's 'communist' witch-hunt in the 1950s. *Esquire* magazine published an article about Cohn with the headline 'Don't mess with Roy Cohn'. He was described as the most feared lawyer in New York and 'a ruthless master of dirty tricks ... [with] ... more than one Mafia Don on speed dial'. Cohn's influence, contacts, support and protection made Trump a front man for Sabbatians in New York with their connections to one of Cohn's many criminal employers, the 'Russian' Sabbatian Mafia. Israel-centric media mogul Rupert Murdoch was introduced to Trump by Cohn and they started a long friendship. Cohn died in 1986 weeks after being disbarred for unethical conduct by the Appellate Division of the New York State Supreme Court. The wheels of justice do indeed run slow given the length of Cohn's crooked career.

QAnon-sense

We are asked to believe that Donald Trump with his fundamental connections to Sabbatian networks and operatives has been leading the fight to stop the Sabbatian agenda for the fascistic control of America and the world. Sure he has. A man entrapped during his years in the White House by Sabbatian operatives and whose biggest financial donor was casino billionaire Sheldon Adelson who was Sabbatian to his DNA?? Oh, do come on. Trump has been used to divide America and isolate Pushbackers on the Cult agenda under the heading of 'Trump supporters', 'insurrectionists' and 'white supremacists'. The US Intelligence/Mossad Psyop or psychological operation known as QAnon emerged during the Trump years as a central pillar in the Sabbatian campaign to lead Pushbackers into the trap set by those that wished to destroy them. I knew from the start that QAnon was a scam because I had seen the same scenario many

times before over 30 years under different names and I had written about one in particular in the books. 'Not again' was my reaction when QAnon came to the fore. The same script is pulled out every few years and a new name added to the letterhead. The story always takes the same form: 'Insiders' or 'the good guys' in the government-intelligence-military 'Deep State' apparatus were going to instigate mass arrests of the 'bad guys' which would include the Rockefellers, Rothschilds, Barack Obama, Hillary Clinton, George Soros, etc., etc. Dates are given for when the 'good guys' are going to move in, but the dates pass without incident and new dates are given which pass without incident. The central message to Pushbackers in each case is that they don't have to do anything because there is 'a plan' and it is all going to be sorted by the 'good guys' on the inside. 'Trust the plan' was a QAnon mantra when the only plan was to misdirect Pushbackers into putting their trust in a Psyop they believed to be real. Beware, beware, those who tell you what you want to hear and always check it out. Right up to Biden's inauguration QAnon was still claiming that 'the Storm' was coming and Trump would stay on as president when Biden and his cronies were arrested and jailed. It was never going to happen and of course it didn't, but what did happen as a result provided that punchline to the Sabbatian Trump/QAnon Psyop.

On January 6th, 2021, a very big crowd of Trump supporters gathered in the National Mall in Washington DC down from the Capitol Building to protest at what they believed to be widespread corruption and vote fraud that stopped Trump being re-elected for a second term as president in November, 2020. I say as someone that does not support Trump or Biden that the evidence is clear that major vote-fixing went on to favour Biden, a man with cognitive problems so advanced he can often hardly string a sentence together without reading the words written for him on the Teleprompter. Glaring ballot discrepancies included serious questions about electronic voting machines that make vote rigging a comparative cinch and hundreds of thousands of paper votes that suddenly appeared during already advanced vote counts and virtually all of

them for Biden. Early Trump leads in crucial swing states suddenly began to close and disappear. The pandemic hoax was used as the excuse to issue almost limitless numbers of mail-in ballots with no checks to establish that the recipients were still alive or lived at that address. They were sent to streams of people who had not even asked for them. Private organisations were employed to gather these ballots and who knows what they did with them before they turned up at the counts. The American election system has been manipulated over decades to become a sick joke with more holes than a Swiss cheese for the express purpose of dictating the results. Then there was the criminal manipulation of information by Sabbatian tech giants like Facebook, Twitter and Google-owned YouTube which deleted pro-Trump, anti-Biden accounts and posts while everything in support of Biden was left alone. Sabbatians wanted Biden to win because after the dividing of America it was time for full-on Woke and every aspect of the Cult agenda to be unleashed.

Hunter gatherer

Extreme Silicon Valley bias included blocking information by the *New York Post* exposing a Biden scandal that should have ended his bid for president in the final weeks of the campaign. Hunter Biden, his monumentally corrupt son, is reported to have sent a laptop to be repaired at a local store and failed to return for it. Time passed until the laptop became the property of the store for non-payment of the bill. When the owner saw what was on the hard drive he gave a copy to the FBI who did nothing even though it confirmed widespread corruption in which the Joe Biden family were using his political position, especially when he was vice president to Obama, to make multiple millions in countries around the world and most notably Ukraine and China. Hunter Biden's one-time business partner Tony Bobulinski went public when the story broke in the *New York Post* to confirm the corruption he saw and that Joe Biden not only knew what was going on he also profited from the spoils. Millions were handed over by a Chinese company with close

connections – like all major businesses in China – to the Chinese communist party of President Xi Jinping. Joe Biden even boasted at a meeting of the Cult's World Economic Forum that as vice president he had ordered the government of Ukraine to fire a prosecutor. What he didn't mention was that the same man just happened to be investigating an energy company which was part of Hunter Biden's corrupt portfolio. The company was paying him big bucks for no other reason than the influence his father had. Overnight Biden's presidential campaign should have been over given that he had lied publicly about not knowing what his son was doing. Instead almost the entire Sabbatian-owned mainstream media and Sabbatian-owned Silicon Valley suppressed circulation of the story. This alone went a mighty way to rigging the election of 2020. Cult assets like Mark Zuckerberg at Facebook also spent hundreds of millions to be used in support of Biden and vote 'administration'.

The Cult had used Trump as the focus to divide America and was now desperate to bring in moronic, pliable, corrupt Biden to complete the double-whammy. No way were they going to let little things like the will of the people thwart their plan. Silicon Valley widely censored claims that the election was rigged because it *was* rigged. For the same reason anyone claiming it was rigged was denounced as a 'white supremacist' including the pathetically few Republican politicians willing to say so. Right across the media where the claim was mentioned it was described as a 'false claim' even though these excuses for 'journalists' would have done no research into the subject whatsoever. Trump won seven million more votes than any sitting president had ever achieved while somehow a cognitively-challenged soon to be 78-year-old who was hidden away from the public for most of the campaign managed to win more votes than any presidential candidate in history. It makes no sense. You only had to see election rallies for both candidates to witness the enthusiasm for Trump and the apathy for Biden. Tens of thousands would attend Trump events while Biden was speaking in empty car parks with often only television crews attending and framing their shots to hide the fact that no one was there. It was pathetic to see

footage come to light of Biden standing at a podium making speeches only to TV crews and party fixers while reading the words written for him on massive Teleprompter screens. So, yes, those protestors on January 6th had a point about election rigging, but some were about to walk into a trap laid for them in Washington by the Cult Deep State and its QAnon Psyop. This was the Capitol Hill riot ludicrously dubbed an 'insurrection'.

The spider and the fly

Renegade Minds know there are not two 'sides' in politics, only one side, the Cult, working through all 'sides'. It's a stage show, a puppet show, to direct the perceptions of the population into focusing on diversions like parties and candidates while missing the puppeteers with their hands holding all the strings. The Capitol Hill 'insurrection' brings us back to the Little Big Horn. Having created two distinct opposing groupings – Woke and Pushbackers – the trap was about to be sprung. Pushbackers were to be encircled and isolated by associating them all in the public mind with Trump and then labelling Trump as some sort of Confederate leader. I knew immediately that the Capitol riot was a set-up because of two things. One was how easy the rioters got into the building with virtually no credible resistance and secondly I could see – as with the 'Covid' hoax in the West at the start of 2020 – how the Cult could exploit the situation to move its agenda forward with great speed. My experience of Cult techniques and activities over more than 30 years has showed me that while they do exploit situations they haven't themselves created this never happens with events of fundamental agenda significance. Every time major events giving cultists the excuse to rapidly advance their plan you find they are manipulated into being for the specific reason of providing that excuse – Problem-Reaction-Solution. Only a tiny minority of the huge crowd of Washington protestors sought to gain entry to the Capitol by smashing windows and breaching doors. That didn't matter. The whole crowd and all Pushbackers, even if they did not support Trump, were going to be lumped together as dangerous

insurrectionists and conspiracy theorists. The latter term came into widespread use through a CIA memo in the 1960s aimed at discrediting those questioning the nonsensical official story of the Kennedy assassination and it subsequently became widely employed by the media. It's still being used by inept 'journalists' with no idea of its origin to discredit anyone questioning anything that authority claims to be true. When you are perpetrating a conspiracy you need to discredit the very word itself even though the dictionary definition of conspiracy is merely 'the activity of secretly planning with other people to do something bad or illegal' and 'a general agreement to keep silent about a subject for the purpose of keeping it secret'. On that basis there are conspiracies almost wherever you look. For obvious reasons the Cult and its lapdog media have to claim there are no conspiracies even though the word appears in state laws as with conspiracy to defraud, to murder, and to corrupt public morals.

Agent provocateurs are widely used by the Cult Deep State to manipulate genuine people into acting in ways that suit the desired outcome. By genuine in this case I mean protestors genuinely supporting Trump and claims that the election was stolen. In among them, however, were agents of the state wearing the garb of Trump supporters and QAnon to pump-prime the Capital riot which some genuine Trump supporters naively fell for. I described the situation as 'Come into my parlour said the spider to the fly'. Leaflets appeared through the Woke paramilitary arm Antifa, the anti-fascist fascists, calling on supporters to turn up in Washington looking like Trump supporters even though they hated him. Some of those arrested for breaching the Capitol Building were sourced to Antifa and its stable mate Black Lives Matter. Both organisations are funded by Cult billionaires and corporations. One man charged for the riot was according to his lawyer a former FBI agent who had held top secret security clearance for 40 years. Attorney Thomas Plofchan said of his client, 66-year-old Thomas Edward Caldwell:

He has held a Top Secret Security Clearance since 1979 and has undergone multiple Special Background Investigations in support of his clearances. After retiring from the Navy, he

worked as a section chief for the Federal Bureau of Investigation from 2009-2010 as a GS-12 [mid-level employee].

He also formed and operated a consulting firm performing work, often classified, for U.S government customers including the US. Drug Enforcement Agency, Department of Housing and Urban Development, the US Coast Guard, and the US Army Personnel Command.

A judge later released Caldwell pending trial in the absence of evidence about a conspiracy or that he tried to force his way into the building. *The New York Post* reported a 'law enforcement source' as saying that 'at least two known Antifa members were spotted' on camera among Trump supporters during the riot while one of the rioters arrested was John Earle Sullivan, a seriously extreme Black Lives Matter Trump-hater from Utah who was previously arrested and charged in July, 2020, over a BLM-Antifa riot in which drivers were threatened and one was shot. Sullivan is the founder of Utah-based Insurgence USA which is an affiliate of the Cult-created-and-funded Black Lives Matter movement. Footage appeared and was then deleted by Twitter of Trump supporters calling out Antifa infiltrators and a group was filmed changing into pro-Trump clothing before the riot. Security at the building was *pathetic* – as planned. Colonel Leroy Fletcher Prouty, a man with long experience in covert operations working with the US security apparatus, once described the tell-tale sign to identify who is involved in an assassination. He said:

No one has to direct an assassination – it happens. The active role is played secretly by permitting it to happen. This is the greatest single clue. Who has the power to call off or reduce the usual security precautions?

This principle applies to many other situations and certainly to the Capitol riot of January 6th, 2021.

The sting

With such a big and potentially angry crowd known to be gathering near the Capitol the security apparatus would have had a major police detail to defend the building with National Guard troops on

standby given the strength of feeling among people arriving from all over America encouraged by the QAnon Psyop and statements by Donald Trump. Instead Capitol Police 'security' was flimsy, weak, and easily breached. The same number of officers was deployed as on a regular day and that is a blatant red flag. They were not staffed or equipped for a possible riot that had been an obvious possibility in the circumstances. No protective and effective fencing worth the name was put in place and there were no contingency plans. The whole thing was basically a case of standing aside and waving people in. Once inside police mostly backed off apart from one Capitol police officer who ridiculously shot dead unarmed Air Force veteran protestor Ashli Babbitt without a warning as she climbed through a broken window. The 'investigation' refused to name or charge the officer after what must surely be considered a murder in the circumstances. They just lifted a carpet and swept. The story was endlessly repeated about five people dying in the 'armed insurrection' when there was no report of rioters using weapons. Apart from Babbitt the other four died from a heart attack, strokes and apparently a drug overdose. Capitol police officer Brian Sicknick was reported to have died after being bludgeoned with a fire extinguisher when he was alive after the riot was over and died later of what the Washington Medical Examiner's Office said was a stroke. Sicknick had no external injuries. The lies were delivered like rapid fire. There was a narrative to build with incessant repetition of the lie until the lie became the accepted 'everybody knows that' truth. The 'Big Lie' technique of Nazi Propaganda Minister Joseph Goebbels is constantly used by the Cult which was behind the Nazis and is today behind the 'Covid' and 'climate change' hoaxes. Goebbels said:

If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.

Most protestors had a free run of the Capitol Building. This allowed pictures to be taken of rioters in iconic parts of the building including the Senate chamber which could be used as propaganda images against all Pushbackers. One Congresswoman described the scene as 'the worst kind of non-security anybody could ever imagine'. Well, the first part was true, but someone obviously did imagine it and made sure it happened. Some photographs most widely circulated featured people wearing QAnon symbols and now the Psyop would be used to dub all QAnon followers with the ubiquitous fit-all label of 'white supremacist' and 'insurrectionists'. When a Muslim extremist called Noah Green drove his car at two police officers at the Capitol Building killing one in April, 2021, there was no such political and media hysteria. They were just disappointed he wasn't white.

The witch-hunt

Government prosecutor Michael Sherwin, an aggressive, dark-eyed, professional Rottweiler led the 'investigation' and to call it over the top would be to understate reality a thousand fold. Hundreds were tracked down and arrested for the crime of having the wrong political views and people were jailed who had done nothing more than walk in the building, committed no violence or damage to property, took a few pictures and left. They were labelled a 'threat to the Republic' while Biden sat in the White House signing executive orders written for him that were dismantling 'the Republic'. Even when judges ruled that a mother and son should not be in jail the government kept them there. Some of those arrested have been badly beaten by prison guards in Washington and lawyers for one man said he suffered a fractured skull and was made blind in one eye. Meanwhile a woman is shot dead for no reason by a Capitol Police officer and we are not allowed to know who he is never mind what has happened to him although that will be *nothing*. The Cult's QAnon/Trump sting to identify and isolate Pushbackers and then target them on the road to crushing and deleting them was a resounding success. You would have thought the Russians had

invaded the building at gunpoint and lined up senators for a firing squad to see the political and media reaction. Congresswoman Alexandria Ocasio-Cortez is a child in a woman's body, a terrible-tvos, me, me, me, Woker narcissist of such proportions that words have no meaning. She said she thought she was going to die when 'insurrectionists' banged on her office door. It turned out she wasn't even in the Capitol Building when the riot was happening and the 'banging' was a Capitol Police officer. She referred to herself as a 'survivor' which is an insult to all those true survivors of violent and sexual abuse while she lives her pampered and privileged life talking drivel for a living. Her Woke colleague and fellow mega-narcissist Rashida Tlaib broke down describing the devastating effect on her, too, of *not being* in the building when the rioters were there. Ocasio-Cortez and Tlaib are members of a fully-Woke group of Congresswomen known as 'The Squad' along with Ilhan Omar and Ayanna Pressley. The Squad from what I can see can be identified by its vehement anti-white racism, anti-white men agenda, and, as always in these cases, the absence of brain cells on active duty.

The usual suspects were on the riot case immediately in the form of Democrat ultra-Zionist senators and operatives Chuck Schumer and Adam Schiff demanding that Trump be impeached for 'his part in the insurrection'. The same pair of prats had led the failed impeachment of Trump over the invented 'Russia collusion' nonsense which claimed Russia had helped Trump win the 2016 election. I didn't realise that Tel Aviv had been relocated just outside Moscow. I must find an up-to-date map. The Russia hoax was a Sabbatian operation to keep Trump occupied and impotent and to stop any rapport with Russia which the Cult wants to retain as a perceptual enemy to be pulled out at will. Puppet Biden began attacking Russia when he came to office as the Cult seeks more upheaval, division and war across the world. A two-year stage show 'Russia collusion inquiry' headed by the not-very-bright former 9/11 FBI chief Robert Mueller, with support from 19 lawyers, 40 FBI agents plus intelligence analysts, forensic accountants and other

staff, devoured tens of millions of dollars and found no evidence of Russia collusion which a ten-year-old could have told them on day one. Now the same moronic Schumer and Schiff wanted a second impeachment of Trump over the Capitol 'insurrection' (riot) which the arrested development of Schumer called another 'Pearl Harbor' while others compared it with 9/11 in which 3,000 died and, in the case of CNN, with the Rwandan genocide in the 1990s in which an estimated 500,000 to 600,000 were murdered, between 250,000 and 500,000 women were raped, and populations of whole towns were hacked to death with machetes. To make those comparisons purely for Cult political reasons is beyond insulting to those that suffered and lost their lives and confirms yet again the callous inhumanity that we are dealing with. Schumer is a monumental idiot and so is Schiff, but they serve the Cult agenda and do whatever they're told so they get looked after. Talking of idiots – another inane man who spanned the Russia and Capitol impeachment attempts was Senator Eric Swalwell who had the nerve to accuse Trump of collusion with the Russians while sleeping with a Chinese spy called Christine Fang or 'Fang Fang' which is straight out of a Bond film no doubt starring Klaus Schwab as the bloke living on a secret island and controlling laser weapons positioned in space and pointing at world capitals. Fang Fang plays the part of Bond's infiltrator girlfriend which I'm sure she would enjoy rather more than sharing a bed with the brainless Swalwell, lying back and thinking of China. The FBI eventually warned Swalwell about Fang Fang which gave her time to escape back to the Chinese dictatorship. How very thoughtful of them. The second Trump impeachment also failed and hardly surprising when an impeachment is supposed to remove a sitting president and by the time it happened Trump was no longer president. These people are running your country America, well, officially anyway. Terrifying isn't it?

Outcomes tell the story - always

The outcome of all this – and it's the *outcome* on which Renegade Minds focus, not the words – was that a vicious, hysterical and

obviously pre-planned assault was launched on Pushbackers to censor, silence and discredit them and even targeted their right to earn a living. They have since been condemned as 'domestic terrorists' that need to be treated like Al-Qaeda and Islamic State. 'Domestic terrorists' is a label the Cult has been trying to make stick since the period of the Oklahoma bombing in 1995 which was blamed on 'far-right domestic terrorists'. If you read *The Trigger* you will see that the bombing was clearly a Problem-Reaction-Solution carried out by the Deep State during a Bill Clinton administration so corrupt that no dictionary definition of the term would even nearly suffice. Nearly 30, 000 troops were deployed from all over America to the empty streets of Washington for Biden's inauguration. Ten thousand of them stayed on with the pretext of protecting the capital from insurrectionists when it was more psychological programming to normalise the use of the military in domestic law enforcement in support of the Cult plan for a police-military state. Biden's fascist administration began a purge of 'wrong-thinkers' in the military which means anyone that is not on board with Woke. The Capitol Building was surrounded by a fence with razor wire and the Land of the Free was further symbolically and literally dismantled. The circle was completed with the installation of Biden and the exploitation of the QAnon Psyop.

America had never been so divided since the civil war of the 19th century, Pushbackers were isolated and dubbed terrorists and now, as was always going to happen, the Cult immediately set about deleting what little was left of freedom and transforming American society through a swish of the hand of the most controlled 'president' in American history leading (officially at least) the most extreme regime since the country was declared an independent state on July 4th, 1776. Biden issued undebated, dictatorial executive orders almost by the hour in his opening days in office across the whole spectrum of the Cult wish-list including diluting controls on the border with Mexico allowing thousands of migrants to illegally enter the United States to transform the demographics of America and import an election-changing number of perceived Democrat

voters. Then there were Biden deportation amnesties for the already illegally resident (estimated to be as high as 20 or even 30 million). A bill before Congress awarded American citizenship to anyone who could prove they had worked in agriculture for just 180 days in the previous two years as 'Big Ag' secured its slave labour long-term. There were the plans to add new states to the union such as Puerto Rico and making Washington DC a state. They are all parts of a plan to ensure that the Cult-owned Woke Democrats would be permanently in power.

Border – what border?

I have exposed in detail in other books how mass immigration into the United States and Europe is the work of Cult networks fuelled by the tens of billions spent to this and other ends by George Soros and his global Open Society (open borders) Foundations. The impact can be seen in America alone where the population has increased by *100 million* in little more than 30 years mostly through immigration. I wrote in *The Answer* that the plan was to have so many people crossing the southern border that the numbers become unstoppable and we are now there under Cult-owned Biden. El Salvador in Central America puts the scale of what is happening into context. A third of the population now lives in the United States, much of it illegally, and many more are on the way. The methodology is to crush Central and South American countries economically and spread violence through machete-wielding psychopathic gangs like MS-13 based in El Salvador and now operating in many American cities. Biden-imposed lax security at the southern border means that it is all but open. He said before his 'election' that he wanted to see a surge towards the border if he became president and that was the green light for people to do just that after election day to create the human disaster that followed for both America and the migrants. When that surge came the imbecilic Alexandria Ocasio-Cortez said it wasn't a 'surge' because they are 'children, not insurgents' and the term 'surge' (used by Biden) was a claim of 'white supremacists'.

This disingenuous lady may one day enter the realm of the most basic intelligence, but it won't be any time soon.

Sabbatians and the Cult are in the process of destroying America by importing violent people and gangs in among the genuine to terrorise American cities and by overwhelming services that cannot cope with the sheer volume of new arrivals. Something similar is happening in Europe as Western society in general is targeted for demographic and cultural transformation and upheaval. The plan demands violence and crime to create an environment of intimidation, fear and division and Soros has been funding the election of district attorneys across America who then stop prosecuting many crimes, reduce sentences for violent crimes and free as many violent criminals as they can. Sabbatians are creating the chaos from which order – their order – can respond in a classic Problem-Reaction-Solution. A Freemasonic motto says 'Ordo Ab Chao' (Order out of Chaos) and this is why the Cult is constantly creating chaos to impose a new 'order'. Here you have the reason the Cult is constantly creating chaos. The 'Covid' hoax can be seen with those entering the United States by plane being forced to take a 'Covid' test while migrants flooding through southern border processing facilities do not. Nothing is put in the way of mass migration and if that means ignoring the government's own 'Covid' rules then so be it. They know it's all bullshit anyway. Any pushback on this is denounced as 'racist' by Wokers and Sabbatian fronts like the ultra-Zionist Anti-Defamation League headed by the appalling Jonathan Greenblatt which at the same time argues that Israel should not give citizenship and voting rights to more Palestinian Arabs or the 'Jewish population' (in truth the Sabbatian network) will lose control of the country.

Society-changing numbers

Biden's masters have declared that countries like El Salvador are so dangerous that their people must be allowed into the United States for humanitarian reasons when there are fewer murders in large parts of many Central American countries than in US cities like

Baltimore. That is not to say Central America cannot be a dangerous place and Cult-controlled American governments have been making it so since way back, along with the dismantling of economies, in a long-term plan to drive people north into the United States. Parts of Central America are very dangerous, but in other areas the story is being greatly exaggerated to justify relaxing immigration criteria. Migrants are being offered free healthcare and education in the United States as another incentive to head for the border and there is no requirement to be financially independent before you can enter to prevent the resources of America being drained. You can't blame migrants for seeking what they believe will be a better life, but they are being played by the Cult for dark and nefarious ends. The numbers since Biden took office are huge. In February, 2021, more than 100,000 people were known to have tried to enter the US illegally through the southern border (it was 34,000 in the same month in 2020) and in March it was 170,000 – a 418 percent increase on March, 2020. These numbers are only known people, not the ones who get in unseen. The true figure for migrants illegally crossing the border in a single month was estimated by one congressman at 250,000 and that number will only rise under Biden's current policy. Gangs of murdering drug-running thugs that control the Mexican side of the border demand money – thousands of dollars – to let migrants cross the Rio Grande into America. At the same time gun battles are breaking out on the border several times a week between rival Mexican drug gangs (which now operate globally) who are equipped with sophisticated military-grade weapons, grenades and armoured vehicles. While the Capitol Building was being 'protected' from a non-existent 'threat' by thousands of troops, and others were still deployed at the time in the Cult Neocon war in Afghanistan, the southern border of America was left to its fate. This is not incompetence, it is cold calculation.

By March, 2021, there were 17,000 unaccompanied children held at border facilities and many of them are ensnared by people traffickers for paedophile rings and raped on their journey north to America. This is not conjecture – this is fact. Many of those designated

children are in reality teenage boys or older. Meanwhile Wokers posture their self-purity for encouraging poor and tragic people to come to America and face this nightmare both on the journey and at the border with the disgusting figure of House Speaker Nancy Pelosi giving disingenuous speeches about caring for migrants. The woman's evil. Wokers condemned Trump for having children in cages at the border (so did Obama, *Shhhh*), but now they are sleeping on the floor without access to a shower with one border facility 729 percent over capacity. The Biden insanity even proposed flying migrants from the southern border to the northern border with Canada for 'processing'. The whole shambles is being overseen by ultra-Zionist Secretary of Homeland Security, the moronic liar Alejandro Mayorkas, who banned news cameras at border facilities to stop Americans seeing what was happening. Mayorkas said there was not a ban on news crews; it was just that they were not allowed to film. Alongside him at Homeland Security is another ultra-Zionist Cass Sunstein appointed by Biden to oversee new immigration laws. Sunstein despises conspiracy researchers to the point where he suggests they should be banned or *taxed* for having such views. The man is not bonkers or anything. He's perfectly well-adjusted, but adjusted to what is the question. Criticise what is happening and you are a 'white supremacist' when earlier non-white immigrants also oppose the numbers which effect their lives and opportunities. Black people in poor areas are particularly damaged by uncontrolled immigration and the increased competition for work opportunities with those who will work for less. They are also losing voting power as Hispanics become more dominant in former black areas. It's a downward spiral for them while the billionaires behind the policy drone on about how much they care about black people and 'racism'. None of this is about compassion for migrants or black people – that's just wind and air. Migrants are instead being mercilessly exploited to transform America while the countries they leave are losing their future and the same is true in Europe. Mass immigration may now be the work of Woke Democrats, but it can be traced back to the 1986 Immigration Reform and Control Act (it

wasn't) signed into law by Republican hero President Ronald Reagan which gave amnesty to millions living in the United States illegally and other incentives for people to head for the southern border. Here we have the one-party state at work again.

Save me syndrome

Almost every aspect of what I have been exposing as the Cult agenda was on display in even the first days of 'Biden' with silencing of Pushbackers at the forefront of everything. A Renegade Mind will view the Trump years and QAnon in a very different light to their supporters and advocates as the dots are connected. The QAnon/Trump Psyop has given the Cult all it was looking for. We may not know how much, or little, that Trump realised he was being used, but that's a side issue. This pincer movement produced the desired outcome of dividing America and having Pushbackers isolated. To turn this around we have to look at new routes to empowerment which do not include handing our power to other people and groups through what I will call the 'Save Me Syndrome' – 'I want someone else to do it so that I don't have to'. We have seen this at work throughout human history and the QAnon/Trump Psyop is only the latest incarnation alongside all the others. Religion is an obvious expression of this when people look to a 'god' or priest to save them or tell them how to be saved and then there are 'save me' politicians like Trump. Politics is a diversion and not a 'saviour'. It is a means to block positive change, not make it possible.

Save Me Syndrome always comes with the same repeating theme of handing your power to whom or what you believe will save you while your real 'saviour' stares back from the mirror every morning. Renegade Minds are constantly vigilant in this regard and always asking the question 'What can I do?' rather than 'What can someone else do for me?' Gandhi was right when he said: 'You must be the change you want to see in the world.' We are indeed the people we have been waiting for. We are presented with a constant raft of reasons to concede that power to others and forget where the real power is. Humanity has the numbers and the Cult does not. It has to

use diversion and division to target the unstoppable power that comes from unity. Religions, governments, politicians, corporations, media, QAnon, are all different manifestations of this power-diversion and dilution. Refusing to give your power to governments and instead handing it to Trump and QAnon is not to take a new direction, but merely to recycle the old one with new names on the posters. I will explore this phenomenon as we proceed and how to break the cycles and recycles that got us here through the mists of repeating perception and so repeating history.

For now we shall turn to the most potent example in the entire human story of the consequences that follow when you give your power away. I am talking, of course, of the 'Covid' hoax.

CHAPTER FOUR

'Covid': Calculated catastrophe

Facts are threatening to those invested in fraud
DaShanne Stokes

We can easily unravel the real reason for the 'Covid pandemic' hoax by employing the Renegade Mind methodology that I have outlined this far. We'll start by comparing the long-planned Cult outcome with the 'Covid pandemic' outcome. Know the outcome and you'll see the journey.

I have highlighted the plan for the Hunger Games Society which has been in my books for so many years with the very few controlling the very many through ongoing dependency. To create this dependency it is essential to destroy independent livelihoods, businesses and employment to make the population reliant on the state (the Cult) for even the basics of life through a guaranteed pittance income. While independence of income remained these Cult ambitions would be thwarted. With this knowledge it was easy to see where the 'pandemic' hoax was going once talk of 'lockdowns' began and the closing of all but perceived 'essential' businesses to 'save' us from an alleged 'deadly virus'. Cult corporations like Amazon and Walmart were naturally considered 'essential' while mom and pop shops and stores had their doors closed by fascist decree. As a result with every new lockdown and new regulation more small and medium, even large businesses not owned by the Cult, went to the wall while Cult giants and their frontmen and women grew financially fatter by the second. Mom and pop were

denied an income and the right to earn a living and the wealth of people like Jeff Bezos (Amazon), Mark Zuckerberg (Facebook) and Sergei Brin and Larry Page (Google/Alphabet) have reached record levels. The Cult was increasing its own power through further dramatic concentrations of wealth while the competition was being destroyed and brought into a state of dependency. Lockdowns have been instigated to secure that very end and were never anything to do with health. My brother Paul spent 45 years building up a bus repair business, but lockdowns meant buses were running at a fraction of normal levels for months on end. Similar stories can be told in their hundreds of millions worldwide. Efforts of a lifetime coldly destroyed by Cult multi-billionaires and their lackeys in government and law enforcement who continued to earn their living from the taxation of the people while denying the right of the same people to earn theirs. How different it would have been if those making and enforcing these decisions had to face the same financial hardships of those they affected, but they never do.

Gates of Hell

Behind it all in the full knowledge of what he is doing and why is the psychopathic figure of Cult operative Bill Gates. His puppet Tedros at the World Health Organization declared 'Covid' a pandemic in March, 2020. The WHO had changed the definition of a 'pandemic' in 2009 just a month before declaring the 'swine flu pandemic' which would not have been so under the previous definition. The same applies to 'Covid'. The definition had included... 'an infection by an infectious agent, occurring simultaneously in different countries, with a significant mortality rate relative to the proportion of the population infected'. The new definition removed the need for 'significant mortality'. The 'pandemic' has been fraudulent even down to the definition, but Gates demanded economy-destroying lockdowns, school closures, social distancing, mandatory masks, a 'vaccination' for every man, woman and child on the planet and severe consequences and restrictions for those that refused. Who gave him this power? The

Cult did which he serves like a little boy in short trousers doing what his daddy tells him. He and his psychopathic missus even smiled when they said that much worse was to come (what they knew was planned to come). Gates responded in the matter-of-fact way of all psychopaths to a question about the effect on the world economy of what he was doing:

Well, it won't go to zero but it will shrink. Global GDP is probably going to take the biggest hit ever [Gates was smiling as he said this] ... in my lifetime this will be the greatest economic hit. But you don't have a choice. People act as if you have a choice. People don't feel like going to the stadium when they might get infected ... People are deeply affected by seeing these stats, by knowing they could be part of the transmission chain, old people, their parents and grandparents, could be affected by this, and so you don't get to say ignore what is going on here.

There will be the ability to open up, particularly in rich countries, if things are done well over the next few months, but for the world at large normalcy only returns when we have largely vaccinated the entire population.

The man has no compassion or empathy. How could he when he's a psychopath like all Cult players? My own view is that even beyond that he is very seriously mentally ill. Look in his eyes and you can see this along with his crazy flailing arms. You don't do what he has done to the world population since the start of 2020 unless you are mentally ill and at the most extreme end of psychopathic. You especially don't do it when to you know, as we shall see, that cases and deaths from 'Covid' are fakery and a product of monumental figure massaging. 'These stats' that Gates referred to are based on a 'test' that's not testing for the 'virus' as he has known all along. He made his fortune with big Cult support as an infamously ruthless software salesman and now buys global control of 'health' (death) policy without the population he affects having any say. It's a breathtaking outrage. Gates talked about people being deeply affected by fear of 'Covid' when that was because of *him* and his global network lying to them minute-by-minute supported by a lying media that he seriously influences and funds to the tune of hundreds of millions. He's handed big sums to media operations including the BBC, NBC, Al Jazeera, Univision, *PBS NewsHour*,

ProPublica, National Journal, The Guardian, The Financial Times, The Atlantic, Texas Tribune, USA Today publisher Gannett, Washington Monthly, Le Monde, Center for Investigative Reporting, Pulitzer Center on Crisis Reporting, National Press Foundation, International Center for Journalists, Solutions Journalism Network, the Poynter Institute for Media Studies, and many more. Gates is everywhere in the 'Covid' hoax and the man must go to prison – or a mental facility – for the rest of his life and his money distributed to those he has taken such enormous psychopathic pleasure in crushing.

The Muscle

The Hunger Games global structure demands a police-military state – a fusion of the two into one force – which viciously imposes the will of the Cult on the population and protects the Cult from public rebellion. In that regard, too, the 'Covid' hoax just keeps on giving. Often unlawful, ridiculous and contradictory 'Covid' rules and regulations have been policed across the world by moronic automatons and psychopaths made faceless by face-nappy masks and acting like the Nazi SS and fascist blackshirts and brownshirts of Hitler and Mussolini. The smallest departure from the rules decreed by the psychos in government and their clueless gofers were jumped upon by the face-nappy fascists. Brutality against public protestors soon became commonplace even on girls, women and old people as the brave men with the batons – the Face-Nappies as I call them – broke up peaceful protests and handed out fines like confetti to people who couldn't earn a living let alone pay hundreds of pounds for what was once an accepted human right. Robot Face-Nappies of Nottingham police in the English East Midlands fined one group £11,000 for attending a child's birthday party. For decades I charted the transformation of law enforcement as genuine, decent officers were replaced with psychopaths and the brain dead who would happily and brutally do whatever their masters told them. Now they were let loose on the public and I would emphasise the point that none of this just happened. The step-by-step change in the dynamic between police and public was orchestrated from the shadows by

those who knew where this was all going and the same with the perceptual reframing of those in all levels of authority and official administration through 'training courses' by organisations such as Common Purpose which was created in the late 1980s and given a massive boost in Blair era Britain until it became a global phenomenon. Supposed public 'servants' began to view the population as the enemy and the same was true of the police. This was the start of the explosion of behaviour manipulation organisations and networks preparing for the all-war on the human psyche unleashed with the dawn of 2020. I will go into more detail about this later in the book because it is a core part of what is happening.

Police desecrated beauty spots to deter people gathering and arrested women for walking in the countryside alone 'too far' from their homes. We had arrogant, clueless sergeants in the Isle of Wight police where I live posting on Facebook what they insisted the population must do or else. A schoolmaster sergeant called Radford looked young enough for me to ask if his mother knew he was out, but he was posting what he *expected* people to do while a Sergeant Wilkinson boasted about fining lads for meeting in a McDonald's car park where they went to get a lockdown takeaway. Wilkinson added that he had even cancelled their order. What a pair of prats these people are and yet they have increasingly become the norm among Jackboot Johnson's Yellowshirts once known as the British police. This was the theme all over the world with police savagery common during lockdown protests in the United States, the Netherlands, and the fascist state of Victoria in Australia under its tyrannical and again moronic premier Daniel Andrews. Amazing how tyrannical and moronic tend to work as a team and the same combination could be seen across America as arrogant, narcissistic Woke governors and mayors such as Gavin Newsom (California), Andrew Cuomo (New York), Gretchen Whitmer (Michigan), Lori Lightfoot (Chicago) and Eric Garcetti (Los Angeles) did their Nazi and Stalin impressions with the full support of the compliant brutality of their enforcers in uniform as they arrested small business owners defying

fascist shutdown orders and took them to jail in ankle shackles and handcuffs. This happened to bistro owner Marlena Pavlos-Hackney in Gretchen Whitmer's fascist state of Michigan when police arrived to enforce an order by a state-owned judge for 'putting the community at risk' at a time when other states like Texas were dropping restrictions and migrants were pouring across the southern border without any 'Covid' questions at all. I'm sure there are many officers appalled by what they are ordered to do, but not nearly enough of them. If they were truly appalled they would not do it. As the months passed every opportunity was taken to have the military involved to make their presence on the streets ever more familiar and 'normal' for the longer-term goal of police-military fusion.

Another crucial element to the Hunger Games enforcement network has been encouraging the public to report neighbours and others for 'breaking the lockdown rules'. The group faced with £11,000 in fines at the child's birthday party would have been dobbed-in by a neighbour with a brain the size of a pea. The technique was most famously employed by the Stasi secret police in communist East Germany who had public informants placed throughout the population. A police chief in the UK says his force doesn't need to carry out 'Covid' patrols when they are flooded with so many calls from the public reporting other people for visiting the beach. Dorset police chief James Vaughan said people were so enthusiastic about snitching on their fellow humans they were now operating as an auxiliary arm of the police: 'We are still getting around 400 reports a week from the public, so we will respond to reports ... We won't need to be doing hotspot patrols because people are very quick to pick the phone up and tell us.' Vaughan didn't say that this is a pillar of all tyrannies of whatever complexion and the means to hugely extend the reach of enforcement while spreading distrust among the people and making them wary of doing anything that might get them reported. Those narcissistic Isle of Wight sergeants Radford and Wilkinson never fail to add a link to their Facebook posts where the public can inform on their fellow slaves.

Neither would be self-aware enough to realise they were imitating the Stasi which they might well never have heard of. Government psychologists that I will expose later laid out a policy to turn communities against each other in the same way.

A coincidence? Yep, and I can knit fog

I knew from the start of the alleged pandemic that this was a Cult operation. It presented limitless potential to rapidly advance the Cult agenda and exploit manipulated fear to demand that every man, woman and child on the planet was 'vaccinated' in a process never used on humans before which infuses self-replicating *synthetic* material into human cells. Remember the plan to transform the human body from a biological to a synthetic biological state. I'll deal with the 'vaccine' (that's not actually a vaccine) when I focus on the genetic agenda. Enough to say here that mass global 'vaccination' justified by this 'new virus' set alarms ringing after 30 years of tracking these people and their methods. The 'Covid' hoax officially beginning in China was also a big red flag for reasons I will be explaining. The agenda potential was so enormous that I could dismiss any idea that the 'virus' appeared naturally. Major happenings with major agenda implications never occur without Cult involvement in making them happen. My questions were twofold in early 2020 as the media began its campaign to induce global fear and hysteria: Was this alleged infectious agent released on purpose by the Cult or did it even exist at all? I then did what I always do in these situations. I sat, observed and waited to see where the evidence and information would take me. By March and early April synchronicity was strongly – and ever more so since then – pointing me in the direction of *there is no 'virus'*. I went public on that with derision even from swathes of the alternative media that voiced a scenario that the Chinese government released the 'virus' in league with Deep State elements in the United States from a top-level bio-lab in Wuhan where the 'virus' is said to have first appeared. I looked at that possibility, but I didn't buy it for several reasons. Deaths from the 'virus' did not in any way match what they

would have been with a 'deadly bioweapon' and it is much more effective if you sell the *illusion* of an infectious agent rather than having a real one unless you can control through injection who has it and who doesn't. Otherwise you lose control of events. A made-up 'virus' gives you a blank sheet of paper on which you can make it do whatever you like and have any symptoms or mutant 'variants' you choose to add while a real infectious agent would limit you to what it actually does. A phantom disease allows you to have endless ludicrous 'studies' on the 'Covid' dollar to widen the perceived impact by inventing ever more 'at risk' groups including one study which said those who walk slowly may be almost four times more likely to die from the 'virus'. People are in psychiatric wards for less.

A real 'deadly bioweapon' can take out people in the hierarchy that are not part of the Cult, but essential to its operation. Obviously they don't want that. Releasing a real disease means you immediately lose control of it. Releasing an illusory one means you don't. Again it's vital that people are extra careful when dealing with what they want to hear. A bioweapon unleashed from a Chinese laboratory in collusion with the American Deep State may fit a conspiracy narrative, but is it true? Would it not be far more effective to use the excuse of a 'virus' to justify the real bioweapon – the 'vaccine'? That way your disease agent does not have to be transmitted and arrives directly through a syringe. I saw a French virologist Luc Montagnier quoted in the alternative media as saying he had discovered that the alleged 'new' severe acute respiratory syndrome coronavirus , or SARS-CoV-2, was made artificially and included elements of the human immunodeficiency 'virus' (HIV) and a parasite that causes malaria. SARS-CoV-2 is alleged to trigger an alleged illness called Covid-19. I remembered Montagnier's name from my research years before into claims that an HIV 'retrovirus' causes AIDs – claims that were demolished by Berkeley virologist Peter Duesberg who showed that no one had ever proved that HIV causes acquired immunodeficiency syndrome or AIDS. Claims that become accepted as fact, publicly and medically, with no proof whatsoever are an ever-recurring story that profoundly applies to

'Covid'. Nevertheless, despite the lack of proof, Montagnier's team at the Pasteur Institute in Paris had a long dispute with American researcher Robert Gallo over which of them discovered and isolated the HIV 'virus' and with *no evidence* found it to cause AIDS. You will see later that there is also no evidence that any 'virus' causes any disease or that there is even such a thing as a 'virus' in the way it is said to exist. The claim to have 'isolated' the HIV 'virus' will be presented in its real context as we come to the shocking story – and it is a story – of SARS-CoV-2 and so will Montagnier's assertion that he identified the full SARS-CoV-2 genome.

Hoax in the making

We can pick up the 'Covid' story in 2010 and the publication by the Rockefeller Foundation of a document called 'Scenarios for the Future of Technology and International Development'. The inner circle of the Rockefeller family has been serving the Cult since John D. Rockefeller (1839-1937) made his fortune with Standard Oil. It is less well known that the same Rockefeller – the Bill Gates of his day – was responsible for establishing what is now referred to as 'Big Pharma', the global network of pharmaceutical companies that make outrageous profits dispensing scalpel and drug 'medicine' and are obsessed with pumping vaccines in ever-increasing number into as many human arms and backsides as possible. John D. Rockefeller was the driving force behind the creation of the 'education' system in the United States and elsewhere specifically designed to program the perceptions of generations thereafter. The Rockefeller family donated exceptionally valuable land in New York for the United Nations building and were central in establishing the World Health Organization in 1948 as an agency of the UN which was created from the start as a Trojan horse and stalking horse for world government. Now enter Bill Gates. His family and the Rockefellers have long been extremely close and I have seen genealogy which claims that if you go back far enough the two families fuse into the same bloodline. Gates has said that the Bill and Melinda Gates Foundation was inspired by the Rockefeller Foundation and why not

when both are serving the same Cult? Major tax-exempt foundations are overwhelmingly criminal enterprises in which Cult assets fund the Cult agenda in the guise of 'philanthropy' while avoiding tax in the process. Cult operatives can become mega-rich in their role of front men and women for the psychopaths at the inner core and they, too, have to be psychopaths to knowingly serve such evil. Part of the deal is that a big percentage of the wealth gleaned from representing the Cult has to be spent advancing the ambitions of the Cult and hence you have the Rockefeller Foundation, Bill and Melinda Gates Foundation (and *so* many more) and people like George Soros with his global Open Society Foundations spending their billions in pursuit of global Cult control. Gates is a global public face of the Cult with his interventions in world affairs including Big Tech influence; a central role in the 'Covid' and 'vaccine' scam; promotion of the climate change shakedown; manipulation of education; geoengineering of the skies; and his food-control agenda as the biggest owner of farmland in America, his GMO promotion and through other means. As one writer said: 'Gates monopolizes or wields disproportionate influence over the tech industry, global health and vaccines, agriculture and food policy (including biopiracy and fake food), weather modification and other climate technologies, surveillance, education and media.' The almost limitless wealth secured through Microsoft and other not-allowed-to-fail ventures (including vaccines) has been ploughed into a long, long list of Cult projects designed to enslave the entire human race. Gates and the Rockefellers have been working as one unit with the Rockefeller-established World Health Organization leading global 'Covid' policy controlled by Gates through his mouth-piece Tedros. Gates became the WHO's biggest funder when Trump announced that the American government would cease its donations, but Biden immediately said he would restore the money when he took office in January, 2021. The Gates Foundation (the Cult) owns through limitless funding the world health system and the major players across the globe in the 'Covid' hoax.

Okay, with that background we return to that Rockefeller Foundation document of 2010 headed 'Scenarios for the Future of Technology and International Development' and its 'imaginary' epidemic of a virulent and deadly influenza strain which infected 20 percent of the global population and killed eight million in seven months. The Rockefeller scenario was that the epidemic destroyed economies, closed shops, offices and other businesses and led to governments imposing fierce rules and restrictions that included mandatory wearing of face masks and body-temperature checks to enter communal spaces like railway stations and supermarkets. The document predicted that even after the height of the Rockefeller-envisaged epidemic the authoritarian rule would continue to deal with further pandemics, transnational terrorism, environmental crises and rising poverty. Now you may think that the Rockefellers are our modern-day seers or alternatively, and rather more likely, that they well knew what was planned a few years further on. Fascism had to be imposed, you see, to 'protect citizens from risk and exposure'. The Rockefeller scenario document said:

During the pandemic, national leaders around the world flexed their authority and imposed airtight rules and restrictions, from the mandatory wearing of face masks to body-temperature checks at the entries to communal spaces like train stations and supermarkets. Even after the pandemic faded, this more authoritarian control and oversight of citizens and their activities stuck and even intensified. In order to protect themselves from the spread of increasingly global problems – from pandemics and transnational terrorism to environmental crises and rising poverty – leaders around the world took a firmer grip on power.

At first, the notion of a more controlled world gained wide acceptance and approval. Citizens willingly gave up some of their sovereignty – and their privacy – to more paternalistic states in exchange for greater safety and stability. Citizens were more tolerant, and even eager, for top-down direction and oversight, and national leaders had more latitude to impose order in the ways they saw fit.

In developed countries, this heightened oversight took many forms: biometric IDs for all citizens, for example, and tighter regulation of key industries whose stability was deemed vital to national interests. In many developed countries, enforced cooperation with a suite of new regulations and agreements slowly but steadily restored both order and, importantly, economic growth.

There we have the prophetic Rockefellers in 2010 and three years later came their paper for the Global Health Summit in Beijing, China, when government representatives, the private sector, international organisations and groups met to discuss the next 100 years of 'global health'. The Rockefeller Foundation-funded paper was called 'Dreaming the Future of Health for the Next 100 Years and more prophecy ensued as it described a dystopian future: 'The abundance of data, digitally tracking and linking people may mean the 'death of privacy' and may replace physical interaction with transient, virtual connection, generating isolation and raising questions of how values are shaped in virtual networks.' Next in the 'Covid' hoax preparation sequence came a 'table top' simulation in 2018 for another 'imaginary' pandemic of a disease called Clade X which was said to kill 900 million people. The exercise was organised by the Gates-funded Johns Hopkins University's Center for Health Security in the United States and this is the very same university that has been compiling the disgustingly and systematically erroneous global figures for 'Covid' cases and deaths. Similar Johns Hopkins health crisis scenarios have included the Dark Winter exercise in 2001 and Atlantic Storm in 2005.

Nostradamus 201

For sheer predictive genius look no further prophecy-watchers than the Bill Gates-funded Event 201 held only six weeks before the 'coronavirus pandemic' is supposed to have broken out in China and Event 201 was based on a scenario of a global 'coronavirus pandemic'. Melinda Gates, the great man's missus, told the BBC that he had 'prepared for years' for a coronavirus pandemic which told us what we already knew. Nostradamugates had predicted in a TED talk in 2015 that a pandemic was coming that would kill a lot of people and demolish the world economy. My god, the man is a machine – possibly even literally. Now here he was only weeks before the real thing funding just such a simulated scenario and involving his friends and associates at Johns Hopkins, the World Economic Forum Cult-front of Klaus Schwab, the United Nations,

Johnson & Johnson, major banks, and officials from China and the Centers for Disease Control in the United States. What synchronicity – Johns Hopkins would go on to compile the fraudulent ‘Covid’ figures, the World Economic Forum and Schwab would push the ‘Great Reset’ in response to ‘Covid’, the Centers for Disease Control would be at the forefront of ‘Covid’ policy in the United States, Johnson & Johnson would produce a ‘Covid vaccine’, and everything would officially start just weeks later in China. Spooky, eh? They were even accurate in creating a simulation of a ‘virus’ pandemic because the ‘real thing’ would also be a simulation. Event 201 was not an exercise preparing for something that might happen; it was a rehearsal for what those in control knew was *going* to happen and very shortly. Hours of this simulation were posted on the Internet and the various themes and responses mirrored what would soon be imposed to transform human society. News stories were inserted and what they said would be commonplace a few weeks later with still more prophecy perfection. Much discussion focused on the need to deal with misinformation and the ‘anti-vax movement’ which is exactly what happened when the ‘virus’ arrived – was said to have arrived – in the West.

Cult-owned social media banned criticism and exposure of the official ‘virus’ narrative and when I said there *was* no ‘virus’ in early April, 2020, I was banned by one platform after another including YouTube, Facebook and later Twitter. The mainstream broadcast media in Britain was in effect banned from interviewing me by the Tony-Blair-created government broadcasting censor Ofcom headed by career government bureaucrat Melanie Dawes who was appointed just as the ‘virus’ hoax was about to play out in January, 2020. At the same time the Ickonic media platform was using Vimeo, another ultra-Zionist-owned operation, while our own player was being created and they deleted in an instant hundreds of videos, documentaries, series and shows to confirm their unbelievable vindictiveness. We had copies, of course, and they had to be restored one by one when our player was ready. These people have no class. Sabbatian Facebook promised free advertisements for the Gates-

controlled World Health Organization narrative while deleting ‘false claims and conspiracy theories’ to stop ‘misinformation’ about the alleged coronavirus. All these responses could be seen just a short while earlier in the scenarios of Event 201. Extreme censorship was absolutely crucial for the Cult because the official story was so ridiculous and unsupportable by the evidence that it could never survive open debate and the free-flow of information and opinion. If you can’t win a debate then don’t have one is the Cult’s approach throughout history. Facebook’s little boy front man – front boy – Mark Zuckerberg equated ‘credible and accurate information’ with official sources and exposing their lies with ‘misinformation’.

Silencing those that can see

The censorship dynamic of Event 201 is now the norm with an army of narrative-supporting ‘fact-checker’ organisations whose entire reason for being is to tell the public that official narratives are true and those exposing them are lying. One of the most appalling of these ‘fact-checkers’ is called NewsGuard founded by ultra-Zionist Americans Gordon Crovitz and Steven Brill. Crovitz is a former publisher of *The Wall Street Journal*, former Executive Vice President of Dow Jones, a member of the Council on Foreign Relations (CFR), and on the board of the American Association of Rhodes Scholars. The CFR and Rhodes Scholarships, named after Rothschild agent Cecil Rhodes who plundered the gold and diamonds of South Africa for his masters and the Cult, have featured widely in my books. NewsGuard don’t seem to like me for some reason – I really can’t think why – and they have done all they can to have me censored and discredited which is, to quote an old British politician, like being savaged by a dead sheep. They are, however, like all in the censorship network, very well connected and funded by organisations themselves funded by, or connected to, Bill Gates. As you would expect with anything associated with Gates NewsGuard has an offshoot called HealthGuard which ‘fights online health care hoaxes’. How very kind. Somehow the NewsGuard European Managing Director Anna-Sophie Harling, a remarkably young-

looking woman with no broadcasting experience and little hands-on work in journalism, has somehow secured a position on the 'Content Board' of UK government broadcast censor Ofcom. An executive of an organisation seeking to discredit dissidents of the official narratives is making decisions for the government broadcast 'regulator' about content?? Another appalling 'fact-checker' is Full Fact funded by George Soros and global censors Google and Facebook.

It's amazing how many activists in the 'fact-checking', 'anti-hate', arena turn up in government-related positions – people like UK Labour Party activist Imran Ahmed who heads the Center for Countering Digital Hate founded by people like Morgan McSweeney, now chief of staff to the Labour Party's hapless and useless 'leader' Keir Starmer. Digital Hate – which is what it really is – uses the American spelling of Center to betray its connection to a transatlantic network of similar organisations which in 2020 shapeshifted from attacking people for 'hate' to attacking them for questioning the 'Covid' hoax and the dangers of the 'Covid vaccine'. It's just a coincidence, you understand. This is one of Imran Ahmed's hysterical statements: 'I would go beyond calling anti-vaxxers conspiracy theorists to say they are an extremist group that pose a national security risk.' No one could ever accuse this prat of understatement and he's including in that those parents who are now against vaccines after their children were damaged for life or killed by them. He's such a nice man. Ahmed does the rounds of the Woke media getting soft-ball questions from spineless 'journalists' who never ask what right he has to campaign to destroy the freedom of speech of others while he demands it for himself. There also seems to be an overrepresentation in Ofcom of people connected to the narrative-worshipping BBC. This incredible global network of narrative-support was super-vital when the 'Covid' hoax was played in the light of the mega-whopper lies that have to be defended from the spotlight cast by the most basic intelligence.

Setting the scene

The Cult plays the long game and proceeds step-by-step ensuring that everything is in place before major cards are played and they don't come any bigger than the 'Covid' hoax. The psychopaths can't handle events where the outcome isn't certain and as little as possible – preferably nothing – is left to chance. Politicians, government and medical officials who would follow direction were brought to illusory power in advance by the Cult web whether on the national stage or others like state governors and mayors of America. For decades the dynamic between officialdom, law enforcement and the public was changed from one of service to one of control and dictatorship. Behaviour manipulation networks established within government were waiting to impose the coming 'Covid' rules and regulations specifically designed to subdue and rewire the psyche of the people in the guise of protecting health. These included in the UK the Behavioural Insights Team part-owned by the British government Cabinet Office; the Scientific Pandemic Insights Group on Behaviours (SPI-B); and a whole web of intelligence and military groups seeking to direct the conversation on social media and control the narrative. Among them are the cyberwarfare (on the people) 77th Brigade of the British military which is also coordinated through the Cabinet Office as civilian and military leadership continues to combine in what they call the Fusion Doctrine. The 77th Brigade is a British equivalent of the infamous Israeli (Sabbatian) military cyberwarfare and Internet manipulation operation Unit 8200 which I expose at length in *The Trigger*. Also carefully in place were the medical and science advisers to government – many on the payroll past or present of Bill Gates – and a whole alternative structure of unelected government stood by to take control when elected parliaments were effectively closed down once the 'Covid' card was slammed on the table. The structure I have described here and so much more was installed in every major country through the Cult networks. The top-down control hierarchy looks like this: The Cult – Cult-owned Gates – the World Health Organization and Tedros – Gates-funded or controlled chief medical officers and science 'advisers' (dictators) in each country –

political 'leaders' – law enforcement – The People. Through this simple global communication and enforcement structure the policy of the Cult could be imposed on virtually the entire human population so long as they acquiesced to the fascism. With everything in place it was time for the button to be pressed in late 2019/early 2020.

These were the prime goals the Cult had to secure for its will to prevail:

1) Locking down economies, closing all but designated 'essential' businesses (Cult-owned corporations were 'essential'), and putting the population under house arrest was an imperative to destroy independent income and employment and ensure dependency on the Cult-controlled state in the Hunger Games Society. Lockdowns had to be established as the global blueprint from the start to respond to the 'virus' and followed by pretty much the entire world.

2) The global population had to be terrified into believing in a deadly 'virus' that didn't actually exist so they would unquestioningly obey authority in the belief that authority must know how best to protect them and their families. Software salesman Gates would suddenly morph into the world's health expert and be promoted as such by the Cult-owned media.

3) A method of testing that wasn't testing for the 'virus', but was only claimed to be, had to be in place to provide the illusion of 'cases' and subsequent 'deaths' that had a very different cause to the 'Covid-19' that would be scribbled on the death certificate.

4) Because there was no 'virus' and the great majority testing positive with a test not testing for the 'virus' would have no symptoms of anything the lie had to be sold that people without symptoms (without the 'virus') could still pass it on to others. This was crucial to justify for the first time quarantining – house arresting – healthy people. Without this the economy-destroying lockdown of *everybody* could not have been credibly sold.

5) The 'saviour' had to be seen as a vaccine which beyond evil drug companies were working like angels of mercy to develop as quickly as possible, with all corners cut, to save the day. The public must absolutely not know that the 'vaccine' had nothing to do with a 'virus' or that the contents were ready and waiting with a very different motive long before the 'Covid' card was even lifted from the pack.

I said in March, 2020, that the 'vaccine' would have been created way ahead of the 'Covid' hoax which justified its use and the following December an article in the New York *Intelligencer* magazine said the Moderna 'vaccine' had been 'designed' by

January, 2020. This was 'before China had even acknowledged that the disease could be transmitted from human to human, more than a week before the first confirmed coronavirus case in the United States'. The article said that by the time the first American death was announced a month later 'the vaccine had already been manufactured and shipped to the National Institutes of Health for the beginning of its Phase I clinical trial'. The 'vaccine' was actually 'designed' long before that although even with this timescale you would expect the article to ask how on earth it could have been done that quickly. Instead it asked why the 'vaccine' had not been rolled out then and not months later. Journalism in the mainstream is truly dead. I am going to detail in the next chapter why the 'virus' has never existed and how a hoax on that scale was possible, but first the foundation on which the Big Lie of 'Covid' was built.

The test that doesn't test

Fraudulent 'testing' is the bottom line of the whole 'Covid' hoax and was the means by which a 'virus' that did not exist *appeared* to exist. They could only achieve this magic trick by using a test not testing for the 'virus'. To use a test that *was* testing for the 'virus' would mean that every test would come back negative given there was no 'virus'. They chose to exploit something called the RT-PCR test invented by American biochemist Kary Mullis in the 1980s who said publicly that his PCR test ... *cannot detect infectious disease*. Yes, the 'test' used worldwide to detect infectious 'Covid' to produce all the illusory 'cases' and 'deaths' compiled by Johns Hopkins and others *cannot detect infectious disease*. This fact came from the mouth of the man who invented PCR and was awarded the Nobel Prize in Chemistry in 1993 for doing so. Sadly, and incredibly conveniently for the Cult, Mullis died in August, 2019, at the age of 74 just before his test would be fraudulently used to unleash fascism on the world. He was said to have died from pneumonia which was an irony in itself. A few months later he would have had 'Covid-19' on his death certificate. I say the timing of his death was convenient because had he lived Mullis, a brilliant, honest and decent man, would have been

vociferously speaking out against the use of his test to detect 'Covid' when it was never designed, or able, to do that. I know that to be true given that Mullis made the same point when his test was used to 'detect' – not detect – HIV. He had been seriously critical of the Gallo/Montagnier claim to have isolated the HIV 'virus' and shown it to cause AIDS for which Mullis said there was no evidence. AIDS is actually not a disease but a series of diseases from which people die all the time. When they die from those *same diseases* after a positive 'test' for HIV then AIDS goes on their death certificate. I think I've heard that before somewhere. Countries instigated a policy with 'Covid' that anyone who tested positive with a test not testing for the 'virus' and died of any other cause within 28 days and even longer 'Covid-19' had to go on the death certificate. Cases have come from the test that can't test for infectious disease and the deaths are those who have died of *anything* after testing positive with a test not testing for the 'virus'. I'll have much more later about the death certificate scandal.

Mullis was deeply dismissive of the now US 'Covid' star Anthony Fauci who he said was a liar who didn't know anything about anything – 'and I would say that to his face – nothing.' He said of Fauci: 'The man thinks he can take a blood sample, put it in an electron microscope and if it's got a virus in there you'll know it – he doesn't understand electron microscopy and he doesn't understand medicine and shouldn't be in a position like he's in.' That position, terrifyingly, has made him the decider of 'Covid' fascism policy on behalf of the Cult in his role as director since 1984 of the National Institute of Allergy and Infectious Diseases (NIAID) while his record of being wrong is laughable; but being wrong, so long as it's the *right kind* of wrong, is why the Cult loves him. He'll say anything the Cult tells him to say. Fauci was made Chief Medical Adviser to the President immediately Biden took office. Biden was installed in the White House by Cult manipulation and one of his first decisions was to elevate Fauci to a position of even more control. This is a coincidence? Yes, and I identify as a flamenco dancer called Lola. How does such an incompetent criminal like Fauci remain in that

pivotal position in American health since *the 1980s*? When you serve the Cult it looks after you until you are surplus to requirements. Kary Mullis said prophetically of Fauci and his like: 'Those guys have an agenda and it's not an agenda we would like them to have ... they make their own rules, they change them when they want to, and Tony Fauci does not mind going on television in front of the people who pay his salary and lie directly into the camera.' Fauci has done that almost daily since the 'Covid' hoax began. Lying is in Fauci's DNA. To make the situation crystal clear about the PCR test this is a direct quote from its inventor Kary Mullis:

It [the PCR test] doesn't tell you that you're sick and doesn't tell you that the thing you ended up with was really going to hurt you ...'

Ask yourself why governments and medical systems the world over have been using this very test to decide who is 'infected' with the SARS-CoV-2 'virus' and the alleged disease it allegedly causes, 'Covid-19'. The answer to that question will tell you what has been going on. By the way, here's a little show-stopper – the 'new' SARS-CoV-2 'virus' was 'identified' as such right from the start using ... *the PCR test not testing for the 'virus'*. If you are new to this and find that shocking then stick around. I have hardly started yet. Even worse, other 'tests', like the 'Lateral Flow Device' (LFD), are considered so useless that they have to be *confirmed* by the PCR test! Leaked emails written by Ben Dyson, adviser to UK 'Health' Secretary Matt Hancock, said they were 'dangerously unreliable'. Dyson, executive director of strategy at the Department of Health, wrote: 'As of today, someone who gets a positive LFD result in (say) London has at best a 25 per cent chance of it being a true positive, but if it is a self-reported test potentially as low as 10 per cent (on an optimistic assumption about specificity) or as low as 2 per cent (on a more pessimistic assumption).' These are the 'tests' that schoolchildren and the public are being urged to have twice a week or more and have to isolate if they get a positive. Each fake positive goes in the statistics as a 'case' no matter how ludicrously inaccurate and the

'cases' drive lockdown, masks and the pressure to 'vaccinate'. The government said in response to the email leak that the 'tests' were accurate which confirmed yet again what shocking bloody liars they are. The real false positive rate is *100 percent* as we'll see. In another 'you couldn't make it up' the UK government agreed to pay £2.8 billion to California's Innova Medical Group to supply the irrelevant lateral flow tests. The company's primary test-making centre is in China. Innova Medical Group, established in March, 2020, is owned by Pasaca Capital Inc, chaired by Chinese-American millionaire Charles Huang who was born in Wuhan.

How it works – and how it doesn't

The RT-PCR test, known by its full title of Polymerase chain reaction, is used across the world to make millions, even billions, of copies of a DNA/RNA genetic information sample. The process is called 'amplification' and means that a tiny sample of genetic material is amplified to bring out the detailed content. I stress that it is not testing for an infectious disease. It is simply amplifying a sample of genetic material. In the words of Kary Mullis: 'PCR is ... just a process that's used to make a whole lot of something out of something.' To emphasise the point companies that make the PCR tests circulated around the world to 'test' for 'Covid' warn on the box that it can't be used to detect 'Covid' or infectious disease and is for research purposes only. It's okay, rest for a minute and you'll be fine. This is the test that produces the 'cases' and 'deaths' that have been used to destroy human society. All those global and national medical and scientific 'experts' demanding this destruction to 'save us' *KNOW* that the test is not testing for the 'virus' and the cases and deaths they claim to be real are an almost unimaginable fraud. Every one of them and so many others including politicians and psychopaths like Gates and Tedros must be brought before Nuremburg-type trials and jailed for the rest of their lives. The more the genetic sample is amplified by PCR the more elements of that material become sensitive to the test and by that I don't mean sensitive for a 'virus' but for elements of the genetic material which

is *naturally* in the body or relates to remnants of old conditions of various kinds lying dormant and causing no disease. Once the amplification of the PCR reaches a certain level *everyone* will test positive. So much of the material has been made sensitive to the test that everyone will have some part of it in their body. Even lying criminals like Fauci have said that once PCR amplifications pass 35 cycles everything will be a false positive that cannot be trusted for the reasons I have described. I say, like many proper doctors and scientists, that 100 percent of the 'positives' are false, but let's just go with Fauci for a moment.

He says that any amplification over 35 cycles will produce false positives and yet the US Centers for Disease Control (CDC) and Food and Drug Administration (FDA) have recommended up to 40 *cycles* and the National Health Service (NHS) in Britain admitted in an internal document for staff that it was using 45 *cycles* of amplification. A long list of other countries has been doing the same and at least one 'testing' laboratory has been using 50 *cycles*. Have you ever heard a doctor, medical 'expert' or the media ask what level of amplification has been used to claim a 'positive'. The 'test' comes back 'positive' and so you have the 'virus', end of story. Now we can see how the government in Tanzania could send off samples from a goat and a pawpaw fruit under human names and both came back positive for 'Covid-19'. Tanzania president John Magufuli mocked the 'Covid' hysteria, the PCR test and masks and refused to import the DNA-manipulating 'vaccine'. The Cult hated him and an article sponsored by the Bill Gates Foundation appeared in the London *Guardian* in February, 2021, headed 'It's time for Africa to rein in Tanzania's anti-vaxxer president'. Well, 'reined in' he shortly was. Magufuli appeared in good health, but then, in March, 2021, he was dead at 61 from 'heart failure'. He was replaced by Samia Hassan Suhulu who is connected to Klaus Schwab's World Economic Forum and she immediately reversed Magufuli's 'Covid' policy. A sample of cola tested positive for 'Covid' with the PCR test in Germany while American actress and singer-songwriter Erykah Badu tested positive in one nostril and negative in the other. Footballer Ronaldo called

the PCR test 'bullshit' after testing positive three times and being forced to quarantine and miss matches when there was nothing wrong with him. The mantra from Tedros at the World Health Organization and national governments (same thing) has been test, test, test. They know that the more tests they can generate the more fake 'cases' they have which go on to become 'deaths' in ways I am coming to. The UK government has its Operation Moonshot planned to test multiple millions every day in workplaces and schools with free tests for everyone to use twice a week at home in line with the Cult plan from the start to make testing part of life. A government advertisement for an 'Interim Head of Asymptomatic Testing Communication' said the job included responsibility for delivering a 'communications strategy' (propaganda) 'to support the expansion of asymptomatic testing that *'normalises testing as part of everyday life'*'. More tests means more fake 'cases', 'deaths' and fascism. I have heard of, and from, many people who booked a test, couldn't turn up, and yet got a positive result through the post for a test they'd never even had. The whole thing is crazy, but for the Cult there's method in the madness. Controlling and manipulating the level of amplification of the test means the authorities can control whenever they want the number of apparent 'cases' and 'deaths'. If they want to justify more fascist lockdown and destruction of livelihoods they keep the amplification high. If they want to give the illusion that lockdowns and the 'vaccine' are working then they lower the amplification and 'cases' and 'deaths' will appear to fall. In January, 2021, the Cult-owned World Health Organization suddenly warned laboratories about over-amplification of the test and to lower the threshold. Suddenly headlines began appearing such as: 'Why ARE "Covid" cases plummeting?' This was just when the vaccine rollout was underway and I had predicted months before they would make cases appear to fall through amplification tampering when the 'vaccine' came. These people are so predictable.

Cow vaccines?

The question must be asked of what is on the test swabs being poked far up the nose of the population to the base of the brain? A nasal swab punctured one woman's brain and caused it to leak fluid. Most of these procedures are being done by people with little training or medical knowledge. Dr Lorraine Day, former orthopaedic trauma surgeon and Chief of Orthopaedic Surgery at San Francisco General Hospital, says the tests are really a 'vaccine'. Cows have long been vaccinated this way. She points out that masks have to cover the nose and the mouth where it is claimed the 'virus' exists in saliva. Why then don't they take saliva from the mouth as they do with a DNA test instead of pushing a long swab up the nose towards the brain? The ethmoid bone separates the nasal cavity from the brain and within that bone is the cribriform plate. Dr Day says that when the swab is pushed up against this plate and twisted the procedure is 'depositing things back there'. She claims that among these 'things' are nanoparticles that can enter the brain. Researchers have noted that a team at the Gates-funded Johns Hopkins have designed tiny, star-shaped micro-devices that can latch onto intestinal mucosa and release drugs into the body. Mucosa is the thin skin that covers the inside surface of parts of the body such as *the nose* and mouth and produces mucus to protect them. The Johns Hopkins micro-devices are called 'theragrippers' and were 'inspired' by a parasitic worm that digs its sharp teeth into a host's intestines. Nasal swabs are also coated in the sterilisation agent ethylene oxide. The US National Cancer Institute posts this explanation on its website:

At room temperature, ethylene oxide is a flammable colorless gas with a sweet odor. It is used primarily to produce other chemicals, including antifreeze. In smaller amounts, ethylene oxide is used as a pesticide and a sterilizing agent. The ability of ethylene oxide to damage DNA makes it an effective sterilizing agent but also accounts for its cancer-causing activity.

The Institute mentions lymphoma and leukaemia as cancers most frequently reported to be associated with occupational exposure to ethylene oxide along with stomach and breast cancers. How does anyone think this is going to work out with the constant testing

regime being inflicted on adults and children at home and at school that will accumulate in the body anything that's on the swab?

Doctors know best

It is vital for people to realise that 'hero' doctors 'know' only what the Big Pharma-dominated medical authorities tell them to 'know' and if they refuse to 'know' what they are told to 'know' they are out the door. They are mostly not physicians or healers, but repeaters of the official narrative – or else. I have seen alleged professional doctors on British television make shocking statements that we are supposed to take seriously. One called 'Dr' Amir Khan, who is actually telling patients how to respond to illness, said that men could take the birth pill to 'help slow down the effects of Covid-19'. In March, 2021, another ridiculous 'Covid study' by an American doctor proposed injecting men with the female sex hormone progesterone as a 'Covid' treatment. British doctor Nighat Arif told the BBC that face coverings were now going to be part of ongoing normal. Yes, the vaccine protects you, she said (evidence?) ... but the way to deal with viruses in the community was always going to come down to hand washing, face covering and keeping a physical distance. That's not what we were told before the 'vaccine' was circulating. Arif said she couldn't imagine ever again going on the underground or in a lift without a mask. I was just thanking my good luck that she was not my doctor when she said – in March, 2021 – that if 'we are *behaving* and we are doing all the right things' she thought we could 'have our nearest and dearest around us at home ... around *Christmas* and *New Year!* Her patronising delivery was the usual school teacher talking to six-year-olds as she repeated every government talking point and probably believed them all. If we have learned anything from the 'Covid' experience surely it must be that humanity's perception of doctors needs a fundamental rethink. NHS 'doctor' Sara Kayat told her television audience that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Not even Big Pharma claimed that. We have to stop taking 'experts' at their word without question when so many of them are

clueless and only repeating the party line on which their careers depend. That is not to say there are not brilliant doctors – there are and I have spoken to many of them since all this began – but you won't see them in the mainstream media or quoted by the psychopaths and yes-people in government.

Remember the name – Christian Drosten

German virologist Christian Drosten, Director of Charité Institute of Virology in Berlin, became a national star after the pandemic hoax began. He was feted on television and advised the German government on 'Covid' policy. Most importantly to the wider world Drosten led a group that produced the 'Covid' testing protocol for the PCR test. What a remarkable feat given the PCR cannot test for infectious disease and even more so when you think that Drosten said that his method of testing for SARS-CoV-2 was developed 'without having virus material available'. *He developed a test for a 'virus' that he didn't have and had never seen.* Let that sink in as you survey the global devastation that came from what he did. The whole catastrophe of Drosten's 'test' was based on the alleged genetic sequence published by Chinese scientists on the Internet. We will see in the next chapter that this alleged 'genetic sequence' has never been produced by China or anyone and cannot be when there *is no* SARS-CoV-2. Drosten, however, doesn't seem to let little details like that get in the way. He was the lead author with Victor Corman from the same Charité Hospital of the paper 'Detection of 2019 novel coronavirus (2019-nCoV) by real-time PCR' published in a magazine called *Eurosurveillance*. This became known as the Corman-Drosten paper. In November, 2020, with human society devastated by the effects of the Corman-Drosten test baloney, the protocol was publicly challenged by 22 international scientists and independent researchers from Europe, the United States, and Japan. Among them were senior molecular geneticists, biochemists, immunologists, and microbiologists. They produced a document headed 'External peer review of the RTPCR test to detect SARS-Cov-2 Reveals 10 Major Flaws At The Molecular and Methodological Level: Consequences

For False-Positive Results'. The flaws in the Corman-Drosten test included the following:

- The test is non-specific because of erroneous design
- Results are enormously variable
- The test is unable to discriminate between the whole 'virus' and viral fragments
- It doesn't have positive or negative controls
- The test lacks a standard operating procedure
- It is unsupported by proper peer view

The scientists said the PCR 'Covid' testing protocol was not founded on science and they demanded the Corman-Drosten paper be retracted by *Eurosurveillance*. They said all present and previous Covid deaths, cases, and 'infection rates' should be subject to a massive retroactive inquiry. Lockdowns and travel restrictions should be reviewed and relaxed and those diagnosed through PCR to have 'Covid-19' should not be forced to isolate. Dr Kevin Corbett, a health researcher and nurse educator with a long academic career producing a stream of peer-reviewed publications at many UK universities, made the same point about the PCR test debacle. He said of the scientists' conclusions: 'Every scientific rationale for the development of that test has been totally destroyed by this paper. It's like Hiroshima/Nagasaki to the Covid test.' He said that China hadn't given them an isolated 'virus' when Drosten developed the test. Instead they had developed the test from *a sequence in a gene bank*.' Put another way ... *they made it up!* The scientists were supported in this contention by a Portuguese appeals court which ruled in November, 2020, that PCR tests are unreliable and it is unlawful to quarantine people based solely on a PCR test. The point about China not providing an isolated virus must be true when the 'virus' has never been isolated to this day and the consequences of that will become clear. Drosten and company produced this useless 'protocol' right on cue in January, 2020, just as the 'virus' was said to

be moving westward and it somehow managed to successfully pass a peer-review in 24 hours. In other words there was no peer-review for a test that would be used to decide who had 'Covid' and who didn't across the world. The Cult-created, Gates-controlled World Health Organization immediately recommended all its nearly 200 member countries to use the Drosten PCR protocol to detect 'cases' and 'deaths'. The sting was underway and it continues to this day.

So who is this Christian Drosten that produced the means through which death, destruction and economic catastrophe would be justified? His education background, including his doctoral thesis, would appear to be somewhat shrouded in mystery and his track record is dire as with another essential player in the 'Covid' hoax, the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College in London of whom more shortly. Drosten predicted in 2003 that the alleged original SARS 'virus' (SARS-1) was an epidemic that could have serious effects on economies and an effective vaccine would take at least two years to produce. Drosten's answer to every alleged 'outbreak' is a vaccine which you won't be shocked to know. What followed were just 774 official deaths worldwide and none in Germany where there were only nine cases. That is even if you believe there ever was a SARS 'virus' when the evidence is zilch and I will expand on this in the next chapter. Drosten claims to be co-discoverer of 'SARS-1' and developed a test for it in 2003. He was screaming warnings about 'swine flu' in 2009 and how it was a widespread infection far more severe than any dangers from a vaccine could be and people should get vaccinated. It would be helpful for Drosten's vocal chords if he simply recorded the words 'the virus is deadly and you need to get vaccinated' and copies could be handed out whenever the latest made-up threat comes along. Drosten's swine flu epidemic never happened, but Big Pharma didn't mind with governments spending hundreds of millions on vaccines that hardly anyone bothered to use and many who did wished they hadn't. A study in 2010 revealed that the risk of dying from swine flu, or H1N1, was no higher than that of the annual seasonal flu which is what at least most of 'it' really was as in

the case of 'Covid-19'. A media investigation into Drosten asked how with such a record of inaccuracy he could be *the* government adviser on these issues. The answer to that question is the same with Drosten, Ferguson and Fauci – they keep on giving the authorities the 'conclusions' and 'advice' they want to hear. Drosten certainly produced the goods for them in January, 2020, with his PCR protocol garbage and provided the foundation of what German internal medicine specialist Dr Claus Köhnlein, co-author of *Virus Mania*, called the 'test pandemic'. The 22 scientists in the *Eurosurveillance* challenge called out conflicts of interest within the Drosten 'protocol' group and with good reason. Olfert Landt, a regular co-author of Drosten 'studies', owns the biotech company TIB Molbiol Syntheselabor GmbH in Berlin which manufactures and sells the tests that Drosten and his mates come up with. They have done this with SARS, Enterotoxigenic E. coli (ETEC), MERS, Zika 'virus', yellow fever, and now 'Covid'. Landt told the *Berliner Zeitung* newspaper:

The testing, design and development came from the Charité [Drosten and Corman]. We simply implemented it immediately in the form of a kit. And if we don't have the virus, which originally only existed in Wuhan, we can make a synthetic gene to simulate the genome of the virus. That's what we did very quickly.

This is more confirmation that the Drosten test was designed without access to the 'virus' and only a synthetic simulation which is what SARS-CoV-2 really is – a computer-generated synthetic fiction. It's quite an enterprise they have going here. A Drosten team decides what the test for something should be and Landt's biotech company flogs it to governments and medical systems across the world. His company must have made an absolute fortune since the 'Covid' hoax began. Dr Reiner Fuellmich, a prominent German consumer protection trial lawyer in Germany and California, is on Drosten's case and that of Tedros at the World Health Organization for crimes against humanity with a class-action lawsuit being prepared in the United States and other legal action in Germany.

Why China?

Scamming the world with a 'virus' that doesn't exist would seem impossible on the face of it, but not if you have control of the relatively few people that make policy decisions and the great majority of the global media. Remember it's not about changing 'real' reality it's about controlling *perception* of reality. You don't have to make something happen you only have to make people *believe* that it's happening. Renegade Minds understand this and are therefore much harder to swindle. 'Covid-19' is not a 'real' 'virus'. It's a mind virus, like a computer virus, which has infected the minds, not the bodies, of billions. It all started, publically at least, in China and that alone is of central significance. The Cult was behind the revolution led by its asset Mao Zedong, or Chairman Mao, which established the People's Republic of China on October 1st, 1949. It should have been called The Cult's Republic of China, but the name had to reflect the recurring illusion that vicious dictatorships are run by and for the people (see all the 'Democratic Republics' controlled by tyrants). In the same way we have the 'Biden' Democratic Republic of America officially ruled by a puppet tyrant (at least temporarily) on behalf of Cult tyrants. The creation of Mao's merciless communist/fascist dictatorship was part of a frenzy of activity by the Cult at the conclusion of World War Two which, like the First World War, it had instigated through its assets in Germany, Britain, France, the United States and elsewhere. Israel was formed in 1948; the Soviet Union expanded its 'Iron Curtain' control, influence and military power with the Warsaw Pact communist alliance in 1955; the United Nations was formed in 1945 as a Cult precursor to world government; and a long list of world bodies would be established including the World Health Organization (1948), World Trade Organization (1948 under another name until 1995), International Monetary Fund (1945) and World Bank (1944). Human society was redrawn and hugely centralised in the global Problem-Reaction-Solution that was World War Two. All these changes were significant. Israel would become the headquarters of the Sabbatians

and the revolution in China would prepare the ground and control system for the events of 2019/2020.

Renegade Minds know there are no borders except for public consumption. The Cult is a seamless, borderless global entity and to understand the game we need to put aside labels like borders, nations, countries, communism, fascism and democracy. These delude the population into believing that countries are ruled within their borders by a government of whatever shade when these are mere agencies of a global power. America's illusion of democracy and China's communism/fascism are subsidiaries – vehicles – for the same agenda. We may hear about conflict and competition between America and China and on the lower levels that will be true; but at the Cult level they are branches of the same company in the way of the McDonald's example I gave earlier. I have tracked in the books over the years support by US governments of both parties for Chinese Communist Party infiltration of American society through allowing the sale of land, even military facilities, and the acquisition of American business and university influence. All this is underpinned by the infamous stealing of intellectual property and technological know-how. Cult-owned Silicon Valley corporations waive their fraudulent 'morality' to do business with human-rights-free China; Cult-controlled Disney has become China's PR department; and China in effect owns 'American' sports such as basketball which depends for much of its income on Chinese audiences. As a result any sports player, coach or official speaking out against China's horrific human rights record is immediately condemned or fired by the China-worshipping National Basketball Association. One of the first acts of China-controlled Biden was to issue an executive order telling federal agencies to stop making references to the 'virus' by the 'geographic location of its origin'. Long-time Congressman Jerry Nadler warned that criticising China, America's biggest rival, leads to hate crimes against Asian people in the United States. So shut up you bigot. China is fast closing in on Israel as a country that must not be criticised which is apt, really, given that Sabbatians control them both. The two countries have

developed close economic, military, technological and strategic ties which include involvement in China's 'Silk Road' transport and economic initiative to connect China with Europe. Israel was the first country in the Middle East to recognise the establishment of Mao's tyranny in 1950 months after it was established.

Project Wuhan – the 'Covid' Psyop

I emphasise again that the Cult plays the long game and what is happening to the world today is the result of centuries of calculated manipulation following a script to take control step-by-step of every aspect of human society. I will discuss later the common force behind all this that has spanned those centuries and thousands of years if the truth be told. Instigating the Mao revolution in China in 1949 with a 2020 'pandemic' in mind is not only how they work – the 71 years between them is really quite short by the Cult's standards of manipulation preparation. The reason for the Cult's Chinese revolution was to create a fiercely-controlled environment within which an extreme structure for human control could be incubated to eventually be unleashed across the world. We have seen this happen since the 'pandemic' emerged from China with the Chinese control-structure founded on AI technology and tyrannical enforcement sweep across the West. Until the moment when the Cult went for broke in the West and put its fascism on public display Western governments had to pay some lip-service to freedom and democracy to not alert too many people to the tyranny-in-the-making. Freedoms were more subtly eroded and power centralised with covert government structures put in place waiting for the arrival of 2020 when that smokescreen of 'freedom' could be dispensed with. The West was not able to move towards tyranny before 2020 anything like as fast as China which was created as a tyranny and had no limits on how fast it could construct the Cult's blueprint for global control. When the time came to impose that structure on the world it was the same Cult-owned Chinese communist/fascist government that provided the excuse – the 'Covid pandemic'. It was absolutely crucial to the Cult plan for the Chinese response to the 'pandemic' –

draconian lockdowns of the entire population – to become the blueprint that Western countries would follow to destroy the livelihoods and freedom of their people. This is why the Cult-owned, Gates-owned, WHO Director-General Tedros said early on:

The Chinese government is to be congratulated for the extraordinary measures it has taken to contain the outbreak. China is actually setting a new standard for outbreak response and it is not an exaggeration.

Forbes magazine said of China: ‘... those measures protected untold millions from getting the disease’. The Rockefeller Foundation ‘epidemic scenario’ document in 2010 said ‘prophetically’:

However, a few countries did fare better – China in particular. The Chinese government’s quick imposition and enforcement of mandatory quarantine for all citizens, as well as its instant and near-hermetic sealing off of all borders, saved millions of lives, stopping the spread of the virus far earlier than in other countries and enabling a swifter post-pandemic recovery.

Once again – *spooky*.

The first official story was the ‘bat theory’ or rather the bat diversion. The source of the ‘virus outbreak’ we were told was a ‘wet market’ in Wuhan where bats and other animals are bought and eaten in horrifically unhygienic conditions. Then another story emerged through the alternative media that the ‘virus’ had been released on purpose or by accident from a BSL-4 (biosafety level 4) laboratory in Wuhan not far from the wet market. The lab was reported to create and work with lethal concoctions and bioweapons. Biosafety level 4 is the highest in the World Health Organization system of safety and containment. Renegade Minds are aware of what I call designer manipulation. The ideal for the Cult is for people to buy its prime narrative which in the opening salvos of the ‘pandemic’ was the wet market story. It knows, however, that there is now a considerable worldwide alternative media of researchers sceptical of anything governments say and they are often given a version of events in a form they can perceive as credible while misdirecting them from the real truth. In this case let them

think that the conspiracy involved is a 'bioweapon virus' released from the Wuhan lab to keep them from the real conspiracy – *there is no 'virus'*. The WHO's current position on the source of the outbreak at the time of writing appears to be: 'We haven't got a clue, mate.' This is a good position to maintain mystery and bewilderment. The inner circle will know where the 'virus' came from – *nowhere*. The bottom line was to ensure the public believed there *was* a 'virus' and it didn't much matter if they thought it was natural or had been released from a lab. The belief that there was a 'deadly virus' was all that was needed to trigger global panic and fear. The population was terrified into handing their power to authority and doing what they were told. They had to or they were 'all gonna die'.

In March, 2020, information began to come my way from real doctors and scientists and my own additional research which had my intuition screaming: 'Yes, that's it! *There is no virus.*' The 'bioweapon' was not the 'virus'; it was the '*vaccine*' already being talked about that would be the bioweapon. My conclusion was further enhanced by happenings in Wuhan. The 'virus' was said to be sweeping the city and news footage circulated of people collapsing in the street (which they've never done in the West with the same 'virus'). The Chinese government was building 'new hospitals' in a matter of ten days to 'cope with demand' such was the virulent nature of the 'virus'. Yet in what seemed like no time the 'new hospitals' closed – even if they even opened – and China declared itself 'virus-free'. It was back to business as usual. This was more propaganda to promote the Chinese draconian lockdowns in the West as the way to 'beat the virus'. Trouble was that we subsequently had lockdown after lockdown, but never business as usual. As the people of the West and most of the rest of the world were caught in an ever-worsening spiral of lockdown, social distancing, masks, isolated old people, families forced apart, and livelihood destruction, it was party-time in Wuhan. Pictures emerged of thousands of people enjoying pool parties and concerts. It made no sense until you realised there never was a 'virus' and the

whole thing was a Cult set-up to transform human society out of one of its major global strongholds – China.

How is it possible to deceive virtually the entire world population into believing there is a deadly virus when there is not even a 'virus' let alone a deadly one? It's nothing like as difficult as you would think and that's clearly true because it happened.

Postscript: See end of book Postscript for more on the 'Wuhan lab virus release' story which the authorities and media were pushing heavily in the summer of 2021 to divert attention from the truth that the 'Covid virus' is pure invention.

CHAPTER FIVE

There is no 'virus'

You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time

Abraham Lincoln

The greatest form of mind control is repetition. The more you repeat the same mantra of alleged 'facts' the more will accept them to be true. It becomes an 'everyone knows that, mate'. If you can also censor any other version or alternative to your alleged 'facts' you are pretty much home and cooking.

By the start of 2020 the Cult owned the global mainstream media almost in its entirety to spew out its 'Covid' propaganda and ignore or discredit any other information and view. Cult-owned social media platforms in Cult-owned Silicon Valley were poised and ready to unleash a campaign of ferocious censorship to obliterate all but the official narrative. To complete the circle many demands for censorship by Silicon Valley were led by the mainstream media as 'journalists' became full-out enforcers for the Cult both as propagandists and censors. Part of this has been the influx of young people straight out of university who have become 'journalists' in significant positions. They have no experience and a headful of programmed perceptions from their years at school and university at a time when today's young are the most perceptually-targeted generations in known human history given the insidious impact of technology. They enter the media perceptually prepared and ready to repeat the narratives of the system that programmed them to

repeat its narratives. The BBC has a truly pathetic 'specialist disinformation reporter' called Marianna Spring who fits this bill perfectly. She is clueless about the world, how it works and what is really going on. Her role is to discredit anyone doing the job that a proper journalist would do and system-serving hacks like Spring wouldn't dare to do or even see the need to do. They are too busy licking the arse of authority which can never be wrong and, in the case of the BBC propaganda programme, *Panorama*, contacting payments systems such as PayPal to have a donations page taken down for a film company making documentaries questioning vaccines. Even the BBC soap opera *EastEnders* included a disgracefully biased scene in which an inarticulate white working class woman was made to look foolish for questioning the 'vaccine' while a well-spoken black man and Asian woman promoted the government narrative. It ticked every BBC box and the fact that the black and minority community was resisting the 'vaccine' had nothing to do with the way the scene was written. The BBC has become a disgusting tyrannical propaganda and censorship operation that should be defunded and disbanded and a free media take its place with a brief to stop censorship instead of demanding it. A BBC 'interview' with Gates goes something like: 'Mr Gates, sir, if I can call you sir, would you like to tell our audience why you are such a great man, a wonderful humanitarian philanthropist, and why you should absolutely be allowed as a software salesman to decide health policy for approaching eight billion people? Thank you, sir, please sir.' Propaganda programming has been incessant and merciless and when all you hear is the same story from the media, repeated by those around you who have only heard the same story, is it any wonder that people on a grand scale believe absolute mendacious garbage to be true? You are about to see, too, why this level of information control is necessary when the official 'Covid' narrative is so nonsensical and unsupportable by the evidence.

Structure of Deceit

The pyramid structure through which the 'Covid' hoax has been manifested is very simple and has to be to work. As few people as possible have to be involved with full knowledge of what they are doing – and why – or the real story would get out. At the top of the pyramid are the inner core of the Cult which controls Bill Gates who, in turn, controls the World Health Organization through his pivotal funding and his puppet Director-General mouthpiece, Tedros. Before he was appointed Tedros was chair of the Gates-founded Global Fund to 'fight against AIDS, tuberculosis and malaria', a board member of the Gates-funded 'vaccine alliance' GAVI, and on the board of another Gates-funded organisation. Gates owns him and picked him for a specific reason – Tedros is a crook and worse. 'Dr' Tedros (he's not a medical doctor, the first WHO chief not to be) was a member of the tyrannical Marxist government of Ethiopia for decades with all its human rights abuses. He has faced allegations of corruption and misappropriation of funds and was exposed three times for covering up cholera epidemics while Ethiopia's health minister. Tedros appointed the mass-murdering genocidal Zimbabwe dictator Robert Mugabe as a WHO goodwill ambassador for public health which, as with Tedros, is like appointing a psychopath to run a peace and love campaign. The move was so ridiculous that he had to drop Mugabe in the face of widespread condemnation. American economist David Steinman, a Nobel peace prize nominee, lodged a complaint with the International Criminal Court in The Hague over alleged genocide by Tedros when he was Ethiopia's foreign minister. Steinman says Tedros was a 'crucial decision maker' who directed the actions of Ethiopia's security forces from 2013 to 2015 and one of three officials in charge when those security services embarked on the 'killing' and 'torturing' of Ethiopians. You can see where Tedros is coming from and it's sobering to think that he has been the vehicle for Gates and the Cult to direct the global response to 'Covid'. Think about that. A psychopathic Cult dictates to psychopath Gates who dictates to psychopath Tedros who dictates how countries of the world must respond to a 'Covid virus' never scientifically shown to exist. At the same time psychopathic Cult-owned Silicon Valley information

giants like Google, YouTube, Facebook and Twitter announced very early on that they would give the Cult/Gates/Tedros/WHO version of the narrative free advertising and censor those who challenged their intelligence-insulting, mendacious story.

The next layer in the global 'medical' structure below the Cult, Gates and Tedros are the chief medical officers and science 'advisers' in each of the WHO member countries which means virtually all of them. Medical officers and arbiters of science (they're not) then take the WHO policy and recommended responses and impose them on their country's population while the political 'leaders' say they are deciding policy (they're clearly not) by 'following the science' on the advice of the 'experts' – the same medical officers and science 'advisers' (dictators). In this way with the rarest of exceptions the entire world followed the same policy of lockdown, people distancing, masks and 'vaccines' dictated by the psychopathic Cult, psychopathic Gates and psychopathic Tedros who we are supposed to believe give a damn about the health of the world population they are seeking to enslave. That, amazingly, is all there is to it in terms of crucial decision-making. Medical staff in each country then follow like sheep the dictates of the shepherds at the top of the national medical hierarchies – chief medical officers and science 'advisers' who themselves follow like sheep the shepherds of the World Health Organization and the Cult. Shepherds at the national level often have major funding and other connections to Gates and his Bill and Melinda Gates Foundation which carefully hands out money like confetti at a wedding to control the entire global medical system from the WHO down.

Follow the money

Christopher Whitty, Chief Medical Adviser to the UK Government at the centre of 'virus' policy, a senior adviser to the government's Scientific Advisory Group for Emergencies (SAGE), and Executive Board member of the World Health Organization, was gifted a grant of \$40 million by the Bill and Melinda Gates Foundation for malaria research in Africa. The BBC described the unelected Whitty as 'the

official who will probably have the greatest impact on our everyday lives of any individual policymaker in modern times' and so it turned out. What Gates and Tedros have said Whitty has done like his equivalents around the world. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of Big Pharma giant GlaxoSmithKline with its fundamental financial and business connections to Bill Gates. In September, 2020, it was revealed that Vallance owned a deferred bonus of shares in GlaxoSmithKline worth £600,000 while the company was 'developing' a 'Covid vaccine'. Move along now – nothing to see here – what could possibly be wrong with that? Imperial College in London, a major player in 'Covid' policy in Britain and elsewhere with its 'Covid-19' Response Team, is funded by Gates and has big connections to China while the now infamous Professor Neil Ferguson, the useless 'computer modeller' at Imperial College is also funded by Gates. Ferguson delivered the dramatically inaccurate excuse for the first lockdowns (much more in the next chapter). The Institute for Health Metrics and Evaluation (IHME) in the United States, another source of outrageously false 'Covid' computer models to justify lockdowns, is bankrolled by Gates who is a vehement promotor of lockdowns. America's version of Whitty and Vallance, the again now infamous Anthony Fauci, has connections to 'Covid vaccine' maker Moderna as does Bill Gates through funding from the Bill and Melinda Gates Foundation. Fauci is director of the National Institute of Allergy and Infectious Diseases (NIAID), a major recipient of Gates money, and they are very close. Deborah Birx who was appointed White House Coronavirus Response Coordinator in February, 2020, is yet another with ties to Gates. Everywhere you look at the different elements around the world behind the coordination and decision making of the 'Covid' hoax there is Bill Gates and his money. They include the World Health Organization; Centers for Disease Control (CDC) in the United States; National Institutes of Health (NIH) of Anthony Fauci; Imperial College and Neil Ferguson; the London School of Hygiene where Chris Whitty worked; Regulatory agencies like the UK Medicines & Healthcare products Regulatory Agency (MHRA)

which gave emergency approval for 'Covid vaccines'; Wellcome Trust; GAVI, the Vaccine Alliance; the Coalition for Epidemic Preparedness Innovations (CEPI); Johns Hopkins University which has compiled the false 'Covid' figures; and the World Economic Forum. A Nationalfile.com article said:

Gates has a lot of pull in the medical world, he has a multi-million dollar relationship with Dr. Fauci, and Fauci originally took the Gates line supporting vaccines and casting doubt on [the drug hydroxychloroquine]. Coronavirus response team member Dr. Deborah Birx, appointed by former president Obama to serve as United States Global AIDS Coordinator, also sits on the board of a group that has received billions from Gates' foundation, and Birx reportedly used a disputed Bill Gates-funded model for the White House's Coronavirus effort. Gates is a big proponent for a population lockdown scenario for the Coronavirus outbreak.

Another funder of Moderna is the Defense Advanced Research Projects Agency (DARPA), the technology-development arm of the Pentagon and one of the most sinister organisations on earth. DARPA had a major role with the CIA covert technology-funding operation In-Q-Tel in the development of Google and social media which is now at the centre of global censorship. Fauci and Gates are extremely close and openly admit to talking regularly about 'Covid' policy, but then why wouldn't Gates have a seat at every national 'Covid' table after his Foundation committed \$1.75 billion to the 'fight against Covid-19'. When passed through our Orwellian Translation Unit this means that he has bought and paid for the Cult-driven 'Covid' response worldwide. Research the major 'Covid' response personnel in your own country and you will find the same Gates funding and other connections again and again. Medical and science chiefs following World Health Organization 'policy' sit atop a medical hierarchy in their country of administrators, doctors and nursing staff. These 'subordinates' are told they must work and behave in accordance with the policy delivered from the 'top' of the national 'health' pyramid which is largely the policy delivered by the WHO which is the policy delivered by Gates and the Cult. The whole 'Covid' narrative has been imposed on medical staff by a climate of fear although great numbers don't even need that to comply. They do so through breathtaking levels of ignorance and

include doctors who go through life simply repeating what Big Pharma and their hierarchical masters tell them to say and believe. No wonder Big Pharma 'medicine' is one of the biggest killers on Planet Earth.

The same top-down system of intimidation operates with regard to the Cult Big Pharma cartel which also dictates policy through national and global medical systems in this way. The Cult and Big Pharma agendas are the same because the former controls and owns the latter. 'Health' administrators, doctors, and nursing staff are told to support and parrot the dictated policy or they will face consequences which can include being fired. How sad it's been to see medical staff meekly repeating and imposing Cult policy without question and most of those who can see through the deceit are only willing to speak anonymously off the record. They know what will happen if their identity is known. This has left the courageous few to expose the lies about the 'virus', face masks, overwhelmed hospitals that aren't, and the dangers of the 'vaccine' that isn't a vaccine. When these medical professionals and scientists, some renowned in their field, have taken to the Internet to expose the truth their articles, comments and videos have been deleted by Cult-owned Facebook, Twitter and YouTube. What a real head-shaker to see YouTube videos with leading world scientists and highly qualified medical specialists with an added link underneath to the notorious Cult propaganda website *Wikipedia* to find the 'facts' about the same subject.

HIV – the 'Covid' trial-run

I'll give you an example of the consequences for health and truth that come from censorship and unquestioning belief in official narratives. The story was told by PCR inventor Kary Mullis in his book *Dancing Naked in the Mind Field*. He said that in 1984 he accepted as just another scientific fact that Luc Montagnier of France's Pasteur Institute and Robert Gallo of America's National Institutes of Health had independently discovered that a 'retrovirus' dubbed HIV (human immunodeficiency virus) caused AIDS. They

were, after all, Mullis writes, specialists in retroviruses. This is how the medical and science pyramids work. Something is announced or *assumed* and then becomes an everybody-knows-that purely through repetition of the assumption as if it is fact. Complete crap becomes accepted truth with no supporting evidence and only repetition of the crap. This is how a 'virus' that doesn't exist became the 'virus' that changed the world. The HIV-AIDS fairy story became a multi-billion pound industry and the media poured out propaganda terrifying the world about the deadly HIV 'virus' that caused the lethal AIDS. By then Mullis was working at a lab in Santa Monica, California, to detect retroviruses with his PCR test in blood donations received by the Red Cross. In doing so he asked a virologist where he could find a reference for HIV being the cause of AIDS. 'You don't need a reference,' the virologist said ... '*Everybody knows it.*' Mullis said he wanted to quote a reference in the report he was doing and he said he felt a little funny about not knowing the source of such an important discovery when everyone else seemed to. The virologist suggested he cite a report by the Centers for Disease Control and Prevention (CDC) on morbidity and mortality. Mullis read the report, but it only said that an organism had been identified and did not say how. The report did not identify the original scientific work. Physicians, however, *assumed* (key recurring theme) that if the CDC was convinced that HIV caused AIDS then proof must exist. Mullis continues:

I did computer searches. Neither Montagnier, Gallo, nor anyone else had published papers describing experiments which led to the conclusion that HIV probably caused AIDS. I read the papers in *Science* for which they had become well known as AIDS doctors, but all they had said there was that they had found evidence of a past infection by something which was probably HIV in some AIDS patients.

They found antibodies. Antibodies to viruses had always been considered evidence of past disease, not present disease. Antibodies signaled that the virus had been defeated. The patient had saved himself. There was no indication in these papers that this virus caused a disease. They didn't show that everybody with the antibodies had the disease. In fact they found some healthy people with antibodies.

Mullis asked why their work had been published if Montagnier and Gallo hadn't really found this evidence, and why had they been fighting so hard to get credit for the discovery? He says he was hesitant to write 'HIV is the probable cause of AIDS' until he found published evidence to support that. 'Tens of thousands of scientists and researchers were spending billions of dollars a year doing research based on this idea,' Mullis writes. 'The reason had to be there somewhere; otherwise these people would not have allowed their research to settle into one narrow channel of investigation.' He said he lectured about PCR at numerous meetings where people were always talking about HIV and he asked them how they knew that HIV was the cause of AIDS:

Everyone said something. Everyone had the answer at home, in the office, in some drawer. They all knew, and they would send me the papers as soon as they got back. But I never got any papers. Nobody ever sent me the news about how AIDS was caused by HIV.

Eventually Mullis was able to ask Montagnier himself about the reference proof when he lectured in San Diego at the grand opening of the University of California AIDS Research Center. Mullis says this was the last time he would ask his question without showing anger. Montagnier said he should reference the CDC report. 'I read it', Mullis said, and it didn't answer the question. 'If Montagnier didn't know the answer who the hell did?' Then one night Mullis was driving when an interview came on National Public Radio with Peter Duesberg, a prominent virologist at Berkeley and a California Scientist of the Year. Mullis says he finally understood why he could not find references that connected HIV to AIDS – *there weren't any!* No one had ever proved that HIV causes AIDS even though it had spawned a multi-billion pound global industry and the media was repeating this as fact every day in their articles and broadcasts terrifying the shit out of people about AIDS and giving the impression that a positive test for HIV (see 'Covid') was a death sentence. Duesberg was a threat to the AIDS gravy train and the agenda that underpinned it. He was therefore abused and castigated after he told the Proceedings of the National Academy of Sciences

there was no good evidence implicating the new 'virus'. Editors rejected his manuscripts and his research funds were deleted. Mullis points out that the CDC has defined AIDS as one of more than 30 diseases *if accompanied* by a positive result on a test that detects antibodies to HIV; but those same diseases are not defined as AIDS cases when antibodies are not detected:

If an HIV-positive woman develops uterine cancer, for example, she is considered to have AIDS. If she is not HIV positive, she simply has uterine cancer. An HIV-positive man with tuberculosis has AIDS; if he tests negative he simply has tuberculosis. If he lives in Kenya or Colombia, where the test for HIV antibodies is too expensive, he is simply presumed to have the antibodies and therefore AIDS, and therefore he can be treated in the World Health Organization's clinic. It's the only medical help available in some places. And it's free, because the countries that support WHO are worried about AIDS.

Mullis accuses the CDC of continually adding new diseases (see ever more 'Covid symptoms') to the grand AIDS definition and of virtually doctoring the books to make it appear as if the disease continued to spread. He cites how in 1993 the CDC enormously broadened its AIDS definition and county health authorities were delighted because they received \$2,500 per year from the Federal government for every reported AIDS case. Ladies and gentlemen, I have just described, via Kary Mullis, the 'Covid pandemic' of 2020 and beyond. Every element is the same and it's been pulled off in the same way by the same networks.

The 'Covid virus' exists? Okay – prove it. Er ... still waiting

What Kary Mullis described with regard to 'HIV' has been repeated with 'Covid'. A claim is made that a new, or 'novel', infection has been found and the entire medical system of the world repeats that as fact exactly as they did with HIV and AIDS. No one in the mainstream asks rather relevant questions such as 'How do you know?' and 'Where is your proof?' The SARS-Cov-2 'virus' and the 'Covid-19 disease' became an overnight 'everybody-knows-that'. The origin could be debated and mulled over, but what you could not suggest was that 'SARS-Cov-2' didn't exist. That would be

ridiculous. 'Everybody knows' the 'virus' exists. Well, I didn't for one along with American proper doctors like Andrew Kaufman and Tom Cowan and long-time American proper journalist Jon Rappaport. We dared to pursue the obvious and simple question: 'Where's the evidence?' The overwhelming majority in medicine, journalism and the general public did not think to ask that. After all, *everyone knew* there was a new 'virus'. Everyone was saying so and I heard it on the BBC. Some would eventually argue that the 'deadly virus' was nothing like as deadly as claimed, but few would venture into the realms of its very existence. Had they done so they would have found that the evidence for that claim had gone AWOL as with HIV causes AIDS. In fact, not even that. For something to go AWOL it has to exist in the first place and scientific proof for a 'SARS-Cov-2' can be filed under nothing, nowhere and zilch.

Dr Andrew Kaufman is a board-certified forensic psychiatrist in New York State, a Doctor of Medicine and former Assistant Professor and Medical Director of Psychiatry at SUNY Upstate Medical University, and Medical Instructor of Hematology and Oncology at the Medical School of South Carolina. He also studied biology at the Massachusetts Institute of Technology (MIT) and trained in Psychiatry at Duke University. Kaufman is retired from allopathic medicine, but remains a consultant and educator on natural healing, I saw a video of his very early on in the 'Covid' hoax in which he questioned claims about the 'virus' in the absence of any supporting evidence and with plenty pointing the other way. I did everything I could to circulate his work which I felt was asking the pivotal questions that needed an answer. I can recommend an excellent pull-together interview he did with the website The Last Vagabond entitled *Dr Andrew Kaufman: Virus Isolation, Terrain Theory and Covid-19* and his website is andrewkaufmanmd.com. Kaufman is not only a forensic psychiatrist; he is forensic in all that he does. He always reads original scientific papers, experiments and studies instead of second-third-fourth-hand reports about the 'virus' in the media which are repeating the repeated repetition of the narrative. When he did so with the original Chinese 'virus' papers Kaufman

realised that there was no evidence of a 'SARS-Cov-2'. They had never – from the start – shown it to exist and every repeat of this claim worldwide was based on the accepted existence of proof that was nowhere to be found – see Kary Mullis and HIV. Here we go again.

Let's postulate

Kaufman discovered that the Chinese authorities immediately concluded that the cause of an illness that broke out among about 200 initial patients in Wuhan was a 'new virus' when there were no grounds to make that conclusion. The alleged 'virus' was not isolated from other genetic material in their samples and then shown through a system known as Koch's postulates to be the causative agent of the illness. The world was told that the SARS-Cov-2 'virus' caused a disease they called 'Covid-19' which had 'flu-like' symptoms and could lead to respiratory problems and pneumonia. If it wasn't so tragic it would almost be funny. *'Flu-like' symptoms? Pneumonia? Respiratory disease?* What in CHINA and particularly in Wuhan, one of the most polluted cities in the world with a resulting epidemic of respiratory disease?? Three hundred thousand people get pneumonia in China every year and there are nearly a billion cases worldwide of 'flu-like symptoms'. These have a whole range of causes – including pollution in Wuhan – but no other possibility was credibly considered in late 2019 when the world was told there was a new and deadly 'virus'. The global prevalence of pneumonia and 'flu-like systems' gave the Cult networks unlimited potential to re-diagnose these other causes as the mythical 'Covid-19' and that is what they did from the very start. Kaufman revealed how Chinese medical and science authorities (all subordinates to the Cult-owned communist government) took genetic material from the lungs of only a few of the first patients. The material contained their own cells, bacteria, fungi and other microorganisms living in their bodies. The only way you could prove the existence of the 'virus' and its responsibility for the alleged 'Covid-19' was to isolate the virus from all the other material – a process also known as 'purification' – and

then follow the postulates sequence developed in the late 19th century by German physician and bacteriologist Robert Koch which became the 'gold standard' for connecting an alleged causation agent to a disease:

1. The microorganism (bacteria, fungus, virus, etc.) must be present in every case of the disease and all patients must have the same symptoms. It must also *not be present in healthy individuals*.
2. The microorganism must be isolated from the host with the disease. If the microorganism is a bacteria or fungus it must be grown in a pure culture. If it is a virus, it must be purified (i.e. containing no other material except the virus particles) from a clinical sample.
3. The specific disease, with all of its characteristics, must be reproduced when the infectious agent (the purified virus or a pure culture of bacteria or fungi) is inoculated into a healthy, susceptible host.
4. The microorganism must be recoverable from the experimentally infected host as in step 2.

Not one of these criteria has been met in the case of 'SARS-Cov-2' and 'Covid-19'. Not ONE. EVER. Robert Koch refers to bacteria and not viruses. What are called 'viral particles' are so minute (hence masks are useless by any definition) that they could only be seen after the invention of the electron microscope in the 1930s and can still only be observed through that means. American bacteriologist and virologist Thomas Milton Rivers, the so-called 'Father of Modern Virology' who was very significantly director of the Rockefeller Institute for Medical Research in the 1930s, developed a less stringent version of Koch's postulates to identify 'virus' causation known as 'Rivers criteria'. 'Covid' did not pass that process either. Some even doubt whether any 'virus' can be isolated from other particles containing genetic material in the Koch method. Freedom of Information requests in many countries asking for scientific proof that the 'Covid virus' has been purified and isolated and shown to exist have all come back with a 'we don't have that' and when this happened with a request to the UK Department of Health they added this comment:

However, outside of the scope of the [Freedom of Information Act] and on a discretionary basis, the following information has been advised to us, which may be of interest. Most infectious diseases are caused by viruses, bacteria or fungi. Some bacteria or fungi have the capacity to grow on their own in isolation, for example in colonies on a petri dish. Viruses are different in that they are what we call 'obligate pathogens' – that is, they cannot survive or reproduce without infecting a host ...

... For some diseases, it is possible to establish causation between a microorganism and a disease by isolating the pathogen from a patient, growing it in pure culture and reintroducing it to a healthy organism. These are known as 'Koch's postulates' and were developed in 1882. However, as our understanding of disease and different disease-causing agents has advanced, these are no longer the method for determining causation [Andrew Kaufman asks why in that case are there two published articles falsely claiming to satisfy Koch's postulates].

It has long been known that viral diseases cannot be identified in this way as viruses cannot be grown in 'pure culture'. When a patient is tested for a viral illness, this is normally done by looking for the presence of antigens, or viral genetic code in a host with molecular biology techniques [Kaufman asks how you could know the origin of these chemicals without having a pure culture for comparison].

For the record 'antigens' are defined so:

Invading microorganisms have antigens on their surface that the human body can recognise as being foreign – meaning not belonging to it. When the body recognises a foreign antigen, lymphocytes (white blood cells) produce antibodies, which are complementary in shape to the antigen.

Notwithstanding that this is open to question in relation to 'SARS-Cov-2' the presence of 'antibodies' can have many causes and they are found in people that are perfectly well. Kary Mullis said: 'Antibodies ... had always been considered evidence of past disease, not present disease.'

'Covid' really is a *computer* 'virus'

Where the UK Department of Health statement says 'viruses' are now 'diagnosed' through a 'viral genetic code in a host with molecular biology techniques', they mean ... *the PCR test* which its inventor said cannot test for infectious disease. They have no credible method of connecting a 'virus' to a disease and we will see that there is no scientific proof that any 'virus' causes any disease or there is any such thing as a 'virus' in the way that it is described. Tenacious Canadian researcher Christine Massey and her team made

some 40 Freedom of Information requests to national public health agencies in different countries asking for proof that SARS-CoV-2 has been isolated and not one of them could supply that information. Massey said of her request in Canada: 'Freedom of Information reveals Public Health Agency of Canada has no record of 'SARS-COV-2' isolation performed by anyone, anywhere, ever.' If you accept the comment from the UK Department of Health it's because they can't isolate a 'virus'. Even so many 'science' papers claimed to have isolated the 'Covid virus' until they were questioned and had to admit they hadn't. A reply from the Robert Koch Institute in Germany was typical: 'I am not aware of a paper which purified isolated SARS-CoV-2.' So what the hell was Christian Drosten and his gang using to design the 'Covid' testing protocol that has produced all the illusory Covid' cases and 'Covid' deaths when the head of the Chinese version of the CDC admitted there was a problem right from the start in that the 'virus' had never been isolated/purified? Breathe deeply: What they are calling 'Covid' is actually created by a *computer program* i.e. *they made it up* – er, that's it. They took lung fluid, with many sources of genetic material, from one single person alleged to be infected with Covid-19 by a PCR test which they *claimed*, without clear evidence, contained a 'virus'. They used several computer programs to create a model of a theoretical virus genome sequence from more than fifty-six million small sequences of RNA, each of an unknown source, assembling them like a puzzle with no known solution. The computer filled in the gaps with sequences from bits in the gene bank to make it look like a bat SARS-like coronavirus! A wave of the magic wand and poof, an *in silico* (computer-generated) genome, a scientific fantasy, was created. UK health researcher Dr Kevin Corbett made the same point with this analogy:

... It's like giving you a few bones and saying that's your fish. It could be any fish. Not even a skeleton. Here's a few fragments of bones. That's your fish ... It's all from gene bank and the bits of the virus sequence that weren't there they made up.

They synthetically created them to fill in the blanks. That's what genetics is; it's a code. So it's ABBCCDDDD and you're missing some what you think is EEE so you put it in. It's all

synthetic. You just manufacture the bits that are missing. This is the end result of the geneticization of virology. This is basically a computer virus.

Further confirmation came in an email exchange between British citizen journalist Frances Leader and the government's Medicines & Healthcare Products Regulatory Agency (the Gates-funded MHRA) which gave emergency permission for untested 'Covid vaccines' to be used. The agency admitted that the 'vaccine' is not based on an isolated 'virus', but comes from a *computer-generated model*. Frances Leader was naturally banned from Cult-owned fascist Twitter for making this exchange public. The process of creating computer-generated alleged 'viruses' is called 'in silico' or 'in silicon' – computer chips – and the term 'in silico' is believed to originate with biological experiments using only a computer in 1989. 'Vaccines' involved with 'Covid' are also produced 'in silico' or by computer not a natural process. If the original 'virus' is nothing more than a made-up computer model how can there be 'new variants' of something that never existed in the first place? They are not new 'variants'; they are new *computer models* only minutely different to the original program and designed to further terrify the population into having the 'vaccine' and submitting to fascism. You want a 'new variant'? Click, click, enter – there you go. Tell the medical profession that you have discovered a 'South African variant', 'UK variants' or a 'Brazilian variant' and in the usual HIV-causes-AIDS manner they will unquestioningly repeat it with no evidence whatsoever to support these claims. They will go on television and warn about the dangers of 'new variants' while doing nothing more than repeating what they have been told to be true and knowing that any deviation from that would be career suicide. Big-time insiders will know it's a hoax, but much of the medical community is clueless about the way they are being played and themselves play the public without even being aware they are doing so. What an interesting 'coincidence' that AstraZeneca and Oxford University were conducting 'Covid vaccine trials' in the three countries – the UK, South Africa and Brazil – where the first three 'variants' were claimed to have 'broken out'.

Here's your 'virus' – it's a unicorn

Dr Andrew Kaufman presented a brilliant analysis describing how the 'virus' was imagined into fake existence when he dissected an article published by *Nature* and written by 19 authors detailing *alleged* 'sequencing of a complete viral genome' of the 'new SARS-CoV-2 virus'. This computer-modelled *in silico* genome was used as a template for all subsequent genome sequencing experiments that resulted in the so-called variants which he said now number more than 6,000. The fake genome was constructed from more than 56 million individual short strands of RNA. Those little pieces were assembled into longer pieces by finding areas of overlapping sequences. The computer programs created over two million possible combinations from which the authors simply chose the longest one. They then compared this to a 'bat virus' and the computer 'alignment' rearranged the sequence and filled in the gaps! They called this computer-generated abomination the 'complete genome'. Dr Tom Cowan, a fellow medical author and collaborator with Kaufman, said such computer-generation constitutes scientific fraud and he makes this superb analogy:

Here is an equivalency: A group of researchers claim to have found a unicorn because they found a piece of a hoof, a hair from a tail, and a snippet of a horn. They then add that information into a computer and program it to re-create the unicorn, and they then claim this computer re-creation is the real unicorn. Of course, they had never actually seen a unicorn so could not possibly have examined its genetic makeup to compare their samples with the actual unicorn's hair, hooves and horn.

The researchers claim they decided which is the real genome of SARS-CoV-2 by 'consensus', sort of like a vote. Again, different computer programs will come up with different versions of the imaginary 'unicorn', so they come together as a group and decide which is the real imaginary unicorn.

This is how the 'virus' that has transformed the world was brought into fraudulent 'existence'. Extraordinary, yes, but as the Nazis said the bigger the lie the more will believe it. Cowan, however, wasn't finished and he went on to identify what he called the real blockbuster in the paper. He quotes this section from a paper written

by virologists and published by the CDC and then explains what it means:

Therefore, we examined the capacity of SARS-CoV-2 to infect and replicate in several common primate and human cell lines, including human adenocarcinoma cells (A549), human liver cells (HUH 7.0), and human embryonic kidney cells (HEK-293T). In addition to Vero E6 and Vero CCL81 cells. ... Each cell line was inoculated at high multiplicity of infection and examined 24h post-infection.

No CPE was observed in any of the cell lines except in Vero cells, which grew to greater than 10 to the 7th power at 24 h post-infection. In contrast, HUH 7.0 and 293T showed only modest viral replication, and A549 cells were incompatible with SARS CoV-2 infection.

Cowan explains that when virologists attempt to prove infection they have three possible 'hosts' or models on which they can test. The first was humans. Exposure to humans was generally not done for ethical reasons and has never been done with SARS-CoV-2 or any coronavirus. The second possible host was animals. Cowan said that forgetting for a moment that they never actually use purified virus when exposing animals they do use solutions that they *claim* contain the virus. Exposure to animals has been done with SARS-CoV-2 in an experiment involving mice and this is what they found: *None of the wild (normal) mice got sick.* In a group of genetically-modified mice, a statistically insignificant number lost weight and had slightly bristled fur, but they experienced nothing like the illness called 'Covid-19'. Cowan said the third method – the one they mostly rely on – is to inoculate solutions they *say* contain the virus onto a variety of tissue cultures. This process had never been shown to kill tissue *unless* the sample material was starved of nutrients and poisoned as *part of the process*. Yes, incredibly, in tissue experiments designed to show the 'virus' is responsible for killing the tissue they starve the tissue of nutrients and add toxic drugs including antibiotics and they do not have control studies to see if it's the starvation and poisoning that is degrading the tissue rather than the 'virus' they allege to be in there somewhere. You want me to pinch you? Yep, I understand. Tom Cowan said this about the whole nonsensical farce as he explains what that quote from the CDC paper really means:

The shocking thing about the above quote is that using their own methods, the virologists found that solutions containing SARS-CoV-2 – even in high amounts – were NOT, I repeat NOT, infective to any of the three human tissue cultures they tested. In plain English, this means they proved, on their terms, that this ‘new coronavirus’ is not infectious to human beings. It is ONLY infective to monkey kidney cells, and only then when you add two potent drugs (gentamicin and amphotericin), known to be toxic to kidneys, to the mix.

My friends, read this again and again. These virologists, published by the CDC, performed a clear proof, on their terms, showing that the SARS-CoV-2 virus is harmless to human beings. That is the only possible conclusion, but, unfortunately, this result is not even mentioned in their conclusion. They simply say they can provide virus stocks cultured only on monkey Vero cells, thanks for coming.

Cowan concluded: ‘If people really understood how this “science” was done, I would hope they would storm the gates and demand honesty, transparency and truth.’ Dr Michael Yeadon, former Vice President and Chief Scientific Adviser at drug giant Pfizer has been a vocal critic of the ‘Covid vaccine’ and its potential for multiple harm. He said in an interview in April, 2021, that ‘not one [vaccine] has the virus. He was asked why vaccines normally using a ‘dead’ version of a disease to activate the immune system were not used for ‘Covid’ and instead we had the synthetic methods of the ‘mRNA Covid vaccine’. Yeadon said that to do the former ‘you’d have to have some of [the virus] wouldn’t you?’ He added: ‘No-one’s got any – seriously.’ Yeadon said that surely they couldn’t have fooled the whole world for a year without having a virus, ‘but oddly enough ask around – no one’s got it’. He didn’t know why with all the ‘great labs’ around the world that the virus had not been isolated – ‘Maybe they’ve been too busy running bad PCR tests and vaccines that people don’t need.’ What is today called ‘science’ is not ‘science’ at all. Science is no longer what is, but whatever people can be manipulated to *believe* that it is. Real science has been hijacked by the Cult to dispense and produce the ‘expert scientists’ and contentions that suit the agenda of the Cult. How big-time this has happened with the ‘Covid’ hoax which is entirely based on fake science delivered by fake ‘scientists’ and fake ‘doctors’. The human-caused climate change hoax is also entirely based on fake science delivered by fake ‘scientists’ and fake ‘climate experts’. In both cases real

scientists, climate experts and doctors have their views suppressed and deleted by the Cult-owned science establishment, media and Silicon Valley. This is the 'science' that politicians claim to be 'following' and a common denominator of 'Covid' and climate are Cult psychopaths Bill Gates and his mate Klaus Schwab at the Gates-funded World Economic Forum. But, don't worry, it's all just a coincidence and absolutely nothing to worry about. Zzzzzzzzz.

What is a 'virus' REALLY?

Dr Tom Cowan is one of many contesting the very existence of viruses let alone that they cause disease. This is understandable when there is no scientific evidence for a disease-causing 'virus'. German virologist Dr Stefan Lanka won a landmark case in 2017 in the German Supreme Court over his contention that there is no such thing as a measles virus. He had offered a big prize for anyone who could prove there is and Lanka won his case when someone sought to claim the money. There is currently a prize of more than 225,000 euros on offer from an Isolate Truth Fund for anyone who can prove the isolation of SARS-CoV-2 and its genetic substance. Lanka wrote in an article headed 'The Misconception Called Virus' that scientists think a 'virus' is causing tissue to become diseased and degraded when in fact it is the *processes they are using* which do that – not a 'virus'. Lanka has done an important job in making this point clear as Cowan did in his analysis of the CDC paper. Lanka says that all claims about viruses as disease-causing pathogens are wrong and based on 'easily recognisable, understandable and verifiable misinterpretations.' Scientists believed they were working with 'viruses' in their laboratories when they were really working with 'typical particles of specific dying tissues or cells ...' Lanka said that the tissue decaying process claimed to be caused by a 'virus' still happens when no alleged 'virus' is involved. It's the *process* that does the damage and not a 'virus'. The genetic sample is deprived of nutrients, removed from its energy supply through removal from the body and then doused in toxic antibiotics to remove any bacteria. He confirms again that establishment scientists do not (pinch me)

conduct control experiments to see if this is the case and if they did they would see the claims that 'viruses' are doing the damage is nonsense. He adds that during the measles 'virus' court case he commissioned an independent laboratory to perform just such a control experiment and the result was that the tissues and cells died in the exact same way as with alleged 'infected' material. This is supported by a gathering number of scientists, doctors and researchers who reject what is called 'germ theory' or the belief in the body being infected by contagious sources emitted by other people. Researchers Dawn Lester and David Parker take the same stance in their highly-detailed and sourced book *What Really Makes You Ill – Why everything you thought you knew about disease is wrong* which was recommended to me by a number of medical professionals genuinely seeking the truth. Lester and Parker say there is no provable scientific evidence to show that a 'virus' can be transmitted between people or people and animals or animals and people:

The definition also claims that viruses are the cause of many diseases, as if this has been definitively proven. But this is not the case; there is no original scientific evidence that definitively demonstrates that any virus is the cause of any disease. The burden of proof for any theory lies with those who proposed it; but none of the existing documents provides 'proof' that supports the claim that 'viruses' are pathogens.

Dr Tom Cowan employs one of his clever analogies to describe the process by which a 'virus' is named as the culprit for a disease when what is called a 'virus' is only material released by cells detoxing themselves from infiltration by chemical or radiation poisoning. The tidal wave of technologically-generated radiation in the 'smart' modern world plus all the toxic food and drink are causing this to happen more than ever. Deluded 'scientists' misread this as a gathering impact of what they wrongly label 'viruses'.

Paper can infect houses

Cowan said in an article for davidicke.com – with his tongue only mildly in his cheek – that he believed he had made a tremendous

discovery that may revolutionise science. He had discovered that small bits of paper are alive, 'well alive-ish', can 'infect' houses, and then reproduce themselves inside the house. The result was that this explosion of growth in the paper inside the house causes the house to explode, blowing it to smithereens. His evidence for this new theory is that in the past months he had carefully examined many of the houses in his neighbourhood and found almost no scraps of paper on the lawns and surrounds of the house. There was an occasional stray label, but nothing more. Then he would return to these same houses a week or so later and with a few, not all of them, particularly the old and decrepit ones, he found to his shock and surprise they were littered with stray bits of paper. He knew then that the paper had infected these houses, made copies of itself, and blew up the house. A young boy on a bicycle at one of the sites told him he had seen a demolition crew using dynamite to explode the house the previous week, but Cowan dismissed this as the idle thoughts of silly boys because 'I was on to something big'. He was on to how 'scientists' mistake genetic material in the detoxifying process for something they call a 'virus'. Cowan said of his house and paper story:

If this sounds crazy to you, it's because it should. This scenario is obviously nuts. But consider this admittedly embellished, for effect, current viral theory that all scientists, medical doctors and virologists currently believe.

He takes the example of the 'novel SARS-Cov2' virus to prove the point. First they take someone with an undefined illness called 'Covid-19' and don't even attempt to find any virus in their sputum. Never mind the scientists still describe how this 'virus', which they have not located attaches to a cell receptor, injects its genetic material, in 'Covid's' case, RNA, into the cell. The RNA once inserted exploits the cell to reproduce itself and makes 'thousands, nay millions, of copies of itself ... Then it emerges victorious to claim its next victim':

If you were to look in the scientific literature for proof, actual scientific proof, that uniform SARS-CoV2 viruses have been properly isolated from the sputum of a sick person, that actual spike proteins could be seen protruding from the virus (which has not been found), you would find that such evidence doesn't exist.

If you go looking in the published scientific literature for actual pictures, proof, that these spike proteins or any viral proteins are ever attached to any receptor embedded in any cell membrane, you would also find that no such evidence exists. If you were to look for a video or documented evidence of the intact virus injecting its genetic material into the body of the cell, reproducing itself and then emerging victorious by budding off the cell membrane, you would find that no such evidence exists.

The closest thing you would find is electron micrograph pictures of cellular particles, possibly attached to cell debris, both of which to be seen were stained by heavy metals, a process that completely distorts their architecture within the living organism. This is like finding bits of paper stuck to the blown-up bricks, thereby proving the paper emerged by taking pieces of the bricks on its way out.

The Enders baloney

Cowan describes the 'Covid' story as being just as make-believe as his paper story and he charts back this fantasy to a Nobel Prize winner called John Enders (1897-1985), an American biomedical scientist who has been dubbed 'The Father of Modern Vaccines'. Enders is claimed to have 'discovered' the process of the viral culture which 'proved' that a 'virus' caused measles. Cowan explains how Enders did this 'by using the EXACT same procedure that has been followed by every virologist to find and characterize every new virus since 1954'. Enders took throat swabs from children with measles and immersed them in 2ml of milk. Penicillin (100u/ml) and the antibiotic streptomycin (50,g/ml) were added and the whole mix was centrifuged – rotated at high speed to separate large cellular debris from small particles and molecules as with milk and cream, for example. Cowan says that if the aim is to find little particles of genetic material ('viruses') in the snot from children with measles it would seem that the last thing you would do is mix the snot with other material – milk –that also has genetic material. 'How are you ever going to know whether whatever you found came from the snot or the milk?' He points out that streptomycin is a 'nephrotoxic' or poisonous-to-the-kidney drug. You will see the relevance of that

shortly. Cowan says that it gets worse, much worse, when Enders describes the culture medium upon which the virus 'grows': 'The culture medium consisted of bovine amniotic fluid (90%), beef embryo extract (5%), horse serum (5%), antibiotics and phenol red as an indicator of cell metabolism.' Cowan asks incredulously: 'Did he just say that the culture medium also contained fluids and tissues that are themselves rich sources of genetic material?' The genetic cocktail, or 'medium', is inoculated onto tissue and cells from rhesus monkey *kidney* tissue. This is where the importance of streptomycin comes in and currently-used antimicrobials and other drugs that are *poisonous to kidneys* and used in ALL modern viral cultures (e.g. gentamicin, streptomycin, and amphotericin). Cowan asks: 'How are you ever going to know from this witch's brew where any genetic material comes from as we now have five different sources of rich genetic material in our mix?' Remember, he says, that all genetic material, whether from monkey kidney tissues, bovine serum, milk, etc., is made from the exact same components. The same central question returns: 'How are you possibly going to know that it was the virus that killed the kidney tissue and not the toxic antibiotic and starvation rations on which you are growing the tissue?' John Enders answered the question himself – *you can't*:

A second agent was obtained from an uninoculated culture of monkey kidney cells. The cytopathic changes [death of the cells] it induced in the unstained preparations could not be distinguished with confidence from the viruses isolated from measles.

The death of the cells ('cytopathic changes') happened in exactly the same manner, whether they inoculated the kidney tissue with the measles snot or not, Cowan says. 'This is evidence that the destruction of the tissue, the very proof of viral causation of illness, was not caused by anything in the snot because they saw the same destructive effect when the snot was not even used ... the cytopathic, i.e., cell-killing, changes come from the process of the culture itself, not from any virus in any snot, period.' Enders quotes in his 1957 paper a virologist called Ruckle as reporting similar findings 'and in addition has isolated an agent from monkey kidney tissue that is so

far indistinguishable from human measles virus'. In other words, Cowan says, these particles called 'measles viruses' are simply and clearly breakdown products of the starved and poisoned tissue. For measles 'virus' see all 'viruses' including the so-called 'Covid virus'. Enders, the 'Father of Modern Vaccines', also said:

There is a potential risk in employing cultures of primate cells for the production of vaccines composed of attenuated virus, since the presence of other agents possibly latent in primate tissues cannot be definitely excluded by any known method.

Cowan further quotes from a paper published in the journal *Viruses* in May, 2020, while the 'Covid pandemic' was well underway in the media if not in reality. 'EVs' here refers to particles of genetic debris from our own tissues, such as exosomes of which more in a moment: 'The remarkable resemblance between EVs and viruses has caused quite a few problems in the studies focused on the analysis of EVs released during viral infections.' Later the paper adds that to date a reliable method that can actually guarantee a complete separation (of EVs from viruses) DOES NOT EXIST. This was published at a time when a fairy tale 'virus' was claimed in total certainty to be causing a fairy tale 'viral disease' called 'Covid-19' – a fairy tale that was already well on the way to transforming human society in the image that the Cult has worked to achieve for so long. Cowan concludes his article:

To summarize, there is no scientific evidence that pathogenic viruses exist. What we think of as 'viruses' are simply the normal breakdown products of dead and dying tissues and cells. When we are well, we make fewer of these particles; when we are starved, poisoned, suffocated by wearing masks, or afraid, we make more.

There is no engineered virus circulating and making people sick. People in laboratories all over the world are making genetically modified products to make people sick. These are called vaccines. There is no virome, no 'ecosystem' of viruses, viruses are not 8%, 50% or 100 % of our genetic material. These are all simply erroneous ideas based on the misconception called a virus.

What is 'Covid'? Load of bollocks

The background described here by Cowan and Lanka was emphasised in the first video presentation that I saw by Dr Andrew Kaufman when he asked whether the 'Covid virus' was in truth a natural defence mechanism of the body called 'exosomes'. These are released by cells when in states of toxicity – see the same themes returning over and over. They are released ever more profusely as chemical and radiation toxicity increases and think of the potential effect therefore of 5G alone as its destructive frequencies infest the human energetic information field with a gathering pace (5G went online in Wuhan in 2019 as the 'virus' emerged). I'll have more about this later. Exosomes transmit a warning to the rest of the body that 'Houston, we have a problem'. Kaufman presented images of exosomes and compared them with 'Covid' under an electron microscope and the similarity was remarkable. They both attach to the same cell receptors (*claimed* in the case of 'Covid'), contain the same genetic material in the form of RNA or ribonucleic acid, and both are found in 'viral cell cultures' with damaged or dying cells. James Hildreth MD, President and Chief Executive Officer of the Meharry Medical College at Johns Hopkins, said: 'The virus is fully an exosome in every sense of the word.' Kaufman's conclusion was that there is no 'virus': 'This entire pandemic is a completely manufactured crisis ... there is no evidence of anyone dying from [this] illness.' Dr Tom Cowan and Sally Fallon Morell, authors of *The Contagion Myth*, published a statement with Dr Kaufman in February, 2021, explaining why the 'virus' does not exist and you can read it that in full in the Appendix.

'Virus' theory can be traced to the 'cell theory' in 1858 of German physician Rudolf Virchow (1821-1920) who contended that disease originates from a single cell infiltrated by a 'virus'. Dr Stefan Lanka said that findings and insights with respect to the structure, function and central importance of tissues in the creation of life, which were already known in 1858, comprehensively refute the cell theory. Virchow ignored them. We have seen the part later played by John Enders in the 1950s and Lanka notes that infection theories were only established as a global dogma through the policies and

eugenics of the Third Reich in Nazi Germany (creation of the same Sabbatian cult behind the 'Covid' hoax). Lanka said: 'Before 1933, scientists dared to contradict this theory; after 1933, these critical scientists were silenced'. Dr Tom Cowan's view is that ill-health is caused by too much of something, too little of something, or toxification from chemicals and radiation – not contagion. We must also highlight as a major source of the 'virus' theology a man still called the 'Father of Modern Virology' – Thomas Milton Rivers (1888-1962). There is no way given the Cult's long game policy that it was a coincidence for the 'Father of Modern Virology' to be director of the Rockefeller Institute for Medical Research from 1937 to 1956 when he is credited with making the Rockefeller Institute a leader in 'viral research'. Cult Rockefeller were the force behind the creation of Big Pharma 'medicine', established the World Health Organisation in 1948, and have long and close associations with the Gates family that now runs the WHO during the pandemic hoax through mega-rich Cult gofer and psychopath Bill Gates.

Only a Renegade Mind can see through all this bullshit by asking the questions that need to be answered, not taking 'no' or prevarication for an answer, and certainly not hiding from the truth in fear of speaking it. Renegade Minds have always changed the world for the better and they will change this one no matter how bleak it may currently appear to be.

CHAPTER SIX

Sequence of deceit

If you tell the truth, you don't have to remember anything
Mark Twain

Against the background that I have laid out this far the sequence that took us from an invented 'virus' in Cult-owned China in late 2019 to the fascist transformation of human society can be seen and understood in a whole new context.

We were told that a deadly disease had broken out in Wuhan and the world media began its campaign (coordinated by behavioural psychologists as we shall see) to terrify the population into unquestioning compliance. We were shown images of Chinese people collapsing in the street which never happened in the West with what was supposed to be the same condition. In the earliest days when alleged cases and deaths were few the fear register was hysterical in many areas of the media and this would expand into the common media narrative across the world. The real story was rather different, but we were never told that. The Chinese government, one of the Cult's biggest centres of global operation, said they had discovered a new illness with flu-like and pneumonia-type symptoms in a city with such toxic air that it is overwhelmed with flu-like symptoms, pneumonia and respiratory disease. Chinese scientists said it was a new – 'novel' – coronavirus which they called Sars-Cov-2 and that it caused a disease they labelled 'Covid-19'. There was no evidence for this and the 'virus' has never to this day been isolated, purified and its genetic code established from that. It

was from the beginning a computer-generated fiction. Stories of Chinese whistleblowers saying the number of deaths was being suppressed or that the 'new disease' was related to the Wuhan bio-lab misdirected mainstream and alternative media into cul-de-sacs to obscure the real truth – there was no 'virus'.

Chinese scientists took genetic material from the lung fluid of just a few people and said they had found a 'new' disease when this material had a wide range of content. There was no evidence for a 'virus' for the very reasons explained in the last two chapters. The 'virus' has never been shown to (a) exist and (b) cause any disease. People were diagnosed on symptoms that are so widespread in Wuhan and polluted China and with a PCR test that can't detect infectious disease. On this farce the whole global scam was sold to the rest of the world which would also diagnose respiratory disease as 'Covid-19' from symptoms alone or with a PCR test not testing for a 'virus'. Flu miraculously disappeared *worldwide* in 2020 and into 2021 as it was redesignated 'Covid-19'. It was really the same old flu with its 'flu-like' symptoms attributed to 'flu-like' 'Covid-19'. At the same time with very few exceptions the Chinese response of draconian lockdown and fascism was the chosen weapon to respond across the West as recommended by the Cult-owned Tedros at the Cult-owned World Health Organization run by the Cult-owned Gates. All was going according to plan. Chinese scientists – everything in China is controlled by the Cult-owned government – compared their contaminated RNA lung-fluid material with other RNA sequences and said it appeared to be just under 80 percent identical to the SARS-CoV-1 'virus' claimed to be the cause of the SARS (severe acute respiratory syndrome) 'outbreak' in 2003. They decreed that because of this the 'new virus' had to be related and they called it SARS-CoV-2. There are some serious problems with this assumption and *assumption* was all it was. Most 'factual' science turns out to be assumptions repeated into everyone-knows-that. A match of under 80-percent is meaningless. Dr Kaufman makes the point that there's a 96 percent genetic correlation between humans and chimpanzees, but 'no one would say our genetic material is part

of the chimpanzee family'. Yet the Chinese authorities were claiming that a much lower percentage, less than 80 percent, proved the existence of a new 'coronavirus'. For goodness sake human DNA is 60 percent similar to a *banana*.

You are feeling sleepy

The entire 'Covid' hoax is a global Psyop, a psychological operation to program the human mind into believing and fearing a complete fantasy. A crucial aspect of this was what *appeared* to happen in Italy. It was all very well streaming out daily images of an alleged catastrophe in Wuhan, but to the Western mind it was still on the other side of the world in a very different culture and setting. A reaction of 'this could happen to me and my family' was still nothing like as intense enough for the mind-doctors. The Cult needed a Western example to push people over that edge and it chose Italy, one of its major global locations going back to the Roman Empire. An Italian 'Covid' crisis was manufactured in a particular area called Lombardy which just happens to be notorious for its toxic air and therefore respiratory disease. Wuhan, China, *déjà vu*. An hysterical media told horror stories of Italians dying from 'Covid' in their droves and how Lombardy hospitals were being overrun by a tidal wave of desperately ill people needing treatment after being struck down by the 'deadly virus'. Here was the psychological turning point the Cult had planned. Wow, if this is happening in Italy, the Western mind concluded, this indeed could happen to me and my family. Another point is that Italian authorities responded by following the Chinese blueprint so vehemently recommended by the Cult-owned World Health Organization. They imposed fascistic lockdowns on the whole country viciously policed with the help of surveillance drones sweeping through the streets seeking out anyone who escaped from mass house arrest. Livelihoods were destroyed and psychology unravelled in the way we have witnessed since in all lockdown countries. Crucial to the plan was that Italy responded in this way to set the precedent of suspending freedom and imposing fascism in a 'Western liberal democracy'. I emphasised in an

animated video explanation on davidicke.com posted in the summer of 2020 how important it was to the Cult to expand the Chinese lockdown model across the West. Without this, and the bare-faced lie that non-symptomatic people could still transmit a 'disease' they didn't have, there was no way locking down the whole population, sick and not sick, could be pulled off. At just the right time and with no evidence Cult operatives and gofers claimed that people without symptoms could pass on the 'disease'. In the name of protecting the 'vulnerable' like elderly people, who lockdowns would kill by the tens of thousands, we had for the first time healthy people told to isolate as well as the sick. The great majority of people who tested positive had no symptoms because there was nothing wrong with them. It was just a trick made possible by a test not testing for the 'virus'.

Months after my animated video the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College confirmed that I was right. He didn't say it in those terms, naturally, but he did say it. Ferguson will enter the story shortly for his outrageously crazy 'computer models' that led to Britain, the United States and many other countries following the Chinese and now Italian methods of response. Put another way, following the Cult script. Ferguson said that SAGE, the UK government's scientific advisory group which has controlled 'Covid' policy from the start, wanted to follow the Chinese lockdown model (while they all continued to work and be paid), but they wondered if they could possibly, in Ferguson's words, 'get away with it in Europe'. 'Get away with it'? Who the hell do these moronic, arrogant people think they are? This appalling man Ferguson said that once Italy went into national lockdown they realised they, too, could mimic China:

It's a communist one-party state, we said. We couldn't get away with it in Europe, we thought ... and then Italy did it. And we realised we could. Behind this garbage from Ferguson is a simple fact: Doing the same as China in every country was the plan from the start and Ferguson's 'models' would play a central role in achieving that. It's just a coincidence, of course, and absolutely nothing to worry your little head about.

Oops, sorry, our mistake

Once the Italian segment of the Psyop had done the job it was designed to do a very different story emerged. Italian authorities revealed that 99 percent of those who had 'died from Covid-19' in Italy had one, two, three, or more 'co-morbidities' or illnesses and health problems that could have ended their life. The US Centers for Disease Control and Prevention (CDC) published a figure of 94 percent for Americans dying of 'Covid' while having other serious medical conditions – on average two to three (some five or six) other potential causes of death. In terms of death from an unproven 'virus' I say it is 100 percent. The other one percent in Italy and six percent in the US would presumably have died from 'Covid's' flu-like symptoms with a range of other possible causes in conjunction with a test not testing for the 'virus'. Fox News reported that even more startling figures had emerged in one US county in which 410 of 422 deaths attributed to 'Covid-19' had other potentially deadly health conditions. The Italian National Health Institute said later that the average age of people dying with a 'Covid-19' diagnosis in Italy was about 81. Ninety percent were over 70 with ten percent over 90. In terms of other reasons to die some 80 percent had two or more chronic diseases with half having three or more including cardiovascular problems, diabetes, respiratory problems and cancer. Why is the phantom 'Covid-19' said to kill overwhelmingly old people and hardly affect the young? Old people continually die of many causes and especially respiratory disease which you can re-diagnose 'Covid-19' while young people die in tiny numbers by comparison and rarely of respiratory disease. Old people 'die of Covid' because they die of other things that can be redesignated 'Covid' and it really is that simple.

Flu has flown

The blueprint was in place. Get your illusory 'cases' from a test not testing for the 'virus' and redesignate other causes of death as 'Covid-19'. You have an instant 'pandemic' from something that is nothing more than a computer-generated fiction. With near-on a

billion people having 'flu-like' symptoms every year the potential was limitless and we can see why flu quickly and apparently miraculously disappeared *worldwide* by being diagnosed 'Covid-19'. The painfully bloody obvious was explained away by the childlike media in headlines like this in the UK '*Independent*': 'Not a single case of flu detected by Public Health England this year as Covid restrictions suppress virus'. I kid you not. The masking, social distancing and house arrest that did not make the 'Covid virus' disappear somehow did so with the 'flu virus'. Even worse the article, by a bloke called Samuel Lovett, suggested that maybe the masking, sanitising and other 'Covid' measures should continue to keep the flu away. With a ridiculousness that disturbs your breathing (it's 'Covid-19') the said Lovett wrote: 'With widespread social distancing and mask-wearing measures in place throughout the UK, the usual routes of transmission for influenza have been blocked.' He had absolutely no evidence to support that statement, but look at the consequences of him acknowledging the obvious. With flu not disappearing at all and only being relabelled 'Covid-19' he would have to contemplate that 'Covid' was a hoax on a scale that is hard to imagine. You need guts and commitment to truth to even go there and that's clearly something Samuel Lovett does not have in abundance. He would never have got it through the editors anyway.

Tens of thousands die in the United States alone every winter from flu including many with pneumonia complications. CDC figures record *45 million* Americans diagnosed with flu in 2017-2018 of which 61,000 died and some reports claim 80,000. Where was the same hysteria then that we have seen with 'Covid-19'? Some 250,000 Americans are admitted to hospital with pneumonia every year with about 50,000 cases proving fatal. About 65 million suffer respiratory disease every year and three million deaths makes this the third biggest cause of death worldwide. You only have to redesignate a portion of all these people 'Covid-19' and you have an instant global pandemic or the *appearance* of one. Why would doctors do this? They are told to do this and all but a few dare not refuse those who must be obeyed. Doctors in general are not researching their own

knowledge and instead take it direct and unquestioned from the authorities that own them and their careers. The authorities say they must now diagnose these symptoms 'Covid-19' and not flu, or whatever, and they do it. Dark suits say put 'Covid-19' on death certificates no matter what the cause of death and the doctors do it. Renegade Minds don't fall for the illusion that doctors and medical staff are all highly-intelligent, highly-principled, seekers of medical truth. *Some are*, but not the majority. They are repeaters, gofers, and yes sir, no sir, purveyors of what the system demands they purvey. The 'Covid' con is not merely confined to diseases of the lungs. Instructions to doctors to put 'Covid-19' on death certificates for anyone dying of *anything* within 28 days (or much more) of a positive test not testing for the 'virus' opened the floodgates. The term dying *with* 'Covid' and not *of* 'Covid' was coined to cover the truth. Whether it was a *with* or an *of* they were all added to the death numbers attributed to the 'deadly virus' compiled by national governments and globally by the Gates-funded Johns Hopkins operation in the United States that was so involved in those 'pandemic' simulations. Fraudulent deaths were added to the ever-growing list of fraudulent 'cases' from false positives from a false test. No wonder Professor Walter Ricciardi, scientific advisor to the Italian minister of health, said after the Lombardy hysteria had done its job that 'Covid' death rates were due to Italy having the second oldest population in the world and to *how hospitals record deaths*:

The way in which we code deaths in our country is very generous in the sense that all the people who die in hospitals with the coronavirus are deemed to be dying of the coronavirus. On re-evaluation by the National Institute of Health, only 12 per cent of death certificates have shown a direct causality from coronavirus, while 88 per cent of patients who have died have at least one pre-morbidity – many had two or three.

This is extraordinary enough when you consider the propaganda campaign to use Italy to terrify the world, but how can they even say twelve percent were genuine when the 'virus' has not been shown to exist, its 'code' is a computer program, and diagnosis comes from a test not testing for it? As in China, and soon the world, 'Covid-19' in

Italy was a redesignation of diagnosis. Lies and corruption were to become the real 'pandemic' fuelled by a pathetically-compliant medical system taking its orders from the tiny few at the top of their national hierarchy who answered to the World Health Organization which answers to Gates and the Cult. Doctors were told – ordered – to diagnose a particular set of symptoms 'Covid-19' and put that on the death certificate for any cause of death if the patient had tested positive with a test not testing for the virus or had 'Covid' symptoms like the flu. The United States even introduced big financial incentives to manipulate the figures with hospitals receiving £4,600 from the Medicare system for diagnosing someone with regular pneumonia, \$13,000 if they made the diagnosis from the same symptoms 'Covid-19' pneumonia, and \$39,000 if they put a 'Covid' diagnosed patient on a ventilator that would almost certainly kill them. A few – painfully and pathetically few – medical whistleblowers revealed (before Cult-owned YouTube deleted their videos) that they had been instructed to 'let the patient crash' and put them straight on a ventilator instead of going through a series of far less intrusive and dangerous methods as they would have done before the pandemic hoax began and the financial incentives kicked in. We are talking cold-blooded murder given that ventilators are so damaging to respiratory systems they are usually the last step before heaven awaits. Renegade Minds never fall for the belief that people in white coats are all angels of mercy and cannot be full-on psychopaths. I have explained in detail in *The Answer* how what I am describing here played out across the world coordinated by the World Health Organization through the medical hierarchies in almost every country.

Medical scientist calls it

Information about the non-existence of the 'virus' began to emerge for me in late March, 2020, and mushroomed after that. I was sent an email by Sir Julian Rose, a writer, researcher, and organic farming promotor, from a medical scientist friend of his in the United States. Even at that early stage in March the scientist was able to explain

how the 'Covid' hoax was being manipulated. He said there were no reliable tests for a specific 'Covid-19 virus' and nor were there any reliable agencies or media outlets for reporting numbers of actual 'Covid-19' cases. We have seen in the long period since then that he was absolutely right. 'Every action and reaction to Covid-19 is based on totally flawed data and we simply cannot make accurate assessments,' he said. Most people diagnosed with 'Covid-19' were showing nothing more than cold and flu-like symptoms 'because most coronavirus strains *are* nothing more than cold/flu-like symptoms'. We had farcical situations like an 84-year-old German man testing positive for 'Covid-19' and his nursing home ordered to quarantine only for him to be found to have a common cold. The scientist described back then why PCR tests and what he called the 'Mickey Mouse test kits' were useless for what they were claimed to be identifying. 'The idea these kits can isolate a specific virus like Covid-19 is nonsense,' he said. Significantly, he pointed out that 'if you want to create a totally false panic about a totally false pandemic – pick a coronavirus'. This is exactly what the Cult-owned Gates, World Economic Forum and Johns Hopkins University did with their Event 201 'simulation' followed by their real-life simulation called the 'pandemic'. The scientist said that all you had to do was select the sickest of people with respiratory-type diseases in a single location – 'say Wuhan' – and administer PCR tests to them. You can then claim that anyone showing 'viral sequences' similar to a coronavirus 'which will inevitably be quite a few' is suffering from a 'new' disease:

Since you already selected the sickest flu cases a fairly high proportion of your sample will go on to die. You can then say this 'new' virus has a CFR [case fatality rate] higher than the flu and use this to infuse more concern and do more tests which will of course produce more 'cases', which expands the testing, which produces yet more 'cases' and so on and so on. Before long you have your 'pandemic', and all you have done is use a simple test kit trick to convert the worst flu and pneumonia cases into something new that doesn't ACTUALLY EXIST [my emphasis].

He said that you then 'just run the same scam in other countries' and make sure to keep the fear message running high 'so that people

will feel panicky and less able to think critically'. The only problem to overcome was the fact *there is no* actual new deadly pathogen and only regular sick people. This meant that deaths from the 'new deadly pathogen' were going to be way too low for a real new deadly virus pandemic, but he said this could be overcome in the following ways – all of which would go on to happen:

1. You can claim this is just the beginning and more deaths are imminent [you underpin this with fantasy 'computer projections']. Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.
2. You can [say that people] 'minimizing' the dangers are irresponsible and bully them into not talking about numbers.
3. You can talk crap about made up numbers hoping to blind people with pseudoscience.
4. You can start testing well people (who, of course, will also likely have shreds of coronavirus [RNA] in them) and thus inflate your 'case figures' with 'asymptomatic carriers' (you will of course have to spin that to sound deadly even though any virologist knows the more symptom-less cases you have the less deadly is your pathogen).

The scientist said that if you take these simple steps 'you can have your own entirely manufactured pandemic up and running in weeks'. His analysis made so early in the hoax was brilliantly prophetic of what would actually unfold. Pulling all the information together in these recent chapters we have this is simple 1, 2, 3, of how you can delude virtually the entire human population into believing in a 'virus' that doesn't exist:

- A 'Covid case' is someone who tests positive with a test not testing for the 'virus'.
- A 'Covid death' is someone who dies of *any cause* within 28 days (or much longer) of testing positive with a test not testing for the 'virus'.
- Asymptomatic means there is nothing wrong with you, but they claim you can pass on what you don't have to justify locking

down (quarantining) healthy people in totality.

The foundations of the hoax are that simple. A study involving ten million people in Wuhan, published in November, 2020, demolished the whole lie about those without symptoms passing on the 'virus'. They found '300 asymptomatic cases' and traced their contacts to find that not one of them was detected with the 'virus'.

'Asymptomatic' patients and their contacts were isolated for no less than two weeks and nothing changed. I know it's all crap, but if you are going to claim that those without symptoms can transmit 'the virus' then you must produce evidence for that and they never have. Even World Health Organization official Dr Maria Van Kerkhove, head of the emerging diseases and zoonosis unit, said as early as June, 2020, that she doubted the validity of asymptomatic transmission. She said that 'from the data we have, it still seems to be rare that an asymptomatic person actually transmits onward to a secondary individual' and by 'rare' she meant that she couldn't cite any case of asymptomatic transmission.

The Ferguson factor

The problem for the Cult as it headed into March, 2020, when the script had lockdown due to start, was that despite all the manipulation of the case and death figures they still did not have enough people alleged to have died from 'Covid' to justify mass house arrest. This was overcome in the way the scientist described: 'You can claim this is just the beginning and more deaths are imminent ... Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.' Enter one Professor Neil Ferguson, the Gates-funded 'epidemiologist' at the Gates-funded Imperial College in London. Ferguson is Britain's Christian Drosten in that he has a dire record of predicting health outcomes, but is still called upon to advise government on the next health outcome when another 'crisis' comes along. This may seem to be a strange and ridiculous thing to do. Why would you keep turning for policy guidance to people who have a history of being

monumentally wrong? Ah, but it makes sense from the Cult point of view. These 'experts' keep on producing predictions that suit the Cult agenda for societal transformation and so it was with Neil Ferguson as he revealed his horrific (and clearly insane) computer model predictions that allowed lockdowns to be imposed in Britain, the United States and many other countries. Ferguson does not have even an A-level in biology and would appear to have no formal training in computer modelling, medicine or epidemiology, according to Derek Winton, an MSc in Computational Intelligence. He wrote an article somewhat aghast at what Ferguson did which included taking no account of respiratory disease 'seasonality' which means it is far worse in the winter months. Who would have thought that respiratory disease could be worse in the winter? Well, certainly not Ferguson.

The massively China-connected Imperial College and its bizarre professor provided the excuse for the long-incubated Chinese model of human control to travel westward at lightning speed. Imperial College confirms on its website that it collaborates with the Chinese Research Institute; publishes more than 600 research papers every year with Chinese research institutions; has 225 Chinese staff; 2,600 Chinese students – the biggest international group; 7,000 former students living in China which is the largest group outside the UK; and was selected for a tour by China's President Xi Jinping during his state visit to the UK in 2015. The college takes major donations from China and describes itself as the UK's number one university collaborator with Chinese research institutions. The China communist/fascist government did not appear phased by the woeful predictions of Ferguson and Imperial when during the lockdown that Ferguson induced the college signed a five-year collaboration deal with China tech giant Huawei that will have Huawei's indoor 5G network equipment installed at the college's West London tech campus along with an 'AI cloud platform'. The deal includes Chinese sponsorship of Imperial's Venture Catalyst entrepreneurship competition. Imperial is an example of the enormous influence the Chinese government has within British and North American

universities and research centres – and further afield. Up to 200 academics from more than a dozen UK universities are being investigated on suspicion of ‘unintentionally’ helping the Chinese government build weapons of mass destruction by ‘transferring world-leading research in advanced military technology such as aircraft, missile designs and cyberweapons’. Similar scandals have broken in the United States, but it’s all a coincidence. Imperial College serves the agenda in many other ways including the promotion of every aspect of the United Nations Agenda 21/2030 (the Great Reset) and produced computer models to show that human-caused ‘climate change’ is happening when in the real world it isn’t. Imperial College is driving the climate agenda as it drives the ‘Covid’ agenda (both Cult hoaxes) while Patrick Vallance, the UK government’s Chief Scientific Adviser on ‘Covid’, was named Chief Scientific Adviser to the UN ‘climate change’ conference known as COP26 hosted by the government in Glasgow, Scotland. ‘Covid’ and ‘climate’ are fundamentally connected.

Professor Woeful

From Imperial’s bosom came Neil Ferguson still advising government despite his previous disasters and it was announced early on that he and other key people like UK Chief Medical Adviser Chris Whitty had caught the ‘virus’ as the propaganda story was being sold. Somehow they managed to survive and we had Prime Minister Boris Johnson admitted to hospital with what was said to be a severe version of the ‘virus’ in this same period. His whole policy and demeanour changed when he returned to Downing Street. It’s a small world with these government advisors – especially in their communal connections to Gates – and Ferguson had partnered with Whitty to write a paper called ‘Infectious disease: Tough choices to reduce Ebola transmission’ which involved another scare-story that didn’t happen. Ferguson’s ‘models’ predicted that up to 150,000 could die from ‘mad cow disease’, or BSE, and its version in sheep if it was transmitted to humans. BSE was not transmitted and instead triggered by an organophosphate pesticide used to treat a pest on

cows. Fewer than 200 deaths followed from the human form. Models by Ferguson and his fellow incompetents led to the unnecessary culling of millions of pigs, cattle and sheep in the foot and mouth outbreak in 2001 which destroyed the lives and livelihoods of farmers and their families who had often spent decades building their herds and flocks. Vast numbers of these animals did not have foot and mouth and had no contact with the infection. Another 'expert' behind the cull was Professor Roy Anderson, a computer modeller at Imperial College specialising in the epidemiology of *human*, not animal, disease. Anderson has served on the Bill and Melinda Gates Grand Challenges in Global Health advisory board and chairs another Gates-funded organisation. Gates is everywhere.

In a precursor to the 'Covid' script Ferguson backed closing schools 'for prolonged periods' over the swine flu 'pandemic' in 2009 and said it would affect a third of the world population if it continued to spread at the speed he claimed to be happening. His mates at Imperial College said much the same and a news report said: 'One of the authors, the epidemiologist and disease modeller Neil Ferguson, who sits on the World Health Organisation's emergency committee for the outbreak, said the virus had "full pandemic potential".' Professor Liam Donaldson, the Chris Whitty of his day as Chief Medical Officer, said the worst case could see 30 percent of the British people infected by swine flu with 65,000 dying. Ferguson and Donaldson were indeed proved correct when at the end of the year the number of deaths attributed to swine flu was 392. The term 'expert' is rather liberally applied unfortunately, not least to complete idiots. Swine flu 'projections' were great for GlaxoSmithKline (GSK) as millions rolled in for its Pandemrix influenza vaccine which led to brain damage with children most affected. The British government (taxpayers) paid out more than £60 million in compensation after GSK was given immunity from prosecution. Yet another 'Covid' déjà vu. Swine flu was supposed to have broken out in Mexico, but Dr Wolfgang Wodarg, a German doctor, former member of parliament and critic of the 'Covid' hoax, observed 'the spread of swine flu' in Mexico City at the time. He

said: 'What we experienced in Mexico City was a very mild flu which did not kill more than usual – which killed even fewer people than usual.' Hying the fear against all the facts is not unique to 'Covid' and has happened many times before. Ferguson is reported to have over-estimated the projected death toll of bird flu (H5N1) by some three million-fold, but bird flu vaccine makers again made a killing from the scare. This is some of the background to the Neil Ferguson who produced the perfectly-timed computer models in early 2020 predicting that half a million people would die in Britain without draconian lockdown and 2.2 million in the United States. Politicians panicked, people panicked, and lockdowns of alleged short duration were instigated to 'flatten the curve' of cases gleaned from a test not testing for the 'virus'. I said at the time that the public could forget the 'short duration' bit. This was an agenda to destroy the livelihoods of the population and force them into mass control through dependency and there was going to be nothing 'short' about it. American researcher Daniel Horowitz described the consequences of the 'models' spewed out by Gates-funded Ferguson and Imperial College:

What led our government and the governments of many other countries into panic was a single Imperial College of UK study, funded by global warming activists, that predicted 2.2 million deaths if we didn't lock down the country. In addition, the reported 8-9% death rate in Italy scared us into thinking there was some other mutation of this virus that they got, which might have come here.

Together with the fact that we were finally testing and had the ability to actually report new cases, we thought we were headed for a death spiral. But again ... we can't flatten a curve if we don't know when the curve started.

How about it *never* started?

Giving them what they want

An investigation by German news outlet *Welt Am Sonntag* (*World on Sunday*) revealed how in March, 2020, the German government gathered together 'leading scientists from several research institutes and universities' and 'together, they were to produce a [modelling]

paper that would serve as legitimization for further tough political measures'. The Cult agenda was justified by computer modelling not based on evidence or reality; it was specifically constructed to justify the Cult demand for lockdowns all over the world to destroy the independent livelihoods of the global population. All these modellers and everyone responsible for the 'Covid' hoax have a date with a trial like those in Nuremberg after World War Two when Nazis faced the consequences of their war crimes. These corrupt-beyond-belief 'modellers' wrote the paper according to government instructions and it said that that if lockdown measures were lifted then up to one million Germans would die from 'Covid-19' adding that some would die 'agonizingly at home, gasping for breath' unable to be treated by hospitals that couldn't cope. All lies. No matter – it gave the Cult all that it wanted. What did long-time government 'modeller' Neil Ferguson say? If the UK and the United States didn't lockdown half a million would die in Britain and 2.2 million Americans. Anyone see a theme here? 'Modellers' are such a crucial part of the lockdown strategy that we should look into their background and follow the money. Researcher Rosemary Frei produced an excellent article headlined 'The Modelling-paper Mafiosi'. She highlights a guy called John Edmunds, a British epidemiologist, and professor in the Faculty of Epidemiology and Population Health at the London School of Hygiene & Tropical Medicine. He studied at Imperial College. Edmunds is a member of government 'Covid' advisory bodies which have been dictating policy, the New and Emerging Respiratory Virus Threats Advisory Group (NERVTAG) and the Scientific Advisory Group for Emergencies (SAGE).

Ferguson, another member of NERVTAG and SAGE, led the way with the original 'virus' and Edmunds has followed in the 'variant' stage and especially the so-called UK or Kent variant known as the 'Variant of Concern' (VOC) B.1.1.7. He said in a co-written report for the Centre for Mathematical modelling of Infectious Diseases at the London School of Hygiene and Tropical Medicine, with input from the Centre's 'Covid-19' Working Group, that there was 'a realistic

possibility that VOC B.1.1.7 is associated with an increased risk of death compared to non-VOC viruses'. Fear, fear, fear, get the vaccine, fear, fear, fear, get the vaccine. Rosemary Frei reveals that almost all the paper's authors and members of the modelling centre's 'Covid-19' Working Group receive funding from the Bill and Melinda Gates Foundation and/or the associated Gates-funded Wellcome Trust. The paper was published by e-journal *Medrx* *xiv* which only publishes papers not peer-reviewed and the journal was established by an organisation headed by Facebook's Mark Zuckerberg and his missus. What a small world it is. Frei discovered that Edmunds is on the Scientific Advisory Board of the Coalition for Epidemic Preparedness Innovations (CEPI) which was established by the Bill and Melinda Gates Foundation, Klaus Schwab's Davos World Economic Forum and Big Pharma giant Wellcome. CEPI was 'launched in Davos [in 2017] to develop vaccines to stop future epidemics', according to its website. 'Our mission is to accelerate the development of vaccines against emerging infectious diseases and enable equitable access to these vaccines for people during outbreaks.' What kind people they are. Rosemary Frei reveals that Public Health England (PHE) director Susan Hopkins is an author of her organisation's non-peer-reviewed reports on 'new variants'. Hopkins is a professor of infectious diseases at London's Imperial College which is gifted tens of millions of dollars a year by the Bill and Melinda Gates Foundation. Gates-funded modelling disaster Neil Ferguson also co-authors Public Health England reports and he spoke in December, 2020, about the potential danger of the B.1.1.7. 'UK variant' promoted by Gates-funded modeller John Edmunds. When I come to the 'Covid vaccines' the 'new variants' will be shown for what they are – bollocks.

Connections, connections

All these people and modellers are lockdown-obsessed or, put another way, they demand what the Cult demands. Edmunds said in January, 2021, that to ease lockdowns too soon would be a disaster and they had to 'vaccinate much, much, much more widely than the

elderly'. Rosemary Frei highlights that Edmunds is married to Jeanne Pimenta who is described in a LinkedIn profile as director of epidemiology at GlaxoSmithKline (GSK) and she held shares in the company. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of GSK and has a deferred bonus of shares in the company worth £600,000. GSK has serious business connections with Bill Gates and is collaborating with mRNA-'vaccine' company CureVac to make 'vaccines' for the new variants that Edmunds is talking about. GSK is planning a 'Covid vaccine' with drug giant Sanofi. Puppets Prime Minister Boris Johnson announced in the spring of 2021 that up to 60 million vaccine doses were to be made at the GSK facility at Barnard Castle in the English North East. Barnard Castle, with a population of just 6,000, was famously visited in breach of lockdown rules in April, 2020, by Johnson aide Dominic Cummings who said that he drove there 'to test his eyesight' before driving back to London. Cummings would be better advised to test his integrity – not that it would take long. The GSK facility had nothing to do with his visit then although I'm sure Patrick Vallance would have been happy to arrange an introduction and some tea and biscuits. Ruthless psychopath Gates has made yet another fortune from vaccines in collaboration with Big Pharma companies and gushes at the phenomenal profits to be made from vaccines – more than a 20-to-1 return as he told one interviewer. Gates also tweeted in December, 2019, with the foreknowledge of what was coming: 'What's next for our foundation? I'm particularly excited about what the next year could mean for one of the best buys in global health: vaccines.'

Modeller John Edmunds is a big promoter of vaccines as all these people appear to be. He's the dean of the London School of Hygiene & Tropical Medicine's Faculty of Epidemiology and Population Health which is primarily funded by the Bill and Melinda Gates Foundation and the Gates-established and funded GAVI vaccine alliance which is the Gates vehicle to vaccinate the world. The organisation Doctors Without Borders has described GAVI as being 'aimed more at supporting drug-industry desires to promote new

products than at finding the most efficient and sustainable means for fighting the diseases of poverty'. But then that's why the psychopath Gates created it. John Edmunds said in a video that the London School of Hygiene & Tropical Medicine is involved in every aspect of vaccine development including large-scale clinical trials. He contends that mathematical modelling can show that vaccines protect individuals and society. That's on the basis of shit in and shit out, I take it. Edmunds serves on the UK Vaccine Network as does Ferguson and the government's foremost 'Covid' adviser, the grim-faced, dark-eyed Chris Whitty. The Vaccine Network says it works 'to support the government to identify and shortlist targeted investment opportunities for the most promising vaccines and vaccine technologies that will help combat infectious diseases with epidemic potential, and to address structural issues related to the UK's broader vaccine infrastructure'. Ferguson is acting Director of the Imperial College Vaccine Impact Modelling Consortium which has funding from the Bill and Melina Gates Foundation and the Gates-created GAVI 'vaccine alliance'. Anyone wonder why these characters see vaccines as the answer to every problem? Ferguson is wildly enthusiastic in his support for GAVI's campaign to vaccinate children en masse in poor countries. You would expect someone like Gates who has constantly talked about the need to reduce the population to want to fund vaccines to keep more people alive. I'm sure that's why he does it. The John Edmunds London School of Hygiene & Tropical Medicine (LSHTM) has a Vaccines Manufacturing Innovation Centre which develops, tests and commercialises vaccines. Rosemary Frei writes:

The vaccines centre also performs affiliated activities like combating 'vaccine hesitancy'. The latter includes the Vaccine Confidence Project. The project's stated purpose is, among other things, 'to provide analysis and guidance for early response and engagement with the public to ensure sustained confidence in vaccines and immunisation'. The Vaccine Confidence Project's director is LSHTM professor Heidi Larson. For more than a decade she's been researching how to combat vaccine hesitancy.

How the bloody hell can blokes like John Edmunds and Neil Ferguson with those connections and financial ties model 'virus' case

and death projections for the government and especially in a way that gives their paymasters like Gates exactly what they want? It's insane, but this is what you find throughout the world.

'Covid' is not dangerous, oops, wait, yes it is

Only days before Ferguson's nightmare scenario made Jackboot Johnson take Britain into a China-style lockdown to save us from a deadly 'virus' the UK government website gov.uk was reporting something very different to Ferguson on a page of official government guidance for 'high consequence infectious diseases (HCID)'. It said this about 'Covid-19':

As of 19 March 2020, COVID-19 is no longer considered to be a high consequence infectious diseases (HCID) in the UK [my emphasis]. The 4 nations public health HCID group made an interim recommendation in January 2020 to classify COVID-19 as an HCID. This was based on consideration of the UK HCID criteria about the virus and the disease with information available during the early stages of the outbreak.

Now that more is known about COVID-19, the public health bodies in the UK have reviewed the most up to date information about COVID-19 against the UK HCID criteria. They have determined that several features have now changed; in particular, more information is available about mortality rates (low overall), and there is now greater clinical awareness and a specific and sensitive laboratory test, the availability of which continues to increase. The Advisory Committee on Dangerous Pathogens (ACDP) is also of the opinion that COVID-19 should no longer be classified as an HCID.

Soon after the government had been exposed for downgrading the risk they upgraded it again and everyone was back to singing from the same Cult hymn book. Ferguson and his fellow Gates clones indicated that lockdowns and restrictions would have to continue until a Gates-funded vaccine was developed. Gates said the same because Ferguson and his like were repeating the Gates script which is the Cult script. 'Flatten the curve' became an ongoing nightmare of continuing lockdowns with periods in between of severe restrictions in pursuit of destroying independent incomes and had nothing to do with protecting health about which the Cult gives not a shit. Why wouldn't Ferguson be pushing a vaccine 'solution' when he's owned by vaccine-obsessive Gates who makes a fortune from them and

when Ferguson heads the Vaccine Impact Modelling Consortium at Imperial College funded by the Gates Foundation and GAVI, the 'vaccine alliance', created by Gates as his personal vaccine promotion operation? To compound the human catastrophe that Ferguson's 'models' did so much to create he was later exposed for breaking his own lockdown rules by having sexual liaisons with his married girlfriend Antonia Staats at his home while she was living at another location with her husband and children. Staats was a 'climate' activist and senior campaigner at the Soros-funded Avaaz which I wouldn't trust to tell me that grass is green. Ferguson had to resign as a government advisor over this hypocrisy in May, 2020, but after a period of quiet he was back being quoted by the ridiculous media on the need for more lockdowns and a vaccine rollout. Other government-advising 'scientists' from Imperial College held the fort in his absence and said lockdown could be indefinite until a vaccine was found. The Cult script was being sung by the payrolled choir. I said there was no intention of going back to 'normal' when the 'vaccine' came because the 'vaccine' is part of a very different agenda that I will discuss in Human 2.0. Why would the Cult want to let the world go back to normal when destroying that normal forever was the whole point of what was happening? House arrest, closing businesses and schools through lockdown, (un)social distancing and masks all followed the Ferguson fantasy models. Again as I predicted (these people are so predictable) when the 'vaccine' arrived we were told that house arrest, lockdown, (un)social distancing and masks would still have to continue. I will deal with the masks in the next chapter because they are of fundamental importance.

Where's the 'pandemic'?

Any mildly in-depth assessment of the figures revealed what was really going on. Cult-funded and controlled organisations still have genuine people working within them such is the number involved. So it is with Genevieve Briand, assistant program director of the Applied Economics master's degree program at Johns Hopkins

University. She analysed the impact that 'Covid-19' had on deaths from *all* causes in the United States using official data from the CDC for the period from early February to early September, 2020. She found that allegedly 'Covid' *related*-deaths exceeded those from heart disease which she found strange with heart disease always the biggest cause of fatalities. Her research became even more significant when she noted the sudden decline in 2020 of *all* non-'Covid' deaths: 'This trend is completely contrary to the pattern observed in all previous years ... the total decrease in deaths by other causes almost exactly equals the increase in deaths by Covid-19.' This was such a game, set and match in terms of what was happening that Johns Hopkins University deleted the article on the grounds that it 'was being used to support false and dangerous inaccuracies about the impact of the pandemic'. No – because it exposed the scam from official CDC figures and this was confirmed when those figures were published in January, 2021. Here we can see the effect of people dying from heart attacks, cancer, road accidents and gunshot wounds – *anything* – having 'Covid-19' on the death certificate along with those diagnosed from 'symptoms' who had even not tested positive with a test not testing for the 'virus'. I am not kidding with the gunshot wounds, by the way. Brenda Bock, coroner in Grand County, Colorado, revealed that two gunshot victims tested positive for the 'virus' within the previous 30 days and were therefore classified as 'Covid deaths'. Bock said: 'These two people had tested positive for Covid, but that's not what killed them. A gunshot wound is what killed them.' She said she had not even finished her investigation when the state listed the gunshot victims as deaths due to the 'virus'. The death and case figures for 'Covid-19' are an absolute joke and yet they are repeated like parrots by the media, politicians and alleged medical 'experts'. The official Cult narrative is the only show in town.

Genevieve Briand found that deaths from all causes were not exceptional in 2020 compared with previous years and a Spanish magazine published figures that said the same about Spain which was a 'Covid' propaganda hotspot at one point. *Discovery Salud*, a

health and medicine magazine, quoted government figures which showed how 17,000 *fewer* people died in Spain in 2020 than in 2019 and more than 26,000 fewer than in 2018. The age-standardised mortality rate for England and Wales when age distribution is taken into account was significantly lower in 2020 than the 1970s, 80s and 90s, and was only the ninth highest since 2000. Where is the 'pandemic'?

Post mortems and autopsies virtually disappeared for 'Covid' deaths amid claims that 'virus-infected' bodily fluids posed a risk to those carrying out the autopsy. This was rejected by renowned German pathologist and forensic doctor Klaus Püschel who said that he and his staff had by then done 150 autopsies on 'Covid' patients with no problems at all. He said they were needed to know why some 'Covid' patients suffered blood clots and not severe respiratory infections. The 'virus' is, after all, called SARS or 'severe acute respiratory syndrome'. I highlighted in the spring of 2020 this phenomenon and quoted New York intensive care doctor Cameron Kyle-Sidell who posted a soon deleted YouTube video to say that they had been told to prepare to treat an infectious disease called 'Covid-19', but that was not what they were dealing with. Instead he likened the lung condition of the most severely ill patients to what you would expect with cabin depressurisation in a plane at 30,000 feet or someone dropped on the top of Everest without oxygen or acclimatisation. I have never said this is not happening to a small minority of alleged 'Covid' patients – I am saying this is not caused by a phantom 'contagious virus'. Indeed Kyle-Sidell said that 'Covid-19' was not the disease they were told was coming their way. 'We are operating under a medical paradigm that is untrue,' he said, and he believed they were treating the wrong disease: 'These people are being slowly starved of oxygen.' Patients would take off their oxygen masks in a state of fear and stress and while they were blue in the face on the brink of death. They did not look like patients dying of pneumonia. You can see why they don't want autopsies when their virus doesn't exist and there is another condition in some people that they don't wish to be uncovered. I should add here that

the 5G system of millimetre waves was being rapidly introduced around the world in 2020 and even more so now as they fire 5G at the Earth from satellites. At 60 gigahertz within the 5G range that frequency interacts with the oxygen molecule and stops people breathing in sufficient oxygen to be absorbed into the bloodstream. They are installing 5G in schools and hospitals. The world is not mad or anything. 5G can cause major changes to the lungs and blood as I detail in *The Answer* and these consequences are labelled 'Covid-19', the alleged symptoms of which can be caused by 5G and other electromagnetic frequencies as cells respond to radiation poisoning.

The 'Covid death' scam

Dr Scott Jensen, a Minnesota state senator and medical doctor, exposed 'Covid' Medicare payment incentives to hospitals and death certificate manipulation. He said he was sent a seven-page document by the US Department of Health 'coaching' him on how to fill out death certificates which had never happened before. The document said that he didn't need to have a laboratory test for 'Covid-19' to put that on the death certificate and that shocked him when death certificates are supposed to be about facts. Jensen described how doctors had been 'encouraged, if not pressured' to make a diagnosis of 'Covid-19' if they thought it was probable or '*presumed*'. No positive test was necessary – not that this would have mattered anyway. He said doctors were told to diagnose 'Covid' by symptoms when these were the same as colds, allergies, other respiratory problems, and certainly with influenza which 'disappeared' in the 'Covid' era. A common sniffle was enough to get the dreaded verdict. Ontario authorities decreed that a single care home resident with *one* symptom from a long list must lead to the isolation of the entire home. Other courageous doctors like Jensen made the same point about death figure manipulation and how deaths by other causes were falling while 'Covid-19 deaths' were rising at the same rate due to re-diagnosis. Their videos rarely survive long on YouTube with its Cult-supporting algorithms courtesy of CEO Susan Wojcicki and her bosses at Google. Figure-tampering was so glaring

and ubiquitous that even officials were letting it slip or outright saying it. UK chief scientific adviser Patrick Vallance said on one occasion that 'Covid' on the death certificate doesn't mean 'Covid' was the cause of death (so why the hell is it there?) and we had the rare sight of a BBC reporter telling the truth when she said: 'Someone could be successfully treated for Covid, in say April, discharged, and then in June, get run over by a bus and die ... That person would still be counted as a Covid death in England.' Yet the BBC and the rest of the world media went on repeating the case and death figures as if they were real. Illinois Public Health Director Dr Ngozi Ezike revealed the deceit while her bosses must have been clenching their buttocks:

If you were in a hospice and given a few weeks to live and you were then found to have Covid that would be counted as a Covid death. [There might be] a clear alternate cause, but it is still listed as a Covid death. So everyone listed as a Covid death doesn't mean that was the cause of the death, but that they had Covid at the time of death.

Yes, a 'Covid virus' never shown to exist and tested for with a test not testing for the 'virus'. In the first period of the pandemic hoax through the spring of 2020 the process began of designating almost everything a 'Covid' death and this has continued ever since. I sat in a restaurant one night listening to a loud conversation on the next table where a family was discussing in bewilderment how a relative who had no symptoms of 'Covid', and had died of a long-term problem, could have been diagnosed a death by the 'virus'. I could understand their bewilderment. If they read this book they will know why this medical fraud has been perpetrated the world over.

Some media truth shock

The media ignored the evidence of death certificate fraud until eventually one columnist did speak out when she saw it first-hand. Bel Mooney is a long-time national newspaper journalist in Britain currently working for the *Daily Mail*. Her article on February 19th, 2021, carried this headline: 'My dad Ted passed three Covid tests

and died of a chronic illness yet he's officially one of Britain's 120,000 victims of the virus and is far from alone ... so how many more are there?' She told how her 99-year-old father was in a care home with a long-standing chronic obstructive pulmonary disease and vascular dementia. Maybe, but he was still aware enough to tell her from the start that there was no 'virus' and he refused the 'vaccine' for that reason. His death was not unexpected given his chronic health problems and Mooney said she was shocked to find that 'Covid-19' was declared the cause of death on his death certificate. She said this was a 'bizarre and unacceptable untruth' for a man with long-time health problems who had tested negative twice at the home for the 'virus'. I was also shocked by this story although not by what she said. I had been highlighting the death certificate manipulation for ten months. It was the confirmation that a professional full-time journalist only realised this was going on when it affected her directly and neither did she know that whether her dad tested positive or negative was irrelevant with the test not testing for the 'virus'. Where had she been? She said she did not believe in 'conspiracy theories' without knowing I'm sure that this and 'conspiracy theorists' were terms put into widespread circulation by the CIA in the 1960s to discredit those who did not accept the ridiculous official story of the Kennedy assassination. A blanket statement of 'I don't believe in conspiracy theories' is always bizarre. The dictionary definition of the term alone means the world is drowning in conspiracies. What she said was even more daft when her dad had just been affected by the 'Covid' conspiracy. Why else does she think that 'Covid-19' was going on the death certificates of people who died of something else?

To be fair once she saw from personal experience what was happening she didn't mince words. Mooney was called by the care home on the morning of February 9th to be told her father had died in his sleep. When she asked for the official cause of death what came back was 'Covid-19'. Mooney challenged this and was told there had been deaths from Covid on the dementia floor (confirmed by a test not testing for the 'virus') so they considered it 'reasonable

to assume'. 'But doctor,' Mooney rightly protested, 'an assumption isn't a diagnosis.' She said she didn't blame the perfectly decent and sympathetic doctor – 'he was just doing his job'. Sorry, but that's *bullshit*. He wasn't doing his job at all. He was putting a false cause of death on the death certificate and that is a criminal offence for which he should be brought to account and the same with the millions of doctors worldwide who have done the same. They were not doing their job they were following orders and that must not wash at new Nuremberg trials any more than it did at the first ones. Mooney's doctor was 'assuming' (presuming) as he was told to, but 'just following orders' makes no difference to his actions. A doctor's job is to serve the patient and the truth, not follow orders, but that's what they have done all over the world and played a central part in making the 'Covid' hoax possible with all its catastrophic consequences for humanity. Shame on them and they must answer for their actions. Mooney said her disquiet worsened when she registered her father's death by telephone and was told by the registrar there had been very many other cases like hers where 'the deceased' had not tested positive for 'Covid' yet it was recorded as the cause of death. The test may not matter, but those involved at their level *think* it matters and it shows a callous disregard for accurate diagnosis. The pressure to do this is coming from the top of the national 'health' pyramids which in turn obey the World Health Organization which obeys Gates and the Cult. Mooney said the registrar agreed that this must distort the national figures adding that 'the strangest thing is that every winter we record countless deaths from flu, and this winter there have been none. Not one!' She asked if the registrar thought deaths from flu were being misdiagnosed and lumped together with 'Covid' deaths. The answer was a 'puzzled yes'. Mooney said that the funeral director said the same about 'Covid' deaths which had nothing to do with 'Covid'. They had lost count of the number of families upset by this and other funeral companies in different countries have had the same experience. Mooney wrote:

The nightly shroud-waving and shocking close-ups of pain imposed on us by the TV news bewildered and terrified the population into eager compliance with lockdowns. We were invited to 'save the NHS' and to grieve for strangers – the real-life loved ones behind those shocking death counts. Why would the public imagine what I now fear, namely that the way Covid-19 death statistics are compiled might make the numbers seem greater than they are?

Oh, just a little bit – like 100 percent.

Do the maths

Mooney asked why a country would wish to skew its mortality figures by wrongly certifying deaths? What had been going on? Well, if you don't believe in conspiracies you will never find the answer which is that *it's a conspiracy*. She did, however, describe what she had discovered as a 'national scandal'. In reality it's a global scandal and happening everywhere. Pillars of this conspiracy were all put into place before the button was pressed with the Drosten PCR protocol and high amplifications to produce the cases and death certificate changes to secure illusory 'Covid' deaths. Mooney notes that normally two doctors were needed to certify a death, with one having to know the patient, and how the rules were changed in the spring of 2020 to allow one doctor to do this. In the same period 'Covid deaths' were decreed to be all cases where Covid-19 was put on the death certificate even without a positive test or any symptoms. Mooney asked: 'How many of the 30,851 (as of January 15) care home resident deaths with Covid-19 on the certificate (32.4 per cent of all deaths so far) were based on an assumption, like that of my father? And what has that done to our national psyche?' All of them is the answer to the first question and it has devastated and dismantled the national psyche, actually the global psyche, on a colossal scale. In the UK case and death data is compiled by organisations like Public Health England (PHE) and the Office for National Statistics (ONS). Mooney highlights the insane policy of counting a death from any cause as 'Covid-19' if this happens within 28 days of a positive test (with a test not testing for the 'virus') and she points out that ONS statistics reflect deaths 'involving Covid' 'or due to Covid' which meant in practice any

death where 'Covid-19' was mentioned on the death certificate. She described the consequences of this fraud:

Most people will accept the narrative they are fed, so panicky governments here and in Europe witnessed the harsh measures enacted in totalitarian China and jumped into lockdown. Headlines about Covid deaths tolled like the knell that would bring doomsday to us all. Fear stalked our empty streets. Politicians parroted the frankly ridiculous aim of 'zero Covid' and shut down the economy, while most British people agreed that lockdown was essential and (astonishingly to me, as a patriotic Brit) even wanted more restrictions.

For what? Lies on death certificates? Never mind the grim toll of lives ruined, suicides, schools closed, rising inequality, depression, cancelled hospital treatments, cancer patients in a torture of waiting, poverty, economic devastation, loneliness, families kept apart, and so on. How many lives have been lost as a direct result of lockdown?

She said that we could join in a national chorus of shock and horror at reaching the 120,000 death toll which was surely certain to have been totally skewed all along, but what about the human cost of lockdown justified by these 'death figures'? *The British Medical Journal* had reported a 1,493 percent increase in cases of children taken to Great Ormond Street Hospital with abusive head injuries alone and then there was the effect on families:

Perhaps the most shocking thing about all this is that families have been kept apart – and obeyed the most irrational, changing rules at the whim of government – because they believed in the statistics. They succumbed to fear, which his generation rejected in that war fought for freedom. Dad (God rest his soul) would be angry. And so am I.

Another theme to watch is that in the winter months when there are more deaths from all causes they focus on 'Covid' deaths and in the summer when the British Lung Foundation says respiratory disease plummets by 80 percent they rage on about 'cases'. Either way fascism on population is always the answer.

Nazi eugenics in the 21st century

Elderly people in care homes have been isolated from their families month after lonely month with no contact with relatives and grandchildren who were banned from seeing them. We were told

that lockdown fascism was to 'protect the vulnerable' like elderly people. At the same time Do Not Resuscitate (DNR) orders were placed on their medical files so that if they needed resuscitation it wasn't done and 'Covid-19' went on their death certificates. Old people were not being 'protected' they were being culled – murdered in truth. DNR orders were being decreed for disabled and young people with learning difficulties or psychological problems. The UK Care Quality Commission, a non-departmental body of the Department of Health and Social Care, found that 34 percent of those working in health and social care were pressured into placing 'do not attempt cardiopulmonary resuscitation' orders on 'Covid' patients who suffered from disabilities and learning difficulties without involving the patient or their families in the decision. UK judges ruled that an elderly woman with dementia should have the DNA-manipulating 'Covid vaccine' against her son's wishes and that a man with severe learning difficulties should have the job despite his family's objections. Never mind that many had already died. The judiciary always supports doctors and government in fascist dictatorships. They wouldn't dare do otherwise. A horrific video was posted showing fascist officers from Los Angeles police forcibly giving the 'Covid' shot to women with special needs who were screaming that they didn't want it. The same fascists are seen giving the jab to a sleeping elderly woman in a care home. This is straight out of the Nazi playbook. Hitler's Nazis committed mass murder of the mentally ill and physically disabled throughout Germany and occupied territories in the programme that became known as Aktion T4, or just T4. Sabbatian-controlled Hitler and his grotesque crazies set out to kill those they considered useless and unnecessary. The Reich Committee for the Scientific Registering of Hereditary and Congenital Illnesses registered the births of babies identified by physicians to have 'defects'. By 1941 alone more than 5,000 children were murdered by the state and it is estimated that in total the number of innocent people killed in Aktion T4 was between 275,000 and 300,000. Parents were told their children had been sent away for 'special treatment' never to return. It is rather pathetic to see claims about plans for new extermination camps being dismissed today

when the same force behind current events did precisely that 80 years ago. Margaret Sanger was a Cult operative who used 'birth control' to sanitise her programme of eugenics. Organisations she founded became what is now Planned Parenthood. Sanger proposed that 'the whole dysgenic population would have its choice of segregation or sterilization'. These included epileptics, 'feeble-minded', and prostitutes. Sanger opposed charity because it perpetuated 'human waste'. She reveals the Cult mentality and if anyone thinks that extermination camps are a 'conspiracy theory' their naivety is touching if breathtakingly stupid.

If you don't believe that doctors can act with callous disregard for their patients it is worth considering that doctors and medical staff agreed to put government-decreed DNR orders on medical files and do nothing when resuscitation is called for. I don't know what you call such people in your house. In mine they are Nazis from the Josef Mengele School of Medicine. Phenomenal numbers of old people have died worldwide from the effects of lockdown, depression, lack of treatment, the 'vaccine' (more later) and losing the will to live. A common response at the start of the manufactured pandemic was to remove old people from hospital beds and transfer them to nursing homes. The decision would result in a mass cull of elderly people in those homes through lack of treatment – *not* 'Covid'. Care home whistleblowers have told how once the 'Covid' era began doctors would not come to their homes to treat patients and they were begging for drugs like antibiotics that often never came. The most infamous example was ordered by New York governor Andrew Cuomo, brother of a moronic CNN host, who amazingly was given an Emmy Award for his handling of the 'Covid crisis' by the ridiculous Wokers that hand them out. Just how ridiculous could be seen in February, 2021, when a Department of Justice and FBI investigation began into how thousands of old people in New York died in nursing homes after being discharged from hospital to make way for 'Covid' patients on Cuomo's say-so – and how he and his staff covered up these facts. This couldn't have happened to a nicer psychopath. Even then there was a 'Covid' spin. Reports said that

thousands of old people who tested positive for 'Covid' in hospital were transferred to nursing homes to both die of 'Covid' and transmit it to others. No – they were in hospital because they were ill and the fact that they tested positive with a test not testing for the 'virus' is irrelevant. They were ill often with respiratory diseases ubiquitous in old people near the end of their lives. Their transfer out of hospital meant that their treatment stopped and many would go on to die.

They're old. Who gives a damn?

I have exposed in the books for decades the Cult plan to cull the world's old people and even to introduce at some point what they call a 'demise pill' which at a certain age everyone would take and be out of here by law. In March, 2021, Spain legalised euthanasia and assisted suicide following the Netherlands, Belgium, Luxembourg and Canada on the Tiptoe to the demise pill. Treatment of old people by many 'care' homes has been a disgrace in the 'Covid' era. There are many, many, caring staff – I know some. There have, however, been legions of stories about callous treatment of old people and their families. Police were called when families came to take their loved ones home in the light of isolation that was killing them. They became prisoners of the state. Care home residents in insane, fascist Ontario, Canada, were not allowed to leave their *room* once the 'Covid' hoax began. UK staff have even wheeled elderly people away from windows where family members were talking with them. Oriana Criscuolo from Stockport in the English North West dropped off some things for her 80-year-old father who has Parkinson's disease and dementia and she wanted to wave to him through a ground-floor window. She was told that was 'illegal'. When she went anyway they closed the curtains in the middle of the day. Oriana said:

It's just unbelievable. I cannot understand how care home staff – people who are being paid to care – have become so uncaring. Their behaviour is inhumane and cruel. It's beyond belief.

She was right and this was not a one-off. What a way to end your life in such loveless circumstances. UK registered nurse Nicky Millen, a proper old school nurse for 40 years, said that when she started her career care was based on dignity, choice, compassion and empathy. Now she said 'the things that are important to me have gone out of the window.' She was appalled that people were dying without their loved ones and saying goodbye on iPads. Nicky described how a distressed 89-year-old lady stroked her face and asked her 'how many paracetamol would it take to finish me off'. Life was no longer worth living while not seeing her family. Nicky said she was humiliated in front of the ward staff and patients for letting the lady stroke her face and giving her a cuddle. Such is the dehumanisation that the 'Covid' hoax has brought to the surface. Nicky worked in care homes where patients told her they were being held prisoner. 'I want to live until I die', one said to her. 'I had a lady in tears because she hadn't seen her great-grandson.' Nicky was compassionate old school meeting psychopathic New Normal. She also said she had worked on a 'Covid' ward with no 'Covid' patients. Jewish writer Shai Held wrote an article in March, 2020, which was headlined 'The Staggering, Heartless Cruelty Toward the Elderly'. What he described was happening from the earliest days of lockdown. He said 'the elderly' were considered a group and not unique individuals (the way of the Woke). Shai Held said:

Notice how the all-too-familiar rhetoric of dehumanization works: 'The elderly' are bunched together as a faceless mass, all of them considered culprits and thus effectively deserving of the suffering the pandemic will inflict upon them. Lost entirely is the fact that the elderly are individual human beings, each with a distinctive face and voice, each with hopes and dreams, memories and regrets, friendships and marriages, loves lost and loves sustained.

'The elderly' have become another dehumanised group for which anything goes and for many that has resulted in cold disregard for their rights and their life. The distinctive face that Held talks about is designed to be deleted by masks until everyone is part of a faceless mass.

'War-zone' hospitals myth

Again and again medical professionals have told me what was really going on and how hospitals 'overrun like war zones' according to the media were virtually empty. The mantra from medical whistleblowers was please don't use my name or my career is over. Citizen journalists around the world sneaked into hospitals to film evidence exposing the 'war-zone' lie. They really *were* largely empty with closed wards and operating theatres. I met a hospital worker in my town on the Isle of Wight during the first lockdown in 2020 who said the only island hospital had never been so quiet. Lockdown was justified by the psychopaths to stop hospitals being overrun. At the same time that the island hospital was near-empty the military arrived here to provide *extra beds*. It was all propaganda to ramp up the fear to ensure compliance with fascism as were never-used temporary hospitals with thousands of beds known as Nightingales and never-used make-shift mortuaries opened by the criminal UK government. A man who helped to install those extra island beds attributed to the army said they were never used and the hospital was empty. Doctors and nurses 'stood around talking or on their phones, wandering down to us to see what we were doing'. There were no masks or social distancing. He accused the useless local island paper, the *County Press*, of 'pumping the fear as if our hospital was overrun and we only have one so it should have been'. He described ambulances parked up with crews outside in deck chairs. When his brother called an ambulance he was told there was a two-hour backlog which he called 'bullshit'. An old lady on the island fell 'and was in a bad way', but a caller who rang for an ambulance was told the situation wasn't urgent enough. Ambulance stations were working under capacity while people would hear ambulances with sirens blaring driving through the streets. When those living near the stations realised what was going on they would follow them as they left, circulated around an urban area with the sirens going, and then came back without stopping. All this was to increase levels of fear and the same goes for the 'ventilator shortage crisis' that cost tens of millions for hastily produced ventilators never to be used.

Ambulance crews that agreed to be exploited in this way for fear propaganda might find themselves a mirror. I wish them well with that. Empty hospitals were the obvious consequence of treatment and diagnoses of non-'Covid' conditions cancelled and those involved handed a death sentence. People have been dying at home from undiagnosed and untreated cancer, heart disease and other life-threatening conditions to allow empty hospitals to deal with a 'pandemic' that wasn't happening.

Death of the innocent

'War-zones' have been laying off nursing staff, even doctors where they can. There was no work for them. Lockdown was justified by saving lives and protecting the vulnerable they were actually killing with DNR orders and preventing empty hospitals being 'overrun'. In Britain the mantra of stay at home to 'save the NHS' was everywhere and across the world the same story was being sold when it was all lies. Two California doctors, Dan Erickson and Artin Massihi at Accelerated Urgent Care in Bakersfield, held a news conference in April, 2020, to say that intensive care units in California were 'empty, essentially', with hospitals shutting floors, not treating patients and laying off doctors. The California health system was working at minimum capacity 'getting rid of doctors because we just don't have the volume'. They said that people with conditions such as heart disease and cancer were not coming to hospital out of fear of 'Covid-19'. Their video was deleted by Susan Wojcicki's Cult-owned YouTube after reaching five million views. Florida governor Ron Desantis, who rejected the severe lockdowns of other states and is being targeted for doing so, said that in March, 2020, every US governor was given models claiming they would run out of hospital beds in days. That was never going to happen and the 'modellers' knew it. Deceit can be found at every level of the system. Urgent children's operations were cancelled including fracture repairs and biopsies to spot cancer. Eric Nicholls, a consultant paediatrician, said 'this is obviously concerning and we need to return to normal operating and to increase capacity as soon as possible'. Psychopaths

in power were rather less concerned *because* they are psychopaths. Deletion of urgent care and diagnosis has been happening all over the world and how many kids and others have died as a result of the actions of these cold and heartless lunatics dictating 'health' policy? The number must be stratospheric. Richard Sullivan, professor of cancer and global health at King's College London, said people feared 'Covid' more than cancer such was the campaign of fear. 'Years of lost life will be quite dramatic', Sullivan said, with 'a huge amount of avoidable mortality'. Sarah Woolnough, executive director for policy at Cancer Research UK, said there had been a 75 percent drop in urgent referrals to hospitals by family doctors of people with suspected cancer. Sullivan said that 'a lot of services have had to scale back – we've seen a dramatic decrease in the amount of elective cancer surgery'. Lockdown deaths worldwide has been absolutely fantastic with the *New York Post* reporting how data confirmed that 'lockdowns end more lives than they save':

There was a sharp decline in visits to emergency rooms and an increase in fatal heart attacks because patients didn't receive prompt treatment. Many fewer people were screened for cancer. Social isolation contributed to excess deaths from dementia and Alzheimer's.

Researchers predicted that the social and economic upheaval would lead to tens of thousands of "deaths of despair" from drug overdoses, alcoholism and suicide. As unemployment surged and mental-health and substance-abuse treatment programs were interrupted, the reported levels of anxiety, depression and suicidal thoughts increased dramatically, as did alcohol sales and fatal drug overdoses.

This has been happening while nurses and other staff had so much time on their hands in the 'war-zones' that Tic-Tok dancing videos began appearing across the Internet with medical staff dancing around in empty wards and corridors as people died at home from causes that would normally have been treated in hospital.

Mentions in dispatches

One brave and truth-committed whistleblower was Louise Hampton, a call handler with the UK NHS who made a viral Internet video saying she had done 'fuck all' during the 'pandemic'

which was 'a load of bollocks'. She said that 'Covid-19' was rebranded flu and of course she lost her job. This is what happens in the medical and endless other professions now when you tell the truth. Louise filmed inside 'war-zone' accident and emergency departments to show they were empty and I mean *empty* as in no one there. The mainstream media could have done the same and blown the gaff on the whole conspiracy. They haven't to their eternal shame. Not that most 'journalists' seem capable of manifesting shame as with the psychopaths they slavishly repeat without question. The relative few who were admitted with serious health problems were left to die alone with no loved ones allowed to see them because of 'Covid' rules and they included kids dying without the comfort of mum and dad at their bedside while the evil behind this couldn't give a damn. It was all good fun to them. A Scottish NHS staff nurse publicly quit in the spring of 2021 saying: 'I can no longer be part of the lies and the corruption by the government.' She said hospitals 'aren't full, the beds aren't full, beds have been shut, wards have been shut'. Hospitals were never busy throughout 'Covid'. The staff nurse said that Nicola Sturgeon, tragically the leader of the Scottish government, was on television saying save the hospitals and the NHS – 'but the beds are empty' and 'we've not seen flu, we always see flu every year'. She wrote to government and spoke with her union Unison (the unions are Cult-compromised and *useless*, but nothing changed. Many of her colleagues were scared of losing their jobs if they spoke out as they wanted to. She said nursing staff were being affected by wearing masks all day and 'my head is splitting every shift from wearing a mask'. The NHS is part of the fascist tyranny and must be dismantled so we can start again with human beings in charge. (Ironically, hospitals were reported to be busier again when official 'Covid' cases *fell* in spring/summer of 2021 and many other conditions required treatment at the same time as *the fake vaccine rollout*.)

I will cover the 'Covid vaccine' scam in detail later, but it is another indicator of the sickening disregard for human life that I am highlighting here. The DNA-manipulating concoctions do not fulfil

the definition of a 'vaccine', have never been used on humans before and were given only emergency approval because trials were not completed and they continued using the unknowing public. The result was what a NHS senior nurse with responsibility for 'vaccine' procedure said was 'genocide'. She said the 'vaccines' were not 'vaccines'. They had not been shown to be safe and claims about their effectiveness by drug companies were 'poetic licence'. She described what was happening as a 'horrid act of human annihilation'. The nurse said that management had instigated a policy of not providing a Patient Information Leaflet (PIL) before people were 'vaccinated' even though health care professionals are supposed to do this according to protocol. Patients should also be told that they are taking part in an ongoing clinical trial. Her challenges to what is happening had seen her excluded from meetings and ridiculed in others. She said she was told to 'watch my step ... or I would find myself surplus to requirements'. The nurse, who spoke anonymously in fear of her career, said she asked her NHS manager why he/she was content with taking part in genocide against those having the 'vaccines'. The reply was that everyone had to play their part and to 'put up, shut up, and get it done'. Government was 'leaning heavily' on NHS management which was clearly leaning heavily on staff. This is how the global 'medical' hierarchy operates and it starts with the Cult and its World Health Organization.

She told the story of a doctor who had the Pfizer jab and when questioned had no idea what was in it. The doctor had never read the literature. We have to stop treating doctors as intellectual giants when so many are moral and medical pygmies. The doctor did not even know that the 'vaccines' were not fully approved or that their trials were ongoing. They were, however, asking their patients if they minded taking part in follow-ups for research purposes – yes, the *ongoing clinical trial*. The nurse said the doctor's ignorance was not rare and she had spoken to a hospital consultant who had the jab without any idea of the background or that the 'trials' had not been completed. Nurses and pharmacists had shown the same ignorance.

'My NHS colleagues have forsaken their duty of care, broken their code of conduct – Hippocratic Oath – and have been brainwashed just the same as the majority of the UK public through propaganda ...' She said she had not been able to recruit a single NHS colleague, doctor, nurse or pharmacist to stand with her and speak out. Her union had refused to help. She said that if the genocide came to light she would not hesitate to give evidence at a Nuremberg-type trial against those in power who could have affected the outcomes but didn't.

And all for what?

To put the nonsense into perspective let's say the 'virus' does exist and let's go completely crazy and accept that the official manipulated figures for cases and deaths are accurate. *Even then* a study by Stanford University epidemiologist Dr John Ioannidis published on the World Health Organization website produced an average infection to fatality rate of ... *0.23 percent!* Ioannidis said: 'If one could sample equally from all locations globally, the median infection fatality rate might even be substantially lower than the 0.23% observed in my analysis.' For healthy people under 70 it was ... *0.05 percent!* This compares with the 3.4 percent claimed by the Cult-owned World Health Organization when the hoax was first played and maximum fear needed to be generated. An updated Stanford study in April, 2021, put the 'infection' to 'fatality' rate at just 0.15 percent. Another team of scientists led by Megan O'Driscoll and Henrik Salje studied data from 45 countries and published their findings on the Nature website. For children and young people the figure is so small it virtually does not register although authorities will be hyping dangers to the young when they introduce DNA-manipulating 'vaccines' for children. The O'Driscoll study produced an average infection-fatality figure of 0.003 for children from birth to four; 0.001 for 5 to 14; 0.003 for 15 to 19; and it was still only 0.456 up to 64. To claim that children must be 'vaccinated' to protect them from 'Covid' is an obvious lie and so there must be another reason and there is. What's more the average age of a 'Covid' death is akin

to the average age that people die in general. The average age of death in England is about 80 for men and 83 for women. The average age of death from alleged 'Covid' is between 82 and 83. California doctors, Dan Erickson and Artin Massihi, said at their April media conference that projection models of millions of deaths had been 'woefully inaccurate'. They produced detailed figures showing that Californians had a 0.03 chance of dying from 'Covid' based on the number of people who tested positive (with a test not testing for the 'virus'). Erickson said there was a 0.1 percent chance of dying from 'Covid' in the *state* of New York, not just the city, and a 0.05 percent chance in Spain, a centre of 'Covid-19' hysteria at one stage. The Stanford studies supported the doctors' data with fatality rate estimates of 0.23 and 0.15 percent. How close are these figures to my estimate of *zero*? Death-rate figures claimed by the World Health Organization at the start of the hoax were some 15 times higher. The California doctors said there was no justification for lockdowns and the economic devastation they caused. Everything they had ever learned about quarantine was that you quarantine the *sick* and not the healthy. They had never seen this before and it made no medical sense.

Why in the in the light of all this would governments and medical systems the world over say that billions must go under house arrest; lose their livelihood; in many cases lose their mind, their health and their life; force people to wear masks dangerous to health and psychology; make human interaction and even family interaction a criminal offence; ban travel; close restaurants, bars, watching live sport, concerts, theatre, and any activity involving human togetherness and discourse; and closing schools to isolate children from their friends and cause many to commit suicide in acts of hopelessness and despair? The California doctors said lockdown consequences included increased child abuse, partner abuse, alcoholism, depression, and other impacts they were seeing every day. Who would do that to the entire human race if not mentally-ill psychopaths of almost unimaginable extremes like Bill Gates? We must face the reality of what we are dealing with and come out of

denial. Fascism and tyranny are made possible only by the target population submitting and acquiescing to fascism and tyranny. The whole of human history shows that to be true. Most people naively and unquestioning believed what they were told about a 'deadly virus' and meekly and weakly submitted to house arrest. Those who didn't believe it – at least in total – still submitted in fear of the consequences of not doing so. For the rest who wouldn't submit draconian fines have been imposed, brutal policing by psychopaths *for* psychopaths, and condemnation from the meek and weak who condemn the Pushbackers on behalf of the very force that has them, too, in its gun sights. 'Pathetic' does not even begin to suffice. Britain's brainless 'Health' Secretary Matt Hancock warned anyone lying to border officials about returning from a list of 'hotspot' countries could face a jail sentence of up to ten years which is more than for racially-aggravated assault, incest and attempting to have sex with a child under 13. Hancock is a lunatic, but he has the state apparatus behind him in a Cult-led chain reaction and the same with UK 'Vaccine Minister' Nadhim Zahawi, a prominent member of the mega-Cult secret society, Le Cercle, which featured in my earlier books. The Cult enforces its will on governments and medical systems; government and medical systems enforce their will on business and police; business enforces its will on staff who enforce it on customers; police enforce the will of the Cult on the population and play their essential part in creating a world of fascist control that their own children and grandchildren will have to live in their entire lives. It is a hierarchical pyramid of imposition and acquiescence and, yes indeed, of clinical insanity.

Does anyone bright enough to read this book have to ask what the answer is? I think not, but I will reveal it anyway in the fewest of syllables: Tell the psychos and their moronic lackeys to fuck off and let's get on with our lives. We are many – They are few.

CHAPTER SEVEN

War on your mind

One believes things because one has been conditioned to believe them

Aldous Huxley, Brave New World

I have described the 'Covid' hoax as a 'Psyop' and that is true in every sense and on every level in accordance with the definition of that term which is psychological warfare. Break down the 'Covid pandemic' to the foundation themes and it is psychological warfare on the human individual and collective mind.

The same can be said for the entire human belief system involving every subject you can imagine. Huxley was right in his contention that people believe what they are conditioned to believe and this comes from the repetition throughout their lives of the same falsehoods. They spew from government, corporations, media and endless streams of 'experts' telling you what the Cult wants you to believe and often believing it themselves (although *far* from always). 'Experts' are rewarded with 'prestigious' jobs and titles and as agents of perceptual programming with regular access to the media. The Cult has to control the narrative – control *information* – or they lose control of the vital, crucial, without-which-they-cannot-prevail public perception of reality. The foundation of that control today is the Internet made possible by the Defense Advanced Research Projects Agency (DARPA), the incredibly sinister technological arm of the Pentagon. The Internet is the result of military technology.

DARPA openly brags about establishing the Internet which has been a long-term project to lasso the minds of the global population. I have said for decades the plan is to control information to such an extreme that eventually no one would see or hear anything that the Cult does not approve. We are closing in on that end with ferocious censorship since the 'Covid' hoax began and in my case it started back in the 1990s in terms of books and speaking venues. I had to create my own publishing company in 1995 precisely because no one else would publish my books even then. I think they're all still running.

Cult Internet

To secure total control of information they needed the Internet in which pre-programmed algorithms can seek out 'unclean' content for deletion and even stop it being posted in the first place. The Cult had to dismantle print and non-Internet broadcast media to ensure the transfer of information to the appropriate-named 'Web' – a critical expression of the *Cult* web. We've seen the ever-quickening demise of traditional media and control of what is left by a tiny number of corporations operating worldwide. Independent journalism in the mainstream is already dead and never was that more obvious than since the turn of 2020. The Cult wants all information communicated via the Internet to globally censor and allow the plug to be pulled any time. Lockdowns and forced isolation has meant that communication between people has been through electronic means and no longer through face-to-face discourse and discussion. Cult psychopaths have targeted the bars, restaurants, sport, venues and meeting places in general for this reason. None of this is by chance and it's to stop people gathering in any kind of privacy or number while being able to track and monitor all Internet communications and block them as necessary. Even private messages between individuals have been censored by these fascists that control Cult fronts like Facebook, Twitter, Google and YouTube which are all officially run by Sabbatian place-people and from the background by higher-level Sabbatian place people.

Facebook, Google, Amazon and their like were seed-funded and supported into existence with money-no-object infusions of funds either directly or indirectly from DARPA and CIA technology arm In-Q-Tel. The Cult plays the long game and prepares very carefully for big plays like 'Covid'. Amazon is another front in the psychological war and pretty much controls the global market in book sales and increasingly publishing. Amazon's limitless funds have deleted fantastic numbers of independent publishers to seize global domination on the way to deciding which books can be sold and circulated and which cannot. Moves in that direction are already happening. Amazon's leading light Jeff Bezos is the grandson of Lawrence Preston Gise who worked with DARPA predecessor ARPA. Amazon has big connections to the CIA and the Pentagon. The plan I have long described went like this:

1. Employ military technology to establish the Internet.
2. Sell the Internet as a place where people can freely communicate without censorship and allow that to happen until the Net becomes the central and irreversible pillar of human society. If the Internet had been highly censored from the start many would have rejected it.
3. Fund and manipulate major corporations into being to control the circulation of information on your Internet using cover stories about geeks in garages to explain how they came about. Give them unlimited funds to expand rapidly with no need to make a profit for years while non-Cult companies who need to balance the books cannot compete. You know that in these circumstances your Googles, YouTubes, Facebooks and Amazons are going to secure near monopolies by either crushing or buying up the opposition.
4. Allow freedom of expression on both the Internet and communication platforms to draw people in until the Internet is the central and irreversible pillar of human society and your communication corporations have reached a stage of near monopoly domination.
5. Then unleash your always-planned frenzy of censorship on the basis of 'where else are you going to go?' and continue to expand that until nothing remains that the Cult does not want its human targets to see.

The process was timed to hit the 'Covid' hoax to ensure the best chance possible of controlling the narrative which they knew they had to do at all costs. They were, after all, about to unleash a 'deadly virus' that didn't really exist. If you do that in an environment of free-flowing information and opinion you would be dead in the

water before you could say Gates is a psychopath. The network was in place through which the Cult-created-and-owned World Health Organization could dictate the 'Covid' narrative and response policy slavishly supported by Cult-owned Internet communication giants and mainstream media while those telling a different story were censored. Google, YouTube, Facebook and Twitter openly announced that they would do this. What else would we expect from Cult-owned operations like Facebook which former executives have confirmed set out to make the platform more addictive than cigarettes and coldly manipulates emotions of its users to sow division between people and groups and scramble the minds of the young? If Zuckerberg lives out the rest of his life without going to jail for crimes against humanity, and most emphatically against the young, it will be a travesty of justice. Still, no matter, cause and effect will catch up with him eventually and the same with Sergey Brin and Larry Page at Google with its CEO Sundar Pichai who fix the Google search results to promote Cult narratives and hide the opposition. Put the same key words into Google and other search engines like DuckDuckGo and you will see how different results can be. Wikipedia is another intensely biased 'encyclopaedia' which skews its content to the Cult agenda. YouTube links to Wikipedia's version of 'Covid' and 'climate change' on video pages in which experts in their field offer a different opinion (even that is increasingly rare with Wojcicki censorship). Into this 'Covid' silence-them network must be added government media censors, sorry 'regulators', such as Ofcom in the UK which imposed tyrannical restrictions on British broadcasters that had the effect of banning me from ever appearing. Just to debate with me about my evidence and views on 'Covid' would mean breaking the fascistic impositions of Ofcom and its CEO career government bureaucrat Melanie Dawes. Gutless British broadcasters tremble at the very thought of fascist Ofcom.

Psychos behind 'Covid'

The reason for the 'Covid' catastrophe in all its facets and forms can be seen by whom and what is driving the policies worldwide in such a coordinated way. Decisions are not being made to protect health, but to target psychology. The dominant group guiding and 'advising' government policy are not medical professionals. They are psychologists and behavioural scientists. Every major country has its own version of this phenomenon and I'll use the British example to show how it works. In many ways the British version has been affecting the wider world in the form of the huge behaviour manipulation network in the UK which operates in other countries. The network involves private companies, government, intelligence and military. The Cabinet Office is at the centre of the government 'Covid' Psyop and part-owns, with 'innovation charity' Nesta, the Behavioural Insights Team (BIT) which claims to be independent of government but patently isn't. The BIT was established in 2010 and its job is to manipulate the psyche of the population to acquiesce to government demands and so much more. It is also known as the 'Nudge Unit', a name inspired by the 2009 book by two ultra-Zionists, Cass Sunstein and Richard Thaler, called *Nudge: Improving Decisions About Health, Wealth, and Happiness*. The book, as with the Behavioural Insights Team, seeks to 'nudge' behaviour (manipulate it) to make the public follow patterns of action and perception that suit those in authority (the Cult). Sunstein is so skilled at this that he advises the World Health Organization and the UK Behavioural Insights Team and was Administrator of the White House Office of Information and Regulatory Affairs in the Obama administration. Biden appointed him to the Department of Homeland Security – another ultra-Zionist in the fold to oversee new immigration laws which is another policy the Cult wants to control. Sunstein is desperate to silence anyone exposing conspiracies and co-authored a 2008 report on the subject in which suggestions were offered to ban 'conspiracy theorizing' or impose 'some kind of tax, financial or otherwise, on those who disseminate such theories'. I guess a psychiatrist's chair is out of the question?

Sunstein's mate Richard Thaler, an 'academic affiliate' of the UK Behavioural Insights Team, is a proponent of 'behavioural economics' which is defined as the study of 'the effects of psychological, cognitive, emotional, cultural and social factors on the decisions of individuals and institutions'. Study the effects so they can be manipulated to be what you want them to be. Other leading names in the development of behavioural economics are ultra-Zionists Daniel Kahneman and Robert J. Shiller and they, with Thaler, won the Nobel Memorial Prize in Economic Sciences for their work in this field. The Behavioural Insights Team is operating at the heart of the UK government and has expanded globally through partnerships with several universities including Harvard, Oxford, Cambridge, University College London (UCL) and Pennsylvania. They claim to have 'trained' (reframed) 20,000 civil servants and run more than 750 projects involving 400 randomised controlled trials in dozens of countries' as another version of mind reframers Common Purpose. BIT works from its office in New York with cities and their agencies, as well as other partners, across the United States and Canada – this is a company part-owned by the British government Cabinet Office. An executive order by President Cult-servant Obama established a US Social and Behavioral Sciences Team in 2015. They all have the same reason for being and that's to brainwash the population directly and by brainwashing those in positions of authority.

'Covid' mind game

Another prime aspect of the UK mind-control network is the 'independent' [joke] Scientific Pandemic Insights Group on Behaviours (SPI-B) which 'provides behavioural science advice aimed at anticipating and helping people adhere to interventions that are recommended by medical or epidemiological experts'. That means manipulating public perception and behaviour to do whatever government tells them to do. It's disgusting and if they really want the public to be 'safe' this lot should all be under lock and key. According to the government website SPI-B consists of

'behavioural scientists, health and social psychologists, anthropologists and historians' and advises the Whitty-Vallance-led Scientific Advisory Group for Emergencies (SAGE) which in turn advises the government on 'the science' (it doesn't) and 'Covid' policy. When politicians say they are being guided by 'the science' this is the rabble in each country they are talking about and that 'science' is dominated by behaviour manipulators to enforce government fascism through public compliance. The Behaviour Insight Team is headed by psychologist David Solomon Halpern, a visiting professor at King's College London, and connects with a national and global web of other civilian and military organisations as the Cult moves towards its goal of fusing them into one fascistic whole in every country through its 'Fusion Doctrine'. The behaviour manipulation network involves, but is not confined to, the Foreign Office; National Security Council; government communications headquarters (GCHQ); MI5; MI6; the Cabinet Office-based Media Monitoring Unit; and the Rapid Response Unit which 'monitors digital trends to spot emerging issues; including misinformation and disinformation; and identifies the best way to respond'.

There is also the 77th Brigade of the UK military which operates like the notorious Israeli military's Unit 8200 in manipulating information and discussion on the Internet by posing as members of the public to promote the narrative and discredit those who challenge it. Here we have the military seeking to manipulate *domestic* public opinion while the Nazis in government are fine with that. Conservative Member of Parliament Tobias Ellwood, an advocate of lockdown and control through 'vaccine passports', is a Lieutenant Colonel reservist in the 77th Brigade which connects with the military operation jHub, the 'innovation centre' for the Ministry of Defence and Strategic Command. jHub has also been involved with the civilian National Health Service (NHS) in 'symptom tracing' the population. The NHS is a key part of this mind control network and produced a document in December, 2020, explaining to staff how to use psychological manipulation with different groups and ages to get them to have the DNA-manipulating 'Covid vaccine'

that's designed to cumulatively rewrite human genetics. The document, called 'Optimising Vaccination Roll Out – Do's and Dont's for all messaging, documents and "communications" in the widest sense', was published by NHS England and the NHS Improvement *Behaviour Change Unit* in partnership with Public Health England and Warwick Business School. I hear the mantra about 'save the NHS' and 'protect the NHS' when we need to scrap the NHS and start again. The current version is far too corrupt, far too anti-human and totally compromised by Cult operatives and their assets. UK government broadcast media censor Ofcom will connect into this web – as will the BBC with its tremendous Ofcom influence – to control what the public see and hear and dictate mass perception. Nuremberg trials must include personnel from all these organisations.

The fear factor

The 'Covid' hoax has led to the creation of the UK Cabinet Office-connected Joint Biosecurity Centre (JBC) which is officially described as providing 'expert advice on pandemics' using its independent [all Cult operations are 'independent'] analytical function to provide real-time analysis about infection outbreaks to identify and respond to outbreaks of Covid-19'. Another role is to advise the government on a response to spikes in infections – 'for example by closing schools or workplaces in local areas where infection levels have risen'. Put another way, promoting the Cult agenda. The Joint Biosecurity Centre is modelled on the Joint Terrorism Analysis Centre which analyses intelligence to set 'terrorism threat levels' and here again you see the fusion of civilian and military operations and intelligence that has led to military intelligence producing documents about 'vaccine hesitancy' and how it can be combated. Domestic civilian matters and opinions should not be the business of the military. The Joint Biosecurity Centre is headed by Tom Hurd, director general of the Office for Security and Counter-Terrorism from the establishment-to-its-fingertips Hurd family. His father is former Foreign Secretary Douglas Hurd. How coincidental that Tom

Hurd went to the elite Eton College and Oxford University with Boris Johnson. Imperial College with its ridiculous computer modeller Neil Ferguson will connect with this gigantic web that will itself interconnect with similar set-ups in other major and not so major countries. Compared with this Cult network the politicians, be they Boris Johnson, Donald Trump or Joe Biden, are bit-part players 'following the science'. The network of psychologists was on the 'Covid' case from the start with the aim of generating maximum fear of the 'virus' to ensure compliance by the population. A government behavioural science group known as SPI-B produced a paper in March, 2020, for discussion by the main government science advisory group known as SAGE. It was headed 'Options for increasing adherence to social distancing measures' and it said the following in a section headed 'Persuasion':

- A substantial number of people still do not feel sufficiently personally threatened; it could be that they are reassured by the low death rate in their demographic group, although levels of concern may be rising. Having a good understanding of the risk has been found to be positively associated with adoption of COVID-19 social distancing measures in Hong Kong.
- The perceived level of personal threat needs to be increased among those who are complacent, using hard-hitting evaluation of options for increasing social distancing emotional messaging. To be effective this must also empower people by making clear the actions they can take to reduce the threat.
- Responsibility to others: There seems to be insufficient understanding of, or feelings of responsibility about, people's role in transmitting the infection to others ... Messaging about actions need to be framed positively in terms of protecting oneself and the community, and increase confidence that they will be effective.
- Some people will be more persuaded by appeals to play by the rules, some by duty to the community, and some to personal risk.

All these different approaches are needed. The messaging also needs to take account of the realities of different people's lives. Messaging needs to take account of the different motivational levers and circumstances of different people.

All this could be achieved the SPI-B psychologists said by *using the media to increase the sense of personal threat* which translates as terrify the shit out of the population, including children, so they all do what we want. That's not happened has it? Those excuses for 'journalists' who wouldn't know journalism if it bit them on the arse (the great majority) have played their crucial part in serving this Cult-government Psyop to enslave their own kids and grandkids. How they live with themselves I have no idea. The psychological war has been underpinned by constant government 'Covid' propaganda in almost every television and radio ad break, plus the Internet and print media, which has pounded out the fear with taxpayers footing the bill for their own programming. The result has been people terrified of a 'virus' that doesn't exist or one with a tiny fatality rate even if you believe it does. People walk down the street and around the shops wearing face-nappies damaging their health and psychology while others report those who refuse to be that naïve to the police who turn up in their own face-nappies. I had a cameraman come to my flat and he was so frightened of 'Covid' he came in wearing a mask and refused to shake my hand in case he caught something. He had – naïveitis – and the thought that he worked in the mainstream media was both depressing and made his behaviour perfectly explainable. The fear which has gripped the minds of so many and frozen them into compliance has been carefully cultivated by these psychologists who are really psychopaths. If lives get destroyed and a lot of young people commit suicide it shows our plan is working. SPI-B then turned to compulsion on the public to comply. 'With adequate preparation, rapid change can be achieved', it said. Some countries had introduced mandatory self-isolation on a wide scale without evidence of major public unrest and a large majority of the UK's population appeared to be supportive of more coercive measures with 64 percent of adults saying they would

support putting London under a lockdown (watch the 'polls' which are designed to make people believe that public opinion is in favour or against whatever the subject in hand).

For 'aggressive protective measures' to be effective, the SPI-B paper said, special attention should be devoted to those population groups that are more at risk. Translated from the Orwellian this means making the rest of population feel guilty for not protecting the 'vulnerable' such as old people which the Cult and its agencies were about to kill on an industrial scale with lockdown, lack of treatment and the Gates 'vaccine'. Psychopath psychologists sold their guilt-trip so comprehensively that Los Angeles County Supervisor Hilda Solis reported that children were apologising (from a distance) to their parents and grandparents for bringing 'Covid' into their homes and getting them sick. '... These apologies are just some of the last words that loved ones will ever hear as they die alone,' she said. Gut-wrenchingly Solis then used this childhood tragedy to tell children to stay at home and 'keep your loved ones alive'. Imagine heaping such potentially life-long guilt on a kid when it has absolutely nothing to do with them. These people are deeply disturbed and the psychologists behind this even more so.

Uncivil war – divide and rule

Professional mind-controllers at SPI-B wanted the media to increase a sense of responsibility to others (do as you're told) and promote 'positive messaging' for those actions while in contrast to invoke 'social disapproval' by the unquestioning, obedient, community of anyone with a mind of their own. Again the compliant Goebbels-like media obliged. This is an old, old, trick employed by tyrannies the world over throughout human history. You get the target population to keep the target population in line – *your* line. SPI-B said this could 'play an important role in preventing anti-social behaviour or discouraging failure to enact pro-social behaviour'. For 'anti-social' in the Orwellian parlance of SPI-B see any behaviour that government doesn't approve. SPI-B recommendations said that 'social disapproval' should be accompanied by clear messaging and

promotion of strong collective identity – hence the government and celebrity mantra of ‘we’re all in this together’. Sure we are. The mind doctors have such contempt for their targets that they think some clueless comedian, actor or singer telling them to do what the government wants will be enough to win them over. We have had UK comedian Lenny Henry, actor Michael Caine and singer Elton John wheeled out to serve the propagandists by urging people to have the DNA-manipulating ‘Covid’ non-‘vaccine’. The role of Henry and fellow black celebrities in seeking to coax a ‘vaccine’ reluctant black community into doing the government’s will was especially stomach-turning. An emotion-manipulating script and carefully edited video featuring these black ‘celebs’ was such an insult to the intelligence of black people and where’s the self-respect of those involved selling their souls to a fascist government agenda? Henry said he heard black people’s ‘legitimate worries and concerns’, but people must ‘trust the facts’ when they were doing exactly that by not having the ‘vaccine’. They had to include the obligatory reference to Black Lives Matter with the line ... ‘Don’t let coronavirus cost even more black lives – because we matter’. My god, it was pathetic. ‘I know the vaccine is safe and what it does.’ How? ‘I’m a comedian and it says so in my script.’

SPI-B said social disapproval needed to be carefully managed to avoid victimisation, scapegoating and misdirected criticism, but they knew that their ‘recommendations’ would lead to exactly that and the media were specifically used to stir-up the divide-and-conquer hostility. Those who conform like good little baa, baas, are praised while those who have seen through the tidal wave of lies are ‘Covidiot’s’. The awake have been abused by the fast asleep for not conforming to fascism and impositions that the awake know are designed to endanger their health, dehumanise them, and tear asunder the very fabric of human society. We have had the curtain-twitchers and morons reporting neighbours and others to the face-napped police for breaking ‘Covid rules’ with fascist police delighting in posting links and phone numbers where this could be done. The Cult cannot impose its will without a compliant police

and military or a compliant population willing to play their part in enslaving themselves and their kids. The words of a pastor in Nazi Germany are so appropriate today:

First they came for the socialists and I did not speak out because I was not a socialist.

Then they came for the trade unionists and I did not speak out because I was not a trade unionist.

Then they came for the Jews and I did not speak out because I was not a Jew.

Then they came for me and there was no one left to speak for me.

Those who don't learn from history are destined to repeat it and so many are.

'Covid' rules: Rewiring the mind

With the background laid out to this gigantic national and global web of psychological manipulation we can put 'Covid' rules into a clear and sinister perspective. Forget the claims about protecting health. 'Covid' rules are about dismantling the human mind, breaking the human spirit, destroying self-respect, and then putting Humpty Dumpty together again as a servile, submissive slave. Social isolation through lockdown and distancing have devastating effects on the human psyche as the psychological psychopaths well know and that's the real reason for them. Humans need contact with each other, discourse, closeness and touch, or they eventually, and literally, go crazy. Masks, which I will address at some length, fundamentally add to the effects of isolation and the Cult agenda to dehumanise and de-individualise the population. To do this while knowing – in fact *seeking* – this outcome is the very epitome of evil and psychologists involved in this *are* the epitome of evil. They must like all the rest of the Cult demons and their assets stand trial for crimes against humanity on a scale that defies the imagination. Psychopaths in uniform use isolation to break enemy troops and agents and make them subservient and submissive to tell what they know. The technique is rightly considered a form of torture and

torture is most certainly what has been imposed on the human population.

Clinically-insane American psychologist Harry Harlow became famous for his isolation experiments in the 1950s in which he separated baby monkeys from their mothers and imprisoned them for months on end in a metal container or 'pit of despair'. They soon began to show mental distress and depression as any idiot could have predicted. Harlow put other monkeys in steel chambers for three, six or twelve months while denying them any contact with animals or humans. He said that the effects of total social isolation for six months were 'so devastating and debilitating that we had assumed initially that twelve months of isolation would not produce any additional decrement'; but twelve months of isolation 'almost obliterated the animals socially'. This is what the Cult and its psychopaths are doing to you and your children. Even monkeys in partial isolation in which they were not allowed to form relationships with other monkeys became 'aggressive and hostile, not only to others, but also towards their own bodies'. We have seen this in the young as a consequence of lockdown. UK government psychopaths launched a public relations campaign telling people not to hug each other even after they received the 'Covid-19 vaccine' which we were told with more lies would allow a return to 'normal life'. A government source told *The Telegraph*: 'It will be along the lines that it is great that you have been vaccinated, but if you are going to visit your family and hug your grandchildren there is a chance you are going to infect people you love.' The source was apparently speaking from a secure psychiatric facility. Janet Lord, director of Birmingham University's Institute of Inflammation and Ageing, said that parents and grandparents should avoid hugging their children. Well, how can I put it, Ms Lord? Fuck off. Yep, that'll do.

Destroying the kids – where are the parents?

Observe what has happened to people enslaved and isolated by lockdown as suicide and self-harm has soared worldwide,

particularly among the young denied the freedom to associate with their friends. A study of 49,000 people in English-speaking countries concluded that almost half of young adults are at clinical risk of mental health disorders. A national survey in America of 1,000 currently enrolled high school and college students found that 5 percent reported attempting suicide during the pandemic. Data from the US CDC's National Syndromic Surveillance Program from January 1st to October 17th, 2020, revealed a 31 percent increase in mental health issues among adolescents aged 12 to 17 compared with 2019. The CDC reported that America in general suffered the biggest drop in life expectancy since World War Two as it fell by a year in the first half of 2020 as a result of 'deaths of despair' – overdoses and suicides. Deaths of despair have leapt by more than 20 percent during lockdown and include the highest number of fatal overdoses ever recorded in a single year – 81,000. Internet addiction is another consequence of being isolated at home which lowers interest in physical activities as kids fall into inertia and what's the point? Children and young people are losing hope and giving up on life, sometimes literally. A 14-year-old boy killed himself in Maryland because he had 'given up' when his school district didn't reopen; an 11-year-old boy shot himself during a zoom class; a teenager in Maine succumbed to the isolation of the 'pandemic' when he ended his life after experiencing a disrupted senior year at school. Children as young as nine have taken their life and all these stories can be repeated around the world. Careers are being destroyed before they start and that includes those in sport in which promising youngsters have not been able to take part. The plan of the psycho-psychologists is working all right. Researchers at Cambridge University found that lockdowns cause significant harm to children's mental health. Their study was published in the *Archives of Disease in Childhood*, and followed 168 children aged between 7 and 11. The researchers concluded:

During the UK lockdown, children's depression symptoms have increased substantially, relative to before lockdown. The scale of this effect has direct relevance for the continuation of different elements of lockdown policy, such as complete or partial school closures ...

... Specifically, we observed a statistically significant increase in ratings of depression, with a medium-to-large effect size. Our findings emphasise the need to incorporate the potential impact of lockdown on child mental health in planning the ongoing response to the global pandemic and the recovery from it.

Not a chance when the Cult's psycho-psychologists were getting exactly what they wanted. The UK's Royal College of Paediatrics and Child Health has urged parents to look for signs of eating disorders in children and young people after a three to four fold increase. Specialists say the 'pandemic' is a major reason behind the rise. You don't say. The College said isolation from friends during school closures, exam cancellations, loss of extra-curricular activities like sport, and an increased use of social media were all contributory factors along with fears about the virus (psycho-psychologists again), family finances, and students being forced to quarantine. Doctors said young people were becoming severely ill by the time they were seen with 'Covid' regulations reducing face-to-face consultations. Nor is it only the young that have been devastated by the psychopaths. Like all bullies and cowards the Cult is targeting the young, elderly, weak and infirm. A typical story was told by a British lady called Lynn Parker who was not allowed to visit her husband in 2020 for the last ten and half months of his life 'when he needed me most' between March 20th and when he died on December 19th. This vacates the criminal and enters the territory of evil. The emotional impact on the immune system alone is immense as are the number of people of all ages worldwide who have died as a result of Cult-demanded, Gates-demanded, lockdowns.

Isolation is torture

The experience of imposing solitary confinement on millions of prisoners around the world has shown how a large percentage become 'actively psychotic and/or acutely suicidal'. Social isolation has been found to trigger 'a specific psychiatric syndrome, characterized by hallucinations; panic attacks; overt paranoia; diminished impulse control; hypersensitivity to external stimuli; and difficulties with thinking, concentration and memory'. Juan Mendez,

a United Nations rapporteur (investigator), said that isolation is a form of torture. Research has shown that even after isolation prisoners find it far more difficult to make social connections and I remember chatting to a shop assistant after one lockdown who told me that when her young son met another child again he had no idea how to act or what to do. Hannah Flanagan, Director of Emergency Services at Journey Mental Health Center in Dane County, Wisconsin, said: 'The specificity about Covid social distancing and isolation that we've come across as contributing factors to the suicides are really new to us this year.' But they are not new to those that devised them. They are getting the effect they want as the population is psychologically dismantled to be rebuilt in a totally different way. Children and the young are particularly targeted. They will be the adults when the full-on fascist AI-controlled technocracy is planned to be imposed and they are being prepared to meekly submit. At the same time older people who still have a memory of what life was like before – and how fascist the new normal really is – are being deleted. You are going to see efforts to turn the young against the old to support this geriatric genocide. Hannah Flanagan said the big increase in suicide in her county proved that social isolation is not only harmful, but deadly. Studies have shown that isolation from others is one of the main risk factors in suicide and even more so with women. Warnings that lockdown could create a 'perfect storm' for suicide were ignored. After all this was one of the *reasons* for lockdown. Suicide, however, is only the most extreme of isolation consequences. There are many others. Dr Dhruv Khullar, assistant professor of healthcare policy at Weill Cornell Medical College, said in a *New York Times* article in 2016 long before the fake 'pandemic':

A wave of new research suggests social separation is bad for us. Individuals with less social connection have disrupted sleep patterns, altered immune systems, more inflammation and higher levels of stress hormones. One recent study found that isolation increases the risk of heart disease by 29 percent and stroke by 32 percent. Another analysis that pooled data from 70 studies and 3.4 million people found that socially isolated individuals had a 30 percent higher risk of dying in the next seven years, and that this effect was largest in middle age.

Loneliness can accelerate cognitive decline in older adults, and isolated individuals are twice as likely to die prematurely as those with more robust social interactions. These effects start early: Socially isolated children have significantly poorer health 20 years later, even after controlling for other factors. All told, loneliness is as important a risk factor for early death as obesity and smoking.

There you have proof from that one article alone four years before 2020 that those who have enforced lockdown, social distancing and isolation knew what the effect would be and that is even more so with professional psychologists that have been driving the policy across the globe. We can go back even further to the years 2000 and 2003 and the start of a major study on the effects of isolation on health by Dr Janine Gronewold and Professor Dirk M. Hermann at the University Hospital in Essen, Germany, who analysed data on 4,316 people with an average age of 59 who were recruited for the long-term research project. They found that socially isolated people are more than 40 percent more likely to have a heart attack, stroke, or other major cardiovascular event and nearly 50 percent more likely to die from any cause. Given the financial Armageddon unleashed by lockdown we should note that the study found a relationship between increased cardiovascular risk and lack of financial support. After excluding other factors social isolation was still connected to a 44 percent increased risk of cardiovascular problems and a 47 percent increased risk of death by any cause. Lack of financial support was associated with a 30 percent increase in the risk of cardiovascular health events. Dr Gronewold said it had been known for some time that feeling lonely or lacking contact with close friends and family can have an impact on physical health and the study had shown that having strong social relationships is of high importance for heart health. Gronewold said they didn't understand yet why people who are socially isolated have such poor health outcomes, but this was obviously a worrying finding, particularly during these times of prolonged social distancing. Well, it can be explained on many levels. You only have to identify the point in the body where people feel loneliness and missing people they are parted from – it's in the centre of the chest where they feel the ache of loneliness and the ache of missing people. 'My heart aches for

you' ... 'My heart aches for some company.' I will explain this more in the chapter Escaping Wetiko, but when you realise that the body is the mind – they are expressions of each other – the reason why state of the mind dictates state of the body becomes clear.

American psychologist Ranjit Powar was highlighting the effects of lockdown isolation as early as April, 2020. She said humans have evolved to be social creatures and are wired to live in interactive groups. Being isolated from family, friends and colleagues could be unbalancing and traumatic for most people and could result in short or even long-term psychological and physical health problems. An increase in levels of anxiety, aggression, depression, forgetfulness and hallucinations were possible psychological effects of isolation. 'Mental conditions may be precipitated for those with underlying pre-existing susceptibilities and show up in many others without any pre-condition.' Powar said personal relationships helped us cope with stress and if we lost this outlet for letting off steam the result can be a big emotional void which, for an average person, was difficult to deal with. 'Just a few days of isolation can cause increased levels of anxiety and depression' – so what the hell has been the effect on the global population of *18 months* of this at the time of writing? Powar said: 'Add to it the looming threat of a dreadful disease being repeatedly hammered in through the media and you have a recipe for many shades of mental and physical distress.' For those with a house and a garden it is easy to forget that billions have had to endure lockdown isolation in tiny overcrowded flats and apartments with nowhere to go outside. The psychological and physical consequences of this are unimaginable and with lunatic and abusive partners and parents the consequences have led to tremendous increases in domestic and child abuse and alcoholism as people seek to shut out the horror. Ranjit Powar said:

Staying in a confined space with family is not all a rosy picture for everyone. It can be extremely oppressive and claustrophobic for large low-income families huddled together in small single-room houses. Children here are not lucky enough to have many board/electronic games or books to keep them occupied.

Add to it the deep insecurity of running out of funds for food and basic necessities. On the other hand, there are people with dysfunctional family dynamics, such as domineering, abusive or alcoholic partners, siblings or parents which makes staying home a period of trial. Incidence of suicide and physical abuse against women has shown a worldwide increase. Heightened anxiety and depression also affect a person's immune system, making them more susceptible to illness.

To think that Powar's article was published on April 11th, 2020.

Six-foot fantasy

Social (unsocial) distancing demanded that people stay six feet or two metres apart. UK government advisor Robert Dingwall from the New and Emerging Respiratory Virus Threats Advisory Group said in a radio interview that the two-metre rule was 'conjured up out of nowhere' and was not based on science. No, it was not based on *medical* science, but it didn't come out of nowhere. The distance related to *psychological* science. Six feet/two metres was adopted in many countries and we were told by people like the criminal Anthony Fauci and his ilk that it was founded on science. Many schools could not reopen because they did not have the space for six-foot distancing. Then in March, 2021, after a year of six-foot 'science', a study published in the *Journal of Infectious Diseases* involving more than 500,000 students and almost 100,000 staff over 16 weeks revealed no significant difference in 'Covid' cases between six feet and three feet and Fauci changed his tune. Now three feet was okay. There is no difference between six feet and three *inches* when there is no 'virus' and they got away with six feet for psychological reasons for as long as they could. I hear journalists and others talk about 'unintended consequences' of lockdown. They are not *unintended* at all; they have been coldly-calculated for a specific outcome of human control and that's why super-psychopaths like Gates have called for them so vehemently. Super-psychopath psychologists have demanded them and psychopathic or clueless, spineless, politicians have gone along with them by 'following the science'. But it's not science at all. 'Science' is not what is; it's only what people can be manipulated to believe it is. The whole 'Covid' catastrophe is

founded on mind control. Three word or three statement mantras issued by the UK government are a well-known mind control technique and so we've had 'Stay home/protect the NHS/save lives', 'Stay alert/control the virus/save lives' and 'hands/face/space'. One of the most vocal proponents of extreme 'Covid' rules in the UK has been Professor Susan Michie, a member of the British Communist Party, who is not a medical professional. Michie is the director of the Centre for Behaviour Change at University College London. She is a *behavioural psychologist* and another filthy rich 'Marxist' who praised China's draconian lockdown. She was known by fellow students at Oxford University as 'Stalin's nanny' for her extreme Marxism. Michie is an influential member of the UK government's Scientific Advisory Group for Emergencies (SAGE) and behavioural manipulation groups which have dominated 'Covid' policy. She is a consultant adviser to the World Health Organization on 'Covid-19' and behaviour. Why the hell are lockdowns anything to do with her when they are claimed to be about health? Why does a behavioural psychologist from a group charged with changing the behaviour of the public want lockdown, human isolation and mandatory masks? Does that question really need an answer? Michie *absolutely* has to explain herself before a Nuremberg court when humanity takes back its world again and even more so when you see the consequences of masks that she demands are compulsory. This is a Michie classic:

The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Those words alone should carry a prison sentence when you ponder on the callous disregard for children involved and what a statement it makes about the mind and motivations of Susan Michie. What a lovely lady and what she said there encapsulates the mentality of the psychopaths behind the 'Covid' horror. Let us compare what Michie said with a countrywide study in Germany published at [researchsquare.com](https://www.researchsquare.com) involving 25,000 school children and 17,854 health complaints submitted by parents. Researchers

found that masks are harming children physically, psychologically, and behaviourally with 24 health issues associated with mask wearing. They include: shortness of breath (29.7%); dizziness (26.4%); increased headaches (53%); difficulty concentrating (50%); drowsiness or fatigue (37%); and malaise (42%). Nearly a third of children experienced more sleep issues than before and a quarter developed new fears. Researchers found health issues and other impairments in 68 percent of masked children covering their faces for an average of 4.5 hours a day. Hundreds of those taking part experienced accelerated respiration, tightness in the chest, weakness, and short-term impairment of consciousness. A reminder of what Michie said again:

The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Psychopaths in government and psychology now have children and young people – plus all the adults – wearing masks for hours on end while clueless teachers impose the will of the psychopaths on the young they should be protecting. What the hell are parents doing?

Cult lab rats

We have some schools already imposing on students microchipped buzzers that activate when they get 'too close' to their pals in the way they do with lab rats. How apt. To the Cult and its brain-dead servants our children *are* lab rats being conditioned to be unquestioning, dehumanised slaves for the rest of their lives. Children and young people are being weaned and frightened away from the most natural human instincts including closeness and touch. I have tracked in the books over the years how schools were banning pupils from greeting each other with a hug and the whole Cult-induced Me Too movement has terrified men and boys from a relaxed and natural interaction with female friends and work colleagues to the point where many men try never to be in a room

alone with a woman that's not their partner. Airhead celebrities have as always played their virtue-signalling part in making this happen with their gross exaggeration. For every monster like Harvey Weinstein there are at least tens of thousands of men that don't treat women like that; but everyone must be branded the same and policy changed for them as well as the monster. I am going to be using the word 'dehumanise' many times in this chapter because that is what the Cult is seeking to do and it goes very deep as we shall see. Don't let them kid you that social distancing is planned to end one day. That's not the idea. We are seeing more governments and companies funding and producing wearable gadgets to keep people apart and they would not be doing that if this was meant to be short-term. A tech start-up company backed by GCHQ, the British Intelligence and military surveillance headquarters, has created a social distancing wrist sensor that alerts people when they get too close to others. The CIA has also supported tech companies developing similar devices. The wearable sensor was developed by Tended, one of a number of start-up companies supported by GCHQ (see the CIA and DARPA). The device can be worn on the wrist or as a tag on the waistband and will vibrate whenever someone wearing the device breaches social distancing and gets anywhere near natural human contact. The company had a lucky break in that it was developing a distancing sensor when the 'Covid' hoax arrived which immediately provided a potentially enormous market. How fortunate. The government in big-time Cult-controlled Ontario in Canada is investing \$2.5 million in wearable contact tracing technology that 'will alert users if they may have been exposed to the Covid-19 in the workplace and will beep or vibrate if they are within six feet of another person'. Facedrive Inc., the technology company behind this, was founded in 2016 with funding from the Ontario Together Fund and obviously they, too, had a prophet on the board of directors. The human surveillance and control technology is called TraceSCAN and would be worn by the human cyborgs in places such as airports, workplaces, construction sites, care homes and ... *schools*.

I emphasise schools with children and young people the prime targets. You know what is planned for society as a whole if you keep your eyes on the schools. They have always been places where the state program the next generation of slaves to be its compliant worker-ants – or Woker-ants these days; but in the mist of the ‘Covid’ madness they have been transformed into mind laboratories on a scale never seen before. Teachers and head teachers are just as programmed as the kids – often more so. Children are kept apart from human interaction by walk lanes, classroom distancing, staggered meal times, masks, and the rolling-out of buzzer systems. Schools are now physically laid out as a laboratory maze for lab-rats. Lunatics at a school in Anchorage, Alaska, who should be prosecuted for child abuse, took away desks and forced children to kneel (know your place) on a mat for five hours a day while wearing a mask and using their chairs as a desk. How this was supposed to impact on a ‘virus’ only these clinically insane people can tell you and even then it would be clap-trap. The school banned recess (interaction), art classes (creativity), and physical exercise (getting body and mind moving out of inertia). Everyone behind this outrage should be in jail or better still a mental institution. The behavioural manipulators are all for this dystopian approach to schools. Professor Susan Michie, the mind-doctor and British Communist Party member, said it was wrong to say that schools were safe. They had to be made so by ‘distancing’, masks and ventilation (sitting all day in the cold). I must ask this lady round for dinner on a night I know I am going to be out and not back for weeks. She probably wouldn’t be able to make it, anyway, with all the visits to her own psychologist she must have block-booked.

Masking identity

I know how shocking it must be for you that a behaviour manipulator like Michie wants everyone to wear masks which have long been a feature of mind-control programs like the infamous MKUltra in the United States, but, there we are. We live and learn. I spent many years from 1996 to right across the millennium

researching mind control in detail on both sides of the Atlantic and elsewhere. I met a large number of mind-control survivors and many had been held captive in body and mind by MKUltra. MK stands for mind-control, but employs the German spelling in deference to the Nazis spirited out of Germany at the end of World War Two by Operation Paperclip in which the US authorities, with help from the Vatican, transported Nazi mind-controllers and engineers to America to continue their work. Many of them were behind the creation of NASA and they included Nazi scientist and SS officer Wernher von Braun who swapped designing V-2 rockets to bombard London with designing the Saturn V rockets that powered the NASA moon programme's Apollo craft. I think I may have mentioned that the Cult has no borders. Among Paperclip escapees was Josef Mengele, the Angel of Death in the Nazi concentration camps where he conducted mind and genetic experiments on children often using twins to provide a control twin to measure the impact of his 'work' on the other. If you want to observe the Cult mentality in all its extremes of evil then look into the life of Mengele. I have met many people who suffered mercilessly under Mengele in the United States where he operated under the name Dr Greene and became a stalwart of MKUltra programming and torture. Among his locations was the underground facility in the Mojave Desert in California called the China Lake Naval Weapons Station which is almost entirely below the surface. My books *The Biggest Secret*, *Children of the Matrix* and *The Perception Deception* have the detailed background to MKUltra.

The best-known MKUltra survivor is American Cathy O'Brien. I first met her and her late partner Mark Phillips at a conference in Colorado in 1996. Mark helped her escape and deprogram from decades of captivity in an offshoot of MKUltra known as Project Monarch in which 'sex slaves' were provided for the rich and famous including Father George Bush, Dick Cheney and the Clintons. Read Cathy and Mark's book *Trance-Formation of America* and if you are new to this you will be shocked to the core. I read it in 1996 shortly before, with the usual synchronicity of my life, I found

myself given a book table at the conference right next to hers. MKUltra never ended despite being very publicly exposed (only a small part of it) in the 1970s and continues in other guises. I am still in touch with Cathy. She contacted me during 2020 after masks became compulsory in many countries to tell me how they were used as part of MKUltra programming. I had been observing 'Covid regulations' and the relationship between authority and public for months. I saw techniques that I knew were employed on individuals in MKUltra being used on the global population. I had read many books and manuals on mind control including one called *Silent Weapons for Quiet Wars* which came to light in the 1980s and was a guide on how to perceptually program on a mass scale. 'Silent Weapons' refers to mind-control. I remembered a line from the manual as governments, medical authorities and law enforcement agencies have so obviously talked to – or rather at – the adult population since the 'Covid' hoax began as if they are children. The document said:

If a person is spoken to by a T.V. advertiser as if he were a twelve-year-old, then, due to suggestibility, he will, with a certain probability, respond or react to that suggestion with the uncritical response of a twelve-year-old and will reach in to his economic reservoir and deliver its energy to buy that product on impulse when he passes it in the store.

That's why authority has spoken to adults like children since all this began.

Why did Michael Jackson wear masks?

Every aspect of the 'Covid' narrative has mind-control as its central theme. Cathy O'Brien wrote an article for davidicke.com about the connection between masks and mind control. Her daughter Kelly who I first met in the 1990s was born while Cathy was still held captive in MKUltra. Kelly was forced to wear a mask as part of her programming from the age of *two* to dehumanise her, target her sense of individuality and reduce the amount of oxygen her brain and body received. *Bingo*. This is the real reason for compulsory

masks, why they have been enforced en masse, and why they seek to increase the number they demand you wear. First one, then two, with one disgraceful alleged 'doctor' recommending four which is nothing less than a death sentence. Where and how often they must be worn is being expanded for the purpose of mass mind control and damaging respiratory health which they can call 'Covid-19'. Canada's government headed by the man-child Justin Trudeau, says it's fine for children of two and older to wear masks. An insane 'study' in Italy involving just 47 children concluded there was no problem for babies as young as *four months* wearing them. Even after people were 'vaccinated' they were still told to wear masks by the criminal that is Anthony Fauci. Cathy wrote that mandating masks is allowing the authorities literally to control the air we breathe which is what was done in MKUltra. You might recall how the singer Michael Jackson wore masks and there is a reason for that. He was subjected to MKUltra mind control through Project Monarch and his psyche was scrambled by these simpletons. Cathy wrote:

In MKUltra Project Monarch mind control, Michael Jackson had to wear a mask to silence his voice so he could not reach out for help. Remember how he developed that whisper voice when he wasn't singing? Masks control the mind from the outside in, like the redefining of words is doing. By controlling what we can and cannot say for fear of being labeled racist or beaten, for example, it ultimately controls thought that drives our words and ultimately actions (or lack thereof).

Likewise, a mask muffles our speech so that we are not heard, which controls voice ... words ... mind. This is Mind Control. Masks are an obvious mind control device, and I am disturbed so many people are complying on a global scale. Masks depersonalize while making a person feel as though they have no voice. It is a barrier to others. People who would never choose to comply but are forced to wear a mask in order to keep their job, and ultimately their family fed, are compromised. They often feel shame and are subdued. People have stopped talking with each other while media controls the narrative.

The 'no voice' theme has often become literal with train passengers told not to speak to each other in case they pass on the 'virus', singing banned for the same reason and bonkers California officials telling people riding roller coasters that they cannot shout and scream. Cathy said she heard every day from healed MKUltra survivors who cannot wear a mask without flashing back on ways

their breathing was controlled – ‘from ball gags and penises to water boarding’. She said that through the years when she saw images of people in China wearing masks ‘due to pollution’ that it was really to control their oxygen levels. ‘I knew it was as much of a population control mechanism of depersonalisation as are burkas’, she said. Masks are another Chinese communist/fascist method of control that has been swept across the West as the West becomes China at lightning speed since we entered 2020.

Mask-19

There are other reasons for mandatory masks and these include destroying respiratory health to call it ‘Covid-19’ and stunting brain development of children and the young. Dr Margarite Griesz-Brisson MD, PhD, is a Consultant Neurologist and Neurophysiologist and the Founder and Medical Director of the London Neurology and Pain Clinic. Her CV goes down the street and round the corner. She is clearly someone who cares about people and won’t parrot the propaganda. Griesz-Brisson has a PhD in pharmacology, with special interest in neurotoxicology, environmental medicine, neuroregeneration and neuroplasticity (the way the brain can change in the light of information received). She went public in October, 2020, with a passionate warning about the effects of mask-wearing laws:

The reinhalation of our exhaled air will without a doubt create oxygen deficiency and a flooding of carbon dioxide. We know that the human brain is very sensitive to oxygen deprivation. There are nerve cells for example in the hippocampus that can’t be longer than 3 minutes without oxygen – they cannot survive. The acute warning symptoms are headaches, drowsiness, dizziness, issues in concentration, slowing down of reaction time – reactions of the cognitive system.

Oh, I know, let’s tell bus, truck and taxi drivers to wear them and people working machinery. How about pilots, doctors and police? Griesz-Brisson makes the important point that while the symptoms she mentions may fade as the body readjusts this does not alter the fact that people continue to operate in oxygen deficit with long list of

potential consequences. She said it was well known that neurodegenerative diseases take years or decades to develop. 'If today you forget your phone number, the breakdown in your brain would have already started 20 or 30 years ago.' She said degenerative processes in your brain are getting amplified as your oxygen deprivation continues through wearing a mask. Nerve cells in the brain are unable to divide themselves normally in these circumstances and lost nerve cells will no longer be regenerated. 'What is gone is gone.' Now consider that people like shop workers and *schoolchildren* are wearing masks for hours every day. What in the name of sanity is going to be happening to them? 'I do not wear a mask, I need my brain to think', Griesz-Brisson said, 'I want to have a clear head when I deal with my patients and not be in a carbon dioxide-induced anaesthesia'. If you are told to wear a mask anywhere ask the organisation, police, store, whatever, for their risk assessment on the dangers and negative effects on mind and body of enforcing mask-wearing. They won't have one because it has never been done not even by government. All of them must be subject to class-action lawsuits as the consequences come to light. They don't do mask risk assessments for an obvious reason. They know what the conclusions would be and independent scientific studies that *have* been done tell a horror story of consequences.

'Masks are criminal'

Dr Griesz-Brisson said that for children and adolescents, masks are an absolute no-no. They had an extremely active and adaptive immune system and their brain was incredibly active with so much to learn. 'The child's brain, or the youth's brain, is thirsting for oxygen.' The more metabolically active an organ was, the more oxygen it required; and in children and adolescents every organ was metabolically active. Griesz-Brisson said that to deprive a child's or adolescent's brain of oxygen, or to restrict it in any way, was not only dangerous to their health, it was absolutely criminal. 'Oxygen deficiency inhibits the development of the brain, and the damage that has taken place as a result CANNOT be reversed.' Mind

manipulators of MKUltra put masks on two-year-olds they wanted to neurologically rewire and you can see why. Griesz-Brisson said a child needs the brain to learn and the brain needs oxygen to function. 'We don't need a clinical study for that. This is simple, indisputable physiology.' Consciously and purposely induced oxygen deficiency was an absolutely deliberate health hazard, and an absolute medical contraindication which means that 'this drug, this therapy, this method or measure should not be used, and is not allowed to be used'. To coerce an entire population to use an absolute medical contraindication by force, she said, there had to be definite and serious reasons and the reasons must be presented to competent interdisciplinary and independent bodies to be verified and authorised. She had this warning of the consequences that were coming if mask wearing continued:

When, in ten years, dementia is going to increase exponentially, and the younger generations couldn't reach their god-given potential, it won't help to say 'we didn't need the masks'. I know how damaging oxygen deprivation is for the brain, cardiologists know how damaging it is for the heart, pulmonologists know how damaging it is for the lungs. Oxygen deprivation damages every single organ. Where are our health departments, our health insurance, our medical associations? It would have been their duty to be vehemently against the lockdown and to stop it and stop it from the very beginning.

Why do the medical boards issue punishments to doctors who give people exemptions? Does the person or the doctor seriously have to prove that oxygen deprivation harms people? What kind of medicine are our doctors and medical associations representing? Who is responsible for this crime? The ones who want to enforce it? The ones who let it happen and play along, or the ones who don't prevent it?

All of the organisations and people she mentions there either answer directly to the Cult or do whatever hierarchical levels above them tell them to do. The outcome of both is the same. 'It's not about masks, it's not about viruses, it's certainly not about your health', Griesz-Brisson said. 'It is about much, much more. I am not participating. I am not afraid.' They were taking our air to breathe and there was no unfounded medical exemption from face masks. Oxygen deprivation was dangerous for every single brain. It had to be the free decision of every human being whether they want to

wear a mask that was absolutely ineffective to protect themselves from a virus. She ended by rightly identifying where the responsibility lies for all this:

The imperative of the hour is personal responsibility. We are responsible for what we think, not the media. We are responsible for what we do, not our superiors. We are responsible for our health, not the World Health Organization. And we are responsible for what happens in our country, not the government.

Halle-bloody-lujah.

But surgeons wear masks, right?

Independent studies of mask-wearing have produced a long list of reports detailing mental, emotional and physical dangers. What a definition of insanity to see police officers imposing mask-wearing on the public which will cumulatively damage their health while the police themselves wear masks that will cumulatively damage *their* health. It's utter madness and both public and police do this because 'the government says so' – yes a government of brain-donor idiots like UK Health Secretary Matt Hancock reading the 'follow the science' scripts of psychopathic, lunatic psychologists. The response you get from Stockholm syndrome sufferers defending the very authorities that are destroying them and their families is that 'surgeons wear masks'. This is considered the game, set and match that they must work and don't cause oxygen deficit. Well, actually, scientific studies have shown that they *do* and oxygen levels are monitored in operating theatres to compensate. Surgeons wear masks to stop spittle and such like dropping into open wounds – not to stop 'viral particles' which are so miniscule they can only be seen through an electron microscope. Holes in the masks are significantly bigger than 'viral particles' and if you sneeze or cough they will breach the mask. I watched an incredibly disingenuous 'experiment' that claimed to prove that masks work in catching 'virus' material from the mouth and nose. They did this with a slow motion camera and the mask did block big stuff which stayed inside the mask and

against the face to be breathed in or cause infections on the face as we have seen with many children. 'Viral particles', however, would never have been picked up by the camera as they came through the mask when they are far too small to be seen. The 'experiment' was therefore disingenuous *and* useless.

Studies have concluded that wearing masks in operating theatres (and thus elsewhere) make no difference to preventing infection while the opposite is true with toxic shite building up in the mask and this had led to an explosion in tooth decay and gum disease dubbed by dentists 'mask mouth'. You might have seen the Internet video of a furious American doctor urging people to take off their masks after a four-year-old patient had been rushed to hospital the night before and nearly died with a lung infection that doctors sourced to mask wearing. A study in the journal *Cancer Discovery* found that inhalation of harmful microbes can contribute to advanced stage lung cancer in adults and long-term use of masks can help breed dangerous pathogens. Microbiologists have said frequent mask wearing creates a moist environment in which microbes can grow and proliferate before entering the lungs. The Canadian Agency for Drugs and Technologies in Health, or CADTH, a Canadian national organisation that provides research and analysis to healthcare decision-makers, said this as long ago as 2013 in a report entitled 'Use of Surgical Masks in the Operating Room: A Review of the Clinical Effectiveness and Guidelines'. It said:

- No evidence was found to support the use of surgical face masks to reduce the frequency of surgical site infections
- No evidence was found on the effectiveness of wearing surgical face masks to protect staff from infectious material in the operating room.
- Guidelines recommend the use of surgical face masks by staff in the operating room to protect both operating room staff and patients (despite the lack of evidence).

We were told that the world could go back to 'normal' with the arrival of the 'vaccines'. When they came, fraudulent as they are, the story changed as I knew that it would. We are in the midst of transforming 'normal', not going back to it. Mary Ramsay, head of immunisation at Public Health England, echoed the words of US criminal Anthony Fauci who said masks and other regulations must stay no matter if people are vaccinated. The Fauci idiot continued to wear two masks – different colours so both could be clearly seen – after he *claimed* to have been vaccinated. Senator Rand Paul told Fauci in one exchange that his double-masks were 'theatre' and he was right. It's all theatre. Mary Ramsay back-tracked on the vaccine-return-to-normal theme when she said the public may need to wear masks and social-distance for years despite the jabs. 'People have got used to those lower-level restrictions now, and [they] can live with them', she said telling us what the idea has been all along. 'The vaccine does not give you a pass, even if you have had it, you must continue to follow all the guidelines' said a Public Health England statement which reneged on what we had been told before and made having the 'vaccine' irrelevant to 'normality' even by the official story. Spain's fascist government trumped everyone by passing a law mandating the wearing of masks on the beach and even when swimming in the sea. The move would have devastated what's left of the Spanish tourist industry, posed potential breathing dangers to swimmers and had Northern European sunbathers walking around with their forehead brown and the rest of their face white as a sheet. The ruling was so crazy that it had to be retracted after pressure from public and tourist industry, but it confirmed where the Cult wants to go with masks and how clinically insane authority has become. The determination to make masks permanent and hide the serious dangers to body and mind can be seen in the censorship of scientist Professor Denis Rancourt by Bill Gates-funded academic publishing website ResearchGate over his papers exposing the dangers and uselessness of masks. Rancourt said:

ResearchGate today has permanently locked my account, which I have had since 2015. Their reasons graphically show the nature of their attack against democracy, and their corruption of

science ... By their obscene non-logic, a scientific review of science articles reporting on harms caused by face masks has a 'potential to cause harm'. No criticism of the psychological device (face masks) is tolerated, if the said criticism shows potential to influence public policy.

This is what happens in a fascist world.

Where are the 'greens' (again)?

Other dangers of wearing masks especially regularly relate to the inhalation of minute plastic fibres into the lungs and the deluge of discarded masks in the environment and oceans. Estimates predicted that more than 1.5 billion disposable masks will end up in the world's oceans every year polluting the water with tons of plastic and endangering marine wildlife. Studies project that humans are using 129 billion face masks each month worldwide – about three million a minute. Most are disposable and made from plastic, non-biodegradable microfibers that break down into smaller plastic particles that become widespread in ecosystems. They are littering cities, clogging sewage channels and turning up in bodies of water. I have written in other books about the immense amounts of microplastics from endless sources now being absorbed into the body. Rolf Halden, director of the Arizona State University (ASU) Biodesign Center for Environmental Health Engineering, was the senior researcher in a 2020 study that analysed 47 human tissue samples and found microplastics in all of them. 'We have detected these chemicals of plastics in every single organ that we have investigated', he said. I wrote in *The Answer* about the world being deluged with microplastics. A study by the Worldwide Fund for Nature (WWF) found that people are consuming on average every week some 2,000 tiny pieces of plastic mostly through water and also through marine life and the air. Every year humans are ingesting enough microplastics to fill a heaped dinner plate and in a life-time of 79 years it is enough to fill two large waste bins. Marco Lambertini, WWF International director general said: 'Not only are plastics polluting our oceans and waterways and killing marine life – it's in all of us and we can't escape consuming plastics,' American

geologists found tiny plastic fibres, beads and shards in rainwater samples collected from the remote slopes of the Rocky Mountain National Park near Denver, Colorado. Their report was headed: 'It is raining plastic.' Rachel Adams, senior lecturer in Biomedical Science at Cardiff Metropolitan University, said that among health consequences are internal inflammation and immune responses to a 'foreign body'. She further pointed out that microplastics become carriers of toxins including mercury, pesticides and dioxins (a known cause of cancer and reproductive and developmental problems). These toxins accumulate in the fatty tissues once they enter the body through microplastics. Now this is being compounded massively by people putting plastic on their face and throwing it away.

Workers exposed to polypropylene plastic fibres known as 'flock' have developed 'flock worker's lung' from inhaling small pieces of the flock fibres which can damage lung tissue, reduce breathing capacity and exacerbate other respiratory problems. *Now ...* commonly used surgical masks have three layers of melt-blown textiles made of ... polypropylene. We have billions of people putting these microplastics against their mouth, nose and face for hours at a time day after day in the form of masks. How does anyone think that will work out? I mean – what could possibly go wrong? We posted a number of scientific studies on this at davidicke.com, but when I went back to them as I was writing this book the links to the science research website where they were hosted were dead. Anything that challenges the official narrative in any way is either censored or vilified. The official narrative is so unsupportable by the evidence that only deleting the truth can protect it. A study by Chinese scientists still survived – with the usual twist which it why it was still active, I guess. Yes, they found that virtually all the masks they tested increased the daily intake of microplastic fibres, but people should still wear them because the danger from the 'virus' was worse said the crazy 'team' from the Institute of Hydrobiology in Wuhan. Scientists first discovered microplastics in lung tissue of some patients who died of lung cancer

in the 1990s. Subsequent studies have confirmed the potential health damage with the plastic degrading slowly and remaining in the lungs to accumulate in volume. Wuhan researchers used a machine simulating human breathing to establish that masks shed up to nearly 4,000 microplastic fibres in a month with reused masks producing more. Scientists said some masks are laced with toxic chemicals and a variety of compounds seriously restricted for both health and environmental reasons. They include cobalt (used in blue dye) and formaldehyde known to cause watery eyes, burning sensations in the eyes, nose, and throat, plus coughing, wheezing and nausea. No – that must be ‘Covid-19’.

Mask ‘worms’

There is another and potentially even more sinister content of masks. Mostly new masks of different makes filmed under a microscope around the world have been found to contain strange black fibres or ‘worms’ that appear to move or ‘crawl’ by themselves and react to heat and water. The nearest I have seen to them are the self-replicating fibres that are pulled out through the skin of those suffering from Morgellons disease which has been connected to the phenomena of ‘chemtrails’ which I will bring into the story later on. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. Black ‘worm’ fibres in masks have that kind of feel to them and there is a nanotechnology technique called ‘worm micelles’ which carry and release drugs or anything else you want to deliver to the body. For sure the suppression of humanity by mind altering drugs is the Cult agenda big time and the more excuses they can find to gain access to the body the more opportunities there are to make that happen whether through ‘vaccines’ or masks pushed against the mouth and nose for hours on end.

So let us summarise the pros and cons of masks:

Against masks: Breathing in your own carbon dioxide; depriving the body and brain of sufficient oxygen; build-up of toxins in the mask that can be breathed into the lungs and cause rashes on the face and 'mask-mouth'; breathing microplastic fibres and toxic chemicals into the lungs; dehumanisation and deleting individualisation by literally making people faceless; destroying human emotional interaction through facial expression and deleting parental connection with their babies which look for guidance to their facial expression.

For masks: They don't protect you from a 'virus' that doesn't exist and even if it did 'viral' particles are so minute they are smaller than the holes in the mask.

Governments, police, supermarkets, businesses, transport companies, and all the rest who seek to impose masks have done no risk assessment on their consequences for health and psychology and are now open to group lawsuits when the impact becomes clear with a cumulative epidemic of respiratory and other disease. Authorities will try to exploit these effects and hide the real cause by dubbing them 'Covid-19'. Can you imagine setting out to force the population to wear health-destroying masks without doing any assessment of the risks? It is criminal and it is evil, but then how many people targeted in this way, who see their children told to wear them all day at school, have asked for a risk assessment? Billions can't be imposed upon by the few unless the billions allow it. Oh, yes, with just a tinge of irony, 85 percent of all masks made worldwide come from *China*.

Wash your hands in toxic shite

'Covid' rules include the use of toxic sanitisers and again the health consequences of constantly applying toxins to be absorbed through the skin is obvious to any level of Renegade Mind. America's Food and Drug Administration (FDA) said that sanitisers are drugs and issued a warning about 75 dangerous brands which contain

methanol used in antifreeze and can cause death, kidney damage and blindness. The FDA circulated the following warning even for those brands that it claims to be safe:

Store hand sanitizer out of the reach of pets and children, and children should use it only with adult supervision. Do not drink hand sanitizer. This is particularly important for young children, especially toddlers, who may be attracted by the pleasant smell or brightly colored bottles of hand sanitizer.

Drinking even a small amount of hand sanitizer can cause alcohol poisoning in children. (However, there is no need to be concerned if your children eat with or lick their hands after using hand sanitizer.) During this coronavirus pandemic, poison control centers have had an increase in calls about accidental ingestion of hand sanitizer, so it is important that adults monitor young children's use.

Do not allow pets to swallow hand sanitizer. If you think your pet has eaten something potentially dangerous, call your veterinarian or a pet poison control center right away. Hand sanitizer is flammable and should be stored away from heat and flames. When using hand sanitizer, rub your hands until they feel completely dry before performing activities that may involve heat, sparks, static electricity, or open flames.

There you go, perfectly safe, then, and that's without even a mention of the toxins absorbed through the skin. Come on kids – sanitise your hands everywhere you go. It will save you from the 'virus'. Put all these elements together of the 'Covid' normal and see how much health and psychology is being cumulatively damaged, even devastated, to 'protect your health'. Makes sense, right? They are only imposing these things because they care, right? *Right?*

Submitting to insanity

Psychological reframing of the population goes very deep and is done in many less obvious ways. I hear people say how contradictory and crazy 'Covid' rules are and how they are ever changing. This is explained away by dismissing those involved as idiots. It is a big mistake. The Cult is delighted if its cold calculation is perceived as incompetence and idiocy when it is anything but. Oh, yes, there are idiots within the system – lots of them – but they are *administering* the Cult agenda, mostly unknowingly. They are not deciding and dictating it. The bulwark against tyranny is self-

respect, always has been, always will be. It is self-respect that has broken every tyranny in history. By its very nature self-respect will not bow to oppression and its perpetrators. There is so little self-respect that it's always the few that overturn dictators. Many may eventually follow, but the few with the iron spines (self-respect) kick it off and generate the momentum. The Cult targets self-respect in the knowledge that once this has gone only submission remains. Crazy, contradictory, ever-changing 'Covid' rules are systematically applied by psychologists to delete self-respect. They *want* you to see that the rules make no sense. It is one thing to decide to do something when *you* have made the choice based on evidence and logic. You still retain your self-respect. It is quite another when you can see what you are being told to do is insane, ridiculous and makes no sense, and *yet you still do it*. Your self-respect is extinguished and this has been happening as ever more obviously stupid and nonsensical things have been demanded and the great majority have complied even when they can see they are stupid and nonsensical.

People walk around in face-nappies knowing they are damaging their health and make no difference to a 'virus'. They do it in fear of not doing it. I know it's daft, but I'll do it anyway. When that happens something dies inside of you and submissive reframing has begun. Next there's a need to hide from yourself that you have conceded your self-respect and you convince yourself that you have not really submitted to fear and intimidation. You begin to believe that you are complying with craziness because it's the right thing to do. When first you concede your self-respect of $2+2 = 4$ to $2+2 = 5$ you *know* you are compromising your self-respect. Gradually to avoid facing that fact you begin to *believe* that $2+2=5$. You have been reframed and I have been watching this process happening in the human psyche on an industrial scale. The Cult is working to break your spirit and one of its major tools in that war is humiliation. I read how former American soldier Bradley Manning (later Chelsea Manning after a sex-change) was treated after being jailed for supplying WikiLeaks with documents exposing the enormity of

government and elite mendacity. Manning was isolated in solitary confinement for eight months, put under 24-hour surveillance, forced to hand over clothing before going to bed, and stand naked for every roll call. This is systematic humiliation. The introduction of anal swab 'Covid' tests in China has been done for the same reason to delete self-respect and induce compliant submission. Anal swabs are mandatory for incoming passengers in parts of China and American diplomats have said they were forced to undergo the indignity which would have been calculated humiliation by the Cult-owned Chinese government that has America in its sights.

Government-people: An abusive relationship

Spirit-breaking psychological techniques include giving people hope and apparent respite from tyranny only to take it away again. This happened in the UK during Christmas, 2020, when the psychopsychologists and their political lackeys announced an easing of restrictions over the holiday only to reimpose them almost immediately on the basis of yet another lie. There is a big psychological difference between getting used to oppression and being given hope of relief only to have that dashed. Psychologists know this and we have seen the technique used repeatedly. Then there is traumatising people before you introduce more extreme regulations that require compliance. A perfect case was the announcement by the dark and sinister Whitty and Vallance in the UK that 'new data' predicted that 4,000 could die every day over the winter of 2020/2021 if we did not lockdown again. I think they call it lying and after traumatising people with that claim out came Jackboot Johnson the next day with new curbs on human freedom. Psychologists know that a frightened and traumatised mind becomes suggestable to submission and behaviour reframing. Underpinning all this has been to make people fearful and suspicious of each other and see themselves as a potential danger to others. In league with deleted self-respect you have the perfect psychological recipe for self-loathing. The relationship between authority and public is now demonstrably the same as that of

subservience to an abusive partner. These are signs of an abusive relationship explained by psychologist Leslie Becker-Phelps:

Psychological and emotional abuse: Undermining a partner's self-worth with verbal attacks, name-calling, and belittling. Humiliating the partner in public, unjustly accusing them of having an affair, or interrogating them about their every behavior. Keeping partner confused or off balance by saying they were just kidding or blaming the partner for 'making' them act this way ... Feigning in public that they care while turning against them in private. This leads to victims frequently feeling confused, incompetent, unworthy, hopeless, and chronically self-doubting. [Apply these techniques to how governments have treated the population since New Year, 2020, and the parallels are obvious.]

Physical abuse: The abuser might physically harm their partner in a range of ways, such as grabbing, hitting, punching, or shoving them. They might throw objects at them or harm them with a weapon. [Observe the physical harm imposed by masks, lockdown, and so on.]

Threats and intimidation: One way abusers keep their partners in line is by instilling fear. They might be verbally threatening, or give threatening looks or gestures. Abusers often make it known that they are tracking their partner's every move. They might destroy their partner's possessions, threaten to harm them, or threaten to harm their family members. Not surprisingly, victims of this abuse often feel anxiety, fear, and panic. [No words necessary.]

Isolation: Abusers often limit their partner's activities, forbidding them to talk or interact with friends or family. They might limit access to a car or even turn off their phone. All of this might be done by physically holding them against their will, but is often accomplished through psychological abuse and intimidation. The more isolated a person feels, the fewer resources they have to help gain perspective on their situation and to escape from it. [No words necessary.]

Economic abuse: Abusers often make their partners beholden to them for money by controlling access to funds of any kind. They might prevent their partner from getting a job or withhold access to money they earn from a job. This creates financial dependency that makes leaving the relationship very difficult. [See destruction of livelihoods and the proposed meagre 'guaranteed income' so long as you do whatever you are told.]

Using children: An abuser might disparage their partner's parenting skills, tell their children lies about their partner, threaten to take custody of their children, or threaten to harm their children. These tactics instil fear and often elicit compliance. [See reframed social service mafia and how children are being mercilessly abused by the state over 'Covid' while their parents look on too frightened to do anything.]

A further recurring trait in an abusive relationship is the abused blaming themselves for their abuse and making excuses for the abuser. We have the public blaming each other for lockdown abuse by government and many making excuses for the government while attacking those who challenge the government. How often we have heard authorities say that rules are being imposed or reimposed only because people have refused to 'behave' and follow the rules. We don't want to do it – it's *you*.

Renegade Minds are an antidote to all of these things. They will never concede their self-respect no matter what the circumstances. Even when apparent humiliation is heaped upon them they laugh in its face and reflect back the humiliation on the abuser where it belongs. Renegade Minds will never wear masks they know are only imposed to humiliate, suppress and damage both physically and psychologically. Consequences will take care of themselves and they will never break their spirit or cause them to concede to tyranny. UK newspaper columnist Peter Hitchens was one of the few in the mainstream media to speak out against lockdowns and forced vaccinations. He then announced he had taken the jab. He wanted to see family members abroad and he believed vaccine passports were inevitable even though they had not yet been introduced. Hitchens

has a questioning and critical mind, but not a Renegade one. If he had no amount of pressure would have made him concede. Hitchens excused his action by saying that the battle has been lost. Renegade Minds never accept defeat when freedom is at stake and even if they are the last one standing the self-respect of not submitting to tyranny is more important than any outcome or any consequence.

That's why Renegade Minds are the only minds that ever changed anything worth changing.

CHAPTER EIGHT

'Reframing' insanity

Insanity is relative. It depends on who has who locked in what cage
Ray Bradbury

Reframing' a mind means simply to change its perception and behaviour. This can be done subconsciously to such an extent that subjects have no idea they have been 'reframed' while to any observer changes in behaviour and attitudes are obvious.

Human society is being reframed on a ginormous scale since the start of 2020 and here we have the reason why psychologists rather than doctors have been calling the shots. Ask most people who have succumbed to 'Covid' reframing if they have changed and most will say 'no'; but they *have* and fundamentally. The Cult's long-game has been preparing for these times since way back and crucial to that has been to prepare both population and officialdom mentally and emotionally. To use the mind-control parlance they had to reframe the population with a mentality that would submit to fascism and reframe those in government and law enforcement to impose fascism or at least go along with it. The result has been the fact-deleted mindlessness of 'Wokeness' and officialdom that has either enthusiastically or unquestioningly imposed global tyranny demanded by reframed politicians on behalf of psychopathic and deeply evil cultists. 'Cognitive reframing' identifies and challenges the way someone sees the world in the form of situations, experiences and emotions and then restructures those perceptions to view the same set of circumstances in a different way. This can have

benefits if the attitudes are personally destructive while on the other side it has the potential for individual and collective mind control which the subject has no idea has even happened.

Cognitive therapy was developed in the 1960s by Aaron T. Beck who was born in Rhode Island in 1921 as the son of Jewish immigrants from the Ukraine. He became interested in the techniques as a treatment for depression. Beck's daughter Judith S. Beck is prominent in the same field and they founded the Beck Institute for Cognitive Behavior Therapy in Philadelphia in 1994. Cognitive reframing, however, began to be used worldwide by those with a very dark agenda. The Cult reframes politicians to change their attitudes and actions until they are completely at odds with what they once appeared to stand for. The same has been happening to government administrators at all levels, law enforcement, military and the human population. Cultists love mind control for two main reasons: It allows them to control what people think, do and say to secure agenda advancement and, by definition, it calms their legendary insecurity and fear of the unexpected. I have studied mind control since the time I travelled America in 1996. I may have been talking to next to no one in terms of an audience in those years, but my goodness did I gather a phenomenal amount of information and knowledge about so many things including the techniques of mind control. I have described this in detail in other books going back to *The Biggest Secret* in 1998. I met a very large number of people recovering from MKUltra and its offshoots and successors and I began to see how these same techniques were being used on the population in general. This was never more obvious than since the 'Covid' hoax began.

Reframing the enforcers

I have observed over the last two decades and more the very clear transformation in the dynamic between the police, officialdom and the public. I tracked this in the books as the relationship mutated from one of serving the public to seeing them as almost the enemy and certainly a lower caste. There has always been a class divide

based on income and always been some psychopathic, corrupt, and big-I-am police officers. This was different. Wholesale change was unfolding in the collective dynamic; it was less about money and far more about position and perceived power. An us-and-them was emerging. Noses were lifted skyward by government administration and law enforcement and their attitude to the public they were *supposed* to be serving changed to one of increasing contempt, superiority and control. The transformation was so clear and widespread that it had to be planned. Collective attitudes and dynamics do not change naturally and organically that quickly on that scale. I then came across an organisation in Britain called Common Purpose created in the late 1980s by Julia Middleton who would work in the office of Deputy Prime Minister John Prescott during the long and disastrous premiership of war criminal Tony Blair. When Blair speaks the Cult is speaking and the man should have been in jail a long time ago. Common Purpose proclaims itself to be one of the biggest 'leadership development' organisations in the world while functioning as a *charity* with all the financial benefits which come from that. It hosts 'leadership development' courses and programmes all over the world and claims to have 'brought together' what it calls 'leaders' from more than 100 countries on six continents. The modus operandi of Common Purpose can be compared with the work of the UK government's reframing network that includes the Behavioural Insights Team 'nudge unit' and 'Covid' reframing specialists at SPI-B. WikiLeaks described Common Purpose long ago as 'a hidden virus in our government and schools' which is unknown to the general public: 'It recruits and trains "leaders" to be loyal to the directives of Common Purpose and the EU, instead of to their own departments, which they then undermine or subvert, the NHS [National Health Service] being an example.' This is a vital point to understand the 'Covid' hoax. The NHS, and its equivalent around the world, has been utterly reframed in terms of administrators and much of the medical personnel with the transformation underpinned by recruitment policies. The outcome has been the criminal and psychopathic behaviour of the

NHS over 'Covid' and we have seen the same in every other major country. WikiLeaks said Common Purpose trainees are 'learning to rule without regard to democracy' and to usher in a police state (current events explained). Common Purpose operated like a 'glue' and had members in the NHS, BBC, police, legal profession, church, many of Britain's 7,000 quangos, local councils, the Civil Service, government ministries and Parliament, and controlled many RDA's (Regional Development Agencies). Here we have one answer for how and why British institutions and their like in other countries have changed so negatively in relation to the public. This further explains how and why the beyond-disgraceful reframed BBC has become a propaganda arm of 'Covid' fascism. They are all part of a network pursuing the same goal.

By 2019 Common Purpose was quoting a figure of 85,000 'leaders' that had attended its programmes. These 'students' of all ages are known as Common Purpose 'graduates' and they consist of government, state and local government officials and administrators, police chiefs and officers, and a whole range of others operating within the national, local and global establishment. Cressida Dick, Commissioner of the London Metropolitan Police, is the Common Purpose graduate who was the 'Gold Commander' that oversaw what can only be described as the murder of Brazilian electrician Jean Charles de Menezes in 2005. He was held down by psychopathic police and shot seven times in the head by a psychopathic lunatic after being mistaken for a terrorist when he was just a bloke going about his day. Dick authorised officers to pursue and keep surveillance on de Menezes and ordered that he be stopped from entering the underground train system. Police psychopaths took her at her word clearly. She was 'disciplined' for this outrage by being *promoted* – eventually to the top of the 'Met' police where she has been a disaster. Many Chief Constables controlling the police in different parts of the UK are and have been Common Purpose graduates. I have heard the 'graduate' network described as a sort of Mafia or secret society operating within the fabric of government at all levels pursuing a collective policy

ingrained at Common Purpose training events. Founder Julia Middleton herself has said:

Locally and internationally, Common Purpose graduates will be 'lighting small fires' to create change in their organisations and communities ... The Common Purpose effect is best illustrated by the many stories of small changes brought about by leaders, who themselves have changed.

A Common Purpose mission statement declared:

Common Purpose aims to improve the way society works by expanding the vision, decision-making ability and influence of all kinds of leaders. The organisation runs a variety of educational programmes for leaders of all ages, backgrounds and sectors, in order to provide them with the inspirational, information and opportunities they need to change the world.

Yes, but into what? Since 2020 the answer has become clear.

NLP and the Delphi technique

Common Purpose would seem to be a perfect name or would common programming be better? One of the foundation methods of reaching 'consensus' (group think) is by setting the agenda theme and then encouraging, cajoling or pressuring everyone to agree a 'consensus' in line with the core theme promoted by Common Purpose. The methodology involves the 'Delphi technique', or an adaptation of it, in which opinions are expressed that are summarised by a 'facilitator or change agent' at each stage. Participants are 'encouraged' to modify their views in the light of what others have said. Stage by stage the former individual opinions are merged into group consensus which just happens to be what Common Purpose wants them to believe. A key part of this is to marginalise anyone refusing to concede to group think and turn the group against them to apply pressure to conform. We are seeing this very technique used on the general population to make 'Covid' group-thinkers hostile to those who have seen through the bullshit. People can be reframed by using perception manipulation methods such as Neuro-Linguistic Programming (NLP) in which you change perception with the use of

carefully constructed language. An NLP website described the technique this way:

... A method of influencing brain behaviour (the 'neuro' part of the phrase) through the use of language (the 'linguistic' part) and other types of communication to enable a person to 'recode' the way the brain responds to stimuli (that's the 'programming') and manifest new and better behaviours. Neuro-Linguistic Programming often incorporates hypnosis and self-hypnosis to help achieve the change (or 'programming') that is wanted.

British alternative media operation UKColumn has done very detailed research into Common Purpose over a long period. I quoted co-founder and former naval officer Brian Gerrish in my book *Remember Who You Are*, published in 2011, as saying the following years before current times:

It is interesting that many of the mothers who have had children taken by the State speak of the Social Services people being icily cool, emotionless and, as two ladies said in slightly different words, '... like little robots'. We know that NLP is cumulative, so people can be given small imperceptible doses of NLP in a course here, another in a few months, next year etc. In this way, major changes are accrued in their personality, but the day by day change is almost unnoticeable.

In these and other ways 'graduates' have had their perceptions uniformly reframed and they return to their roles in the institutions of government, law enforcement, legal profession, military, 'education', the UK National Health Service and the whole swathe of the establishment structure to pursue a common agenda preparing for the 'post-industrial', 'post-democratic' society. I say 'preparing' but we are now there. 'Post-industrial' is code for the Great Reset and 'post-democratic' is 'Covid' fascism. UKColumn has spoken to partners of those who have attended Common Purpose 'training'. They have described how personalities and attitudes of 'graduates' changed very noticeably for the worse by the time they had completed the course. They had been 'reframed' and told they are the 'leaders' – the special ones – who know better than the population. There has also been the very demonstrable recruitment of psychopaths and narcissists into government administration at all

levels and law enforcement. If you want psychopathy hire psychopaths and you get a simple cause and effect. If you want administrators, police officers and 'leaders' to perceive the public as lesser beings who don't matter then employ narcissists. These personalities are identified using 'psychometrics' that identifies knowledge, abilities, attitudes and personality traits, mostly through carefully-designed questionnaires and tests. As this policy has passed through the decades we have had power-crazy, power-trippers appointed into law enforcement, security and government administration in preparation for current times and the dynamic between public and law enforcement/officialdom has been transformed. UKColumn's Brian Gerrish said of the narcissistic personality:

Their love of themselves and power automatically means that they will crush others who get in their way. I received a major piece of the puzzle when a friend pointed out that when they made public officials re-apply for their own jobs several years ago they were also required to do psychometric tests. This was undoubtedly the start of the screening process to get 'their' sort of people in post.

How obvious that has been since 2020 although it was clear what was happening long before if people paid attention to the changing public-establishment dynamic.

Change agents

At the centre of events in 'Covid' Britain is the National Health Service (NHS) which has behaved disgracefully in slavishly following the Cult agenda. The NHS management structure is awash with Common Purpose graduates or 'change agents' working to a common cause. Helen Bevan, a Chief of Service Transformation at the NHS Institute for Innovation and Improvement, co-authored a document called 'Towards a million change agents, a review of the social movements literature: implications for large scale change in the NHS'. The document compared a project management approach to that of change and social movements where 'people change

themselves and each other – peer to peer’. Two definitions given for a ‘social movement’ were:

A group of people who consciously attempt to build a radically new social order; involves people of a broad range of social backgrounds; and deploys politically confrontational and socially disruptive tactics – Cyrus Zirakzadeh 1997

Collective challenges, based on common purposes and social solidarities, in sustained interaction with elites, opponents, and authorities – Sidney Tarrow 1994

Helen Bevan wrote another NHS document in which she defined ‘framing’ as ‘the process by which leaders construct, articulate and put across their message in a powerful and compelling way in order to win people to their cause and call them to action’. I think I could come up with another definition that would be rather more accurate. The National Health Service and institutions of Britain and the wider world have been taken over by reframed ‘change agents’ and that includes everything from the United Nations to national governments, local councils and social services which have been kidnapping children from loving parents on an extraordinary and gathering scale on the road to the end of parenthood altogether. Children from loving homes are stolen and kidnapped by the state and put into the ‘care’ (inversion) of the local authority through council homes, foster parents and forced adoption. At the same time children are allowed to be abused without response while many are under council ‘care’. UKColumn highlighted the Common Purpose connection between South Yorkshire Police and Rotherham council officers in the case of the scandal in that area of the sexual exploitation of children to which the authorities turned not one blind eye, but both:

We were alarmed to discover that the Chief Executive, the Strategic Director of Children and Young People's Services, the Manager for the Local Strategic Partnership, the Community Cohesion Manager, the Cabinet Member for Cohesion, the Chief Constable and his predecessor had all attended Leadership training courses provided by the pseudo-charity Common Purpose.

Once 'change agents' have secured positions of hire and fire within any organisation things start to move very quickly. Personnel are then hired and fired on the basis of whether they will work towards the agenda the change agent represents. If they do they are rapidly promoted even though they may be incompetent. Those more qualified and skilled who are pre-Common Purpose 'old school' see their careers stall and even disappear. This has been happening for decades in every institution of state, police, 'health' and social services and all of them have been transformed as a result in their attitudes to their jobs and the public. Medical professions, including nursing, which were once vocations for the caring now employ many cold, callous and couldn't give a shit personality types. The UKColumn investigation concluded:

By blurring the boundaries between people, professions, public and private sectors, responsibility and accountability, Common Purpose encourages 'graduates' to believe that as new selected leaders, they can work together, outside of the established political and social structures, to achieve a paradigm shift or CHANGE – so called 'Leading Beyond Authority'. In doing so, the allegiance of the individual becomes 'reframed' on CP colleagues and their NETWORK.

Reframing the Face-Nappies

Nowhere has this process been more obvious than in the police where recruitment of psychopaths and development of unquestioning mind-controlled group-thinkers have transformed law enforcement into a politically-correct 'Woke' joke and a travesty of what should be public service. Today they wear their face-nappies like good little gofers and enforce 'Covid' rules which are fascism under another name. Alongside the specifically-recruited psychopaths we have software minds incapable of free thought. Brian Gerrish again:

An example is the policeman who would not get on a bike for a press photo because he had not done the cycling proficiency course. Normal people say this is political correctness gone mad. Nothing could be further from the truth. The policeman has been reframed, and in his reality it is perfect common sense not to get on the bike 'because he hasn't done the cycling course'.

Another example of this is where the police would not rescue a boy from a pond until they had taken advice from above on the 'risk assessment'. A normal person would have arrived, perhaps thought of the risk for a moment, and dived in. To the police now 'reframed', they followed 'normal' procedure.

There are shocking cases of reframed ambulance crews doing the same. Sheer unthinking stupidity of London Face-Nappies headed by Common Purpose graduate Cressida Dick can be seen in their behaviour at a vigil in March, 2021, for a murdered woman, Sarah Everard. A police officer had been charged with the crime. Anyone with a brain would have left the vigil alone in the circumstances. Instead they 'manhandled' women to stop them breaking 'Covid rules' to betray classic reframing. Minds in the thrall of perception control have no capacity for seeing a situation on its merits and acting accordingly. 'Rules is rules' is their only mind-set. My father used to say that rules and regulations are for the guidance of the intelligent and the blind obedience of the idiot. Most of the intelligent, decent, coppers have gone leaving only the other kind and a few old school for whom the job must be a daily nightmare. The combination of psychopaths and rule-book software minds has been clearly on public display in the 'Covid' era with automaton robots in uniform imposing fascistic 'Covid' regulations on the population without any personal initiative or judging situations on their merits. There are thousands of examples around the world, but I'll make my point with the infamous Derbyshire police in the English East Midlands – the ones who think pouring dye into beauty spots and using drones to track people walking in the countryside away from anyone is called 'policing'. To them there are rules decreed by the government which they have to enforce and in their bewildered state a group gathering in a closed space and someone walking alone in the countryside are the same thing. It is beyond idiocy and enters the realm of clinical insanity.

Police officers in Derbyshire said they were 'horrified' – *horrified* – to find 15 to 20 'irresponsible' kids playing a football match at a closed leisure centre 'in breach of coronavirus restrictions'. When they saw the police the kids ran away leaving their belongings behind and the reframed men and women of Derbyshire police were seeking to establish their identities with a view to fining their parents. The most natural thing for youngsters to do – kicking a ball about – is turned into a criminal activity and enforced by the moronic software programs of Derbyshire police. You find the same mentality in every country. These barely conscious 'horrified' officers said they had to take action because 'we need to ensure these rules are being followed' and 'it is of the utmost importance that you ensure your children are following the rules and regulations for Covid-19'. Had any of them done ten seconds of research to see if this parroting of their masters' script could be supported by any evidence? Nope. Reframed people don't think – others think for them and that's the whole idea of reframing. I have seen police officers one after the other repeating without question word for word what officialdom tells them just as I have seen great swathes of the public doing the same. Ask either for 'their' opinion and out spews what they have been told to think by the official narrative. Police and public may seem to be in different groups, but their mentality is the same. Most people do whatever they are told in fear not doing so or because they believe what officialdom tells them; almost the entirety of the police do what they are told for the same reason. Ultimately it's the tiny inner core of the global Cult that's telling both what to do.

So Derbyshire police were 'horrified'. Oh, really? Why did they think those kids were playing football? It was to relieve the psychological consequences of lockdown and being denied human contact with their friends and interaction, touch and discourse vital to human psychological health. Being denied this month after month has dismantled the psyche of many children and young people as depression and suicide have exploded. Were Derbyshire police *horrified by that*? Are you kidding? Reframed people don't have those

mental and emotional processes that can see how the impact on the psychological health of youngsters is far more dangerous than any 'virus' even if you take the mendacious official figures to be true. The reframed are told (programmed) how to act and so they do. The Derbyshire Chief Constable in the first period of lockdown when the black dye and drones nonsense was going on was Peter Goodman. He was the man who severed the connection between his force and the Derbyshire Constabulary *Male Voice* Choir when he decided that it was not inclusive enough to allow women to join. The fact it was a male voice choir making a particular sound produced by male voices seemed to elude a guy who terrifyingly ran policing in Derbyshire. He retired weeks after his force was condemned as disgraceful by former Supreme Court Justice Jonathan Sumption for their behaviour over extreme lockdown impositions. Goodman was replaced by his deputy Rachel Swann who was in charge when her officers were 'horrified'. The police statement over the boys committing the hanging-offence of playing football included the line about the youngsters being 'irresponsible in the times we are all living through' missing the point that the real relevance of the 'times we are all living through' is the imposition of fascism enforced by psychopaths and reframed minds of police officers playing such a vital part in establishing the fascist tyranny that their own children and grandchildren will have to live in their entire lives. As a definition of insanity that is hard to beat although it might be run close by imposing masks on people that can have a serious effect on their health while wearing a face nappy all day themselves. Once again public and police do it for the same reason – the authorities tell them to and who are they to have the self-respect to say no?

Workers in uniform

How reframed do you have to be to arrest a *six-year-old* and take him to court for *picking a flower* while waiting for a bus? Brain dead police and officialdom did just that in North Carolina where criminal proceedings happen regularly for children under nine. Attorney Julie Boyer gave the six-year-old crayons and a colouring book

during the 'flower' hearing while the 'adults' decided his fate. County Chief District Court Judge Jay Corpening asked: 'Should a child that believes in Santa Claus, the Easter Bunny and the tooth fairy be making life-altering decisions?' Well, of course not, but common sense has no meaning when you have a common purpose and a reframed mind. Treating children in this way, and police operating in American schools, is all part of the psychological preparation for children to accept a police state as normal all their adult lives. The same goes for all the cameras and biometric tracking technology in schools. Police training is focused on reframing them as snowflake Wokers and this is happening in the military. Pentagon top brass said that 'training sessions on extremism' were needed for troops who asked why they were so focused on the Capitol Building riot when Black Lives Matter riots were ignored. What's the difference between them some apparently and rightly asked. Actually, there is a difference. Five people died in the Capitol riot, only one through violence, and that was a police officer shooting an unarmed protestor. BLM riots killed at least 25 people and cost billions. Asking the question prompted the psychopaths and reframed minds that run the Pentagon to say that more 'education' (programming) was needed. Troop training is all based on psychological programming to make them fodder for the Cult – 'Military men are just dumb, stupid animals to be used as pawns in foreign policy' as Cult-to-his-DNA former Secretary of State Henry Kissinger famously said. Governments see the police in similar terms and it's time for those among them who can see this to defend the people and stop being enforcers of the Cult agenda upon the people.

The US military, like the country itself, is being targeted for destruction through a long list of Woke impositions. Cult-owned gaga 'President' Biden signed an executive order when he took office to allow taxpayer money to pay for transgender surgery for active military personnel and veterans. Are you a man soldier? No, I'm a LGBTQIA+ with a hint of Skoliosexual and Spectrasexual. Oh, good man. Bad choice of words you bigot. The Pentagon announced in March, 2021, the appointment of the first 'diversity and inclusion

officer' for US Special Forces. Richard Torres-Estrada arrived with the publication of a 'D&I Strategic Plan which will guide the enterprise-wide effort to institutionalize and sustain D&I'. If you think a Special Forces 'Strategic Plan' should have something to do with defending America you haven't been paying attention. Defending Woke is now the military's new role. Torres-Estrada has posted images comparing Donald Trump with Adolf Hitler and we can expect no bias from him as a representative of the supposedly non-political Pentagon. Cable news host Tucker Carlson said: 'The Pentagon is now the Yale faculty lounge but with cruise missiles.' Meanwhile Secretary of Defense Lloyd Austin, a board member of weapons-maker Raytheon with stock and compensation interests in October, 2020, worth \$1.4 million, said he was purging the military of the 'enemy within' – anyone who isn't Woke and supports Donald Trump. Austin refers to his targets as 'racist extremists' while in true Woke fashion being himself a racist extremist. Pentagon documents pledge to 'eradicate, eliminate and conquer all forms of racism, sexism and homophobia'. The definitions of these are decided by 'diversity and inclusion committees' peopled by those who see racism, sexism and homophobia in every situation and opinion. Woke (the Cult) is dismantling the US military and purging testosterone as China expands its military and gives its troops 'masculinity training'. How do we think that is going to end when this is all Cult coordinated? The US military, like the British military, is controlled by Woke and spineless top brass who just go along with it out of personal career interests.

'Woke' means fast asleep

Mind control and perception manipulation techniques used on individuals to create group-think have been unleashed on the global population in general. As a result many have no capacity to see the obvious fascist agenda being installed all around them or what 'Covid' is really all about. Their brains are firewalled like a computer system not to process certain concepts, thoughts and realisations that are bad for the Cult. The young are most targeted as the adults they

will be when the whole fascist global state is planned to be fully implemented. They need to be prepared for total compliance to eliminate all pushback from entire generations. The Cult has been pouring billions into taking complete control of 'education' from schools to universities via its operatives and corporations and not least Bill Gates as always. The plan has been to transform 'education' institutions into programming centres for the mentality of 'Woke'. James McConnell, professor of psychology at the University of Michigan, wrote in *Psychology Today* in 1970:

The day has come when we can combine sensory deprivation with drugs, hypnosis, and astute manipulation of reward and punishment, to gain almost absolute control over an individual's behaviour. It should then be possible to achieve a very rapid and highly effective type of brainwashing that would allow us to make dramatic changes in a person's behaviour and personality ...

... We should reshape society so that we all would be trained from birth to want to do what society wants us to do. We have the techniques to do it... no-one owns his own personality you acquired, and there's no reason to believe you should have the right to refuse to acquire a new personality if your old one is anti-social.

This was the potential for mass brainwashing in 1970 and the mentality there displayed captures the arrogant psychopathy that drives it forward. I emphasise that not all young people have succumbed to Woke programming and those that haven't are incredibly impressive people given that today's young are the most perceptually-targeted generations in history with all the technology now involved. Vast swathes of the young generations, however, have fallen into the spell – and that's what it is – of Woke. The Woke mentality and perceptual program is founded on *inversion* and you will appreciate later why that is so significant. Everything with Woke is inverted and the opposite of what it is claimed to be. Woke was a term used in African-American culture from the 1900s and referred to an awareness of social and racial justice. This is not the meaning of the modern version or 'New Woke' as I call it in *The Answer*. Oh, no, Woke today means something very different no matter how much Wokers may seek to hide that and insist Old Woke and New

Woke are the same. See if you find any 'awareness of social justice' here in the modern variety:

- Woke demands 'inclusivity' while excluding anyone with a different opinion and calls for mass censorship to silence other views.
- Woke claims to stand against oppression when imposing oppression is the foundation of all that it does. It is the driver of political correctness which is nothing more than a Cult invention to manipulate the population to silence itself.
- Woke believes itself to be 'liberal' while pursuing a global society that can only be described as fascist (see 'anti-fascist' fascist Antifa).
- Woke calls for 'social justice' while spreading injustice wherever it goes against the common 'enemy' which can be easily identified as a differing view.
- Woke is supposed to be a metaphor for 'awake' when it is solid-gold asleep and deep in a Cult-induced coma that meets the criteria for 'off with the fairies'.

I state these points as obvious facts if people only care to look. I don't do this with a sense of condemnation. We need to appreciate that the onslaught of perceptual programming on the young has been incessant and merciless. I can understand why so many have been reframed, or, given their youth, framed from the start to see the world as the Cult demands. The Cult has had access to their minds day after day in its 'education' system for their entire formative years. Perception is formed from information received and the Cult-created system is a life-long download of information delivered to elicit a particular perception, thus behaviour. The more this has expanded into still new extremes in recent decades and ever-increasing censorship has deleted other opinions and information why wouldn't that lead to a perceptual reframing on a mass scale? I

have described already cradle-to-grave programming and in more recent times the targeting of young minds from birth to adulthood has entered the stratosphere. This has taken the form of skewing what is 'taught' to fit the Cult agenda and the omnipresent techniques of group-think to isolate non-believers and pressure them into line. There has always been a tendency to follow the herd, but we really are in a new world now in relation to that. We have parents who can see the 'Covid' hoax told by their children not to stop them wearing masks at school, being 'Covid' tested or having the 'vaccine' in fear of the peer-pressure consequences of being different. What is 'peer-pressure' if not pressure to conform to group-think? Renegade Minds never group-think and always retain a set of perceptions that are unique to them. Group-think is always underpinned by consequences for not group-thinking. Abuse now aimed at those refusing DNA-manipulating 'Covid vaccines' are a potent example of this. The biggest pressure to conform comes from the very group which is itself being manipulated. 'I am programmed to be part of a hive mind and so you must be.'

Woke control structures in 'education' now apply to every mainstream organisation. Those at the top of the 'education' hierarchy (the Cult) decide the policy. This is imposed on governments through the Cult network; governments impose it on schools, colleges and universities; their leadership impose the policy on teachers and academics and they impose it on children and students. At any level where there is resistance, perhaps from a teacher or university lecturer, they are targeted by the authorities and often fired. Students themselves regularly demand the dismissal of academics (increasingly few) at odds with the narrative that the students have been programmed to believe in. It is quite a thought that students who are being targeted by the Cult become so consumed by programmed group-think that they launch protests and demand the removal of those who are trying to push back against those targeting the students. Such is the scale of perceptual inversion. We see this with 'Covid' programming as the Cult imposes the rules via psycho-psychologists and governments on

shops, transport companies and businesses which impose them on their staff who impose them on their customers who pressure Pushbackers to conform to the will of the Cult which is in the process of destroying them and their families. Scan all aspects of society and you will see the same sequence every time.

Fact free Woke and hijacking the 'left'

There is no more potent example of this than 'Woke', a mentality only made possible by the deletion of factual evidence by an 'education' system seeking to produce an ever more uniform society. Why would you bother with facts when you don't know any? Deletion of credible history both in volume and type is highly relevant. Orwell said: 'Who controls the past controls the future: who controls the present controls the past.' They who control the perception of the past control the perception of the future and they who control the present control the perception of the past through the writing and deleting of history. Why would you oppose the imposition of Marxism in the name of Wokeism when you don't know that Marxism cost at least 100 million lives in the 20th century alone? Watch videos and read reports in which Woker generations are asked basic historical questions – it's mind-blowing. A survey of 2,000 people found that six percent of millennials (born approximately early 1980s to early 2000s) believed the Second World War (1939-1945) broke out with the assassination of President Kennedy (in 1963) and one in ten thought Margaret Thatcher was British Prime Minister at the time. She was in office between 1979 and 1990. We are in a post-fact society. Provable facts are no defence against the fascism of political correctness or Silicon Valley censorship. Facts don't matter anymore as we have witnessed with the 'Covid' hoax. Sacrificing uniqueness to the Woke group-think religion is all you are required to do and that means thinking for yourself is the biggest Woke no, no. All religions are an expression of group-think and censorship and Woke is just another religion with an orthodoxy defended by group-think and censorship. Burned at

the stake becomes burned on Twitter which leads back eventually to burned at the stake as Woke humanity regresses to ages past.

The biggest Woke inversion of all is its creators and funders. I grew up in a traditional left of centre political household on a council estate in Leicester in the 1950s and 60s – you know, the left that challenged the power of wealth-hoarding elites and threats to freedom of speech and opinion. In those days students went on marches defending freedom of speech while today's Wokers march for its deletion. What on earth could have happened? Those very elites (collectively the Cult) that we opposed in my youth and early life have funded into existence the antithesis of that former left and hijacked the 'brand' while inverting everything it ever stood for. We have a mentality that calls itself 'liberal' and 'progressive' while acting like fascists. Cult billionaires and their corporations have funded themselves into control of 'education' to ensure that Woke programming is unceasing throughout the formative years of children and young people and that non-Wokers are isolated (that word again) whether they be students, teachers or college professors. The Cult has funded into existence the now colossal global network of Woke organisations that have spawned and promoted all the 'causes' on the Cult wish-list for global transformation and turned Wokers into demanders of them. Does anyone really think it's a coincidence that the Cult agenda for humanity is a carbon (sorry) copy of the societal transformations desired by Woke?? These are only some of them:

Political correctness: The means by which the Cult deletes all public debates that it knows it cannot win if we had the free-flow of information and evidence.

Human-caused 'climate change': The means by which the Cult seeks to transform society into a globally-controlled dictatorship imposing its will over the fine detail of everyone's lives 'to save the planet' which doesn't actually need saving.

Transgender obsession: Preparing collective perception to accept the 'new human' which would not have genders because it would be created technologically and not through procreation. I'll have much more on this in Human 2.0.

Race obsession: The means by which the Cult seeks to divide and rule the population by triggering racial division through the perception that society is more racist than ever when the opposite is the case. Is it perfect in that regard? No. But to compare today with the racism of apartheid and segregation brought to an end by the civil rights movement in the 1960s is to insult the memory of that movement and inspirations like Martin Luther King. Why is the 'anti-racism' industry (which it is) so dominated by privileged white people?

White supremacy: This is a label used by privileged white people to demonise poor and deprived white people pushing back on tyranny to marginalise and destroy them. White people are being especially targeted as the dominant race by number within Western society which the Cult seeks to transform in its image. If you want to change a society you must weaken and undermine its biggest group and once you have done that by using the other groups you next turn on them to do the same ... 'Then they came for the Jews and I was not a Jew so I did nothing.'

Mass migration: The mass movement of people from the Middle East, Africa and Asia into Europe, from the south into the United States and from Asia into Australia are another way the Cult seeks to dilute the racial, cultural and political influence of white people on Western society. White people ask why their governments appear to be working against them while being politically and culturally biased towards incoming cultures. Well, here's your answer. In the same way sexually 'straight' people, men and women, ask why the

authorities are biased against them in favour of other sexualities. The answer is the same – that's the way the Cult wants it to be for very sinister motives.

These are all central parts of the Cult agenda and central parts of the Woke agenda and Woke was created and continues to be funded to an immense degree by Cult billionaires and corporations. If anyone begins to say 'coincidence' the syllables should stick in their throat.

Billionaire 'social justice warriors'

Joe Biden is a 100 percent-owned asset of the Cult and the Wokers' man in the White House whenever he can remember his name and for however long he lasts with his rapidly diminishing cognitive function. Even walking up the steps of an aircraft without falling on his arse would appear to be a challenge. He's not an empty-shell puppet or anything. From the minute Biden took office (or the Cult did) he began his executive orders promoting the Woke wish-list. You will see the Woke agenda imposed ever more severely because it's really the *Cult* agenda. Woke organisations and activist networks spawned by the Cult are funded to the extreme so long as they promote what the Cult wants to happen. Woke is funded to promote 'social justice' by billionaires who become billionaires by destroying social justice. The social justice mantra is only a cover for dismantling social justice and funded by billionaires that couldn't give a damn about social justice. Everything makes sense when you see that. One of Woke's premier funders is Cult billionaire financier George Soros who said: 'I am basically there to make money, I cannot and do not look at the social consequences of what I do.' This is the same Soros who has given more than \$32 billion to his Open Society Foundations global Woke network and funded Black Lives Matter, mass immigration into Europe and the United States, transgender activism, climate change activism, political correctness and groups targeting 'white supremacy' in the form of privileged white thugs that dominate Antifa. What a scam it all is and when

you are dealing with the unquestioning fact-free zone of Woke scamming them is child's play. All you need to pull it off in all these organisations are a few in-the-know agents of the Cult and an army of naïve, reframed, uninformed, narcissistic, know-nothings convinced of their own self-righteousness, self-purity and virtue.

Soros and fellow billionaires and billionaire corporations have poured hundreds of millions into Black Lives Matter and connected groups and promoted them to a global audience. None of this is motivated by caring about black people. These are the billionaires that have controlled and exploited a system that leaves millions of black people in abject poverty and deprivation which they do absolutely nothing to address. The same Cult networks funding BLM were behind the *slave trade*! Black Lives Matter hijacked a phrase that few would challenge and they have turned this laudable concept into a political weapon to divide society. You know that BLM is a fraud when it claims that *All Lives Matter*, the most inclusive statement of all, is 'racist'. BLM and its Cult masters don't want to end racism. To them it's a means to an end to control all of humanity never mind the colour, creed, culture or background. What has destroying the nuclear family got to do with ending racism? Nothing – but that is one of the goals of BLM and also happens to be a goal of the Cult as I have been exposing in my books for decades. Stealing children from loving parents and giving schools ever more power to override parents is part of that same agenda. BLM is a Marxist organisation and why would that not be the case when the Cult created Marxism *and* BLM? Patrisse Cullors, a BLM co-founder, said in a 2015 video that she and her fellow organisers, including co-founder Alicia Garza, are 'trained Marxists'. The lady known after marriage as Patrisse Khan-Cullors bought a \$1.4 million home in 2021 in one of the whitest areas of California with a black population of just 1.6 per cent and has so far bought *four* high-end homes for a total of \$3.2 million. How very Marxist. There must be a bit of spare in the BLM coffers, however, when Cult corporations and billionaires have handed over the best part of \$100 million. Many black people can see that Black Lives Matter is not

working for them, but against them, and this is still more confirmation. Black journalist Jason Whitlock, who had his account suspended by Twitter for simply linking to the story about the 'Marxist's' home buying spree, said that BLM leaders are 'making millions of dollars off the backs of these dead black men who they wouldn't spit on if they were on fire and alive'.

Black Lies Matter

Cult assets and agencies came together to promote BLM in the wake of the death of career criminal George Floyd who had been jailed a number of times including for forcing his way into the home of a black woman with others in a raid in which a gun was pointed at her stomach. Floyd was filmed being held in a Minneapolis street in 2020 with the knee of a police officer on his neck and he subsequently died. It was an appalling thing for the officer to do, but the same technique has been used by police on peaceful protestors of lockdown without any outcry from the Woke brigade. As unquestioning supporters of the Cult agenda Wokers have supported lockdown and all the 'Covid' claptrap while attacking anyone standing up to the tyranny imposed in its name. Court documents would later include details of an autopsy on Floyd by County Medical Examiner Dr Andrew Baker who concluded that Floyd had taken a fatal level of the drug fentanyl. None of this mattered to fact-free, question-free, Woke. Floyd's death was followed by worldwide protests against police brutality amid calls to defund the police. Throwing babies out with the bathwater is a Woke speciality. In the wake of the murder of British woman Sarah Everard a Green Party member of the House of Lords, Baroness Jones of Moulscroomb (Nincompoopia would have been better), called for a 6pm curfew for all men. This would be in breach of the Geneva Conventions on war crimes which ban collective punishment, but that would never have crossed the black and white Woke mind of Baroness Nincompoopia who would have been far too convinced of her own self-righteousness to compute such details. Many American cities did defund the police in the face of Floyd riots

and after \$15 million was deleted from the police budget in Washington DC under useless Woke mayor Muriel Bowser car-jacking alone rose by 300 percent and within six months the US capital recorded its highest murder rate in 15 years. The same happened in Chicago and other cities in line with the Cult/Soros plan to bring fear to streets and neighbourhoods by reducing the police, releasing violent criminals and not prosecuting crime. This is the mob-rule agenda that I have warned in the books was coming for so long. Shootings in the area of Minneapolis where Floyd was arrested increased by 2,500 percent compared with the year before. Defunding the police over George Floyd has led to a big increase in dead people with many of them black. Police protection for politicians making these decisions stayed the same or increased as you would expect from professional hypocrites. The Cult doesn't actually want to abolish the police. It wants to abolish local control over the police and hand it to federal government as the psychopaths advance the Hunger Games Society. Many George Floyd protests turned into violent riots with black stores and businesses destroyed by fire and looting across America fuelled by Black Lives Matter. Woke doesn't do irony. If you want civil rights you must loot the liquor store and the supermarket and make off with a smart TV. It's the only way.

It's not a race war – it's a class war

Black people are patronised by privileged blacks and whites alike and told they are victims of white supremacy. I find it extraordinary to watch privileged blacks supporting the very system and bloodline networks behind the slave trade and parroting the same Cult-serving manipulative crap of their privileged white, often billionaire, associates. It is indeed not a race war but a class war and colour is just a diversion. Black Senator Cory Booker and black Congresswoman Maxine Waters, more residents of Nincompoopia, personify this. Once you tell people they are victims of someone else you devalue both their own responsibility for their plight and the power they have to impact on their reality and experience. Instead

we have: 'You are only in your situation because of whitey – turn on them and everything will change.' It won't change. Nothing changes in our lives unless *we* change it. Crucial to that is never seeing yourself as a victim and always as the creator of your reality. Life is a simple sequence of choice and consequence. Make different choices and you create different consequences. *You* have to make those choices – not Black Lives Matter, the Woke Mafia and anyone else that seeks to dictate your life. Who are they these Wokers, an emotional and psychological road traffic accident, to tell you what to do? Personal empowerment is the last thing the Cult and its Black Lives Matter want black people or anyone else to have. They claim to be defending the underdog while *creating* and perpetuating the underdog. The Cult's worst nightmare is human unity and if they are going to keep blacks, whites and every other race under economic servitude and control then the focus must be diverted from what they have in common to what they can be manipulated to believe divides them. Blacks have to be told that their poverty and plight is the fault of the white bloke living on the street in the same poverty and with the same plight they are experiencing. The difference is that your plight black people is due to him, a white supremacist with 'white privilege' living on the street. Don't unite as one human family against your mutual oppressors and suppressors – fight the oppressor with the white face who is as financially deprived as you are. The Cult knows that as its 'Covid' agenda moves into still new levels of extremism people are going to respond and it has been spreading the seeds of disunity everywhere to stop a united response to the evil that targets *all of us*.

Racist attacks on 'whiteness' are getting ever more outrageous and especially through the American Democratic Party which has an appalling history for anti-black racism. Barack Obama, Joe Biden, Hillary Clinton and Nancy Pelosi all eulogised about Senator Robert Byrd at his funeral in 2010 after a nearly 60-year career in Congress. Byrd was a brutal Ku Klux Klan racist and a violent abuser of Cathy O'Brien in MKUltra. He said he would never fight in the military 'with a negro by my side' and 'rather I should die a thousand times,

and see Old Glory trampled in the dirt never to rise again, than to see this beloved land of ours become degraded by race mongrels, a throwback to the blackest specimen from the wilds'. Biden called Byrd a 'very close friend and mentor'. These 'Woke' hypocrites are not anti-racist they are anti-poor and anti-people not of their perceived class. Here is an illustration of the scale of anti-white racism to which we have now descended. Seriously Woke and moronic *New York Times* contributor Damon Young described whiteness as a 'virus' that 'like other viruses will not die until there are no bodies left for it to infect'. He went on: '... the only way to stop it is to locate it, isolate it, extract it, and kill it.' Young can say that as a black man with no consequences when a white man saying the same in reverse would be facing a jail sentence. *That's* racism. We had super-Woke numbskull senators Tammy Duckworth and Mazie Hirono saying they would object to future Biden Cabinet appointments if he did not nominate more Asian Americans and Pacific Islanders. Never mind the ability of the candidate what do they look like? Duckworth said: 'I will vote for racial minorities and I will vote for LGBTQ, but anyone else I'm not voting for.' Appointing people on the grounds of race is illegal, but that was not a problem for this ludicrous pair. They were on-message and that's a free pass in any situation.

Critical race racism

White children are told at school they are intrinsically racist as they are taught the divisive 'critical race theory'. This claims that the law and legal institutions are inherently racist and that race is a socially constructed concept used by white people to further their economic and political interests at the expense of people of colour. White is a 'virus' as we've seen. Racial inequality results from 'social, economic, and legal differences that white people create between races to maintain white interests which leads to poverty and criminality in minority communities'. I must tell that to the white guy sleeping on the street. The principal of East Side Community School in New York sent white parents a manifesto that called on

them to become 'white traitors' and advocate for full 'white abolition'. These people are teaching your kids when they urgently need a psychiatrist. The 'school' included a chart with 'eight white identities' that ranged from 'white supremacist' to 'white abolition' and defined the behaviour white people must follow to end 'the regime of whiteness'. Woke blacks and their privileged white associates are acting exactly like the slave owners of old and Ku Klux Klan racists like Robert Byrd. They are too full of their own self-purity to see that, but it's true. Racism is not a body type; it's a state of mind that can manifest through any colour, creed or culture.

Another racial fraud is '*equity*'. Not equality of treatment and opportunity – equity. It's a term spun as equality when it means something very different. Equality in its true sense is a raising up while '*equity*' is a race to the bottom. Everyone in the same level of poverty is '*equity*'. Keep everyone down – that's equity. The Cult doesn't want anyone in the human family to be empowered and BLM leaders, like all these 'anti-racist' organisations, continue their privileged, pampered existence by perpetuating the perception of gathering racism. When is the last time you heard an 'anti-racist' or 'anti-Semitism' organisation say that acts of racism and discrimination have *fallen*? It's not in the interests of their fundraising and power to influence and the same goes for the professional soccer anti-racism operation, Kick It Out. Two things confirmed that the Black Lives Matter riots in the summer of 2020 were Cult creations. One was that while anti-lockdown protests were condemned in this same period for 'transmitting 'Covid' the authorities supported mass gatherings of Black Lives Matter supporters. I even saw self-deluding people claiming to be doctors say the two types of protest were not the same. No – the non-existent 'Covid' was in favour of lockdowns and attacked those that protested against them while 'Covid' supported Black Lives Matter and kept well away from its protests. The whole thing was a joke and as lockdown protestors were arrested, often brutally, by reframed Face-Nappies we had the grotesque sight of police officers taking the knee to Black Lives Matter, a Cult-funded Marxist

organisation that supports violent riots and wants to destroy the nuclear family and white people.

He's not white? Shucks!

Woke obsession with race was on display again when ten people were shot dead in Boulder, Colorado, in March, 2021. Cult-owned Woke TV channels like CNN said the shooter appeared to be a white man and Wokers were on Twitter condemning 'violent white men' with the usual mantras. Then the shooter's name was released as Ahmad Al Aliwi Alissa, an anti-Trump Arab-American, and the sigh of disappointment could be heard five miles away. Never mind that ten people were dead and what that meant for their families. Race baiting was all that mattered to these sick Cult-serving people like Barack Obama who exploited the deaths to further divide America on racial grounds which is his job for the Cult. This is the man that 'racist' white Americans made the first black president of the United States and then gave him a second term. Not-very-bright Obama has become filthy rich on the back of that and today appears to have a big influence on the Biden administration. Even so he's still a downtrodden black man and a victim of white supremacy. This disingenuous fraud reveals the contempt he has for black people when he puts on a Deep South Alabama accent whenever he talks to them, no, *at* them.

Another BLM red flag was how the now fully-Woke (fully-Cult) and fully-virtue-signalled professional soccer authorities had their teams taking the knee before every match in support of Marxist Black Lives Matter. Soccer authorities and clubs displayed 'Black Lives Matter' on the players' shirts and flashed the name on electronic billboards around the pitch. Any fans that condemned what is a Freemasonic taking-the-knee ritual were widely condemned as you would expect from the Woke virtue-signallers of professional sport and the now fully-Woke media. We have reverse racism in which you are banned from criticising any race or culture except for white people for whom anything goes – say what you like, no problem. What has this got to do with racial harmony and

equality? We've had black supremacists from Black Lives Matter telling white people to fall to their knees in the street and apologise for their white supremacy. Black supremacists acting like white supremacist slave owners of the past couldn't breach their self-obsessed, race-obsessed sense of self-purity. Joe Biden appointed a race-obsessed black supremacist Kristen Clarke to head the Justice Department Civil Rights Division. Clarke claimed that blacks are endowed with 'greater mental, physical and spiritual abilities' than whites. If anyone reversed that statement they would be vilified. Clarke is on-message so no problem. She's never seen a black-white situation in which the black figure is anything but a virtuous victim and she heads the Civil Rights Division which should treat everyone the same or it isn't civil rights. Another perception of the Renegade Mind: If something or someone is part of the Cult agenda they will be supported by Woke governments and media no matter what. If they're not, they will be condemned and censored. It really is that simple and so racist Clarke prospers despite (make that because of) her racism.

The end of culture

Biden's administration is full of such racial, cultural and economic bias as the Cult requires the human family to be divided into warring factions. We are now seeing racially-segregated graduations and everything, but everything, is defined through the lens of perceived 'racism. We have 'racist' mathematics, 'racist' food and even 'racist' *plants*. World famous Kew Gardens in London said it was changing labels on plants and flowers to tell its pre-'Covid' more than two million visitors a year how racist they are. Kew director Richard Deverell said this was part of an effort to 'move quickly to decolonise collections' after they were approached by one Ajay Chhabra 'an actor with an insight into how sugar cane was linked to slavery'. They are *plants* you idiots. 'Decolonisation' in the Woke manual really means colonisation of society with its mentality and by extension colonisation by the Cult. We are witnessing a new Chinese-style 'Cultural Revolution' so essential to the success of all

Marxist takeovers. Our cultural past and traditions have to be swept away to allow a new culture to be built-back-better. Woke targeting of long-standing Western cultural pillars including historical monuments and cancelling of historical figures is what happened in the Mao revolution in China which 'purged remnants of capitalist and traditional elements from Chinese society' and installed Maoism as the dominant ideology'. For China see the Western world today and for 'dominant ideology' see Woke. Better still see Marxism or Maoism. The 'Covid' hoax has specifically sought to destroy the arts and all elements of Western culture from people meeting in a pub or restaurant to closing theatres, music venues, sports stadiums, places of worship and even banning *singing*. Destruction of Western society is also why criticism of any religion is banned except for Christianity which again is the dominant religion as white is the numerically-dominant race. Christianity may be fading rapidly, but its history and traditions are weaved through the fabric of Western society. Delete the pillars and other structures will follow until the whole thing collapses. I am not a Christian defending that religion when I say that. I have no religion. It's just a fact. To this end Christianity has itself been turned Woke to usher its own downfall and its ranks are awash with 'change agents' – knowing and unknowing – at every level including Pope Francis (*definitely* knowing) and the clueless Archbishop of Canterbury Justin Welby (possibly not, but who can be sure?). Woke seeks to coordinate attacks on Western culture, traditions, and ways of life through 'intersectionality' defined as 'the complex, cumulative way in which the effects of multiple forms of discrimination (such as racism, sexism, and classism) combine, overlap, or intersect especially in the experiences of marginalised individuals or groups'. Wade through the Orwellian Woke-speak and this means coordinating disparate groups in a common cause to overthrow freedom and liberal values.

The entire structure of public institutions has been infested with Woke – government at all levels, political parties, police, military, schools, universities, advertising, media and trade unions. This abomination has been achieved through the Cult web by appointing

Wokers to positions of power and battering non-Wokers into line through intimidation, isolation and threats to their job. Many have been fired in the wake of the empathy-deleted, vicious hostility of 'social justice' Wokers and the desire of gutless, spineless employers to virtue-signal their Wokeness. Corporations are filled with Wokers today, most notably those in Silicon Valley. Ironically at the top they are not Woke at all. They are only exploiting the mentality their Cult masters have created and funded to censor and enslave while the Wokers cheer them on until it's their turn. Thus the Woke 'liberal left' is an inversion of the traditional liberal left. Campaigning for justice on the grounds of power and wealth distribution has been replaced by campaigning for identity politics. The genuine traditional left would never have taken money from today's billionaire abusers of fairness and justice and nor would the billionaires have wanted to fund that genuine left. It would not have been in their interests to do so. The division of opinion in those days was between the haves and have nots. This all changed with Cult manipulated and funded identity politics. The division of opinion today is between Wokers and non-Wokers and not income brackets. Cult corporations and their billionaires may have taken wealth disparity to cataclysmic levels of injustice, but as long as they speak the language of Woke, hand out the dosh to the Woke network and censor the enemy they are 'one of us'. Billionaires who don't give a damn about injustice are laughing at them till their bellies hurt. Wokers are not even close to self-aware enough to see that. The transformed 'left' dynamic means that Wokers who drone on about 'social justice' are funded by billionaires that have destroyed social justice the world over. It's *why* they are billionaires.

The climate con

Nothing encapsulates what I have said more comprehensively than the hoax of human-caused global warming. I have detailed in my books over the years how Cult operatives and organisations were the pump-primers from the start of the climate con. A purpose-built vehicle for this is the Club of Rome established by the Cult in 1968

with the Rockefellers and Rothschilds centrally involved all along. Their gofer frontman Maurice Strong, a Canadian oil millionaire, hosted the Earth Summit in Rio de Janeiro, Brazil, in 1992 where the global 'green movement' really expanded in earnest under the guiding hand of the Cult. The Earth Summit established Agenda 21 through the Cult-created-and-owned United Nations to use the illusion of human-caused climate change to justify the transformation of global society to save the world from climate disaster. It is a No-Problem-Reaction-Solution sold through governments, media, schools and universities as whole generations have been terrified into believing that the world was going to end in their lifetimes unless what old people had inflicted upon them was stopped by a complete restructuring of how everything is done. Chill, kids, it's all a hoax. Such restructuring is precisely what the Cult agenda demands (purely by coincidence of course). Today this has been given the codename of the Great Reset which is only an updated term for Agenda 21 and its associated Agenda 2030. The latter, too, is administered through the UN and was voted into being by the General Assembly in 2015. Both 21 and 2030 seek centralised control of all resources and food right down to the raindrops falling on your own land. These are some of the demands of Agenda 21 established in 1992. See if you recognise this society emerging today:

- End national sovereignty
- State planning and management of all land resources, ecosystems, deserts, forests, mountains, oceans and fresh water; agriculture; rural development; biotechnology; and ensuring 'equity'
- The state to 'define the role' of business and financial resources
- Abolition of private property
- 'Restructuring' the family unit (see BLM)
- Children raised by the state
- People told what their job will be
- Major restrictions on movement
- Creation of 'human settlement zones'

- Mass resettlement as people are forced to vacate land where they live
- Dumbing down education
- Mass global depopulation in pursuit of all the above

The United Nations was created as a Trojan horse for world government. With the climate con of critical importance to promoting that outcome you would expect the UN to be involved. Oh, it's involved all right. The UN is promoting Agenda 21 and Agenda 2030 justified by 'climate change' while also driving the climate hoax through its Intergovernmental Panel on Climate Change (IPCC), one of the world's most corrupt organisations. The IPCC has been lying ferociously and constantly since the day it opened its doors with the global media hanging unquestioningly on its every mendacious word. The Green movement is entirely Woke and has long lost its original environmental focus since it was co-opted by the Cult. An obsession with 'global warming' has deleted its values and scrambled its head. I experienced a small example of what I mean on a beautiful country walk that I have enjoyed several times a week for many years. The path merged into the fields and forests and you felt at one with the natural world. Then a 'Green' organisation, the Hampshire and Isle of Wight Wildlife Trust, took over part of the land and proceeded to cut down a large number of trees, including mature ones, to install a horrible big, bright steel 'this-is-ours-stay-out' fence that destroyed the whole atmosphere of this beautiful place. No one with a feel for nature would do that. Day after day I walked to the sound of chainsaws and a magnificent mature weeping willow tree that I so admired was cut down at the base of the trunk. When I challenged a Woke young girl in a green shirt (of course) about this vandalism she replied: 'It's a weeping willow – it will grow back.' This is what people are paying for when they donate to the Hampshire and Isle of Wight Wildlife Trust and many other 'green' organisations today. It is not the environmental movement that I knew and instead has become a support-system – as with Extinction Rebellion – for a very dark agenda.

Private jets for climate justice

The Cult-owned, Gates-funded, World Economic Forum and its founder Klaus Schwab were behind the emergence of Greta Thunberg to harness the young behind the climate agenda and she was invited to speak to the world at ... the UN. Schwab published a book, *Covid-19: The Great Reset* in 2020 in which he used the 'Covid' hoax and the climate hoax to lay out a new society straight out of Agenda 21 and Agenda 2030. Bill Gates followed in early 2021 when he took time out from destroying the world to produce a book in his name about the way to save it. Gates flies across the world in private jets and admitted that 'I probably have one of the highest greenhouse gas footprints of anyone on the planet ... my personal flying alone is gigantic.' He has also bid for the planet's biggest private jet operator. Other climate change saviours who fly in private jets include John Kerry, the US Special Presidential Envoy for Climate, and actor Leonardo DiCaprio, a 'UN Messenger of Peace with special focus on climate change'. These people are so full of bullshit they could corner the market in manure. We mustn't be sceptical, though, because the Gates book, *How to Avoid a Climate Disaster: The Solutions We Have and the Breakthroughs We Need*, is a genuine attempt to protect the world and not an obvious pile of excrement attributed to a mega-psychopath aimed at selling his masters' plans for humanity. The Gates book and the other shite-pile by Klaus Schwab could have been written by the same person and may well have been. Both use 'climate change' and 'Covid' as the excuses for their new society and by coincidence the Cult's World Economic Forum and Bill and Melinda Gates Foundation promote the climate hoax and hosted Event 201 which pre-empted with a 'simulation' the very 'coronavirus' hoax that would be simulated for real on humanity within weeks. The British 'royal' family is promoting the 'Reset' as you would expect through Prince 'climate change caused the war in Syria' Charles and his hapless son Prince William who said that we must 'reset our relationship with nature and our trajectory as a species' to avoid a climate disaster. Amazing how many promoters of the 'Covid' and 'climate change' control

systems are connected to Gates and the World Economic Forum. A 'study' in early 2021 claimed that carbon dioxide emissions must fall by the equivalent of a global lockdown roughly every two years for the next decade to save the planet. The 'study' appeared in the same period that the Schwab mob claimed in a video that lockdowns destroying the lives of billions are good because they make the earth 'quieter' with less 'ambient noise'. They took down the video amid a public backlash for such arrogant, empathy-deleted stupidity You see, however, where they are going with this. Corinne Le Quéré, a professor at the Tyndall Centre for Climate Change Research, University of East Anglia, was lead author of the climate lockdown study, and she writes for ... the World Economic Forum. Gates calls in 'his' book for changing 'every aspect of the economy' (long-time Cult agenda) and for humans to eat synthetic 'meat' (predicted in my books) while cows and other farm animals are eliminated. Australian TV host and commentator Alan Jones described what carbon emission targets would mean for farm animals in Australia alone if emissions were reduced as demanded by 35 percent by 2030 and zero by 2050:

Well, let's take agriculture, the total emissions from agriculture are about 75 million tonnes of carbon dioxide, equivalent. Now reduce that by 35 percent and you have to come down to 50 million tonnes, I've done the maths. So if you take for example 1.5 million cows, you're going to have to reduce the herd by 525,000 [by] 2030, nine years, that's 58,000 cows a year. The beef herd's 30 million, reduce that by 35 percent, that's 10.5 million, which means 1.2 million cattle have to go every year between now and 2030. This is insanity!

There are 75 million sheep. Reduce that by 35 percent, that's 26 million sheep, that's almost 3 million a year. So under the Paris Agreement over 30 million beasts. dairy cows, cattle, pigs and sheep would go. More than 8,000 every minute of every hour for the next decade, do these people know what they're talking about?

Clearly they don't at the level of campaigners, politicians and administrators. The Cult *does* know; that's the outcome it wants. We are faced with not just a war on humanity. Animals and the natural world are being targeted and I have been saying since the 'Covid' hoax began that the plan eventually was to claim that the 'deadly virus' is able to jump from animals, including farm animals and

domestic pets, to humans. Just before this book went into production came this story: 'Russia registers world's first Covid-19 vaccine for cats & dogs as makers of Sputnik V warn pets & farm animals could spread virus'. The report said 'top scientists warned that the deadly pathogen could soon begin spreading through homes and farms' and 'the next stage is the infection of farm and domestic animals'. Know the outcome and you'll see the journey. Think what that would mean for animals and keep your eye on a term called zoonosis or zoonotic diseases which transmit between animals and humans. The Cult wants to break the connection between animals and people as it does between people and people. Farm animals fit with the Cult agenda to transform food from natural to synthetic.

The gas of life is killing us

There can be few greater examples of Cult inversion than the condemnation of carbon dioxide as a dangerous pollutant when it is the gas of life. Without it the natural world would be dead and so we would all be dead. We breathe in oxygen and breathe out carbon dioxide while plants produce oxygen and absorb carbon dioxide. It is a perfect symbiotic relationship that the Cult wants to dismantle for reasons I will come to in the final two chapters. Gates, Schwab, other Cult operatives and mindless repeaters, want the world to be 'carbon neutral' by at least 2050 and the earlier the better. 'Zero carbon' is the cry echoed by lunatics calling for 'Zero Covid' when we already have it. These carbon emission targets will deindustrialise the world in accordance with Cult plans – the post-industrial, post-democratic society – and with so-called renewables like solar and wind not coming even close to meeting human energy needs blackouts and cold are inevitable. Texans got the picture in the winter of 2021 when a snow storm stopped wind turbines and solar panels from working and the lights went down along with water which relies on electricity for its supply system. Gates wants everything to be powered by electricity to ensure that his masters have the kill switch to stop all human activity, movement, cooking, water and warmth any time they like. The climate lie is so

stupendously inverted that it claims we must urgently reduce carbon dioxide when we *don't have enough*.

Co2 in the atmosphere is a little above 400 parts per million when the optimum for plant growth is 2,000 ppm and when it falls anywhere near 150 ppm the natural world starts to die and so do we. It fell to as low as 280 ppm in an 1880 measurement in Hawaii and rose to 413 ppm in 2019 with industrialisation which is why the planet has become *greener* in the industrial period. How insane then that psychopathic madman Gates is not satisfied only with blocking the rise of Co2. He's funding technology to suck it out of the atmosphere. The reason why will become clear. The industrial era is not destroying the world through Co2 and has instead turned around a potentially disastrous ongoing fall in Co2. Greenpeace co-founder and scientist Patrick Moore walked away from Greenpeace in 1986 and has exposed the green movement for fear-mongering and lies. He said that 500 million years ago there was *17 times* more Co2 in the atmosphere than we have today and levels have been falling for hundreds of millions of years. In the last 150 million years Co2 levels in Earth's atmosphere had reduced by *90 percent*. Moore said that by the time humanity began to unlock carbon dioxide from fossil fuels we were at '38 seconds to midnight' and in that sense: 'Humans are [the Earth's] salvation.' Moore made the point that only half the Co2 emitted by fossil fuels stays in the atmosphere and we should remember that all pollution pouring from chimneys that we are told is carbon dioxide is in fact nothing of the kind. It's pollution. Carbon dioxide is an invisible gas.

William Happer, Professor of Physics at Princeton University and long-time government adviser on climate, has emphasised the Co2 deficiency for maximum growth and food production. Greenhouse growers don't add carbon dioxide for a bit of fun. He said that most of the warming in the last 100 years, after the earth emerged from the super-cold period of the 'Little Ice Age' into a natural warming cycle, was over by 1940. Happer said that a peak year for warming in 1988 can be explained by a 'monster El Nino' which is a natural and cyclical warming of the Pacific that has nothing to do with 'climate

change'. He said the effect of Co2 could be compared to painting a wall with red paint in that once two or three coats have been applied it didn't matter how much more you slapped on because the wall will not get much redder. Almost all the effect of the rise in Co2 has already happened, he said, and the volume in the atmosphere would now have to *double* to increase temperature by a single degree. Climate hoaxers know this and they have invented the most ridiculously complicated series of 'feedback' loops to try to overcome this rather devastating fact. You hear puppet Greta going on cluelessly about feedback loops and this is why.

The Sun affects temperature? No you *climate denier*

Some other nonsense to contemplate: Climate graphs show that rises in temperature do not follow rises in Co2 – *it's the other way round* with a lag between the two of some 800 years. If we go back 800 years from present time we hit the Medieval Warm Period when temperatures were higher than now without any industrialisation and this was followed by the Little Ice Age when temperatures plummeted. The world was still emerging from these centuries of serious cold when many climate records began which makes the ever-repeated line of the 'hottest year since records began' meaningless when you are not comparing like with like. The coldest period of the Little Ice Age corresponded with the lowest period of sunspot activity when the Sun was at its least active. Proper scientists will not be at all surprised by this when it confirms the obvious fact that earth temperature is affected by the scale of Sun activity and the energetic power that it subsequently emits; but when is the last time you heard a climate hoaxer talking about the Sun as a source of earth temperature?? Everything has to be focussed on Co2 which makes up just 0.117 percent of so-called greenhouse gases and only a fraction of even that is generated by human activity. The rest is natural. More than *90 percent* of those greenhouse gases are water vapour and clouds ([Fig 9](#)). Ban moisture I say. Have you noticed that the climate hoaxers no longer use the polar bear as their promotion image? That's because far from becoming extinct polar

bear communities are stable or thriving. Joe Bastardi, American meteorologist, weather forecaster and outspoken critic of the climate lie, documents in his book *The Climate Chronicles* how weather patterns and events claimed to be evidence of climate change have been happening since long before industrialisation: 'What happened before naturally is happening again, as is to be expected given the cyclical nature of the climate due to the design of the planet.' If you read the detailed background to the climate hoax in my other books you will shake your head and wonder how anyone could believe the crap which has spawned a multi-trillion dollar industry based on absolute garbage (see HIV causes AIDs and Sars-Cov-2 causes 'Covid-19'). Climate and 'Covid' have much in common given they have the same source. They both have the contradictory *everything* factor in which everything is explained by reference to them. It's hot – 'it's climate change'. It's cold – 'it's climate change'. I got a sniffle – 'it's Covid'. I haven't got a sniffle – 'it's Covid'. Not having a sniffle has to be a symptom of 'Covid'. Everything is and not having a sniffle is especially dangerous if you are a slow walker. For sheer audacity I offer you a Cambridge University 'study' that actually linked 'Covid' to 'climate change'. It had to happen eventually. They concluded that climate change played a role in 'Covid-19' spreading from animals to humans because ... wait for it ... I kid you not ... *the two groups were forced closer together as populations grow*. Er, that's it. The whole foundation on which this depended was that 'Bats are the likely zoonotic origin of SARS-CoV-1 and SARS-CoV-2'. Well, they are not. They are nothing to do with it. Apart from bats not being the origin and therefore 'climate change' effects on bats being irrelevant I am in awe of their academic insight. Where would we be without them? Not where we are that's for sure.

Figure 9: The idea that the gas of life is disastrously changing the climate is an insult to brain cell activity.

One other point about the weather is that climate modification is now well advanced and not every major weather event is natural – or earthquake come to that. I cover this subject at some length in other books. China is openly planning a rapid expansion of its weather modification programme which includes changing the climate in an area more than one and a half times the size of India. China used weather manipulation to ensure clear skies during the 2008 Olympics in Beijing. I have quoted from US military documents detailing how to employ weather manipulation as a weapon of war and they did that in the 1960s and 70s during the conflict in Vietnam with Operation Popeye manipulating monsoon rains for military purposes. Why would there be international treaties on weather modification if it wasn't possible? Of course it is. Weather is energetic information and it can be changed.

How was the climate hoax pulled off? See 'Covid'

If you can get billions to believe in a 'virus' that doesn't exist you can get them to believe in human-caused climate change that doesn't exist. Both are being used by the Cult to transform global society in the way it has long planned. Both hoaxes have been achieved in pretty much the same way. First you declare a lie is a fact. There's a

'virus' you call SARS-Cov-2 or humans are warming the planet with their behaviour. Next this becomes, via Cult networks, the foundation of government, academic and science policy and belief. Those who parrot the mantra are given big grants to produce research that confirms the narrative is true and ever more 'symptoms' are added to make the 'virus'/'climate change' sound even more scary. Scientists and researchers who challenge the narrative have their grants withdrawn and their careers destroyed. The media promote the lie as the unquestionable truth and censor those with an alternative view or evidence. A great percentage of the population believe what they are told as the lie becomes an everybody-knows-that and the believing-masses turn on those with a mind of their own. The technique has been used endlessly throughout human history. Wokers are the biggest promoters of the climate lie *and* 'Covid' fascism because their minds are owned by the Cult; their sense of self-righteous self-purity knows no bounds; and they exist in a bubble of reality in which facts are irrelevant and only get in the way of looking without seeing.

Running through all of this like veins in a blue cheese is control of information, which means control of perception, which means control of behaviour, which collectively means control of human society. The Cult owns the global media and Silicon Valley fascists for the simple reason that it *has* to. Without control of information it can't control perception and through that human society. Examine every facet of the Cult agenda and you will see that anything supporting its introduction is never censored while anything pushing back is always censored. I say again: Psychopaths that know why they are doing this must go before Nuremberg trials and those that follow their orders must trot along behind them into the same dock. 'I was just following orders' didn't work the first time and it must not work now. Nuremberg trials must be held all over the world before public juries for politicians, government officials, police, compliant doctors, scientists and virologists, and all Cult operatives such as Gates, Tedros, Fauci, Vallance, Whitty, Ferguson, Zuckerberg, Wojcicki, Brin, Page, Dorsey, the whole damn lot of

them – including, no *especially*, the psychopath psychologists. Without them and the brainless, gutless excuses for journalists that have repeated their lies, none of this could be happening. Nobody can be allowed to escape justice for the psychological and economic Armageddon they are all responsible for visiting upon the human race.

As for the compliant, unquestioning, swathes of humanity, and the self-obsessed, all-knowing ignorance of the Wokers ... don't start me. God help their kids. God help their grandkids. God *help them*.

CHAPTER NINE

We must have it? So what is it?

Well I won't back down. No, I won't back down. You can stand me up at the Gates of Hell. But I won't back down

Tom Petty

I will now focus on the genetically-manipulating 'Covid vaccines' which do not meet this official definition of a vaccine by the US Centers for Disease Control (CDC): 'A product that stimulates a person's immune system to produce immunity to a specific disease, protecting the person from that disease.' On that basis 'Covid vaccines' are not a vaccine in that the makers don't even claim they stop infection or transmission.

They are instead part of a multi-levelled conspiracy to change the nature of the human body and what it means to be 'human' and to depopulate an enormous swathe of humanity. What I shall call Human 1.0 is on the cusp of becoming Human 2.0 and for very sinister reasons. Before I get to the 'Covid vaccine' in detail here's some background to vaccines in general. Government regulators do not test vaccines – the makers do – and the makers control which data is revealed and which isn't. Children in America are given 50 vaccine doses by age six and 69 by age 19 and the effect of the whole combined schedule has never been tested. Autoimmune diseases when the immune system attacks its own body have soared in the mass vaccine era and so has disease in general in children and the young. Why wouldn't this be the case when vaccines target the *immune system*? The US government gave Big Pharma drug

companies immunity from prosecution for vaccine death and injury in the 1986 National Childhood Vaccine Injury Act (NCVIA) and since then the government (taxpayer) has been funding compensation for the consequences of Big Pharma vaccines. The criminal and satanic drug giants can't lose and the vaccine schedule has increased dramatically since 1986 for this reason. There is no incentive to make vaccines safe and a big incentive to make money by introducing ever more. Even against a ridiculously high bar to prove vaccine liability, and with the government controlling the hearing in which it is being challenged for compensation, the vaccine court has so far paid out more than \$4 billion. These are the vaccines we are told are safe and psychopaths like Zuckerberg censor posts saying otherwise. The immunity law was even justified by a ruling that vaccines by their nature were 'unavoidably unsafe'.

Check out the ingredients of vaccines and you will be shocked if you are new to this. *They put that in children's bodies?? What??* Try aluminium, a brain toxin connected to dementia, aborted foetal tissue and formaldehyde which is used to embalm corpses. World-renowned aluminium expert Christopher Exley had his research into the health effect of aluminium in vaccines shut down by Keele University in the UK when it began taking funding from the Bill and Melinda Gates Foundation. Research when diseases 'eradicated' by vaccines began to decline and you will find the fall began long *before* the vaccine was introduced. Sometimes the fall even plateaued after the vaccine. Diseases like scarlet fever for which there was no vaccine declined in the same way because of environmental and other factors. A perfect case in point is the polio vaccine. Polio began when lead arsenate was first sprayed as an insecticide and residues remained in food products. Spraying started in 1892 and the first US polio epidemic came in Vermont in 1894. The simple answer was to stop spraying, but Rockefeller-created Big Pharma had a better idea. Polio was decreed to be caused by the *poliovirus* which 'spreads from person to person and can infect a person's spinal cord'. Lead arsenate was replaced by the lethal DDT which had the same effect of causing paralysis by damaging the brain and central nervous

system. Polio plummeted when DDT was reduced and then banned, but the vaccine is still given the credit for something it didn't do. Today by far the biggest cause of polio is the vaccines promoted by Bill Gates. Vaccine justice campaigner Robert Kennedy Jr, son of assassinated (by the Cult) US Attorney General Robert Kennedy, wrote:

In 2017, the World Health Organization (WHO) reluctantly admitted that the global explosion in polio is predominantly vaccine strain. The most frightening epidemics in Congo, Afghanistan, and the Philippines, are all linked to vaccines. In fact, by 2018, 70% of global polio cases were vaccine strain.

Vaccines make fortunes for Cult-owned Gates and Big Pharma while undermining the health and immune systems of the population. We had a glimpse of the mentality behind the Big Pharma cartel with a report on WION (World is One News), an international English language TV station based in India, which exposed the extraordinary behaviour of US drug company Pfizer over its 'Covid vaccine'. The WION report told how Pfizer had made fantastic demands of Argentina, Brazil and other countries in return for its 'vaccine'. These included immunity from prosecution, even for Pfizer negligence, government insurance to protect Pfizer from law suits and handing over as collateral sovereign assets of the country to include Argentina's bank reserves, military bases and embassy buildings. Pfizer demanded the same of Brazil in the form of waiving sovereignty of its assets abroad; exempting Pfizer from Brazilian laws; and giving Pfizer immunity from all civil liability. This is a 'vaccine' developed with government funding. Big Pharma is evil incarnate as a creation of the Cult and all must be handed tickets to Nuremberg.

Phantom 'vaccine' for a phantom 'disease'

I'll expose the 'Covid vaccine' fraud and then go on to the wider background of why the Cult has set out to 'vaccinate' every man, woman and child on the planet for an alleged 'new disease' with a survival rate of 99.77 percent (or more) even by the grotesquely-

manipulated figures of the World Health Organization and Johns Hopkins University. The 'infection' to 'death' ratio is 0.23 to 0.15 percent according to Stanford epidemiologist Dr John Ioannidis and while estimates vary the danger remains tiny. I say that if the truth be told the fake infection to fake death ratio is zero. Never mind all the evidence I have presented here and in *The Answer* that there is no 'virus' let us just focus for a moment on that death-rate figure of say 0.23 percent. The figure includes all those worldwide who have tested positive with a test not testing for the 'virus' and then died within 28 days or even longer of any other cause – *any other cause*. Now subtract all those illusory 'Covid' deaths on the global data sheets from the 0.23 percent. What do you think you would be left with? *Zero*. A vaccination has never been successfully developed for a so-called coronavirus. They have all failed at the animal testing stage when they caused hypersensitivity to what they were claiming to protect against and made the impact of a disease far worse. Cult-owned vaccine corporations got around that problem this time by bypassing animal trials, going straight to humans and making the length of the 'trials' before the public rollout as short as they could get away with. Normally it takes five to ten years or more to develop vaccines that still cause demonstrable harm to many people and that's without including the long-term effects that are never officially connected to the vaccination. 'Covid' non-vaccines have been officially produced and approved in a matter of months from a standing start and part of the reason is that (a) they were developed before the 'Covid' hoax began and (b) they are based on computer programs and not natural sources. Official non-trials were so short that government agencies gave *emergency*, not full, approval. 'Trials' were not even completed and full approval cannot be secured until they are. Public 'Covid vaccination' is actually a *continuation of the trial*. Drug company 'trials' are not scheduled to end until 2023 by which time a lot of people are going to be dead. Data on which government agencies gave this emergency approval was supplied by the Big Pharma corporations themselves in the form of Pfizer/BioNTech, AstraZeneca, Moderna, Johnson & Johnson, and

others, and this is the case with all vaccines. By its very nature *emergency* approval means drug companies do not have to prove that the 'vaccine' is 'safe and effective'. How could they with trials way short of complete? Government regulators only have to *believe* that they *could* be safe and effective. It is criminal manipulation to get products in circulation with no testing worth the name. Agencies giving that approval are infested with Big Pharma-connected place-people and they act in the interests of Big Pharma (the Cult) and not the public about whom they do not give a damn.

More human lab rats

'Covid vaccines' produced in record time by Pfizer/BioNTech and Moderna employ a technique *never approved before for use on humans*. They are known as mRNA 'vaccines' and inject a synthetic version of 'viral' mRNA or 'messenger RNA'. The key is in the term 'messenger'. The body works, or doesn't, on the basis of information messaging. Communications are constantly passing between and within the genetic system and the brain. Change those messages and you change the state of the body and even its very nature and you can change psychology and behaviour by the way the brain processes information. I think you are going to see significant changes in personality and perception of many people who have had the 'Covid vaccine' synthetic potions. Insider Aldous Huxley predicted the following in 1961 and mRNA 'vaccines' can be included in the term 'pharmacological methods':

There will be, in the next generation or so, a pharmacological method of making people love their servitude, and producing dictatorship without tears, so to speak, producing a kind of painless concentration camp for entire societies, so that people will in fact have their own liberties taken away from them, but rather enjoy it, because they will be distracted from any desire to rebel by propaganda or brainwashing, or brainwashing enhanced by pharmacological methods. And this seems to be the final revolution.

Apologists claim that mRNA synthetic 'vaccines' don't change the DNA genetic blueprint because RNA does not affect DNA only the other way round. This is so disingenuous. A process called 'reverse

transcription' can convert RNA into DNA and be integrated into DNA in the cell nucleus. This was highlighted in December, 2020, by scientists at Harvard and Massachusetts Institute of Technology (MIT). Geneticists report that more than 40 percent of mammalian genomes results from reverse transcription. On the most basic level if messaging changes then that sequence must lead to changes in DNA which is receiving and transmitting those communications. How can introducing synthetic material into cells not change the cells where DNA is located? The process is known as transfection which is defined as 'a technique to insert foreign nucleic acid (DNA or RNA) into a cell, typically with the intention of altering the properties of the cell'. Researchers at the Sloan Kettering Institute in New York found that changes in messenger RNA can deactivate tumour-suppressing proteins and thereby promote cancer. This is what happens when you mess with messaging. 'Covid vaccine' maker Moderna was founded in 2010 by Canadian stem cell biologist Derrick J. Rossi after his breakthrough discovery in the field of transforming and reprogramming stem cells. These are neutral cells that can be programmed to become any cell including sperm cells. Moderna was therefore founded on the principle of genetic manipulation and has never produced any vaccine or drug before its genetically-manipulating synthetic 'Covid' shite. Look at the name – Mode-RNA or Modify-RNA. Another important point is that the US Supreme Court has ruled that genetically-modified DNA, or complementary DNA (cDNA) synthesized in the laboratory from messenger RNA, can be patented and owned. These psychopaths are doing this to the human body.

Cells replicate synthetic mRNA in the 'Covid vaccines' and in theory the body is tricked into making antigens which trigger antibodies to target the 'virus spike proteins' which as Dr Tom Cowan said have *never been seen*. Cut the crap and these 'vaccines' deliver *self-replicating* synthetic material to the cells with the effect of changing human DNA. The more of them you have the more that process is compounded while synthetic material is all the time self-replicating. 'Vaccine'-maker Moderna describes mRNA as 'like

software for the cell' and so they are messing with the body's software. What happens when you change the software in a computer? Everything changes. For this reason the Cult is preparing a production line of mRNA 'Covid vaccines' and a long list of excuses to use them as with all the 'variants' of a 'virus' never shown to exist. The plan is further to transfer the mRNA technique to other vaccines mostly given to children and young people. The cumulative consequences will be a transformation of human DNA through a constant infusion of synthetic genetic material which will kill many and change the rest. Now consider that governments that have given emergency approval for a vaccine that's not a vaccine; never been approved for humans before; had no testing worth the name; and the makers have been given immunity from prosecution for any deaths or adverse effects suffered by the public. The UK government awarded *permanent legal indemnity* to itself and its employees for harm done when a patient is being treated for 'Covid-19' or 'suspected Covid-19'. That is quite a thought when these are possible 'side-effects' from the 'vaccine' (they are not 'side', they are effects) listed by the US Food and Drug Administration:

Guillain-Barre syndrome; acute disseminated encephalomyelitis; transverse myelitis; encephalitis; myelitis; encephalomyelitis; meningoencephalitis; meningitis; encephalopathy; convulsions; seizures; stroke; narcolepsy; cataplexy; anaphylaxis; acute myocardial infarction (heart attack); myocarditis; pericarditis; autoimmune disease; death; implications for pregnancy, and birth outcomes; other acute demyelinating diseases; non anaphylactic allergy reactions; thrombocytopenia ; disseminated intravascular coagulation; venous thromboembolism; arthritis; arthralgia; joint pain; Kawasaki disease; multisystem inflammatory syndrome in children; vaccine enhanced disease. The latter is the way the 'vaccine' has the potential to make diseases far worse than they would otherwise be.

UK doctor and freedom campaigner Vernon Coleman described the conditions in this list as 'all unpleasant, most of them very serious, and you can't get more serious than death'. The thought that anyone at all has had the 'vaccine' in these circumstances is testament to the potential that humanity has for clueless, unquestioning, stupidity and for many that programmed stupidity has already been terminal.

An insider speaks

Dr Michael Yeadon is a former Vice President, head of research and Chief Scientific Adviser at vaccine giant Pfizer. Yeadon worked on the inside of Big Pharma, but that did not stop him becoming a vocal critic of 'Covid vaccines' and their potential for multiple harms, including infertility in women. By the spring of 2021 he went much further and even used the no, no, term 'conspiracy'. When you begin to see what is going on it is impossible not to do so. Yeadon spoke out in an interview with freedom campaigner James Delingpole and I mentioned earlier how he said that no one had samples of 'the virus'. He explained that the mRNA technique originated in the anti-cancer field and ways to turn on and off certain genes which could be advantageous if you wanted to stop cancer growing out of control. 'That's the origin of them. They are a very unusual application, really.' Yeadon said that treating a cancer patient with an aggressive procedure might be understandable if the alternative was dying, but it was quite another thing to use the same technique as a public health measure. Most people involved wouldn't catch the infectious agent you were vaccinating against and if they did they probably wouldn't die:

If you are really using it as a public health measure you really want to as close as you can get to zero sides-effects ... I find it odd that they chose techniques that were really cutting their teeth in the field of oncology and I'm worried that in using gene-based vaccines that have to be injected in the body and spread around the body, get taken up into some cells, and the regulators haven't quite told us which cells they get taken up into ... you are going to be generating a wide range of responses ... with multiple steps each of which could go well or badly.

I doubt the Cult intends it to go well. Yeadon said that you can put any gene you like into the body through the 'vaccine'. 'You can certainly give them a gene that would do them some harm if you wanted.' I was intrigued when he said that when used in the cancer field the technique could turn genes on and off. I explore this process in *The Answer* and with different genes having different functions you could create mayhem – physically and psychologically – if you turned the wrong ones on and the right ones off. I read reports of an experiment by researchers at the University of Washington's school of computer science and engineering in which they encoded DNA to infect computers. The body is itself a biological computer and if human DNA can inflict damage on a computer why can't the computer via synthetic material mess with the human body? It can. The Washington research team said it was possible to insert malicious malware into 'physical DNA strands' and corrupt the computer system of a gene sequencing machine as it 'reads gene letters and stores them as binary digits 0 and 1'. They concluded that hackers could one day use blood or spit samples to access computer systems and obtain sensitive data from police forensics labs or infect genome files. It is at this level of digital interaction that synthetic 'vaccines' need to be seen to get the full picture and that will become very clear later on. Michael Yeadon said it made no sense to give the 'vaccine' to younger people who were in no danger from the 'virus'. What was the benefit? It was all downside with potential effects:

The fact that my government in what I thought was a civilised, rational country, is raining [the 'vaccine'] on people in their 30s and 40s, even my children in their 20s, they're getting letters and phone calls, I know this is not right and any of you doctors who are vaccinating you know it's not right, too. They are not at risk. They are not at risk from the disease, so you are now hoping that the side-effects are so rare that you get away with it. You don't give new technology ... that you don't understand to 100 percent of the population.

Blood clot problems with the AstraZeneca 'vaccine' have been affecting younger people to emphasise the downside risks with no benefit. AstraZeneca's version, produced with Oxford University, does not use mRNA, but still gets its toxic cocktail inside cells where

it targets DNA. The Johnson & Johnson 'vaccine' which uses a similar technique has also produced blood clot effects to such an extent that the United States paused its use at one point. They are all 'gene therapy' (cell modification) procedures and not 'vaccines'. The truth is that once the content of these injections enter cells we have no idea what the effect will be. People can speculate and some can give very educated opinions and that's good. In the end, though, only the makers know what their potions are designed to do and even they won't know every last consequence. Michael Yeadon was scathing about doctors doing what they knew to be wrong. 'Everyone's mute', he said. Doctors in the NHS must know this was not right, coming into work and injecting people. 'I don't know how they sleep at night. I know I couldn't do it. I know that if I were in that position I'd have to quit.' He said he knew enough about toxicology to know this was not a good risk-benefit. Yeadon had spoken to seven or eight university professors and all except two would not speak out publicly. Their universities had a policy that no one said anything that countered the government and its medical advisors. They were afraid of losing their government grants. This is how intimidation has been used to silence the truth at every level of the system. I say silence, but these people could still speak out if they made that choice. Yeadon called them 'moral cowards' – 'This is about your children and grandchildren's lives and you have just buggered off and left it.'

'Variant' nonsense

Some of his most powerful comments related to the alleged 'variants' being used to instil more fear, justify more lockdowns, and introduce more 'vaccines'. He said government claims about 'variants' were nonsense. He had checked the alleged variant 'codes' and they were 99.7 percent identical to the 'original'. This was the human identity difference equivalent to putting a baseball cap on and off or wearing it the other way round. A 0.3 percent difference would make it impossible for that 'variant' to escape immunity from the 'original'. This made no sense of having new 'vaccines' for

'variants'. He said there would have to be at least a *30 percent* difference for that to be justified and even then he believed the immune system would still recognise what it was. Gates-funded 'variant modeller' and 'vaccine'-pusher John Edmunds might care to comment. Yeadon said drug companies were making new versions of the 'vaccine' as a 'top up' for 'variants'. Worse than that, he said, the 'regulators' around the world like the MHRA in the UK had got together and agreed that because 'vaccines' for 'variants' were so similar to the first 'vaccines' *they did not have to do safety studies*. How transparently sinister that is. This is when Yeadon said: 'There is a conspiracy here.' There was no need for another vaccine for 'variants' and yet we were told that there was and the country had shut its borders because of them. 'They are going into hundreds of millions of arms without passing 'go' or any regulator. Why did they do that? Why did they pick this method of making the vaccine?'

The reason had to be something bigger than that it seemed and 'it's not protection against the virus'. It's was a far bigger project that meant politicians and advisers were willing to do things and not do things that knowingly resulted in avoidable deaths – 'that's already happened when you think about lockdown and deprivation of health care for a year.' He spoke of people prepared to do something that results in the avoidable death of their fellow human beings and it not bother them. This is the penny-drop I have been working to get across for more than 30 years – the level of pure evil we are dealing with. Yeadon said his friends and associates could not believe there could be that much evil, but he reminded them of Stalin, Pol Pot and Hitler and of what Stalin had said: 'One death is a tragedy. A million? A statistic.' He could not think of a benign explanation for why you need top-up vaccines 'which I'm sure you don't' and for the regulators 'to just get out of the way and wave them through'. Why would the regulators do that when they were still wrestling with the dangers of the 'parent' vaccine? He was clearly shocked by what he had seen since the 'Covid' hoax began and now he was thinking the previously unthinkable:

If you wanted to depopulate a significant proportion of the world and to do it in a way that doesn't involve destruction of the environment with nuclear weapons, poisoning everyone with anthrax or something like that, and you wanted plausible deniability while you had a multi-year infectious disease crisis, I actually don't think you could come up with a better plan of work than seems to be in front of me. I can't say that's what they are going to do, but I can't think of a benign explanation why they are doing it.

He said he never thought that they would get rid of 99 percent of humans, but now he wondered. 'If you wanted to that this would be a hell of a way to do it – it would be unstoppable folks.' Yeadon had concluded that those who submitted to the 'vaccine' would be allowed to have some kind of normal life (but for how long?) while screws were tightened to coerce and mandate the last few percent. 'I think they'll put the rest of them in a prison camp. I wish I was wrong, but I don't think I am.' Other points he made included: There were no coronavirus vaccines then suddenly they all come along at the same time; we have no idea of the long term affect with trials so short; coercing or forcing people to have medical procedures is against the Nuremberg Code instigated when the Nazis did just that; people should at least delay having the 'vaccine'; a quick Internet search confirms that masks don't reduce respiratory viral transmission and 'the government knows that'; they have smashed civil society and they know that, too; two dozen peer-reviewed studies show no connection between lockdown and reducing deaths; he knew from personal friends the elite were still flying around and going on holiday while the public were locked down; the elite were not having the 'vaccines'. He was also asked if 'vaccines' could be made to target difference races. He said he didn't know, but the document by the Project for the New American Century in September, 2000, said developing 'advanced forms of biological warfare that can target *specific genotypes* may transform biological warfare from the realm of terror to a politically useful tool.' Oh, they're evil all right. Of that we can be *absolutely* sure.

Another cull of old people

We have seen from the CDC definition that the mRNA 'Covid vaccine' is not a vaccine and nor are the others that *claim* to reduce 'severity of symptoms' in *some* people, but not protect from infection or transmission. What about all the lies about returning to 'normal' if people were 'vaccinated'? If they are not claimed to stop infection and transmission of the alleged 'virus', how does anything change? This was all lies to manipulate people to take the jabs and we are seeing that now with masks and distancing still required for the 'vaccinated'. How did they think that elderly people with fragile health and immune responses were going to be affected by infusing their cells with synthetic material and other toxic substances? They *knew* that in the short and long term it would be devastating and fatal as the culling of the old that began with the first lockdowns was continued with the 'vaccine'. Death rates in care homes soared immediately residents began to be 'vaccinated' – infused with synthetic material. Brave and committed whistleblower nurses put their careers at risk by exposing this truth while the rest kept their heads down and their mouths shut to put their careers before those they are supposed to care for. A long-time American Certified Nursing Assistant who gave his name as James posted a video in which he described emotionally what happened in his care home when vaccination began. He said that during 2020 very few residents were sick with 'Covid' and no one died during the entire year; but shortly after the Pfizer mRNA injections 14 people died within two weeks and many others were near death. 'They're dropping like flies', he said. Residents who walked on their own before the shot could no longer and they had lost their ability to conduct an intelligent conversation. The home's management said the sudden deaths were caused by a 'super-spreader' of 'Covid-19'. Then how come, James asked, that residents who refused to take the injections were not sick? It was a case of inject the elderly with mRNA synthetic potions and blame their illness and death that followed on the 'virus'. James described what was happening in care homes as 'the greatest crime of genocide this country has ever seen'. Remember the NHS staff nurse from earlier who used the same

word 'genocide' for what was happening with the 'vaccines' and that it was an 'act of human annihilation'. A UK care home whistleblower told a similar story to James about the effect of the 'vaccine' in deaths and 'outbreaks' of illness dubbed 'Covid' after getting the jab. She told how her care home management and staff had zealously imposed government regulations and no one was allowed to even question the official narrative let alone speak out against it. She said the NHS was even worse. Again we see the results of reframing. A worker at a local care home where I live said they had not had a single case of 'Covid' there for almost a year and when the residents were 'vaccinated' they had 19 positive cases in two weeks with eight dying.

It's not the 'vaccine' – honest

The obvious cause and effect was being ignored by the media and most of the public. Australia's health minister Greg Hunt (a former head of strategy at the World Economic Forum) was admitted to hospital after he had the 'vaccine'. He was suffering according to reports from the skin infection 'cellulitis' and it must have been a severe case to have warranted days in hospital. Immediately the authorities said this was nothing to do with the 'vaccine' when an effect of some vaccines is a 'cellulitis-like reaction'. We had families of perfectly healthy old people who died after the 'vaccine' saying that if only they had been given the 'vaccine' earlier they would still be alive. As a numbskull rating that is off the chart. A father of four 'died of Covid' at aged 48 when he was taken ill two days after having the 'vaccine'. The man, a health administrator, had been 'shielding during the pandemic' and had 'not really left the house' until he went for the 'vaccine'. Having the 'vaccine' and then falling ill and dying does not seem to have qualified as a possible cause and effect and 'Covid-19' went on his death certificate. His family said they had no idea how he 'caught the virus'. A family member said: 'Tragically, it could be that going for a vaccination ultimately led to him catching Covid ...The sad truth is that they are never going to know where it came from.' The family warned people to remember

that the virus still existed and was 'very real'. So was their stupidity. Nurses and doctors who had the first round of the 'vaccine' were collapsing, dying and ending up in a hospital bed while they or their grieving relatives were saying they'd still have the 'vaccine' again despite what happened. I kid you not. You mean if your husband returned from the dead he'd have the same 'vaccine' again that killed him??

Doctors at the VCU Medical Center in Richmond, Virginia, said the Johnson & Johnson 'vaccine' was to blame for a man's skin peeling off. Patient Richard Terrell said: 'It all just happened so fast. My skin peeled off. It's still coming off on my hands now.' He said it was stinging, burning and itching and when he bent his arms and legs it was very painful with 'the skin swollen and rubbing against itself'. Pfizer/BioNTech and Moderna vaccines use mRNA to change the cell while the Johnson & Johnson version uses DNA in a process similar to AstraZeneca's technique. Johnson & Johnson and AstraZeneca have both had their 'vaccines' paused by many countries after causing serious blood problems. Terrell's doctor Fnu Nutan said he could have died if he hadn't got medical attention. It sounds terrible so what did Nutan and Terrell say about the 'vaccine' now? Oh, they still recommend that people have it. A nurse in a hospital bed 40 minutes after the vaccination and unable to swallow due to throat swelling was told by a doctor that he lost mobility in his arm for 36 hours following the vaccination. What did he say to the ailing nurse? 'Good for you for getting the vaccination.' We are dealing with a serious form of cognitive dissonance madness in both public and medical staff. There is a remarkable correlation between those having the 'vaccine' and trumpeting the fact and suffering bad happenings shortly afterwards. Witold Rogiewicz, a Polish doctor, made a video of his 'vaccination' and ridiculed those who were questioning its safety and the intentions of Bill Gates: 'Vaccinate yourself to protect yourself, your loved ones, friends and also patients. And to mention quickly I have info for anti-vaxxers and anti-Coviders if you want to contact Bill Gates you can do this through me.' He further ridiculed the dangers of 5G. Days later he

was dead, but naturally the vaccination wasn't mentioned in the verdict of 'heart attack'.

Lies, lies and more lies

So many members of the human race have slipped into extreme states of insanity and unfortunately they include reframed doctors and nursing staff. Having a 'vaccine' and dying within minutes or hours is not considered a valid connection while death from any cause within 28 days or longer of a positive test with a test not testing for the 'virus' means 'Covid-19' goes on the death certificate. How could that 'vaccine'-death connection not have been made except by calculated deceit? US figures in the initial rollout period to February 12th, 2020, revealed that a third of the deaths reported to the CDC after 'Covid vaccines' happened within 48 hours. Five men in the UK suffered an 'extremely rare' blood clot problem after having the AstraZeneca 'vaccine', but no causal link was established said the Gates-funded Medicines and Healthcare products Regulatory Agency (MHRA) which had given the 'vaccine' emergency approval to be used. Former Pfizer executive Dr Michael Yeadon explained in his interview how the procedures could cause blood coagulation and clots. People who should have been at no risk were dying from blood clots in the brain and he said he had heard from medical doctor friends that people were suffering from skin bleeding and massive headaches. The AstraZeneca 'shot' was stopped by some 20 countries over the blood clotting issue and still the corrupt MHRA, the European Medicines Agency (EMA) and the World Health Organization said that it should continue to be given even though the EMA admitted that it 'still cannot rule out definitively' a link between blood clotting and the 'vaccine'. Later Marco Cavaleri, head of EMA vaccine strategy, said there was indeed a clear link between the 'vaccine' and thrombosis, but they didn't know why. So much for the trials showing the 'vaccine' is safe. Blood clots were affecting younger people who would be under virtually no danger from 'Covid' even if it existed which makes it all the more stupid and sinister.

The British government responded to public alarm by wheeling out June Raine, the terrifyingly weak infant school headmistress sound-alike who heads the UK MHRA drug 'regulator'. The idea that she would stand up to Big Pharma and government pressure is laughable and she told us that all was well in the same way that she did when allowing untested, never-used-on-humans-before, genetically-manipulating 'vaccines' to be exposed to the public in the first place. Mass lying is the new normal of the 'Covid' era. The MHRA later said 30 cases of rare blood clots had by then been connected with the AstraZeneca 'vaccine' (that means a lot more in reality) while stressing that the benefits of the jab in preventing 'Covid-19' outweighed any risks. A more ridiculous and disingenuous statement with callous disregard for human health it is hard to contemplate. Immediately after the mendacious 'all-clears' two hospital workers in Denmark experienced blood clots and cerebral haemorrhaging following the AstraZeneca jab and one died. Top Norwegian health official Pål Andre Holme said the 'vaccine' was the only common factor: 'There is nothing in the patient history of these individuals that can give such a powerful immune response ... I am confident that the antibodies that we have found are the cause, and I see no other explanation than it being the vaccine which triggers it.' Strokes, a clot or bleed in the brain, were clearly associated with the 'vaccine' from word of mouth and whistleblower reports. Similar consequences followed with all these 'vaccines' that we were told were so safe and as the numbers grew by the day it was clear we were witnessing human carnage.

Learning the hard way

A woman interviewed by UKColumn told how her husband suffered dramatic health effects after the vaccine when he'd been in good health all his life. He went from being a little unwell to losing all feeling in his legs and experiencing 'excruciating pain'. Misdiagnosis followed twice at Accident and Emergency (an 'allergy' and 'sciatica') before he was admitted to a neurology ward where doctors said his serious condition had been caused by the

'vaccine'. Another seven 'vaccinated' people were apparently being treated on the same ward for similar symptoms. The woman said he had the 'vaccine' because they believed media claims that it was safe. 'I didn't think the government would give out a vaccine that does this to somebody; I believed they would be bringing out a vaccination that would be safe.' What a tragic way to learn that lesson. Another woman posted that her husband was transporting stroke patients to hospital on almost every shift and when he asked them if they had been 'vaccinated' for 'Covid' they all replied 'yes'. One had a 'massive brain bleed' the day after his second dose. She said her husband reported the 'just been vaccinated' information every time to doctors in A and E only for them to ignore it, make no notes and appear annoyed that it was even mentioned. This particular report cannot be verified, but it expresses a common theme that confirms the monumental underreporting of 'vaccine' consequences. Interestingly as the 'vaccines' and their brain blood clot/stroke consequences began to emerge the UK National Health Service began a publicity campaign telling the public what to do in the event of a stroke. A Scottish NHS staff nurse who quit in disgust in March, 2021, said:

I have seen traumatic injuries from the vaccine, they're not getting reported to the yellow card [adverse reaction] scheme, they're treating the symptoms, not asking why, why it's happening. It's just treating the symptoms and when you speak about it you're dismissed like you're crazy, I'm not crazy, I'm not crazy because every other colleague I've spoken to is terrified to speak out, they've had enough.

Videos appeared on the Internet of people uncontrollably shaking after the 'vaccine' with no control over muscles, limbs and even their face. A Scottish mother broke out in a severe rash all over her body almost immediately after she was given the AstraZeneca 'vaccine'. The pictures were horrific. Leigh King, a 41-year-old hairdresser from Lanarkshire said: 'Never in my life was I prepared for what I was about to experience ... My skin was so sore and constantly hot ... I have never felt pain like this ...' But don't you worry, the 'vaccine' is perfectly safe. Then there has been the effect on medical

staff who have been pressured to have the 'vaccine' by psychopathic 'health' authorities and government. A London hospital consultant who gave the name K. Polyakova wrote this to the *British Medical Journal* or *BMJ*:

I am currently struggling with ... the failure to report the reality of the morbidity caused by our current vaccination program within the health service and staff population. The levels of sickness after vaccination is unprecedented and staff are getting very sick and some with neurological symptoms which is having a huge impact on the health service function. Even the young and healthy are off for days, some for weeks, and some requiring medical treatment. Whole teams are being taken out as they went to get vaccinated together.

Mandatory vaccination in this instance is stupid, unethical and irresponsible when it comes to protecting our staff and public health. We are in the voluntary phase of vaccination, and encouraging staff to take an unlicensed product that is impacting on their immediate health ... it is clearly stated that these vaccine products do not offer immunity or stop transmission. In which case why are we doing it?

Not to protect health that's for sure. Medical workers are lauded by governments for agenda reasons when they couldn't give a toss about them any more than they can for the population in general. Schools across America faced the same situation as they closed due to the high number of teachers and other staff with bad reactions to the Pfizer/BioNTech, Moderna, and Johnson & Johnson 'Covid vaccines' all of which were linked to death and serious adverse effects. The *BMJ* took down the consultant's comments pretty quickly on the grounds that they were being used to spread 'disinformation'. They were exposing the truth about the 'vaccine' was the real reason. The cover-up is breathtaking.

Hiding the evidence

The scale of the 'vaccine' death cover-up worldwide can be confirmed by comparing official figures with the personal experience of the public. I heard of many people in my community who died immediately or soon after the vaccine that would never appear in the media or even likely on the official totals of 'vaccine' fatalities and adverse reactions when only about ten percent are estimated to be

reported and I have seen some estimates as low as one percent in a Harvard study. In the UK alone by April 29th, 2021, some 757,654 adverse reactions had been officially reported from the Pfizer/BioNTech, Oxford/AstraZeneca and Moderna 'vaccines' with more than a thousand deaths linked to jabs and that means an estimated ten times this number in reality from a ten percent reporting rate percentage. That's seven million adverse reactions and 10,000 potential deaths and a one percent reporting rate would be ten times *those* figures. In 1976 the US government pulled the swine flu vaccine after 53 deaths. The UK data included a combined 10,000 eye disorders from the 'Covid vaccines' with more than 750 suffering visual impairment or blindness and again multiply by the estimated reporting percentages. As 'Covid cases' officially fell hospitals virtually empty during the 'Covid crisis' began to fill up with a range of other problems in the wake of the 'vaccine' rollout. The numbers across America have also been catastrophic. Deaths linked to *all* types of vaccine increased by 6,000 percent in the first quarter of 2021 compared with 2020. A 39-year-old woman from Ogden, Utah, died four days after receiving a second dose of Moderna's 'Covid vaccine' when her liver, heart and kidneys all failed despite the fact that she had no known medical issues or conditions. Her family sought an autopsy, but Dr Erik Christensen, Utah's chief medical examiner, said proving vaccine injury as a cause of death almost never happened. He could think of only one instance where an autopsy would name a vaccine as the official cause of death and that would be anaphylaxis where someone received a vaccine and died almost instantaneously. 'Short of that, it would be difficult for us to definitively say this is the vaccine,' Christensen said. If that is true this must be added to the estimated ten percent (or far less) reporting rate of vaccine deaths and serious reactions and the conclusion can only be that vaccine deaths and serious reactions – including these 'Covid' potions' – are phenomenally understated in official figures. The same story can be found everywhere. Endless accounts of deaths and serious reactions among the public, medical

and care home staff while official figures did not even begin to reflect this.

Professional script-reader Dr David Williams, a 'top public-health official' in Ontario, Canada, insulted our intelligence by claiming only four serious adverse reactions and no deaths from the more than 380,000 vaccine doses then given. This bore no resemblance to what people knew had happened in their own circles and we had Dirk Huyer in charge of getting millions vaccinated in Ontario while at the same time he was Chief Coroner for the province investigating causes of death including possible death from the vaccine. An aide said he had stepped back from investigating deaths, but evidence indicated otherwise. Rosemary Frei, who secured a Master of Science degree in molecular biology at the Faculty of Medicine at Canada's University of Calgary before turning to investigative journalism, was one who could see that official figures for 'vaccine' deaths and reactions made no sense. She said that doctors seldom reported adverse events and when people got really sick or died after getting a vaccination they would attribute that to anything except the vaccines. It had been that way for years and anyone who wondered aloud whether the 'Covid vaccines' or other shots cause harm is immediately branded as 'anti-vax' and 'anti-science'. This was 'career-threatening' for health professionals. Then there was the huge pressure to support the push to 'vaccinate' billions in the quickest time possible. Frei said:

So that's where we're at today. More than half a million vaccine doses have been given to people in Ontario alone. The rush is on to vaccinate all 15 million of us in the province by September. And the mainstream media are screaming for this to be sped up even more. That all adds up to only a very slim likelihood that we're going to be told the truth by officials about how many people are getting sick or dying from the vaccines.

What is true of Ontario is true of everywhere.

They KNEW – and still did it

The authorities knew what was going to happen with multiple deaths and adverse reactions. The UK government's Gates-funded

and Big Pharma-dominated Medicines and Healthcare products Regulatory Agency (MHRA) hired a company to employ AI in compiling the projected reactions to the 'vaccine' that would otherwise be uncountable. The request for applications said: 'The MHRA urgently seeks an Artificial Intelligence (AI) software tool to process the expected high volume of Covid-19 vaccine Adverse Drug Reaction ...' This was from the agency, headed by the disingenuous June Raine, that gave the 'vaccines' emergency approval and the company was hired before the first shot was given. 'We are going to kill and maim you – is that okay?' 'Oh, yes, perfectly fine – I'm very grateful, thank you, doctor.' The range of 'Covid vaccine' adverse reactions goes on for page after page in the MHRA criminally underreported 'Yellow Card' system and includes affects to eyes, ears, skin, digestion, blood and so on. Raine's MHRA amazingly claimed that the 'overall safety experience ... is so far as expected from the clinical trials'. The death, serious adverse effects, deafness and blindness were *expected*? When did they ever mention that? If these human tragedies were expected then those that gave approval for the use of these 'vaccines' must be guilty of crimes against humanity including murder – a definition of which is 'killing a person with malice aforethought or with recklessness manifesting extreme indifference to the value of human life.' People involved at the MHRA, the CDC in America and their equivalent around the world must go before Nuremberg trials to answer for their callous inhumanity. We are only talking here about the immediate effects of the 'vaccine'. The longer-term impact of the DNA synthetic manipulation is the main reason they are so hysterically desperate to inoculate the entire global population in the shortest possible time.

Africa and the developing world are a major focus for the 'vaccine' depopulation agenda and a mass vaccination sales-pitch is underway thanks to caring people like the Rockefellers and other Cult assets. The Rockefeller Foundation, which pre-empted the 'Covid pandemic' in a document published in 2010 that 'predicted' what happened a decade later, announced an initial \$34.95 million grant in February, 2021, 'to ensure more equitable access to Covid-19

testing and vaccines' among other things in Africa in collaboration with '24 organizations, businesses, and government agencies'. The pan-Africa initiative would focus on 10 countries: Burkina Faso, Ethiopia, Ghana, Kenya, Nigeria, Rwanda, South Africa, Tanzania, Uganda, and Zambia'. Rajiv Shah, President of the Rockefeller Foundation and former administrator of CIA-controlled USAID, said that if Africa was not mass-vaccinated (to change the DNA of its people) it was a 'threat to all of humanity' and not fair on Africans. When someone from the Rockefeller Foundation says they want to do something to help poor and deprived people and countries it is time for a belly-laugh. They are doing this out of the goodness of their 'heart' because 'vaccinating' the entire global population is what the 'Covid' hoax set out to achieve. Official 'decolonisation' of Africa by the Cult was merely a prelude to financial colonisation on the road to a return to physical colonisation. The 'vaccine' is vital to that and the sudden and convenient death of the 'Covid' sceptic president of Tanzania can be seen in its true light. A lot of people in Africa are aware that this is another form of colonisation and exploitation and they need to stand their ground.

The 'vaccine is working' scam

A potential problem for the Cult was that the 'vaccine' is meant to change human DNA and body messaging and not to protect anyone from a 'virus' never shown to exist. The vaccine couldn't work because it was not designed to work and how could they make it *appear* to be working so that more people would have it? This was overcome by lowering the amplification rate of the PCR test to produce fewer 'cases' and therefore fewer 'deaths'. Some of us had been pointing out since March, 2020, that the amplification rate of the test not testing for the 'virus' had been made artificially high to generate positive tests which they could call 'cases' to justify lockdowns. The World Health Organization recommended an absurdly high 45 amplification cycles to ensure the high positives required by the Cult and then remained silent on the issue until January 20th, 2021 – Biden's Inauguration Day. This was when the

'vaccinations' were seriously underway and on that day the WHO recommended after discussions with America's CDC that laboratories *lowered their testing amplification*. Dr David Samadi, a certified urologist and health writer, said the WHO was encouraging all labs to reduce their cycle count for PCR tests. He said the current cycle was much too high and was 'resulting in any particle being declared a positive case'. Even one mainstream news report I saw said this meant the number of 'Covid' infections may have been 'dramatically inflated'. Oh, just a little bit. The CDC in America issued new guidance to laboratories in April, 2021, to use 28 cycles *but only for 'vaccinated' people*. The timing of the CDC/WHO interventions were cynically designed to make it appear the 'vaccines' were responsible for falling cases and deaths when the real reason can be seen in the following examples. New York's state lab, the Wadsworth Center, identified 872 positive tests in July, 2020, based on a threshold of 40 cycles. When the figure was lowered to 35 cycles 43 percent of the 872 were no longer 'positives'. At 30 cycles the figure was 63 percent. A Massachusetts lab found that between 85 to 90 percent of people who tested positive in July with a cycle threshold of 40 would be negative at 30 cycles, Ashish Jha, MD, director of the Harvard Global Health Institute, said: 'I'm really shocked that it could be that high ... Boy, does it really change the way we need to be thinking about testing.' I'm shocked that I could see the obvious in the spring of 2020, with no medical background, and most medical professionals still haven't worked it out. No, that's not shocking – it's terrifying.

Three weeks after the WHO directive to lower PCR cycles the London *Daily Mail* ran this headline: 'Why ARE Covid cases plummeting? New infections have fallen 45% in the US and 30% globally in the past 3 weeks but experts say vaccine is NOT the main driver because only 8% of Americans and 13% of people worldwide have received their first dose.' They acknowledged that the drop could not be attributed to the 'vaccine', but soon this morphed throughout the media into the 'vaccine' has caused cases and deaths to fall when it was the PCR threshold. In December, 2020, there was

chaos at English Channel ports with truck drivers needing negative 'Covid' tests before they could board a ferry home for Christmas. The government wanted to remove the backlog as fast as possible and they brought in troops to do the 'testing'. Out of 1,600 drivers just 36 tested positive and the rest were given the all clear to cross the Channel. I guess the authorities thought that 36 was the least they could get away with without the unquestioning catching on. The amplification trick which most people believed in the absence of information in the mainstream applied more pressure on those refusing the 'vaccine' to succumb when it 'obviously worked'. The truth was the exact opposite with deaths in care homes soaring with the 'vaccine' and in Israel the term used was 'skyrocket'. A re-analysis of published data from the Israeli Health Ministry led by Dr Hervé Seligmann at the Medicine Emerging Infectious and Tropical Diseases at Aix-Marseille University found that Pfizer's 'Covid vaccine' killed 'about 40 times more [elderly] people than the disease itself would have killed' during a five-week vaccination period and *260 times* more younger people than would have died from the 'virus' even according to the manipulated 'virus' figures. Dr Seligmann and his co-study author, Haim Yativ, declared after reviewing the Israeli 'vaccine' death data: 'This is a new Holocaust.'

Then, in mid-April, 2021, after vast numbers of people worldwide had been 'vaccinated', the story changed with clear coordination. The UK government began to prepare the ground for more future lockdowns when Nuremberg-destined Boris Johnson told yet another whopper. He said that cases had fallen because of *lockdowns* not 'vaccines'. Lockdowns are irrelevant when *there is no 'virus'* and the test and fraudulent death certificates are deciding the number of 'cases' and 'deaths'. Study after study has shown that lockdowns don't work and instead kill and psychologically destroy people. Meanwhile in the United States Anthony Fauci and Rochelle Walensky, the ultra-Zionist head of the CDC, peddled the same line. More lockdown was the answer and not the 'vaccine', a line repeated on cue by the moron that is Canadian Prime Minister Justin Trudeau. Why all the hysteria to get everyone 'vaccinated' if lockdowns and

not 'vaccines' made the difference? None of it makes sense on the face of it. Oh, but it does. The Cult wants lockdowns *and* the 'vaccine' and if the 'vaccine' is allowed to be seen as the total answer lockdowns would no longer be justified when there are still livelihoods to destroy. 'Variants' and renewed upward manipulation of PCR amplification are planned to instigate never-ending lockdown *and* more 'vaccines'.

You *must* have it – we're desperate

Israel, where the Jewish and Arab population are ruled by the Sabbatian Cult, was the front-runner in imposing the DNA-manipulating 'vaccine' on its people to such an extent that Jewish refusers began to liken what was happening to the early years of Nazi Germany. This would seem to be a fantastic claim. Why would a government of Jewish people be acting like the Nazis did? If you realise that the Sabbatian Cult was behind the Nazis and that Sabbatians hate Jews the pieces start to fit and the question of why a 'Jewish' government would treat Jews with such callous disregard for their lives and freedom finds an answer. Those controlling the government of Israel *aren't Jewish* – they're Sabbatian. Israeli lawyer Tamir Turgal was one who made the Nazi comparison in comments to German lawyer Reiner Fuellmich who is leading a class action lawsuit against the psychopaths for crimes against humanity. Turgal described how the Israeli government was vaccinating children and pregnant women on the basis that there was no evidence that this was dangerous when they had no evidence that it *wasn't* dangerous either. They just had no evidence. This was medical experimentation and Turgal said this breached the Nuremberg Code about medical experimentation and procedures requiring informed consent and choice. Think about that. A Nuremberg Code developed because of Nazi experimentation on Jews and others in concentration camps by people like the evil-beyond-belief Josef Mengele is being breached by the *Israeli* government; but when you know that it's a *Sabbatian* government along with its intelligence and military agencies like Mossad, Shin Bet and the Israeli Defense Forces, and that Sabbatians

were the force behind the Nazis, the kaleidoscope comes into focus. What have we come to when Israeli Jews are suing their government for violating the Nuremberg Code by essentially making Israelis subject to a medical experiment using the controversial 'vaccines'? It's a shocker that this has to be done in the light of what happened in Nazi Germany. The Anshe Ha-Emet, or 'People of the Truth', made up of Israeli doctors, lawyers, campaigners and public, have launched a lawsuit with the International Criminal Court. It says:

When the heads of the Ministry of Health as well as the prime minister presented the vaccine in Israel and began the vaccination of Israeli residents, the vaccinated were not advised, that, in practice, they are taking part in a medical experiment and that their consent is required for this under the Nuremberg Code.

The irony is unbelievable, but easily explained in one word: Sabbatians. The foundation of Israeli 'Covid' apartheid is the 'green pass' or 'green passport' which allows Jews and Arabs who have had the DNA-manipulating 'vaccine' to go about their lives – to work, fly, travel in general, go to shopping malls, bars, restaurants, hotels, concerts, gyms, swimming pools, theatres and sports venues, while non-'vaccinated' are banned from all those places and activities. Israelis have likened the 'green pass' to the yellow stars that Jews in Nazi Germany were forced to wear – the same as the yellow stickers that a branch of UK supermarket chain Morrisons told exempt mask-wearers they had to display when shopping. How very sensitive. The Israeli system is blatant South African-style apartheid on the basis of compliance or non-compliance to fascism rather than colour of the skin. How appropriate that the Sabbatian Israeli government was so close to the pre-Mandela apartheid regime in Pretoria. The Sabbatian-instigated 'vaccine passport' in Israel is planned for everywhere. Sabbatians struck a deal with Pfizer that allowed them to lead the way in the percentage of a national population infused with synthetic material and the result was catastrophic. Israeli freedom activist Shai Dannon told me how chairs were appearing on beaches that said 'vaccinated only'. Health Minister Yuli Edelstein said that anyone unwilling or unable to get

the jabs that 'confer immunity' will be 'left behind'. The man's a liar. Not even the makers claim the 'vaccines' confer immunity. When you see those figures of 'vaccine' deaths these psychopaths were saying that you must take the chance the 'vaccine' will kill you or maim you while knowing it will change your DNA or lockdown for you will be permanent. That's fascism. The Israeli parliament passed a law to allow personal information of the non-vaccinated to be shared with local and national authorities for three months. This was claimed by its supporters to be a way to 'encourage' people to be vaccinated. Hadas Ziv from Physicians for Human Rights described this as a 'draconian law which crushed medical ethics and the patient rights'. But that's the idea, the Sabbatians would reply.

Your papers, please

Sabbatian Israel was leading what has been planned all along to be a global 'vaccine pass' called a 'green passport' without which you would remain in permanent lockdown restriction and unable to do anything. This is how badly – *desperately* – the Cult is to get everyone 'vaccinated'. The term and colour 'green' was not by chance and related to the psychology of fusing the perception of the green climate hoax with the 'Covid' hoax and how the 'solution' to both is the same Great Reset. Lying politicians, health officials and psychologists denied there were any plans for mandatory vaccinations or restrictions based on vaccinations, but they knew that was exactly what was meant to happen with governments of all countries reaching agreements to enforce a global system. 'Free' Denmark and 'free' Sweden unveiled digital vaccine certification. Cyprus, Czech Republic, Estonia, Greece, Hungary, Iceland, Italy, Poland, Portugal, Slovakia, and Spain have all committed to a vaccine passport system and the rest including the whole of the EU would follow. The satanic UK government will certainly go this way despite mendacious denials and at the time of writing it is trying to manipulate the public into having the 'vaccine' so they could go abroad on a summer holiday. How would that work without something to prove you had the synthetic toxicity injected into you?

Documents show that the EU's European Commission was moving towards 'vaccine certificates' in 2018 and 2019 before the 'Covid' hoax began. They knew what was coming. Abracadabra – Ursula von der Leyen, the German President of the Commission, announced in March, 2021, an EU 'Digital Green Certificate' – green again – to track the public's 'Covid status'. The passport sting is worldwide and the Far East followed the same pattern with South Korea ruling that only those with 'vaccination' passports – again the *green* pass – would be able to 'return to their daily lives'.

Bill Gates has been preparing for this 'passport' with other Cult operatives for years and beyond the paper version is a Gates-funded 'digital tattoo' to identify who has been vaccinated and who hasn't. The 'tattoo' is reported to include a substance which is externally readable to confirm who has been vaccinated. This is a bio-luminous light-generating enzyme (think fireflies) called ... *Luciferase*. Yes, named after the Cult 'god' Lucifer the 'light bringer' of whom more to come. Gates said he funded the readable tattoo to ensure children in the developing world were vaccinated and no one was missed out. He cares so much about poor kids as we know. This was just the cover story to develop a vaccine tagging system for everyone on the planet. Gates has been funding the ID2020 'alliance' to do just that in league with other lovely people at Microsoft, GAVI, the Rockefeller Foundation, Accenture and IDEO.org. He said in interviews in March, 2020, before any 'vaccine' publicly existed, that the world must have a globalised digital certificate to track the 'virus' and who had been vaccinated. Gates knew from the start that the mRNA vaccines were coming and when they would come and that the plan was to tag the 'vaccinated' to marginalise the intelligent and stop them doing anything including travel. Evil just doesn't suffice. Gates was exposed for offering a \$10 million bribe to the Nigerian House of Representatives to invoke compulsory 'Covid' vaccination of all Nigerians. Sara Cunial, a member of the Italian Parliament, called Gates a 'vaccine criminal'. She urged the Italian President to hand him over to the International Criminal Court for crimes against

humanity and condemned his plans to 'chip the human race' through ID2020.

You know it's a long-planned agenda when war criminal and Cult gofer Tony Blair is on the case. With the scale of arrogance only someone as dark as Blair can muster he said: 'Vaccination in the end is going to be your route to liberty.' Blair is a disgusting piece of work and he confirms that again. The media has given a lot of coverage to a bloke called Charlie Mullins, founder of London's biggest independent plumbing company, Pimlico Plumbers, who has said he won't employ anyone who has not been vaccinated or have them go to any home where people are not vaccinated. He said that if he had his way no one would be allowed to walk the streets if they have not been vaccinated. Gates was cheering at the time while I was alerting the white coats. The plan is that people will qualify for 'passports' for having the first two doses and then to keep it they will have to have all the follow ups and new ones for invented 'variants' until human genetics is transformed and many are dead who can't adjust to the changes. Hollywood celebrities – the usual propaganda stunt – are promoting something called the WELL Health-Safety Rating to verify that a building or space has 'taken the necessary steps to prioritize the health and safety of their staff, visitors and other stakeholders'. They included Lady Gaga, Jennifer Lopez, Michael B. Jordan, Robert DeNiro, Venus Williams, Wolfgang Puck, Deepak Chopra and 17th Surgeon General Richard Carmona. Yawn. WELL Health-Safety has big connections with China. Parent company Delos is headed by former Goldman Sachs partner Paul Scialla. This is another example – and we will see so many others – of using the excuse of 'health' to dictate the lives and activities of the population. I guess one confirmation of the 'safety' of buildings is that only 'vaccinated' people can go in, right?

Electronic concentration camps

I wrote decades ago about the plans to restrict travel and here we are for those who refuse to bow to tyranny. This can be achieved in one go with air travel if the aviation industry makes a blanket decree.

The 'vaccine' and guaranteed income are designed to be part of a global version of China's social credit system which tracks behaviour 24/7 and awards or deletes 'credits' based on whether your behaviour is supported by the state or not. I mean your entire lifestyle – what you do, eat, say, everything. Once your credit score falls below a certain level consequences kick in. In China tens of millions have been denied travel by air and train because of this. All the locations and activities denied to refusers by the 'vaccine' passports will be included in one big mass ban on doing almost anything for those that don't bow their head to government. It's beyond fascist and a new term is required to describe its extremes – I guess fascist technocracy will have to do. The way the Chinese system of technological – technocratic – control is sweeping the West can be seen in the Los Angeles school system and is planned to be expanded worldwide. Every child is required to have a 'Covid'-tracking app scanned daily before they can enter the classroom. The so-called Daily Pass tracking system is produced by Gates' Microsoft which I'm sure will shock you rigid. The pass will be scanned using a barcode (one step from an inside-the-body barcode) and the information will include health checks, 'Covid' tests and vaccinations. Entry codes are for one specific building only and access will only be allowed if a student or teacher has a negative test with a test not testing for the 'virus', has no symptoms of anything alleged to be related to 'Covid' (symptoms from a range of other illness), and has a temperature under 100 degrees. No barcode, no entry, is planned to be the case for everywhere and not only schools.

Kids are being psychologically prepared to accept this as 'normal' their whole life which is why what they can impose in schools is so important to the Cult and its gofers. Long-time American freedom campaigner John Whitehead of the Rutherford Institute was not exaggerating when he said: 'Databit by databit, we are building our own electronic concentration camps.' Canada under its Cult gofer prime minister Justin Trudeau has taken a major step towards the real thing with people interned against their will if they test positive with a test not testing for the 'virus' when they arrive at a Canadian

airport. They are jailed in internment hotels often without food or water for long periods and with many doors failing to lock there have been sexual assaults. The interned are being charged sometimes \$2,000 for the privilege of being abused in this way. Trudeau is fully on board with the Cult and says the 'Covid pandemic' has provided an opportunity for a global 'reset' to permanently change Western civilisation. His number two, Deputy Prime Minister Chrystia Freeland, is a trustee of the World Economic Forum and a Rhodes Scholar. The Trudeau family have long been servants of the Cult. See *The Biggest Secret* and Cathy O'Brien's book *Trance-Formation of America* for the horrific background to Trudeau's father Pierre Trudeau another Canadian prime minister. Hide your fascism behind the façade of a heart-on-the-sleeve liberal. It's a well-honed Cult technique.

What can the 'vaccine' really do?

We have a 'virus' never shown to exist and 'variants' of the 'virus' that have also never been shown to exist except, like the 'original', as computer-generated fictions. Even if you believe there's a 'virus' the 'case' to 'death' rate is in the region of 0.23 to 0.15 percent and those 'deaths' are concentrated among the very old around the same average age that people die anyway. In response to this lack of threat (in truth none) psychopaths and idiots, knowingly and unknowingly answering to Gates and the Cult, are seeking to 'vaccinate' every man, woman and child on Planet Earth. Clearly the 'vaccine' is not about 'Covid' – none of this ever has been. So what is it all about *really*? Why the desperation to infuse genetically-manipulating synthetic material into everyone through mRNA fraudulent 'vaccines' with the intent of doing this over and over with the excuses of 'variants' and other 'virus' inventions? Dr Sherri Tenpenny, an osteopathic medical doctor in the United States, has made herself an expert on vaccines and their effects as a vehement campaigner against their use. Tenpenny was board certified in emergency medicine, the director of a level two trauma centre for 12 years, and moved to Cleveland in 1996 to start an integrative

medicine practice which has treated patients from all 50 states and some 17 other countries. Weaning people off pharmaceutical drugs is a speciality.

She became interested in the consequences of vaccines after attending a meeting at the National Vaccine Information Center in Washington DC in 2000 where she 'sat through four days of listening to medical doctors and scientists and lawyers and parents of vaccine injured kids' and asked: 'What's going on?' She had never been vaccinated and never got ill while her father was given a list of vaccines to be in the military and was 'sick his entire life'. The experience added to her questions and she began to examine vaccine documents from the Centers for Disease Control (CDC). After reading the first one, the 1998 version of *The General Recommendations of Vaccination*, she thought: 'This is it?' The document was poorly written and bad science and Tenpenny began 20 years of research into vaccines that continues to this day. She began her research into 'Covid vaccines' in March, 2020, and she describes them as 'deadly'. For many, as we have seen, they already have been. Tenpenny said that in the first 30 days of the 'vaccine' rollout in the United States there had been more than 40,000 adverse events reported to the vaccine adverse event database. A document had been delivered to her the day before that was 172 pages long. 'We have over 40,000 adverse events; we have over 3,100 cases of [potentially deadly] anaphylactic shock; we have over 5,000 neurological reactions.' Effects ranged from headaches to numbness, dizziness and vertigo, to losing feeling in hands or feet and paraesthesia which is when limbs 'fall asleep' and people have the sensation of insects crawling underneath their skin. All this happened in the first 30 days and remember that only about *ten percent* (or far less) of adverse reactions and vaccine-related deaths are estimated to be officially reported. Tenpenny said:

So can you think of one single product in any industry, any industry, for as long as products have been made on the planet that within 30 days we have 40,000 people complaining of side effects that not only is still on the market but ... we've got paid actors telling us how great

they are for getting their vaccine. We're offering people \$500 if they will just get their vaccine and we've got nurses and doctors going; 'I got the vaccine, I got the vaccine'.

Tenpenny said they were not going to be 'happy dancing folks' when they began to suffer Bell's palsy (facial paralysis), neuropathies, cardiac arrhythmias and autoimmune reactions that kill through a blood disorder. 'They're not going to be so happy, happy then, but we're never going to see pictures of those people' she said. Tenpenny described the 'vaccine' as 'a well-designed killing tool'.

No off-switch

Bad as the initial consequences had been Tenpenny said it would be maybe 14 months before we began to see the 'full ravage' of what is going to happen to the 'Covid vaccinated' with full-out consequences taking anything between two years and 20 years to show. You can understand why when you consider that variations of the 'Covid vaccine' use mRNA (messenger RNA) to in theory activate the immune system to produce protective antibodies without using the actual 'virus'. How can they when it's a computer program and they've never isolated what they claim is the 'real thing'? Instead they use *synthetic* mRNA. They are inoculating synthetic material into the body which through a technique known as the Trojan horse is absorbed into cells to change the nature of DNA. Human DNA is changed by an infusion of messenger RNA and with each new 'vaccine' of this type it is changed even more. Say so and you are banned by Cult Internet platforms. The contempt the contemptuous Mark Zuckerberg has for the truth and human health can be seen in an internal Facebook video leaked to the Project Veritas investigative team in which he said of the 'Covid vaccines': '... I share some caution on this because we just don't know the long term side-effects of basically modifying people's DNA and RNA.' At the same time this disgusting man's Facebook was censoring and banning anyone saying exactly the same. He must go before a Nuremberg trial for crimes against humanity when he *knows* that he

is censoring legitimate concerns and denying the right of informed consent on behalf of the Cult that owns him. People have been killed and damaged by the very 'vaccination' technique he cast doubt on himself when they may not have had the 'vaccine' with access to information that he denied them. The plan is to have at least annual 'Covid vaccinations', add others to deal with invented 'variants', and change all other vaccines into the mRNA system. Pfizer executives told shareholders at a virtual Barclays Global Healthcare Conference in March, 2021, that the public may need a third dose of 'Covid vaccine', plus regular yearly boosters and the company planned to hike prices to milk the profits in a 'significant opportunity for our vaccine'. These are the professional liars, cheats and opportunists who are telling you their 'vaccine' is safe. Given this volume of mRNA planned to be infused into the human body and its ability to then replicate we will have a transformation of human genetics from biological to synthetic biological – exactly the long-time Cult plan for reasons we'll see – and many will die. Sherri Tenpenny said of this replication:

It's like having an on-button but no off-button and that whole mechanism ... they actually give it a name and they call it the Trojan horse mechanism, because it allows that [synthetic] virus and that piece of that [synthetic] virus to get inside of your cells, start to replicate and even get inserted into other parts of your DNA as a Trojan-horse.

Ask the overwhelming majority of people who have the 'vaccine' what they know about the contents and what they do and they would reply: 'The government says it will stop me getting the virus.' Governments give that false impression on purpose to increase take-up. You can read Sherri Tenpenny's detailed analysis of the health consequences in her blog at [Vaxxter.com](https://www.vaxxter.com), but in summary these are some of them. She highlights the statement by Bill Gates about how human beings can become their own 'vaccine manufacturing machine'. The man is insane. ['Vaccine'-generated] 'antibodies' carry synthetic messenger RNA into the cells and the damage starts, Tenpenny contends, and she says that lungs can be adversely affected through varying degrees of pus and bleeding which

obviously affects breathing and would be dubbed 'Covid-19'. Even more sinister was the impact of 'antibodies' on macrophages, a white blood cell of the immune system. They consist of Type 1 and Type 2 which have very different functions. She said Type 1 are 'hyper-vigilant' white blood cells which 'gobble up' bacteria etc. However, in doing so, this could cause inflammation and in extreme circumstances be fatal. She says these affects are mitigated by Type 2 macrophages which kick in to calm down the system and stop it going rogue. They clear up dead tissue debris and reduce inflammation that the Type 1 'fire crews' have caused. Type 1 kills the infection and Type 2 heals the damage, she says. This is her punchline with regard to 'Covid vaccinations': She says that mRNA 'antibodies' block Type 2 macrophages by attaching to them and deactivating them. This meant that when the Type 1 response was triggered by infection there was nothing to stop that getting out of hand by calming everything down. There's an on-switch, but no off-switch, she says. What follows can be 'over and out, see you when I see you'.

Genetic suicide

Tenpenny also highlights the potential for autoimmune disease – the body attacking itself – which has been associated with vaccines since they first appeared. Infusing a synthetic foreign substance into cells could cause the immune system to react in a panic believing that the body is being overwhelmed by an invader (it is) and the consequences can again be fatal. There is an autoimmune response known as a 'cytokine storm' which I have likened to a homeowner panicked by an intruder and picking up a gun to shoot randomly in all directions before turning the fire on himself. The immune system unleashes a storm of inflammatory response called cytokines to a threat and the body commits hara-kiri. The lesson is that you mess with the body's immune response at your peril and these 'vaccines' seriously – fundamentally – mess with immune response. Tenpenny refers to a consequence called anaphylactic shock which is a severe and highly dangerous allergic reaction when the immune system

floods the body with chemicals. She gives the example of having a bee sting which primes the immune system and makes it sensitive to those chemicals. When people are stung again maybe years later the immune response can be so powerful that it leads to anaphylactic shock. Tenpenny relates this 'shock' with regard to the 'Covid vaccine' to something called polyethylene glycol or PEG. Enormous numbers of people have become sensitive to this over decades of use in a whole range of products and processes including food, drink, skin creams and 'medicine'. Studies have claimed that some 72 percent of people have antibodies triggered by PEG compared with two percent in the 1960s and allergic hypersensitive reactions to this become a gathering cause for concern. Tenpenny points out that the 'mRNA vaccine' is coated in a 'bubble' of polyethylene glycol which has the potential to cause anaphylactic shock through immune sensitivity. Many reports have appeared of people reacting this way after having the 'Covid vaccine'. What do we think is going to happen as humanity has more and more of these 'vaccines'?

Tenpenny said: 'All these pictures we have seen with people with these rashes ... these weepy rashes, big reactions on their arms and things like that – it's an acute allergic reaction most likely to the polyethylene glycol that you've been previously primed and sensitised to.'

Those who have not studied the conspiracy and its perpetrators at length might think that making the population sensitive to PEG and then putting it in these 'vaccines' is just a coincidence. It is not. It is instead testament to how carefully and coldly-planned current events have been and the scale of the conspiracy we are dealing with. Tenpenny further explains that the 'vaccine' mRNA procedure can breach the blood-brain barrier which protects the brain from toxins and other crap that will cause malfunction. In this case they could make two proteins corrupt brain function to cause Amyotrophic lateral sclerosis (ALS), a progressive nervous system disease leading to loss of muscle control, and frontal lobe degeneration – Alzheimer's and dementia. Immunologist J. Bart Classon published a paper connecting mRNA 'vaccines' to prion

disease which can lead to Alzheimer's and other forms of neurodegenerative disease while others have pointed out the potential to affect the placenta in ways that make women infertile. This will become highly significant in the next chapter when I will discuss other aspects of this non-vaccine that relate to its nanotechnology and transmission from the injected to the uninjected.

Qualified in idiocy

Tenpenny describes how research has confirmed that these 'vaccine'-generated antibodies can interact with a range of other tissues in the body and attack many other organs including the lungs. 'This means that if you have a hundred people standing in front of you that all got this shot they could have a hundred different symptoms.'

Anyone really think that Cult gofers like the Queen, Tony Blair, Christopher Whitty, Anthony Fauci, and all the other psychopaths have really had this 'vaccine' in the pictures we've seen? Not a bloody chance. Why don't doctors all tell us about all these dangers and consequences of the 'Covid vaccine'? Why instead do they encourage and pressure patients to have the shot? Don't let's think for a moment that doctors and medical staff can't be stupid, lazy, and psychopathic and that's without the financial incentives to give the jab. Tenpenny again:

Some people are going to die from the vaccine directly but a large number of people are going to start to get horribly sick and get all kinds of autoimmune diseases 42 days to maybe a year out. What are they going to do, these stupid doctors who say; 'Good for you for getting that vaccine.' What are they going to say; 'Oh, it must be a mutant, we need to give an extra dose of that vaccine.'

Because now the vaccine, instead of one dose or two doses we need three or four because the stupid physicians aren't taking the time to learn anything about it. If I can learn this sitting in my living room reading a 19 page paper and several others so can they. There's nothing special about me, I just take the time to do it.

Remember how Sara Kayat, the NHS and TV doctor, said that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Doctors can be idiots like every other profession and they

should not be worshipped as infallible. They are not and far from it. Behind many medical and scientific 'experts' lies an uninformed prat trying to hide themselves from you although in the 'Covid' era many have failed to do so as with UK narrative-repeating 'TV doctor' Hilary Jones. Pushing back against the minority of proper doctors and scientists speaking out against the 'vaccine' has been the entire edifice of the Cult global state in the form of governments, medical systems, corporations, mainstream media, Silicon Valley, and an army of compliant doctors, medical staff and scientists willing to say anything for money and to enhance their careers by promoting the party line. If you do that you are an 'expert' and if you won't you are an 'anti-vaxxer' and 'Covidiot'. The pressure to be 'vaccinated' is incessant. We have even had reports claiming that the 'vaccine' can help cure cancer and Alzheimer's and make the lame walk. I am waiting for the announcement that it can bring you coffee in the morning and cook your tea. Just as the symptoms of 'Covid' seem to increase by the week so have the miracles of the 'vaccine'. American supermarket giant Kroger Co. offered nearly 500,000 employees in 35 states a \$100 bonus for having the 'vaccine' while donut chain Krispy Kreme promised 'vaccinated' customers a free glazed donut every day for the rest of 2021. Have your DNA changed and you will get a doughnut although we might not have to give you them for long. Such offers and incentives confirm the desperation.

Perhaps the worse vaccine-stunt of them all was UK 'Health' Secretary Matt-the-prat Hancock on live TV after watching a clip of someone being 'vaccinated' when the roll-out began. Hancock faked tears so badly it was embarrassing. Brain-of-Britain Piers Morgan, the lockdown-supporting, 'vaccine' supporting, 'vaccine' passport-supporting, TV host played along with Hancock – 'You're quite emotional about that' he said in response to acting so atrocious it would have been called out at a school nativity which will presumably today include Mary and Jesus in masks, wise men keeping their camels six feet apart, and shepherds under tent arrest. System-serving Morgan tweeted this: 'Love the idea of covid vaccine passports for everywhere: flights, restaurants, clubs, football, gyms,

shops etc. It's time covid-denying, anti-vaxxer loonies had their bullsh*t bluff called & bar themselves from going anywhere that responsible citizens go.' If only I could aspire to his genius. To think that Morgan, who specialises in shouting over anyone he disagrees with, was lauded as a free speech hero when he lost his job after storming off the set of his live show like a child throwing his dolly out of the pram. If he is a free speech hero we are in real trouble. I have no idea what 'bullsh*t' means, by the way, the * throws me completely.

The Cult is desperate to infuse its synthetic DNA-changing concoction into everyone and has been using every lie, trick and intimidation to do so. The question of '*Why?*' we shall now address.

CHAPTER TEN

Human 2.0

I believe that at the end of the century the use of words and general educated opinion will have altered so much that one will be able to speak of machines thinking without expecting to be contradicted – Alan Turing (1912-1954), the ‘Father of artificial intelligence’

I have been exposing for decades the plan to transform the human body from a biological to a synthetic-biological state. The new human that I will call Human 2.0 is planned to be connected to artificial intelligence and a global AI ‘Smart Grid’ that would operate as one global system in which AI would control everything from your fridge to your heating system to your car to your mind. Humans would no longer be ‘human’, but post-human and sub-human, with their thinking and emotional processes replaced by AI.

What I said sounded crazy and beyond science fiction and I could understand that. To any balanced, rational, mind it *is* crazy. Today, however, that world is becoming reality and it puts the ‘Covid vaccine’ into its true context. Ray Kurzweil is the ultra-Zionist ‘computer scientist, inventor and futurist’ and co-founder of the Singularity University. Singularity refers to the merging of humans with machines or ‘transhumanism’. Kurzweil has said humanity would be connected to the cyber ‘cloud’ in the period of the ever-recurring year of 2030:

Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and ‘think in the cloud’ ... We’re going to put gateways to the

cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations. As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

They are trying to sell this end-of-humanity-as-we-know-it as the next stage of 'evolution' when we become super-human and 'like the gods'. They are lying to you. Shocked, eh? The population, and again especially the young, have been manipulated into addiction to technologies designed to enslave them for life. First they induced an addiction to smartphones (holdables); next they moved to technology on the body (wearables); and then began the invasion of the body (implantables). I warned way back about the plan for microchipped people and we are now entering that era. We should not be diverted into thinking that this refers only to chips we can see. Most important are the nanochips known as smart dust, neural dust and nanobots which are far too small to be seen by the human eye. Nanotechnology is everywhere, increasingly in food products, and released into the atmosphere by the geoengineering of the skies funded by Bill Gates to 'shut out the Sun' and 'save the planet from global warming'. Gates has been funding a project to spray millions of tonnes of chalk (calcium carbonate) into the stratosphere over Sweden to 'dim the Sun' and cool the Earth. Scientists warned the move could be disastrous for weather systems in ways no one can predict and opposition led to the Swedish space agency announcing that the 'experiment' would not be happening as planned in the summer of 2021; but it shows where the Cult is going with dimming the impact of the Sun and there's an associated plan to change the planet's atmosphere. Who gives psychopath Gates the right to dictate to the entire human race and dismantle planetary systems? The world will not be safe while this man is at large.

The global warming hoax has made the Sun, like the gas of life, something to fear when both are essential to good health and human survival (more inversion). The body transforms sunlight into vital vitamin D through a process involving ... *cholesterol*. This is the cholesterol we are also told to fear. We are urged to take Big Pharma

statin drugs to reduce cholesterol and it's all systematic. Reducing cholesterol means reducing vitamin D uptake with all the multiple health problems that will cause. At least if you take statins long term it saves the government from having to pay you a pension. The delivery system to block sunlight is widely referred to as chemtrails although these have a much deeper agenda, too. They appear at first to be contrails or condensation trails streaming from aircraft into cold air at high altitudes. Contrails disperse very quickly while chemtrails do not and spread out across the sky before eventually their content falls to earth. Many times I have watched aircraft cross-cross a clear blue sky releasing chemtrails until it looks like a cloudy day. Chemtrails contain many things harmful to humans and the natural world including toxic heavy metals, aluminium (see Alzheimer's) and nanotechnology. Ray Kurzweil reveals the reason without actually saying so: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' How do you deliver that? *From the sky.* Self-replicating nanobots would connect everything to the Smart Grid. The phenomenon of Morgellons disease began in the chemtrail era and the correlation has led to it being dubbed the 'chemtrail disease'. Self-replicating fibres appear in the body that can be pulled out through the skin. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. I cover this at greater length in *Phantom Self*.

'Vaccine' operating system

'Covid vaccines' with their self-replicating synthetic material are also designed to make the connection between humanity and Kurzweil's 'cloud'. American doctor and dedicated campaigner for truth, Carrie Madej, an Internal Medicine Specialist in Georgia with more than 20 years medical experience, has highlighted the nanotechnology aspect of the fake 'vaccines'. She explains how one of the components in at least the Moderna and Pfizer synthetic potions are 'lipid nanoparticles' which are 'like little tiny computer bits' – a 'sci-fi substance' known as nanobots and hydrogel which can be 'triggered

at any moment to deliver its payload' and act as 'biosensors'. The synthetic substance had 'the ability to accumulate data from your body like your breathing, your respiration, thoughts and emotions, all kind of things' and each syringe could carry a *million* nanobots:

This substance because it's like little bits of computers in your body, crazy, but it's true, it can do that, [and] obviously has the ability to act through Wi-Fi. It can receive and transmit energy, messages, frequencies or impulses. That issue has never been addressed by these companies. What does that do to the human?

Just imagine getting this substance in you and it can react to things all around you, the 5G, your smart device, your phones, what is happening with that? What if something is triggering it, too, like an impulse, a frequency? We have something completely foreign in the human body.

Madej said her research revealed that electromagnetic (EMF) frequencies emitted by phones and other devices had increased dramatically in the same period of the 'vaccine' rollout and she was seeing more people with radiation problems as 5G and other electromagnetic technology was expanded and introduced to schools and hospitals. She said she was 'floored with the EMF coming off' the devices she checked. All this makes total sense and syncs with my own work of decades when you think that Moderna refers in documents to its mRNA 'vaccine' as an 'operating system':

Recognizing the broad potential of mRNA science, we set out to create an mRNA technology platform that functions very much like an operating system on a computer. It is designed so that it can plug and play interchangeably with different programs. In our case, the 'program' or 'app' is our mRNA drug – the unique mRNA sequence that codes for a protein ...

... Our MRNA Medicines – 'The 'Software Of Life': When we have a concept for a new mRNA medicine and begin research, fundamental components are already in place. Generally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.

Who needs a real 'virus' when you can create a computer version to justify infusing your operating system into the entire human race on the road to making living, breathing people into cyborgs? What is missed with the 'vaccines' is the *digital* connection between synthetic material and the body that I highlighted earlier with the study that hacked a computer with human DNA. On one level the body is digital, based on mathematical codes, and I'll have more about that in the next chapter. Those who ridiculously claim that mRNA 'vaccines' are not designed to change human genetics should explain the words of Dr Tal Zaks, chief medical officer at Moderna, in a 2017 TED talk. He said that over the last 30 years 'we've been living this phenomenal digital scientific revolution, and I'm here today to tell you, that we are actually *hacking the software of life*, and that it's changing the way we think about prevention and treatment of disease':

In every cell there's this thing called messenger RNA, or mRNA for short, that transmits the critical information from the DNA in our genes to the protein, which is really the stuff we're all made out of. This is the critical information that determines what the cell will do. So we think about it as an operating system. So if you could change that, if you could introduce a line of code, or change a line of code, it turns out, that has profound implications for everything, from the flu to cancer.

Zaks should more accurately have said that this has profound implications for the human genetic code and the nature of DNA. Communications within the body go both ways and not only one. But, hey, no, the 'Covid vaccine' will not affect your genetics. Cult fact-checkers say so even though the man who helped to develop the mRNA technique says that it does. Zaks said in 2017:

If you think about what it is we're trying to do. We've taken information and our understanding of that information and how that information is transmitted in a cell, and we've taken our understanding of medicine and how to make drugs, and we're fusing the two. We think of it as information therapy.

I have been writing for decades that the body is an information field communicating with itself and the wider world. This is why

radiation which is information can change the information field of body and mind through phenomena like 5G and change their nature and function. 'Information therapy' means to change the body's information field and change the way it operates. DNA is a receiver-transmitter of information and can be mutated by information like mRNA synthetic messaging. Technology to do this has been ready and waiting in the underground bases and other secret projects to be rolled out when the 'Covid' hoax was played. 'Trials' of such short and irrelevant duration were only for public consumption. When they say the 'vaccine' is 'experimental' that is not true. It may appear to be 'experimental' to those who don't know what's going on, but the trials have already been done to ensure the Cult gets the result it desires. Zaks said that it took decades to sequence the human genome, completed in 2003, but now they could do it in a week. By 'they' he means scientists operating in the public domain. In the secret projects they were sequencing the genome in a week long before even 2003.

Deluge of mRNA

Highly significantly the Moderna document says the guiding premise is that if using mRNA as a medicine works for one disease then it should work for many diseases. They were leveraging the flexibility afforded by their platform and the fundamental role mRNA plays in protein synthesis to pursue mRNA medicines for a broad spectrum of diseases. Moderna is confirming what I was saying through 2020 that multiple 'vaccines' were planned for 'Covid' (and later invented 'variants') and that previous vaccines would be converted to the mRNA system to infuse the body with massive amounts of genetically-manipulating synthetic material to secure a transformation to a synthetic-biological state. The 'vaccines' are designed to kill stunning numbers as part of the long-exposed Cult depopulation agenda and transform the rest. Given this is the goal you can appreciate why there is such hysterical demand for every human to be 'vaccinated' for an alleged 'disease' that has an estimated 'infection' to 'death' ratio of 0.23-0.15 percent. As I write

children are being given the 'vaccine' in trials (their parents are a disgrace) and ever-younger people are being offered the vaccine for a 'virus' that even if you believe it exists has virtually zero chance of harming them. Horrific effects of the 'trials' on a 12-year-old girl were revealed by a family member to be serious brain and gastric problems that included a bowel obstruction and the inability to swallow liquids or solids. She was unable to eat or drink without throwing up, had extreme pain in her back, neck and abdomen, and was paralysed from the waist down which stopped her urinating unaided. When the girl was first taken to hospital doctors said it was all in her mind. She was signed up for the 'trial' by her parents for whom no words suffice. None of this 'Covid vaccine' insanity makes any sense unless you see what the 'vaccine' really is – a body-changer. Synthetic biology or 'SynBio' is a fast-emerging and expanding scientific discipline which includes everything from genetic and molecular engineering to electrical and computer engineering. Synthetic biology is defined in these ways:

- A multidisciplinary area of research that seeks to create new biological parts, devices, and systems, or to redesign systems that are already found in nature.
- The use of a mixture of physical engineering and genetic engineering to create new (and therefore synthetic) life forms.
- An emerging field of research that aims to combine the knowledge and methods of biology, engineering and related disciplines in the design of chemically-synthesized DNA to create organisms with novel or enhanced characteristics and traits (synthetic organisms including humans).

We now have synthetic blood, skin, organs and limbs being developed along with synthetic body parts produced by 3D printers. These are all elements of the synthetic human programme and this comment by Kurzweil's co-founder of the Singularity University,

Peter Diamandis, can be seen in a whole new light with the 'Covid' hoax and the sanctions against those that refuse the 'vaccine':

Anybody who is going to be resisting the progress forward [to transhumanism] is going to be resisting evolution and, fundamentally, they will die out. It's not a matter of whether it's good or bad. It's going to happen.

'Resisting evolution'? What absolute bollocks. The arrogance of these people is without limit. His 'it's going to happen' mantra is another way of saying 'resistance is futile' to break the spirit of those pushing back and we must not fall for it. Getting this genetically-transforming 'vaccine' into everyone is crucial to the Cult plan for total control and the desperation to achieve that is clear for anyone to see. Vaccine passports are a major factor in this and they, too, are a form of resistance is futile. It's NOT. The paper funded by the Rockefeller Foundation for the 2013 'health conference' in China said:

We will interact more with artificial intelligence. The use of robotics, bio-engineering to augment human functioning is already well underway and will advance. Re-engineering of humans into potentially separate and unequal forms through genetic engineering or mixed human-robots raises debates on ethics and equality.

A new demography is projected to emerge after 2030 [that year again] of technologies (robotics, genetic engineering, nanotechnology) producing robots, engineered organisms, 'nanobots' and artificial intelligence (AI) that can self-replicate. Debates will grow on the implications of an impending reality of human designed life.

What is happening today is so long planned. The world army enforcing the will of the world government is intended to be a robot army, not a human one. Today's military and its technologically 'enhanced' troops, pilotless planes and driverless vehicles are just stepping stones to that end. Human soldiers are used as Cult fodder and its time they woke up to that and worked for the freedom of the population instead of their own destruction and their family's destruction – the same with the police. Join us and let's sort this out. The phenomenon of enforce my own destruction is widespread in the 'Covid' era with Woker 'luvvies' in the acting and entertainment

industries supporting 'Covid' rules which have destroyed their profession and the same with those among the public who put signs on the doors of their businesses 'closed due to Covid – stay safe' when many will never reopen. It's a form of masochism and most certainly insanity.

Transgender = transhumanism

When something explodes out of nowhere and is suddenly everywhere it is always the Cult agenda and so it is with the tidal wave of claims and demands that have infiltrated every aspect of society under the heading of 'transgenderism'. The term 'trans' is so 'in' and this is the dictionary definition:

A prefix meaning 'across', 'through', occurring ... in loanwords from Latin, used in particular for denoting movement or conveyance from place to place (transfer; transmit; transplant) or complete change (transform; transmute), or to form adjectives meaning 'crossing', 'on the other side of', or 'going beyond' the place named (transmontane; transnational; trans-Siberian).

Transgender means to go beyond gender and transhuman means to go beyond human. Both are aspects of the Cult plan to transform the human body to a synthetic state with *no gender*. Human 2.0 is not designed to procreate and would be produced technologically with no need for parents. The new human would mean the end of parents and so men, and increasingly women, are being targeted for the deletion of their rights and status. Parental rights are disappearing at an ever-quickenning speed for the same reason. The new human would have no need for men or women when there is no procreation and no gender. Perhaps the transgender movement that appears to be in a permanent state of frenzy might now contemplate on how it is being used. This was never about transgender rights which are only the interim excuse for confusing gender, particularly in the young, on the road to *fusing* gender. Transgender activism is not an end; it is a *means* to an end. We see again the technique of creative destruction in which you destroy the status quo to 'build back better' in the form that you want. The gender status quo had to be

destroyed by persuading the Cult-created Woke mentality to believe that you can have 100 genders or more. A programme for 9 to 12 year olds produced by the Cult-owned BBC promoted the 100 genders narrative. The very idea may be the most monumental nonsense, but it is not what is true that counts, only what you can make people *believe* is true. Once the gender of $2 + 2 = 4$ has been dismantled through indoctrination, intimidation and $2 + 2 = 5$ then the new no-gender normal can take its place with Human 2.0.

Aldous Huxley revealed the plan in his prophetic *Brave New World* in 1932:

Natural reproduction has been done away with and children are created, decanted', and raised in 'hatcheries and conditioning centres'. From birth, people are genetically designed to fit into one of five castes, which are further split into 'Plus' and 'Minus' members and designed to fulfil predetermined positions within the social and economic strata of the World State.

How could Huxley know this in 1932? For the same reason George Orwell knew about the Big Brother state in 1948, Cult insiders I have quoted knew about it in 1969, and I have known about it since the early 1990s. If you are connected to the Cult or you work your balls off to uncover the plan you can predict the future. The process is simple. If there is a plan for the world and nothing intervenes to stop it then it will happen. Thus if you communicate the plan ahead of time you are perceived to have predicted the future, but you haven't. You have revealed the plan which without intervention will become the human future. The whole reason I have done what I have is to alert enough people to inspire an intervention and maybe at last that time has come with the Cult and its intentions now so obvious to anyone with a brain in working order.

The future is here

Technological wombs that Huxley described to replace parent procreation are already being developed and they are only the projects we know about in the public arena. Israeli scientists told *The Times of Israel* in March, 2021, that they have grown 250-cell embryos

into mouse foetuses with fully formed organs using artificial wombs in a development they say could pave the way for gestating humans outside the womb. Professor Jacob Hanna of the Weizmann Institute of Science said:

We took mouse embryos from the mother at day five of development, when they are just of 250 cells, and had them in the incubator from day five until day 11, by which point they had grown all their organs.

By day 11 they make their own blood and have a beating heart, a fully developed brain. Anybody would look at them and say, 'this is clearly a mouse foetus with all the characteristics of a mouse.' It's gone from being a ball of cells to being an advanced foetus.

A special liquid is used to nourish embryo cells in a laboratory dish and they float on the liquid to duplicate the first stage of embryonic development. The incubator creates all the right conditions for its development, Hanna said. The liquid gives the embryo 'all the nutrients, hormones and sugars they need' along with a custom-made electronic incubator which controls gas concentration, pressure and temperature. The cutting-edge in the underground bases and other secret locations will be light years ahead of that, however, and this was reported by the London *Guardian* in 2017:

We are approaching a biotechnological breakthrough. Ectogenesis, the invention of a complete external womb, could completely change the nature of human reproduction. In April this year, researchers at the Children's Hospital of Philadelphia announced their development of an artificial womb.

The article was headed 'Artificial wombs could soon be a reality. What will this mean for women?' What would it mean for children is an even bigger question. No mother to bond with only a machine in preparation for a life of soulless interaction and control in a world governed by machines (see the *Matrix* movies). Now observe the calculated manipulations of the 'Covid' hoax as human interaction and warmth has been curtailed by distancing, isolation and fear with people communicating via machines on a scale never seen before.

These are all dots in the same picture as are all the personal assistants, gadgets and children's toys through which kids and adults communicate with AI as if it is human. The AI 'voice' on Sat-Nav should be included. All these things are psychological preparation for the Cult endgame. Before you can make a physical connection with AI you have to make a psychological connection and that is what people are being conditioned to do with this ever gathering human-AI interaction. Movies and TV programmes depicting the transhuman, robot dystopia relate to a phenomenon known as 'pre-emptive programming' in which the world that is planned is portrayed everywhere in movies, TV and advertising. This is conditioning the conscious and subconscious mind to become familiar with the planned reality to dilute resistance when it happens for real. What would have been a shock such is the change is made less so. We have young children put on the road to transgender transition surgery with puberty blocking drugs at an age when they could never be able to make those life-changing decisions.

Rachel Levine, a professor of paediatrics and psychiatry who believes in treating children this way, became America's highest-ranked openly-transgender official when she was confirmed as US Assistant Secretary at the Department of Health and Human Services after being nominated by Joe Biden (the Cult). Activists and governments press for laws to deny parents a say in their children's transition process so the kids can be isolated and manipulated into agreeing to irreversible medical procedures. A Canadian father Robert Hoogland was denied bail by the Vancouver Supreme Court in 2021 and remained in jail for breaching a court order that he stay silent over his young teenage daughter, a minor, who was being offered life-changing hormone therapy without parental consent. At the age of 12 the girl's 'school counsellor' said she may be transgender, referred her to a doctor and told the school to treat her like a boy. This is another example of state-serving schools imposing ever more control over children's lives while parents have ever less.

Contemptible and extreme child abuse is happening all over the world as the Cult gender-fusion operation goes into warp-speed.

Why the war on men – and now women?

The question about what artificial wombs mean for women should rightly be asked. The answer can be seen in the deletion of women's rights involving sport, changing rooms, toilets and status in favour of people in male bodies claiming to identify as women. I can identify as a mountain climber, but it doesn't mean I can climb a mountain any more than a biological man can be a biological woman. To believe so is a triumph of belief over factual reality which is the very perceptual basis of everything Woke. Women's sport is being destroyed by allowing those with male bodies who say they identify as female to 'compete' with girls and women. Male body 'women' dominate 'women's' competition with their greater muscle mass, bone density, strength and speed. With that disadvantage sport for women loses all meaning. To put this in perspective nearly 300 American high school boys can run faster than the quickest woman sprinter in the world. Women are seeing their previously protected spaces invaded by male bodies simply because they claim to identify as women. That's all they need to do to access all women's spaces and activities under the Biden 'Equality Act' that destroys equality for women with the usual Orwellian Woke inversion. Male sex offenders have already committed rapes in women's prisons after claiming to identify as women to get them transferred. Does this not matter to the Woke 'equality' hypocrites? Not in the least. What matters to Cult manipulators and funders behind transgender activists is to advance gender fusion on the way to the no-gender 'human'. When you are seeking to impose transparent nonsense like this, or the 'Covid' hoax, the only way the nonsense can prevail is through censorship and intimidation of dissenters, deletion of factual information, and programming of the unquestioning, bewildered and naive. You don't have to scan the world for long to see that all these things are happening.

Many women's rights organisations have realised that rights and status which took such a long time to secure are being eroded and that it is systematic. Kara Dansky of the global Women's Human Rights Campaign said that Biden's transgender executive order immediately he took office, subsequent orders, and Equality Act legislation that followed 'seek to erase women and girls in the law as a category'. *Exactly*. I said during the long ago-started war on men (in which many women play a crucial part) that this was going to turn into a war on them. The Cult is phasing out *both* male and female genders. To get away with that they are brought into conflict so they are busy fighting each other while the Cult completes the job with no unity of response. Unity, people, *unity*. We need unity everywhere. Transgender is the only show in town as the big step towards the no-gender human. It's not about rights for transgender people and never has been. Woke political correctness is deleting words relating to genders to the same end. Wokers believe this is to be 'inclusive' when the opposite is true. They are deleting words describing gender because gender *itself* is being deleted by Human 2.0. Terms like 'man', 'woman', 'mother' and 'father' are being deleted in the universities and other institutions to be replaced by the *no-gender*, not trans-gender, 'individuals' and 'guardians'. Women's rights campaigner Maria Keffler of Partners for Ethical Care said: 'Children are being taught from kindergarten upward that some boys have a vagina, some girls have a penis, and that kids can be any gender they want to be.' Do we really believe that suddenly countries all over the world at the same time had the idea of having drag queens go into schools or read transgender stories to very young children in the local library? It's coldly-calculated confusion of gender on the way to the fusion of gender. Suzanne Vierling, a psychologist from Southern California, made another important point:

Yesterday's slave woman who endured gynecological medical experiments is today's girl-child being butchered in a booming gender-transitioning sector. Ovaries removed, pushing her into menopause and osteoporosis, uncharted territory, and parents' rights and authority decimated.

The erosion of parental rights is a common theme in line with the Cult plans to erase the very concept of parents and 'ovaries removed, pushing her into menopause' means what? Those born female lose the ability to have children – another way to discontinue humanity as we know it.

Eliminating Human 1.0 (before our very eyes)

To pave the way for Human 2.0 you must phase out Human 1.0. This is happening through plummeting sperm counts and making women infertile through an onslaught of chemicals, radiation (including smartphones in pockets of men) and mRNA 'vaccines'. Common agriculture pesticides are also having a devastating impact on human fertility. I have been tracking collapsing sperm counts in the books for a long time and in 2021 came a book by fertility scientist and reproductive epidemiologist Shanna Swan, *Count Down: How Our Modern World Is Threatening Sperm Counts, Altering Male and Female Reproductive Development and Imperiling the Future of the Human Race*. She reports how the global fertility rate dropped by *half* between 1960 and 2016 with America's birth rate 16 percent below where it needs to be to sustain the population. Women are experiencing declining egg quality, more miscarriages, and more couples suffer from infertility. Other findings were an increase in erectile dysfunction, infant boys developing more genital abnormalities, male problems with conception, and plunging levels of the male hormone testosterone which would explain why so many men have lost their backbone and masculinity. This has been very evident during the 'Covid' hoax when women have been prominent among the Pushbackers and big strapping blokes have bowed their heads, covered their faces with a nappy and quietly submitted. Mind control expert Cathy O'Brien also points to how global education introduced the concept of 'we're all winners' in sport and classrooms: 'Competition was defused, and it in turn defused a sense of fighting back.' This is another version of the 'equity' doctrine in which you drive down rather than raise up. What a contrast in Cult-controlled China with its global ambitions

where the government published plans in January, 2021, to 'cultivate masculinity' in boys from kindergarten through to high school in the face of a 'masculinity crisis'. A government adviser said boys would be soon become 'delicate, timid and effeminate' unless action was taken. Don't expect any similar policy in the targeted West. A 2006 study showed that a 65-year-old man in 2002 had testosterone levels *15 percent* lower than a 65-year-old man in 1987 while a 2020 study found a similar story with young adults and adolescents. Men are getting prescriptions for testosterone replacement therapy which causes an even greater drop in sperm count with up to 99 percent seeing sperm counts drop to zero during the treatment. More sperm is defective and malfunctioning with some having two heads or not pursuing an egg.

A class of *synthetic* chemicals known as phthalates are being blamed for the decline. These are found everywhere in plastics, shampoos, cosmetics, furniture, flame retardants, personal care products, pesticides, canned foods and even receipts. Why till receipts? Everyone touches them. Let no one delude themselves that all this is not systematic to advance the long-time agenda for human body transformation. Phthalates mimic hormones and disrupt the hormone balance causing testosterone to fall and genital birth defects in male infants. Animals and fish have been affected in the same way due to phthalates and other toxins in rivers. When fish turn gay or change sex through chemicals in rivers and streams it is a pointer to why there has been such an increase in gay people and the sexually confused. It doesn't matter to me what sexuality people choose to be, but if it's being affected by chemical pollution and consumption then we need to know. Does anyone really think that this is not connected to the transgender agenda, the war on men and the condemnation of male 'toxic masculinity'? You watch this being followed by 'toxic femininity'. It's already happening. When breastfeeding becomes 'chest-feeding', pregnant women become pregnant people along with all the other Woke claptrap you know that the world is going insane and there's a Cult scam in progress. Transgender activists are promoting the Cult agenda while Cult

billionaires support and fund the insanity as they laugh themselves to sleep at the sheer stupidity for which humans must be infamous in galaxies far, far away.

'Covid vaccines' and female infertility

We can now see why the 'vaccine' has been connected to potential infertility in women. Dr Michael Yeadon, former Vice President and Chief Scientific Advisor at Pfizer, and Dr Wolfgang Wodarg in Germany, filed a petition with the European Medicines Agency in December, 2020, urging them to stop trials for the Pfizer/BioNTech shot and all other mRNA trials until further studies had been done. They were particularly concerned about possible effects on fertility with 'vaccine'-produced antibodies attacking the protein Syncytin-1 which is responsible for developing the placenta. The result would be infertility 'of indefinite duration' in women who have the 'vaccine' with the placenta failing to form. Section 10.4.2 of the Pfizer/BioNTech trial protocol says that pregnant women or those who might become so should not have mRNA shots. Section 10.4 warns men taking mRNA shots to 'be abstinent from heterosexual intercourse' and not to donate sperm. The UK government said that it *did not know* if the mRNA procedure had an effect on fertility. *Did not know?* These people have to go to jail. UK government advice did not recommend at the start that pregnant women had the shot and said they should avoid pregnancy for at least two months after 'vaccination'. The 'advice' was later updated to pregnant women should only have the 'vaccine' if the benefits outweighed the risks to mother and foetus. What the hell is that supposed to mean? Then 'spontaneous abortions' began to appear and rapidly increase on the adverse reaction reporting schemes which include only a fraction of adverse reactions. Thousands and ever-growing numbers of 'vaccinated' women are describing changes to their menstrual cycle with heavier blood flow, irregular periods and menstruating again after going through the menopause – all links to reproduction effects. Women are passing blood clots and the lining of their uterus while men report erectile dysfunction and blood effects. Most

significantly of all *unvaccinated* women began to report similar menstrual changes after interaction with '*vaccinated*' people and men and children were also affected with bleeding noses, blood clots and other conditions. 'Shedding' is when vaccinated people can emit the content of a vaccine to affect the unvaccinated, but this is different. 'Vaccinated' people were not shedding a 'live virus' allegedly in 'vaccines' as before because the fake 'Covid vaccines' involve synthetic material and other toxicity. Doctors exposing what is happening prefer the term 'transmission' to shedding. Somehow those that have had the shots are transmitting effects to those that haven't. Dr Carrie Madej said the nano-content of the 'vaccines' can 'act like an antenna' to others around them which fits perfectly with my own conclusions. This 'vaccine' transmission phenomenon was becoming known as the book went into production and I deal with this further in the Postscript.

Vaccine effects on sterility are well known. The World Health Organization was accused in 2014 of sterilising millions of women in Kenya with the evidence confirmed by the content of the vaccines involved. The same WHO behind the 'Covid' hoax admitted its involvement for more than ten years with the vaccine programme. Other countries made similar claims. Charges were lodged by Tanzania, Nicaragua, Mexico, and the Philippines. The Gardasil vaccine claimed to protect against a genital 'virus' known as HPV has also been linked to infertility. Big Pharma and the WHO (same thing) are criminal and satanic entities. Then there's the Bill Gates Foundation which is connected through funding and shared interests with 20 pharmaceutical giants and laboratories. He stands accused of directing the policy of United Nations Children's Fund (UNICEF), vaccine alliance GAVI, and other groupings, to advance the vaccine agenda and silence opposition at great cost to women and children. At the same time Gates wants to reduce the global population. Coincidence?

Great Reset = Smart Grid = new human

The Cult agenda I have been exposing for 30 years is now being openly promoted by Cult assets like Gates and Klaus Schwab of the World Economic Forum under code-terms like the 'Great Reset', 'Build Back Better' and 'a rare but narrow window of opportunity to reflect, reimagine, and reset our world'. What provided this 'rare but narrow window of opportunity'? The 'Covid' hoax did. Who created that? *They* did. My books from not that long ago warned about the planned 'Internet of Things' (IoT) and its implications for human freedom. This was the plan to connect all technology to the Internet and artificial intelligence and today we are way down that road with an estimated 36 billion devices connected to the World Wide Web and that figure is projected to be 76 billion by 2025. I further warned that the Cult planned to go beyond that to the Internet of *Everything* when the human brain was connected via AI to the Internet and Kurzweil's 'cloud'. Now we have Cult operatives like Schwab calling for precisely that under the term 'Internet of Bodies', a fusion of the physical, digital and biological into one centrally-controlled Smart Grid system which the Cult refers to as the 'Fourth Industrial Revolution'. They talk about the 'biological', but they really mean the synthetic-biological which is required to fully integrate the human body and brain into the Smart Grid and artificial intelligence planned to replace the human mind. We have everything being synthetically manipulated including the natural world through GMO and smart dust, the food we eat and the human body itself with synthetic 'vaccines'. I said in *The Answer* that we would see the Cult push for synthetic meat to replace animals and in February, 2021, the so predictable psychopath Bill Gates called for the introduction of synthetic meat to save us all from 'climate change'. The climate hoax just keeps on giving like the 'Covid' hoax. The war on meat by vegan activists is a carbon (oops, sorry) copy of the manipulation of transgender activists. They have no idea (except their inner core) that they are being used to promote and impose the agenda of the Cult or that they are only the *vehicle* and not the *reason*. This is not to say those who choose not to eat meat shouldn't be respected and supported in that right, but there are ulterior motives

for those in power. A *Forbes* article in December, 2019, highlighted the plan so beloved of Schwab and the Cult under the heading: 'What Is The Internet of Bodies? And How Is It Changing Our World?' The article said the human body is the latest data platform (remember 'our vaccine is an operating system'). *Forbes* described the plan very accurately and the words could have come straight out of my books from long before:

The Internet of Bodies (IoB) is an extension of the IoT and basically connects the human body to a network through devices that are ingested, implanted, or connected to the body in some way. Once connected, data can be exchanged, and the body and device can be remotely monitored and controlled.

They were really describing a human hive mind with human perception centrally-dictated via an AI connection as well as allowing people to be 'remotely monitored and controlled'. Everything from a fridge to a human mind could be directed from a central point by these insane psychopaths and 'Covid vaccines' are crucial to this. *Forbes* explained the process I mentioned earlier of holdable and wearable technology followed by implantable. The article said there were three generations of the Internet of Bodies that include:

- Body external: These are wearable devices such as Apple Watches or Fitbits that can monitor our health.
- Body internal: These include pacemakers, cochlear implants, and digital pills that go inside our bodies to monitor or control various aspects of health.
- Body embedded: The third generation of the Internet of Bodies is embedded technology where technology and the human body are melded together and have a real-time connection to a remote machine.

Forbes noted the development of the Brain Computer Interface (BCI) which merges the brain with an external device for monitoring and controlling in real-time. 'The ultimate goal is to help restore function to individuals with disabilities by using brain signals rather than conventional neuromuscular pathways.' Oh, do fuck off. The goal of brain interface technology is controlling human thought and emotion from the central point in a hive mind serving its masters wishes. Many people are now agreeing to be chipped to open doors without a key. You can recognise them because they'll be wearing a mask, social distancing and lining up for the 'vaccine'. The Cult plans a Great Reset money system after they have completed the demolition of the global economy in which 'money' will be exchanged through communication with body operating systems. Rand Corporation, a Cult-owned think tank, said of the Internet of Bodies or IoB:

Internet of Bodies technologies fall under the broader IoT umbrella. But as the name suggests, IoB devices introduce an even more intimate interplay between humans and gadgets. IoB devices monitor the human body, collect health metrics and other personal information, and transmit those data over the Internet. Many devices, such as fitness trackers, are already in use ... IoB devices ... and those in development can track, record, and store users' whereabouts, bodily functions, and what they see, hear, and even think.

Schwab's World Economic Forum, a long-winded way of saying 'fascism' or 'the Cult', has gone full-on with the Internet of Bodies in the 'Covid' era. 'We're entering the era of the Internet of Bodies', it declared, 'collecting our physical data via a range of devices that can be implanted, swallowed or worn'. The result would be a huge amount of health-related data that could improve human wellbeing around the world, and prove crucial in fighting the 'Covid-19 pandemic'. Does anyone think these clowns care about 'human wellbeing' after the death and devastation their pandemic hoax has purposely caused? Schwab and co say we should move forward with the Internet of Bodies because 'Keeping track of symptoms could help us stop the spread of infection, and quickly detect new cases'. How wonderful, but keeping track' is all they are really bothered

about. Researchers were investigating if data gathered from smartwatches and similar devices could be used as viral infection alerts by tracking the user's heart rate and breathing. Schwab said in his 2018 book *Shaping the Future of the Fourth Industrial Revolution*:

The lines between technologies and beings are becoming blurred and not just by the ability to create lifelike robots or synthetics. Instead it is about the ability of new technologies to literally become part of us. Technologies already influence how we understand ourselves, how we think about each other, and how we determine our realities. As the technologies ... give us deeper access to parts of ourselves, we may begin to integrate digital technologies into our bodies.

You can see what the game is. Twenty-four hour control and people – if you could still call them that – would never know when something would go ping and take them out of circulation. It's the most obvious rush to a global fascist dictatorship and the complete submission of humanity and yet still so many are locked away in their Cult-induced perceptual coma and can't see it.

Smart Grid control centres

The human body is being transformed by the 'vaccines' and in other ways into a synthetic cyborg that can be attached to the global Smart Grid which would be controlled from a central point and other sub-locations of Grid manipulation. Where are these planned to be? Well, China for a start which is one of the Cult's biggest centres of operation. The technological control system and technocratic rule was incubated here to be unleashed across the world after the 'Covid' hoax came out of China in 2020. Another Smart Grid location that will surprise people new to this is Israel. I have exposed in *The Trigger* how Sabbatian technocrats, intelligence and military operatives were behind the horrors of 9/11 and not 19 Arab hijackers' who somehow manifested the ability to pilot big passenger airliners when instructors at puddle-jumping flying schools described some of them as a joke. The 9/11 attacks were made possible through control of civilian and military air computer systems and those of the White House, Pentagon and connected agencies. See *The Trigger* – it

will blow your mind. The controlling and coordinating force were the Sabbatian networks in Israel and the United States which by then had infiltrated the entire US government, military and intelligence system. The real name of the American Deep State is 'Sabbatian State'. Israel is a tiny country of only nine million people, but it is one of the global centres of cyber operations and fast catching Silicon Valley in importance to the Cult. Israel is known as the 'start-up nation' for all the cyber companies spawned there with the Sabbatian specialisation of 'cyber security' that I mentioned earlier which gives those companies access to computer systems of their clients in real time through 'backdoors' written into the coding when security software is downloaded. The Sabbatian centre of cyber operations outside Silicon Valley is the Israeli military Cyber Intelligence Unit, the biggest infrastructure project in Israel's history, headquartered in the desert-city of Beersheba and involving some 20,000 'cyber soldiers'. Here are located a literal army of Internet trolls scanning social media, forums and comment lists for anyone challenging the Cult agenda. The UK military has something similar with its 77th Brigade and associated operations. The Beersheba complex includes research and development centres for other Cult operations such as Intel, Microsoft, IBM, Google, Apple, Hewlett-Packard, Cisco Systems, Facebook and Motorola. Techcrunch.com ran an article about the Beersheba global Internet technology centre headlined 'Israel's desert city of Beersheba is turning into a cybertech oasis':

The military's massive relocation of its prestigious technology units, the presence of multinational and local companies, a close proximity to Ben Gurion University and generous government subsidies are turning Beersheba into a major global cybertech hub. Beersheba has all of the ingredients of a vibrant security technology ecosystem, including Ben Gurion University with its graduate program in cybersecurity and Cyber Security Research Center, and the presence of companies such as EMC, Deutsche Telekom, PayPal, Oracle, IBM, and Lockheed Martin. It's also the future home of the INCB (Israeli National Cyber Bureau); offers a special income tax incentive for cyber security companies, and was the site for the relocation of the army's intelligence corps units.

Sabbatians have taken over the cyber world through the following process: They scan the schools for likely cyber talent and develop them at Ben Gurion University and their period of conscription in the Israeli Defense Forces when they are stationed at the Beersheba complex. When the cyber talented officially leave the army they are funded to start cyber companies with technology developed by themselves or given to them by the state. Much of this is stolen through backdoors of computer systems around the world with America top of the list. Others are sent off to Silicon Valley to start companies or join the major ones and so we have many major positions filled by apparently 'Jewish' but really Sabbatian operatives. Google, YouTube and Facebook are all run by 'Jewish' CEOs while Twitter is all but run by ultra-Zionist hedge-fund shark Paul Singer. At the centre of the Sabbatian global cyber web is the Israeli army's Unit 8200 which specialises in hacking into computer systems of other countries, inserting viruses, gathering information, instigating malfunction, and even taking control of them from a distance. A long list of Sabbatians involved with 9/11, Silicon Valley and Israeli cyber security companies are operatives of Unit 8200. This is not about Israel. It's about the Cult. Israel is planned to be a Smart Grid hub as with China and what is happening at Beersheba is not for the benefit of Jewish people who are treated disgustingly by the Sabbatian elite that control the country. A glance at the Nuremberg Codes will tell you that.

The story is much bigger than 'Covid', important as that is to where we are being taken. Now, though, it's time to really strap in. There's more ... much more ...

CHAPTER ELEVEN

Who controls the Cult?

Awake, arise or be forever fall'n
John Milton, *Paradise Lost*

I have exposed this far the level of the Cult conspiracy that operates in the world of the seen and within the global secret society and satanic network which operates in the shadows one step back from the seen. The story, however, goes much deeper than that.

The 'Covid' hoax is major part of the Cult agenda, but only part, and to grasp the biggest picture we have to expand our attention beyond the realm of human sight and into the infinity of possibility that we cannot see. It is from here, ultimately, that humanity is being manipulated into a state of total control by the force which dictates the actions of the Cult. How much of reality can we see? Next to damn all is the answer. We may appear to see all there is to see in the 'space' our eyes survey and observe, but little could be further from the truth. The human 'world' is only a tiny band of frequency that the body's visual and perceptual systems can decode into *perception* of a 'world'. According to mainstream science the electromagnetic spectrum is 0.005 percent of what exists in the Universe (Fig 10). The maximum estimate I have seen is 0.5 percent and either way it's miniscule. I say it is far, far, smaller even than 0.005 percent when you compare reality we see with the totality of reality that we don't. Now get this if you are new to such information: Visible light, the only band of frequency that we can see, is a *fraction* of the 0.005

percent (Fig 11 overleaf). Take this further and realise that our universe is one of infinite universes and that universes are only a fragment of overall reality – *infinite* reality. Then compare that with the almost infinitesimal frequency band of visible light or human sight. You see that humans are as near blind as it is possible to be without actually being so. Artist and filmmaker, Sergio Toporek, said:

Figure 10: Humans can perceive such a tiny band of visual reality it's laughable.

Figure 11: We can see a smear of the 0.005 percent electromagnetic spectrum, but we still know it all. Yep, makes sense.

Consider that you can see less than 1% of the electromagnetic spectrum and hear less than 1% of the acoustic spectrum. 90% of the cells in your body carry their own microbial DNA and are not 'you'. The atoms in your body are 99.9999999999999999% empty space and none of them are the ones you were born with ... Human beings have 46 chromosomes, two less than a potato.

The existence of the rainbow depends on the conical photoreceptors in your eyes; to animals without cones, the rainbow does not exist. So you don't just look at a rainbow, you create it. This is pretty amazing, especially considering that all the beautiful colours you see represent less than 1% of the electromagnetic spectrum.

Suddenly the 'world' of humans looks a very different place. Take into account, too, that Planet Earth when compared with the projected size of this single universe is the equivalent of a billionth of a pinhead. Imagine the ratio that would be when compared to infinite reality. To think that Christianity once insisted that Earth and humanity were the centre of everything. This background is vital if we are going to appreciate the nature of 'human' and how we can be manipulated by an unseen force. To human visual reality virtually *everything* is unseen and yet the prevailing perception within the institutions and so much of the public is that if we can't see it, touch it, hear it, taste it and smell it then it cannot exist. Such perception is indoctrinated and encouraged by the Cult and its agents because it isolates believers in the strictly limited, village-idiot, realm of the five senses where perceptions can be firewalled and information controlled. Most of those perpetuating the 'this-world-is-all-there-is' insanity are themselves indoctrinated into believing the same delusion. While major players and influencers know that official reality is laughable most of those in science, academia and medicine really believe the nonsense they peddle and teach succeeding generations. Those who challenge the orthodoxy are dismissed as nutters and freaks to protect the manufactured illusion from exposure. Observe the dynamic of the 'Covid' hoax and you will see how that takes the same form. The inner-circle psychopaths knows it's a gigantic scam, but almost the entirety of those imposing their fascist rules believe that 'Covid' is all that they're told it is.

Stolen identity

Ask people who they are and they will give you their name, place of birth, location, job, family background and life story. Yet that is not who they are – it is what they are *experiencing*. The difference is *absolutely crucial*. The true 'I', the eternal, infinite 'I', is consciousness,

a state of being aware. Forget 'form'. That is a vehicle for a brief experience. Consciousness does not come *from* the brain, but *through* the brain and even that is more symbolic than literal. We are awareness, pure awareness, and this is what withdraws from the body at what we call 'death' to continue our eternal beingness, *isness*, in other realms of reality within the limitlessness of infinity or the Biblical 'many mansions in my father's house'. Labels of a human life, man, woman, transgender, black, white, brown, nationality, circumstances and income are not who we are. They are what we are – awareness – is *experiencing* in a brief connection with a band of frequency we call 'human'. The labels are not the self; they are, to use the title of one of my books, a *Phantom Self*. I am not David Icke born in Leicester, England, on April 29th, 1952. I am the consciousness *having that experience*. The Cult and its non-human masters seek to convince us through the institutions of 'education', science, medicine, media and government that what we are *experiencing* is who we *are*. It's so easy to control and direct perception locked away in the bewildered illusions of the five senses with no expanded radar. Try, by contrast, doing the same with a humanity aware of its true self and its true power to consciously create its reality and experience. How is it possible to do this? We do it all day every day. If you perceive yourself as 'little me' with no power to impact upon your life and the world then your life experience will reflect that. You will hand the power you don't think you have to authority in all its forms which will use it to control your experience. This, in turn, will appear to confirm your perception of 'little me' in a self-fulfilling feedback loop. But that is what 'little me' really is – a *perception*. We are all 'big-me', infinite me, and the Cult has to make us forget that if its will is to prevail. We are therefore manipulated and pressured into self-identifying with human labels and not the consciousness/awareness *experiencing* those human labels.

The phenomenon of identity politics is a Cult-instigated manipulation technique to sub-divide previous labels into even smaller ones. A United States university employs this list of letters to

describe student identity: LGBTTQQFAGPBDSM or lesbian, gay, bisexual, transgender, transsexual, queer, questioning, flexual, asexual, gender-fuck, polyamorous, bondage/discipline, dominance/submission and sadism/masochism. I'm sure other lists are even longer by now as people feel the need to self-identity the 'I' with the minutiae of race and sexual preference. Wokers programmed by the Cult for generations believe this is about 'inclusivity' when it's really the Cult locking them away into smaller and smaller versions of Phantom Self while firewalling them from the influence of their true self, the infinite, eternal 'I'. You may notice that my philosophy which contends that we are all unique points of attention/awareness within the same infinite whole or Oneness is the ultimate non-racism. The very sense of Oneness makes the judgement of people by their body-type, colour or sexuality utterly ridiculous and confirms that racism has no understanding of reality (including anti-white racism). Yet despite my perception of life Cult agents and fast-asleep Wokers label me racist to discredit my information while they are themselves phenomenally racist and sexist. All they see is race and sexuality and they judge people as good or bad, demons or untouchables, by their race and sexuality. All they see is *Phantom Self* and perceive themselves in terms of Phantom Self. They are pawns and puppets of the Cult agenda to focus attention and self-identity in the five senses and play those identities against each other to divide and rule. Columbia University has introduced segregated graduations in another version of social distancing designed to drive people apart and teach them that different racial and cultural groups have nothing in common with each other. The last thing the Cult wants is unity. Again the pump-primers of this will be Cult operatives in the knowledge of what they are doing, but the rest are just the Phantom Self blind leading the Phantom Self blind. We *do* have something in common – we are all *the same consciousness* having different temporary experiences.

What is this 'human'?

Yes, what *is* 'human'? That is what we are supposed to be, right? I mean 'human'? True, but 'human' is the experience not the 'I'. Break it down to basics and 'human' is the way that information is processed. If we are to experience and interact with this band of frequency we call the 'world' we must have a vehicle that operates within that band of frequency. Our consciousness in its prime form cannot do that; it is way beyond the frequency of the human realm. My consciousness or awareness could not tap these keys and pick up the cup in front of me in the same way that radio station A cannot interact with radio station B when they are on different frequencies. The human body is the means through which we have that interaction. I have long described the body as a biological computer which processes information in a way that allows consciousness to experience this reality. The body is a receiver, transmitter and processor of information in a particular way that we call human. We visually perceive only the world of the five senses in a wakened state – that is the limit of the body's visual decoding system. In truth it's not even visual in the way we experience 'visual reality' as I will come to in a moment. We are 'human' because the body processes the information sources of human into a reality and behaviour system that we *perceive* as human. Why does an elephant act like an elephant and not like a human or a duck? The elephant's biological computer is a different information field and processes information according to that program into a visual and behaviour type we call an elephant. The same applies to everything in our reality. These body information fields are perpetuated through procreation (like making a copy of a software program). The Cult wants to break that cycle and intervene technologically to transform the human information field into one that will change what we call humanity. If it can change the human information field it will change the way that field processes information and change humanity both 'physically' and psychologically. Hence the *messenger* (information) RNA 'vaccines' and so much more that is targeting human genetics by changing the body's information – *messaging* – construct through food, drink, radiation, toxicity and other means.

Reality that we experience is nothing like reality as it really is in the same way that the reality people experience in virtual reality games is not the reality they are really living in. The game is only a decoded source of information that appears to be a reality. Our world is also an information construct – a *simulation* (more later). In its base form our reality is a wavefield of information much the same in theme as Wi-Fi. The five senses decode wavefield information into electrical information which they communicate to the brain to decode into holographic (illusory ‘physical’) information. Different parts of the brain specialise in decoding different senses and the information is fused into a reality that appears to be outside of us but is really inside the brain and the genetic structure in general (Fig 12 overleaf). DNA is a receiver-transmitter of information and a vital part of this decoding process and the body’s connection to other realities. Change DNA and you change the way we decode and connect with reality – see ‘Covid vaccines’. Think of computers decoding Wi-Fi. You have information encoded in a radiation field and the computer decodes that information into a very different form on the screen. You can’t see the Wi-Fi until its information is made manifest on the screen and the information on the screen is inside the computer and not outside. I have just described how we decode the ‘human world’. All five senses decode the waveform ‘Wi-Fi’ field into electrical signals and the brain (computer) constructs reality inside the brain and not outside – ‘You don’t just look at a rainbow, you create it’. Sound is a simple example. We don’t hear sound until the brain decodes it. Waveform sound waves are picked up by the hearing sense and communicated to the brain in an electrical form to be decoded into the sounds that we hear. Everything we hear is inside the brain along with everything we see, feel, smell and taste. Words and language are waveform fields generated by our vocal chords which pass through this process until they are decoded by the brain into words that we hear. Different languages are different frequency fields or sound waves generated by vocal chords. Late British philosopher Alan Watts said:

Figure 12: The brain receives information from the five senses and constructs from that our perceived reality.

[Without the brain] the world is devoid of light, heat, weight, solidity, motion, space, time or any other imaginable feature. All these phenomena are interactions, or transactions, of vibrations with a certain arrangement of neurons.

That's exactly what they are and scientist Robert Lanza describes in his book, *Biocentrism*, how we decode electromagnetic waves and energy into visual and 'physical' experience. He uses the example of a flame emitting photons, electromagnetic energy, each pulsing electrically and magnetically:

... these ... invisible electromagnetic waves strike a human retina, and if (and only if) the waves happen to measure between 400 and 700 nano meters in length from crest to crest, then their energy is just right to deliver a stimulus to the 8 million cone-shaped cells in the retina.

Each in turn send an electrical pulse to a neighbour neuron, and on up the line this goes, at 250 mph, until it reaches the ... occipital lobe of the brain, in the back of the head. There, a cascading complex of neurons fire from the incoming stimuli, and we subjectively perceive this experience as a yellow brightness occurring in a place we have been conditioned to call the 'external world'.

You hear what you decode

If a tree falls or a building collapses they make no noise unless someone is there to decode the energetic waves generated by the disturbance into what we call sound. Does a falling tree make a noise? Only if you hear it – *decode* it. Everything in our reality is a frequency field of information operating within the overall ‘Wi-Fi’ field that I call The Field. A vibrational disturbance is generated in The Field by the fields of the falling tree or building. These disturbance waves are what we decode into the sound of them falling. If no one is there to do that then neither will make any noise. Reality is created by the observer – *decoder* – and the *perceptions* of the observer affect the decoding process. For this reason different people – different *perceptions* – will perceive the same reality or situation in a different way. What one may perceive as a nightmare another will see as an opportunity. The question of why the Cult is so focused on controlling human perception now answers itself. All experienced reality is the act of decoding and we don’t experience Wi-Fi until it is decoded on the computer screen. The sight and sound of an Internet video is encoded in the Wi-Fi all around us, but we don’t see or hear it until the computer decodes that information. Taste, smell and touch are all phenomena of the brain as a result of the same process. We don’t taste, smell or feel anything except in the brain and there are pain relief techniques that seek to block the signal from the site of discomfort to the brain because if the brain doesn’t decode that signal we don’t feel pain. Pain is in the brain and only appears to be at the point of impact thanks to the feedback loop between them. We don’t see anything until electrical information from the sight senses is decoded in an area at the back of the brain. If that area is damaged we can go blind when our eyes are perfectly okay. So why do we go blind if we damage an eye? We damage the information processing between the waveform visual information and the visual decoding area of the brain. If information doesn’t reach the brain in a form it can decode then we can’t see the visual reality that it represents. What’s more the brain is decoding only a fraction of the information it receives and the rest is absorbed by the

sub-conscious mind. This explanation is from the science magazine, *Wonderpedia*:

Every second, 11 million sensations crackle along these [brain] pathways ... The brain is confronted with an alarming array of images, sounds and smells which it rigorously filters down until it is left with a manageable list of around 40. Thus 40 sensations per second make up what we perceive as reality.

The 'world' is not what people are told to believe that is it and the inner circles of the Cult *know that*.

Illusory 'physical' reality

We can only see a smear of 0.005 percent of the Universe which is only one of a vast array of universes – 'mansions' – within infinite reality. Even then the brain decodes only 40 pieces of information ('sensations') from a potential *11 million* that we receive every second. Two points strike you from this immediately: The sheer breathtaking stupidity of believing we know anything so rigidly that there's nothing more to know; and the potential for these processes to be manipulated by a malevolent force to control the reality of the population. One thing I can say for sure with no risk of contradiction is that when you can perceive an almost indescribable fraction of infinite reality there is always more to know as in tidal waves of it. Ancient Greek philosopher Socrates was so right when he said that wisdom is to know how little we know. How obviously true that is when you think that we are experiencing a physical world of solidity that is neither physical nor solid and a world of apartness when everything is connected. Cult-controlled 'science' dismisses the so-called 'paranormal' and all phenomena related to that when the 'para'-normal is perfectly normal and explains the alleged 'great mysteries' which dumbfound scientific minds. There is a reason for this. A 'scientific mind' in terms of the mainstream is a material mind, a five-sense mind imprisoned in see it, touch it, hear it, smell it and taste it. Phenomena and happenings that can't be explained that way leave the 'scientific mind' bewildered and the rule is that if they

can't account for why something is happening then it can't, by definition, be happening. I beg to differ. Telepathy is thought waves passing through The Field (think wave disturbance again) to be decoded by someone able to connect with that wavelength (information). For example: You can pick up the thought waves of a friend at any distance and at the very least that will bring them to mind. A few minutes later the friend calls you. 'My god', you say, 'that's incredible – I was just thinking of you.' Ah, but *they* were thinking of *you* before they made the call and that's what you decoded. Native peoples not entrapped in five-sense reality do this so well it became known as the 'bush telegraph'. Those known as psychics and mediums (genuine ones) are doing the same only across dimensions of reality. 'Mind over matter' comes from the fact that matter and mind are the *same*. The state of one influences the state of the other. Indeed one *and* the other are illusions. They are aspects of the same field. Paranormal phenomena are all explainable so why are they still considered 'mysteries' or not happening? Once you go down this road of understanding you begin to expand awareness beyond the five senses and that's the nightmare for the Cult.

Figure 13: Holograms are not solid, but the best ones appear to be.

Figure 14: How holograms are created by capturing a waveform version of the subject image.

Holographic 'solidity'

Our reality is not solid, it is holographic. We are now well aware of holograms which are widely used today. Two-dimensional information is decoded into a three-dimensional reality that is not solid although can very much appear to be (Fig 13). Holograms are created with a laser divided into two parts. One goes directly onto a holographic photographic print ('reference beam') and the other takes a waveform image of the subject ('working beam') before being directed onto the print where it 'collides' with the other half of the laser (Fig 14). This creates a *waveform* interference pattern which contains the wavefield information of whatever is being photographed (Fig 15 overleaf). The process can be likened to dropping pebbles in a pond. Waves generated by each one spread out across the water to collide with the others and create a wave representation of where the stones fell and at what speed, weight and distance. A waveform interference pattern of a hologram is akin to the waveform information in The Field which the five senses decode into electrical signals to be decoded by the brain into a holographic illusory 'physical' reality. In the same way when a laser (think human attention) is directed at the waveform interference pattern a three-dimensional version of the subject is projected into apparently 'solid' reality (Fig 16). An amazing trait of holograms reveals more 'paranormal mysteries'. Information of the *whole*

hologram is encoded in waveform in every part of the interference pattern by the way they are created. This means that every *part* of a hologram is a smaller version of the whole. Cut the interference wave-pattern into four and you won't get four parts of the image. You get quarter-sized versions of the *whole* image. The body is a hologram and the same applies. Here we have the basis of acupuncture, reflexology and other forms of healing which identify representations of the whole body in all of the parts, hands, feet, ears, everywhere. Skilled palm readers can do what they do because the information of whole body is encoded in the hand. The concept of as above, so below, comes from this.

Figure 15: A waveform interference pattern that holds the information that transforms into a hologram.

Figure 16: Holographic people including 'Elvis' holographically inserted to sing a duet with Celine Dion.

The question will be asked of why, if solidity is illusory, we can't just walk through walls and each other. The resistance is not solid against solid; it is electromagnetic field against electromagnetic field and we decode this into the *experience* of solid against solid. We should also not underestimate the power of belief to dictate reality. What you believe is impossible *will be*. Your belief impacts on your decoding processes and they won't decode what you think is impossible. What we believe we perceive and what we perceive we experience. 'Can't dos' and 'impossibles' are like a firewall in a computer system that won't put on the screen what the firewall blocks. How vital that is to understanding how human experience has been hijacked. I explain in *The Answer, Everything You Need To Know But Have Never Been Told* and other books a long list of 'mysteries' and 'paranormal' phenomena that are not mysterious and perfectly normal once you realise what reality is and how it works. 'Ghosts' can be seen to pass through 'solid' walls because the walls are not solid and the ghost is a discarnate entity operating on a frequency so different to that of the wall that it's like two radio stations sharing the same space while never interfering with each other. I have seen ghosts do this myself. The apartness of people and objects is also an illusion. Everything is connected by the Field like all sea life is connected by the sea. It's just that within the limits of our visual reality we only 'see' holographic information and not the field of information that connects everything and from which the holographic world is made manifest. If you can only see holographic 'objects' and not the field that connects them they will appear to you as unconnected to each other in the same way that we see the computer while not seeing the Wi-Fi.

What you don't know *can* hurt you

Okay, we return to those 'two worlds' of human society and the Cult with its global network of interconnecting secret societies and satanic groups which manipulate through governments, corporations, media, religions, etc. The fundamental difference between them is *knowledge*. The idea has been to keep humanity

ignorant of the plan for its total enslavement underpinned by a crucial ignorance of reality – who we are and where we are – and how we interact with it. ‘Human’ should be the interaction between our expanded eternal consciousness and the five-sense body experience. We are meant to be *in* this world in terms of the five senses but not *of* this world in relation to our greater consciousness and perspective. In that state we experience the small picture of the five senses within the wider context of the big picture of awareness beyond the five senses. Put another way the five senses see the dots and expanded awareness connects them into pictures and patterns that give context to the apparently random and unconnected. Without the context of expanded awareness the five senses see only apartness and randomness with apparently no meaning. The Cult and its other-dimensional controllers seek to intervene in the frequency realm where five-sense reality is supposed to connect with expanded reality and to keep the two apart (more on this in the final chapter). When that happens five-sense mental and emotional processes are no longer influenced by expanded awareness, or the True ‘I’, and instead are driven by the isolated perceptions of the body’s decoding systems. They are in the world *and* of it. Here we have the human plight and why humanity with its potential for infinite awareness can be so easily manipulatable and descend into such extremes of stupidity.

Once the Cult isolates five-sense mind from expanded awareness it can then program the mind with perceptions and beliefs by controlling information that the mind receives through the ‘education’ system of the formative years and the media perceptual bombardment and censorship of an entire lifetime. Limit perception and a sense of the possible through limiting knowledge by limiting and skewing information while censoring and discrediting that which could set people free. As the title of another of my books says ... *And The Truth Shall Set You Free*. For this reason the last thing the Cult wants in circulation is the truth about anything – especially the reality of the eternal ‘I’ – and that’s why it is desperate to control information. The Cult knows that information becomes perception

which becomes behaviour which, collectively, becomes human society. Cult-controlled and funded mainstream 'science' denies the existence of an eternal 'I' and seeks to dismiss and trash all evidence to the contrary. Cult-controlled mainstream religion has a version of 'God' that is little more than a system of control and dictatorship that employs threats of damnation in an afterlife to control perceptions and behaviour in the here and now through fear and guilt. Neither is true and it's the 'neither' that the Cult wishes to suppress. This 'neither' is that everything is an expression, a point of attention, within an infinite state of consciousness which is the real meaning of the term 'God'.

Perceptual obsession with the 'physical body' and five-senses means that 'God' becomes personified as a bearded bloke sitting among the clouds or a raging bully who loves us if we do what 'he' wants and condemns us to the fires of hell if we don't. These are no more than a 'spiritual' fairy tales to control and dictate events and behaviour through fear of this 'God' which has bizarrely made 'God-fearing' in religious circles a state to be desired. I would suggest that fearing *anything* is not to be encouraged and celebrated, but rather deleted. You can see why 'God fearing' is so beneficial to the Cult and its religions when *they* decide what 'God' wants and what 'God' demands (the Cult demands) that everyone do. As the great American comedian Bill Hicks said satirising a Christian zealot: 'I think what God meant to say.' How much of this infinite awareness ('God') that we access is decided by how far we choose to expand our perceptions, self-identity and sense of the possible. The scale of self-identity reflects itself in the scale of awareness that we can connect with and are influenced by – how much knowing and insight we have instead of programmed perception. You cannot expand your awareness into the infinity of possibility when you believe that you are little me Peter the postman or Mary in marketing and nothing more. I'll deal with this in the concluding chapter because it's crucial to how we turnaround current events.

Where the Cult came from

When I realised in the early 1990s there was a Cult network behind global events I asked the obvious question: When did it start? I took it back to ancient Rome and Egypt and on to Babylon and Sumer in Mesopotamia, the 'Land Between Two Rivers', in what we now call Iraq. The two rivers are the Tigris and Euphrates and this region is of immense historical and other importance to the Cult, as is the land called Israel only 550 miles away by air. There is much more going on with deep esoteric meaning across this whole region. It's not only about 'wars for oil'. Priceless artefacts from Mesopotamia were stolen or destroyed after the American and British invasion of Iraq in 2003 justified by the lies of Boy Bush and Tony Blair (their Cult masters) about non-existent 'weapons of mass destruction'.

Mesopotamia was the location of Sumer (about 5,400BC to 1,750BC), and Babylon (about 2,350BC to 539BC). Sabbatians may have become immensely influential in the Cult in modern times but they are part of a network that goes back into the mists of history. Sumer is said by historians to be the 'cradle of civilisation'. I disagree. I say it was the re-start of what we call human civilisation after cataclysmic events symbolised in part as the 'Great Flood' destroyed the world that existed before. These fantastic upheavals that I have been describing in detail in the books since the early 1990s appear in accounts and legends of ancient cultures across the world and they are supported by geological and biological evidence. Stone tablets found in Iraq detailing the Sumer period say the cataclysms were caused by non-human 'gods' they call the Anunnaki. These are described in terms of extraterrestrial visitations in which knowledge supplied by the Anunnaki is said to have been the source of at least one of the world's oldest writing systems and developments in astronomy, mathematics and architecture that were way ahead of their time. I have covered this subject at length in *The Biggest Secret* and *Children of the Matrix* and the same basic 'Anunnaki' story can be found in Zulu accounts in South Africa where the late and very great Zulu high shaman Credo Mutwa told me that the Sumerian Anunnaki were known by Zulus as the Chitauri or 'children of the serpent'. See my six-hour video interview with Credo on this subject entitled *The*

Reptilian Agenda recorded at his then home near Johannesburg in 1999 which you can watch on the Ickonic media platform.

The Cult emerged out of Sumer, Babylon and Egypt (and elsewhere) and established the Roman Empire before expanding with the Romans into northern Europe from where many empires were savagely imposed in the form of Cult-controlled societies all over the world. Mass death and destruction was their calling card. The Cult established its centre of operations in Europe and European Empires were Cult empires which allowed it to expand into a global force. Spanish and Portuguese colonialists headed for Central and South America while the British and French targeted North America. Africa was colonised by Britain, France, Belgium, the Netherlands, Portugal, Spain, Italy, and Germany. Some like Britain and France moved in on the Middle East. The British Empire was by far the biggest for a simple reason. By now Britain was the headquarters of the Cult from which it expanded to form Canada, the United States, Australia and New Zealand. The Sun never set on the British Empire such was the scale of its occupation. London remains a global centre for the Cult along with Rome and the Vatican although others have emerged in Israel and China. It is no accident that the 'virus' is alleged to have come out of China while Italy was chosen as the means to terrify the Western population into compliance with 'Covid' fascism. Nor that Israel has led the world in 'Covid' fascism and mass 'vaccination'.

You would think that I would mention the United States here, but while it has been an important means of imposing the Cult's will it is less significant than would appear and is currently in the process of having what power it does have deleted. The Cult in Europe has mostly loaded the guns for the US to fire. America has been controlled from Europe from the start through Cult operatives in Britain and Europe. The American Revolution was an illusion to make it appear that America was governing itself while very different forces were pulling the strings in the form of Cult families such as the Rothschilds through the Rockefellers and other subordinates. The Rockefellers are extremely close to Bill Gates and

established both scalpel and drug 'medicine' and the World Health Organization. They play a major role in the development and circulation of vaccines through the Rockefeller Foundation on which Bill Gates said his Foundation is based. Why wouldn't this be the case when the Rockefellers and Gates are on the same team? Cult infiltration of human society goes way back into what we call history and has been constantly expanding and centralising power with the goal of establishing a global structure to dictate everything. Look how this has been advanced in great leaps with the 'Covid' hoax.

The non-human dimension

I researched and observed the comings and goings of Cult operatives through the centuries and even thousands of years as they were born, worked to promote the agenda within the secret society and satanic networks, and then died for others to replace them. Clearly there had to be a coordinating force that spanned this entire period while operatives who would not have seen the end goal in their lifetimes came and went advancing the plan over millennia. I went in search of that coordinating force with the usual support from the extraordinary synchronicity of my life which has been an almost daily experience since 1990. I saw common themes in religious texts and ancient cultures about a non-human force manipulating human society from the hidden. Christianity calls this force Satan, the Devil and demons; Islam refers to the Jinn or Djinn; Zulus have their Chitauri (spelt in other ways in different parts of Africa); and the Gnostic people in Egypt in the period around and before 400AD referred to this phenomena as the 'Archons', a word meaning rulers in Greek. Central American cultures speak of the 'Predators' among other names and the same theme is everywhere. I will use 'Archons' as a collective name for all of them. When you see how their nature and behaviour is described all these different sources are clearly talking about the same force. Gnostics described the Archons in terms of 'luminous fire' while Islam relates the Jinn to 'smokeless fire'. Some refer to beings in form that could occasionally be seen, but the most common of common theme is that they operate from

unseen realms which means almost all existence to the visual processes of humans. I had concluded that this was indeed the foundation of human control and that the Cult was operating within the human frequency band on behalf of this hidden force when I came across the writings of Gnostics which supported my conclusions in the most extraordinary way.

A sealed earthen jar was found in 1945 near the town of Nag Hammadi about 75-80 miles north of Luxor on the banks of the River Nile in Egypt. Inside was a treasure trove of manuscripts and texts left by the Gnostic people some 1,600 years earlier. They included 13 leather-bound papyrus codices (manuscripts) and more than 50 texts written in Coptic Egyptian estimated to have been hidden in the jar in the period of 400AD although the source of the information goes back much further. Gnostics oversaw the Great or Royal Library of Alexandria, the fantastic depository of ancient texts detailing advanced knowledge and accounts of human history. The Library was dismantled and destroyed in stages over a long period with the death-blow delivered by the Cult-established Roman Church in the period around 415AD. The Church of Rome was the Church of Babylon relocated as I said earlier. Gnostics were not a race. They were a way of perceiving reality. Whenever they established themselves and their information circulated the terrorists of the Church of Rome would target them for destruction. This happened with the Great Library and with the Gnostic Cathars who were burned to death by the psychopaths after a long period of oppression at the siege of the Castle of Monségur in southern France in 1244. The Church has always been terrified of Gnostic information which demolishes the official Christian narrative although there is much in the Bible that supports the Gnostic view if you read it in another way. To anyone studying the texts of what became known as the Nag Hammadi Library it is clear that great swathes of Christian and Biblical belief has its origin with Gnostics sources going back to Sumer. Gnostic themes have been twisted to manipulate the perceived reality of Bible believers. Biblical texts have been in the open for centuries where they could be changed while Gnostic

documents found at Nag Hammadi were sealed away and untouched for 1,600 years. What you see is what they wrote.

Use your *pneuma* not your *nous*

Gnosticism and Gnostic come from 'gnosis' which means knowledge, or rather *secret* knowledge, in the sense of spiritual awareness – knowledge about reality and life itself. The desperation of the Cult's Church of Rome to destroy the Gnostics can be understood when the knowledge they were circulating was the last thing the Cult wanted the population to know. Sixteen hundred years later the same Cult is working hard to undermine and silence me for the same reason. The dynamic between knowledge and ignorance is a constant. 'Time' appears to move on, but essential themes remain the same. We are told to 'use your nous', a Gnostic word for head/brain/intelligence. They said, however, that spiritual awakening or 'salvation' could only be secured by expanding awareness *beyond* what they called *nous* and into *pneuma* or Infinite Self. Obviously as I read these texts the parallels with what I have been saying since 1990 were fascinating to me. There is a universal truth that spans human history and in that case why wouldn't we be talking the same language 16 centuries apart? When you free yourself from the perception program of the five senses and explore expanded realms of consciousness you are going to connect with the same information no matter what the perceived 'era' within a manufactured timeline of a single and tiny range of manipulated frequency. Humans working with 'smart' technology or knocking rocks together in caves is only a timeline appearing to operate within the human frequency band. Expanded awareness and the knowledge it holds have always been there whether the era be Stone Age or computer age. We can only access that knowledge by opening ourselves to its frequency which the five-sense prison cell is designed to stop us doing. Gates, Fauci, Whitty, Vallance, Zuckerberg, Brin, Page, Wojcicki, Bezos, and all the others behind the 'Covid' hoax clearly have a long wait before their range of frequency can make that connection given that an open heart is

crucial to that as we shall see. Instead of accessing knowledge directly through expanded awareness it is given to Cult operatives by the secret society networks of the Cult where it has been passed on over thousands of years outside the public arena. Expanded realms of consciousness is where great artists, composers and writers find their inspiration and where truth awaits anyone open enough to connect with it. We need to go there fast.

Archon hijack

A fifth of the Nag Hammadi texts describe the existence and manipulation of the Archons led by a 'Chief Archon' they call 'Yaldabaoth', or the 'Demiurge', and this is the Christian 'Devil', 'Satan', 'Lucifer', and his demons. Archons in Biblical symbolism are the 'fallen ones' which are also referred to as fallen angels after the angels expelled from heaven according to the Abrahamic religions of Judaism, Christianity and Islam. These angels are claimed to tempt humans to 'sin' ongoing and you will see how accurate that symbolism is during the rest of the book. The theme of 'original sin' is related to the 'Fall' when Adam and Eve were 'tempted by the serpent' and fell from a state of innocence and 'obedience' (connection) with God into a state of disobedience (disconnection). The Fall is said to have brought sin into the world and corrupted everything including human nature. Yaldabaoth, the 'Lord Archon', is described by Gnostics as a 'counterfeit spirit', 'The Blind One', 'The Blind God', and 'The Foolish One'. The Jewish name for Yaldabaoth in Talmudic writings is Samael which translates as 'Poison of God', or 'Blindness of God'. You see the parallels. Yaldabaoth in Islamic belief is the Muslim Jinn devil known as Shaytan – Shaytan is Satan as the same themes are found all over the world in every religion and culture. The 'Lord God' of the Old Testament is the 'Lord Archon' of Gnostic manuscripts and that's why he's such a bloodthirsty bastard. Satan is known by Christians as 'the Demon of Demons' and Gnostics called Yaldabaoth the 'Archon of Archons'. Both are known as 'The Deceiver'. We are talking about the same 'bloke' for sure and these common themes

using different names, storylines and symbolism tell a common tale of the human plight.

Archons are referred to in Nag Hammadi documents as mind parasites, inverters, guards, gatekeepers, detainers, judges, pitiless ones and deceivers. The 'Covid' hoax alone is a glaring example of all these things. The Biblical 'God' is so different in the Old and New Testaments because they are not describing the same phenomenon. The vindictive, angry, hate-filled, 'God' of the Old Testament, known as Yahweh, is Yaldabaoth who is depicted in Cult-dictated popular culture as the 'Dark Lord', 'Lord of Time', Lord (Darth) Vader and Dormammu, the evil ruler of the 'Dark Dimension' trying to take over the 'Earth Dimension' in the Marvel comic movie, *Dr Strange*. Yaldabaoth is both the Old Testament 'god' and the Biblical 'Satan'. Gnostics referred to Yaldabaoth as the 'Great Architect of the Universe' and the Cult-controlled Freemason network calls their god 'the 'Great Architect of the Universe' (also Grand Architect). The 'Great Architect' Yaldabaoth is symbolised by the Cult as the all-seeing eye at the top of the pyramid on the Great Seal of the United States and the dollar bill. Archon is encoded in *arch*-itect as it is in *arch*-angels and *arch*-bishops. All religions have the theme of a force for good and force for evil in some sort of spiritual war and there is a reason for that – the theme is true. The Cult and its non-human masters are quite happy for this to circulate. They present themselves as the force for good fighting evil when they are really the force of evil (absence of love). The whole foundation of Cult modus operandi is inversion. They promote themselves as a force for good and anyone challenging them in pursuit of peace, love, fairness, truth and justice is condemned as a satanic force for evil. This has been the game plan throughout history whether the Church of Rome inquisitions of non-believers or 'conspiracy theorists' and 'anti-vaxxers' of today. The technique is the same whatever the timeline era.

Yaldabaoth is revolting (true)

Yaldabaoth and the Archons are said to have revolted against God with Yaldabaoth claiming to *be* God – the *All That Is*. The Old Testament ‘God’ (Yaldabaoth) demanded to be worshipped as such: ‘*I am the LORD, and there is none else, there is no God beside me*’ (Isaiah 45:5). I have quoted in other books a man who said he was the unofficial son of the late Baron Philippe de Rothschild of the Mouton-Rothschild wine producing estates in France who died in 1988 and he told me about the Rothschild ‘revolt from God’. The man said he was given the name Phillip Eugene de Rothschild and we shared long correspondence many years ago while he was living under another identity. He said that he was conceived through ‘occult incest’ which (within the Cult) was ‘normal and to be admired’. ‘Phillip’ told me about his experience attending satanic rituals with rich and famous people whom he names and you can see them and the wider background to Cult Satanism in my other books starting with *The Biggest Secret*. Cult rituals are interactions with Archontic ‘gods’. ‘Phillip’ described Baron Philippe de Rothschild as ‘a master Satanist and hater of God’ and he used the same term ‘revolt from God’ associated with Yaldabaoth/Satan/Lucifer/the Devil in describing the Sabbatian Rothschild dynasty. ‘I played a key role in my family’s revolt from God’, he said. That role was to infiltrate in classic Sabbatian style the Christian Church, but eventually he escaped the mind-prison to live another life. The Cult has been targeting religion in a plan to make worship of the Archons the global one-world religion. Infiltration of Satanism into modern ‘culture’, especially among the young, through music videos, stage shows and other means, is all part of this.

Nag Hammadi texts describe Yaldabaoth and the Archons in their prime form as energy – consciousness – and say they can take form if they choose in the same way that consciousness takes form as a human. Yaldabaoth is called ‘formless’ and represents a deeply inverted, distorted and chaotic state of consciousness which seeks to attached to humans and turn them into a likeness of itself in an attempt at assimilation. For that to happen it has to manipulate

humans into low frequency mental and emotional states that match its own. Archons can certainly appear in human form and this is the origin of the psychopathic personality. The energetic distortion Gnostics called Yaldabaoth is psychopathy. When psychopathic Archons take human form that human will be a psychopath as an expression of Yaldabaoth consciousness. Cult psychopaths are Archons in human form. The principle is the same as that portrayed in the 2009 *Avatar* movie when the American military travelled to a fictional Earth-like moon called Pandora in the Alpha Centauri star system to infiltrate a society of blue people, or Na'vi, by hiding within bodies that looked like the Na'vi. Archons posing as humans have a particular hybrid information field, part human, part Archon, (the ancient 'demigods') which processes information in a way that manifests behaviour to match their psychopathic evil, lack of empathy and compassion, and stops them being influenced by the empathy, compassion and love that a fully-human information field is capable of expressing. Cult bloodlines interbreed, be they royalty or dark suits, for this reason and you have their obsession with incest. Interbreeding with full-blown humans would dilute the Archontic energy field that guarantees psychopathy in its representatives in the human realm.

Gnostic writings say the main non-human forms that Archons take are *serpentine* (what I have called for decades 'reptilian' amid unbounded ridicule from the Archontically-programmed) and what Gnostics describe as 'an unborn baby or foetus with grey skin and dark, unmoving eyes'. This is an excellent representation of the ET 'Greys' of UFO folklore which large numbers of people claim to have seen and been abducted by – Zulu shaman Credo Mutwa among them. I agree with those that believe in extraterrestrial or interdimensional visitations today and for thousands of years past. No wonder with their advanced knowledge and technological capability they were perceived and worshipped as gods for technological and other 'miracles' they appeared to perform. Imagine someone arriving in a culture disconnected from the modern world with a smartphone and computer. They would be

seen as a 'god' capable of 'miracles'. The Renegade Mind, however, wants to know the source of everything and not only the way that source manifests as human or non-human. In the same way that a Renegade Mind seeks the original source material for the 'Covid virus' to see if what is claimed is true. The original source of Archons in form is consciousness – the distorted state of consciousness known to Gnostics as Yaldabaoth.

'Revolt from God' is energetic disconnection

Where I am going next will make a lot of sense of religious texts and ancient legends relating to 'Satan', Lucifer' and the 'gods'. Gnostic descriptions sync perfectly with the themes of my own research over the years in how they describe a consciousness distortion seeking to impose itself on human consciousness. I've referred to the core of infinite awareness in previous books as Infinite Awareness in Awareness of Itself. By that I mean a level of awareness that knows that it is all awareness and is aware of all awareness. From here comes the frequency of love in its true sense and balance which is what love is on one level – the balance of all forces into a single whole called Oneness and Isness. The more we disconnect from this state of love that many call 'God' the constituent parts of that Oneness start to unravel and express themselves as a part and not a whole. They become individualised as intellect, mind, selfishness, hatred, envy, desire for power over others, and such like. This is not a problem in the greater scheme in that 'God', the *All That Is*, can experience all these possibilities through different expressions of itself including humans. What we as expressions of the whole experience the *All That Is* experiences. We are the *All That Is* experiencing itself. As we withdraw from that state of Oneness we disconnect from its influence and things can get very unpleasant and very stupid. Archontic consciousness is at the extreme end of that. It has so disconnected from the influence of Oneness that it has become an inversion of unity and love, an inversion of everything, an inversion of life itself. Evil is appropriately live written backwards. Archontic consciousness is obsessed with death, an inversion of life,

and so its manifestations in Satanism are obsessed with death. They use inverted symbols in their rituals such as the inverted pentagram and cross. Sabbatians as Archontic consciousness incarnate invert Judaism and every other religion and culture they infiltrate. They seek disunity and chaos and they fear unity and harmony as they fear love like garlic to a vampire. As a result the Cult, Archons incarnate, act with such evil, psychopathy and lack of empathy and compassion disconnected as they are from the source of love. How could Bill Gates and the rest of the Archontic psychopaths do what they have to human society in the 'Covid' era with all the death, suffering and destruction involved and have no emotional consequence for the impact on others? Now you know. Why have Zuckerberg, Brin, Page, Wojcicki and company callously censored information warning about the dangers of the 'vaccine' while thousands have been dying and having severe, sometimes life-changing reactions? Now you know. Why have Tedros, Fauci, Whitty, Vallance and their like around the world been using case and death figures they're aware are fraudulent to justify lockdowns and all the deaths and destroyed lives that have come from that? Now you know. Why did Christian Drosten produce and promote a 'testing' protocol that he knew couldn't test for infectious disease which led to a global human catastrophe. Now you know. The Archontic mind doesn't give a shit ([Fig 17](#)). I personally think that Gates and major Cult insiders are a form of AI cyborg that the Archons want humans to become.

Figure 17: Artist Neil Hague's version of the 'Covid' hierarchy.

Human batteries

A state of such inversion does have its consequences, however. The level of disconnection from the Source of All means that you withdraw from that source of energetic sustenance and creativity. This means that you have to find your own supply of energetic power and it has – us. When the Morpheus character in the first *Matrix* movie held up a battery he spoke a profound truth when he said: 'The Matrix is a computer-generated dream world built to keep us under control in order to change the human being into one of

these.’ The statement was true in all respects. We do live in a technologically-generated virtual reality simulation (more very shortly) and we have been manipulated to be an energy source for Archontic consciousness. The Disney-Pixar animated movie *Monsters, Inc.* in 2001 symbolised the dynamic when monsters in their world had no energy source and they would enter the human world to terrify children in their beds, catch the child’s scream, terror (low-vibrational frequencies), and take that energy back to power the monster world. The lead character you might remember was a single giant eye and the symbolism of the Cult’s all-seeing eye was obvious. Every thought and emotion is broadcast as a frequency unique to that thought and emotion. Feelings of love and joy, empathy and compassion, are high, quick, frequencies while fear, depression, anxiety, suffering and hate are low, slow, dense frequencies. Which kind do you think Archontic consciousness can connect with and absorb? In such a low and dense frequency state there’s no way it can connect with the energy of love and joy. Archons can only feed off energy compatible with their own frequency and they and their Cult agents want to delete the human world of love and joy and manipulate the transmission of low vibrational frequencies through low-vibrational human mental and emotional states. *We are their energy source.* Wars are energetic banquets to the Archons – a world war even more so – and think how much low-frequency mental and emotional energy has been generated from the consequences for humanity of the ‘Covid’ hoax orchestrated by Archons incarnate like Gates.

The ancient practice of human sacrifice ‘to the gods’, continued in secret today by the Cult, is based on the same principle. ‘The gods’ are Archontic consciousness in different forms and the sacrifice is induced into a state of intense terror to generate the energy the Archontic frequency can absorb. Incarnate Archons in the ritual drink the blood which contains an adrenaline they crave which floods into the bloodstream when people are terrorised. Most of the sacrifices, ancient and modern, are children and the theme of ‘sacrificing young virgins to the gods’ is just code for children. They

have a particular pre-puberty energy that Archons want more than anything and the energy of the young in general is their target. The California Department of Education wants students to chant the names of Aztec gods (Archontic gods) once worshipped in human sacrifice rituals in a curriculum designed to encourage them to 'challenge racist, bigoted, discriminatory, imperialist/colonial beliefs', join 'social movements that struggle for social justice', and 'build new possibilities for a post-racist, post-systemic racism society'. It's the usual Woke crap that inverts racism and calls it anti-racism. In this case solidarity with 'indigenous tribes' is being used as an excuse to chant the names of 'gods' to which people were sacrificed (and still are in secret). What an example of Woke's inability to see beyond black and white, us and them, They condemn the colonisation of these tribal cultures by Europeans (quite right), but those cultures sacrificing people including children to their 'gods', and mass murdering untold numbers as the Aztecs did, is just fine. One chant is to the Aztec god Tezcatlipoca who had a man sacrificed to him in the 5th month of the Aztec calendar. His heart was cut out and he was eaten. Oh, that's okay then. Come on children ... after three ... Other sacrificial 'gods' for the young to chant their allegiance include Quetzalcoatl, Huitzilopochtli and Xipe Totec. The curriculum says that 'chants, affirmations, and energizers can be used to bring the class together, build unity around ethnic studies principles and values, and to reinvigorate the class following a lesson that may be emotionally taxing or even when student engagement may appear to be low'. Well, that's the cover story, anyway. Chanting and mantras are the repetition of a particular frequency generated from the vocal cords and chanting the names of these Archontic 'gods' tunes you into their frequency. That is the last thing you want when it allows for energetic synchronisation, attachment and perceptual influence. Initiates chant the names of their 'Gods' in their rituals for this very reason.

Vampires of the Woke

Paedophilia is another way that Archons absorb the energy of children. Paedophiles possessed by Archontic consciousness are used as the conduit during sexual abuse for discarnate Archons to vampire the energy of the young they desire so much. Stupendous numbers of children disappear every year never to be seen again although you would never know from the media. Imagine how much low-vibrational energy has been generated by children during the 'Covid' hoax when so many have become depressed and psychologically destroyed to the point of killing themselves. Shocking numbers of children are now taken by the state from loving parents to be handed to others. I can tell you from long experience of researching this since 1996 that many end up with paedophiles and assets of the Cult through corrupt and Cult-owned social services which in the reframing era has hired many psychopaths and emotionless automatons to do the job. Children are even stolen to order using spurious reasons to take them by the corrupt and secret (because they're corrupt) 'family courts'. I have written in detail in other books, starting with *The Biggest Secret* in 1997, about the ubiquitous connections between the political, corporate, government, intelligence and military elites (Cult operatives) and Satanism and paedophilia. If you go deep enough both networks have an interlocking leadership. The Woke mentality has been developed by the Cult for many reasons: To promote almost every aspect of its agenda; to hijack the traditional political left and turn it fascist; to divide and rule; and to target agenda pushbackers. But there are other reasons which relate to what I am describing here. How many happy and joyful Wokers do you ever see especially at the extreme end? They are a mental and psychological mess consumed by emotional stress and constantly emotionally cocked for the next explosion of indignation at someone referring to a female as a female. They are walking, talking, batteries as Morpheus might say emitting frequencies which both enslave them in low-vibrational bubbles of perceptual limitation and feed the Archons. Add to this the hatred claimed to be love; fascism claimed to 'anti-fascism', racism claimed to be 'anti-racism';

exclusion claimed to inclusion; and the abuse-filled Internet trolling. You have a purpose-built Archontic energy system with not a wind turbine in sight and all founded on Archontic *inversion*. We have whole generations now manipulated to serve the Archons with their actions and energy. They will be doing so their entire adult lives unless they snap out of their Archon-induced trance. Is it really a surprise that Cult billionaires and corporations put so much money their way? Where is the energy of joy and laughter, including laughing at yourself which is confirmation of your own emotional security? Mark Twain said: 'The human race has one really effective weapon, and that is laughter.' We must use it all the time. Woke has destroyed comedy because it has no humour, no joy, sense of irony, or self-deprecation. Its energy is dense and intense. *Mmmmm*, lunch says the Archontic frequency. Rudolf Steiner (1861-1925) was the Austrian philosopher and famous esoteric thinker who established Waldorf education or Steiner schools to treat children like unique expressions of consciousness and not minds to be programmed with the perceptions determined by authority. I'd been writing about this energy vampiring for decades when I was sent in 2016 a quote by Steiner. He was spot on:

There are beings in the spiritual realms for whom anxiety and fear emanating from human beings offer welcome food. When humans have no anxiety and fear, then these creatures starve. If fear and anxiety radiates from people and they break out in panic, then these creatures find welcome nutrition and they become more and more powerful. These beings are hostile towards humanity. Everything that feeds on negative feelings, on anxiety, fear and superstition, despair or doubt, are in reality hostile forces in super-sensible worlds, launching cruel attacks on human beings, while they are being fed ... These are exactly the feelings that belong to contemporary culture and materialism; because it estranges people from the spiritual world, it is especially suited to evoke hopelessness and fear of the unknown in people, thereby calling up the above mentioned hostile forces against them.

Pause for a moment from this perspective and reflect on what has happened in the world since the start of 2020. Not only will pennies drop, but billion dollar bills. We see the same theme from Don Juan Matus, a Yaqui Indian shaman in Mexico and the information source for Peruvian-born writer, Carlos Castaneda, who wrote a series of

books from the 1960s to 1990s. Don Juan described the force manipulating human society and his name for the Archons was the predator:

We have a predator that came from the depths of the cosmos and took over the rule of our lives. Human beings are its prisoners. The predator is our lord and master. It has rendered us docile, helpless. If we want to protest, it suppresses our protest. If we want to act independently, it demands that we don't do so ... indeed we are held prisoner!

They took us over because we are food to them, and they squeeze us mercilessly because we are their sustenance. Just as we rear chickens in coops, the predators rear us in human coops, humaneros. Therefore, their food is always available to them.

Different cultures, different eras, same recurring theme.

The 'ennoia' dilemma

Nag Hammadi Gnostic manuscripts say that Archon consciousness has no 'ennoia'. This is directly translated as 'intentionality', but I'll use the term 'creative imagination'. The *All That Is* in awareness of itself is the source of all creativity – all possibility – and the more disconnected you are from that source the more you are subsequently denied 'creative imagination'. Given that Archon consciousness is almost entirely disconnected it severely lacks creativity and has to rely on far more mechanical processes of thought and exploit the creative potential of those that do have 'ennoia'. You can see cases of this throughout human society. Archon consciousness almost entirely dominates the global banking system and if we study how that system works you will appreciate what I mean. Banks manifest 'money' out of nothing by issuing lines of 'credit' which is 'money' that has never, does not, and will never exist except in theory. It's a confidence trick. If you think 'credit' figures-on-a-screen 'money' is worth anything you accept it as payment. If you don't then the whole system collapses through lack of confidence in the value of that 'money'. Archontic bankers with no 'ennoia' are 'lending' 'money' that doesn't exist to humans that *do* have creativity – those that have the inspired ideas and create businesses and products. Archon banking feeds off human creativity

which it controls through 'money' creation and debt. Humans have the creativity and Archons exploit that for their own benefit and control while having none themselves. Archon Internet platforms like Facebook claim joint copyright of everything that creative users post and while Archontic minds like Zuckerberg may officially head that company it will be human creatives on the staff that provide the creative inspiration. When you have limitless 'money' you can then buy other companies established by creative humans. Witness the acquisition record of Facebook, Google and their like. Survey the Archon-controlled music industry and you see non-creative dark suit executives making their fortune from the human creativity of their artists. The cases are endless. Research the history of people like Gates and Zuckerberg and how their empires were built on exploiting the creativity of others. Archon minds cannot create out of nothing, but they are skilled (because they have to be) in what Gnostic texts call 'countermimicry'. They can imitate, but not innovate. Sabbatians trawl the creativity of others through backdoors they install in computer systems through their cybersecurity systems. Archon-controlled China is globally infamous for stealing intellectual property and I remember how Hong Kong, now part of China, became notorious for making counterfeit copies of the creativity of others – 'countermimicry'. With the now pervasive and all-seeing surveillance systems able to infiltrate any computer you can appreciate the potential for Archons to vampire the creativity of humans. Author John Lamb Lash wrote in his book about the Nag Hammadi texts, *Not In His Image*:

Although they cannot originate anything, because they lack the divine factor of ennoia (intentionality), Archons can imitate with a vengeance. Their expertise is simulation (HAL, virtual reality). The Demiurge [Yaldabaoth] fashions a heaven world copied from the fractal patterns [of the original] ... His construction is celestial kitsch, like the fake Italianate villa of a Mafia don complete with militant angels to guard every portal.

This brings us to something that I have been speaking about since the turn of the millennium. Our reality is a simulation; a virtual reality that we think is real. No, I'm not kidding.

Human reality? Well, virtually

I had pondered for years about whether our reality is 'real' or some kind of construct. I remembered being immensely affected on a visit as a small child in the late 1950s to the then newly-opened Planetarium on the Marylebone Road in London which is now closed and part of the adjacent Madame Tussauds wax museum. It was in the middle of the day, but when the lights went out there was the night sky projected in the Planetarium's domed ceiling and it appeared to be so real. The experience never left me and I didn't know why until around the turn of the millennium when I became certain that our 'night sky' and entire reality is a projection, a virtual reality, akin to the illusory world portrayed in the *Matrix* movies. I looked at the sky one day in this period and it appeared to me like the domed roof of the Planetarium. The release of the first *Matrix* movie in 1999 also provided a synchronistic and perfect visual representation of where my mind had been going for a long time. I hadn't come across the Gnostic Nag Hammadi texts then. When I did years later the correlation was once again astounding. As I read Gnostic accounts from 1,600 years and more earlier it was clear that they were describing the same simulation phenomenon. They tell how the Yaldabaoth 'Demiurge' and Archons created a 'bad copy' of original reality to rule over all that were captured by its illusions and the body was a prison to trap consciousness in the 'bad copy' fake reality. Read how Gnostics describe the 'bad copy' and update that to current times and they are referring to what we would call today a virtual reality simulation.

Author John Lamb Lash said 'the Demiurge fashions a heaven world copied from the fractal patterns' of the original through expertise in 'HAL' or virtual reality simulation. Fractal patterns are part of the energetic information construct of our reality, a sort of blueprint. If these patterns were copied in computer terms it would indeed give you a copy of a 'natural' reality in a non-natural frequency and digital form. The principle is the same as making a copy of a website. The original website still exists, but now you can change the copy version to make it whatever you like and it can

become very different to the original website. Archons have done this with our reality, a *synthetic* copy of prime reality that still exists beyond the frequency walls of the simulation. Trapped within the illusions of this synthetic Matrix, however, were and are human consciousness and other expressions of prime reality and this is why the Archons via the Cult are seeking to make the human body synthetic and give us synthetic AI minds to complete the job of turning the entire reality synthetic including what we perceive to be the natural world. To quote Kurzweil: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' Yes, *synthetic* 'creatures' just as 'Covid' and other genetically-manipulating 'vaccines' are designed to make the human body synthetic. From this perspective it is obvious why Archons and their Cult are so desperate to infuse synthetic material into every human with their 'Covid' scam.

Let there be (electromagnetic) light

Yaldabaoth, the force that created the simulation, or Matrix, makes sense of the Gnostic reference to 'The Great Architect' and its use by Cult Freemasonry as the name of its deity. The designer of the Matrix in the movies is called 'The Architect' and that trilogy is jam-packed with symbolism relating to these subjects. I have contended for years that the angry Old Testament God (Yaldabaoth) is the 'God' being symbolically 'quoted' in the opening of Genesis as 'creating the world'. This is not the creation of prime reality – it's the creation of the *simulation*. The Genesis 'God' says: 'Let there be Light: and there was light.' But what is this 'Light'? I have said for decades that the speed of light (186,000 miles per second) is not the fastest speed possible as claimed by mainstream science and is in fact the frequency walls or outer limits of the Matrix. You can't have a fastest or slowest anything within all possibility when everything is possible. The human body is encoded to operate within the speed of light or *within the simulation* and thus we see only the tiny frequency band of visible *light*. Near-death experiencers who perceive reality outside the body during temporary 'death' describe a very different

form of light and this is supported by the Nag Hammadi texts. Prime reality beyond the simulation ('Upper Aeons' to the Gnostics) is described as a realm of incredible beauty, bliss, love and harmony – a realm of 'watery light' that is so powerful 'there are no shadows'. Our false reality of Archon control, which Gnostics call the 'Lower Aeons', is depicted as a realm with a different kind of 'light' and described in terms of chaos, 'Hell', 'the Abyss' and 'Outer Darkness', where trapped souls are tormented and manipulated by demons (relate that to the 'Covid' hoax alone). The watery light theme can be found in near-death accounts and it is not the same as *simulation* 'light' which is electromagnetic or radiation light within the speed of light – the 'Lower Aeons'. Simulation 'light' is the 'luminous fire' associated by Gnostics with the Archons. The Bible refers to Yaldabaoth as 'that old serpent, called the Devil, and Satan, which deceiveth the whole world' (Revelation 12:9). I think that making a simulated copy of prime reality ('countermimicry') and changing it dramatically while all the time manipulating humanity to believe it to be real could probably meet the criteria of deceiving the whole world. Then we come to the Cult god Lucifer – the *Light Bringer*. Lucifer is symbolic of Yaldabaoth, the bringer of radiation light that forms the bad copy simulation within the speed of light. 'He' is symbolised by the lighted torch held by the Statue of Liberty and in the name 'Illuminati'. Sabbatian-Frankism declares that Lucifer is the true god and Lucifer is the real god of Freemasonry honoured as their 'Great or Grand Architect of the Universe' (simulation).

I would emphasise, too, the way Archontic technologically-generated luminous fire of radiation has deluged our environment since I was a kid in the 1950s and changed the nature of The Field with which we constantly interact. Through that interaction technological radiation is changing us. The Smart Grid is designed to operate with immense levels of communication power with 5G expanding across the world and 6G, 7G, in the process of development. Radiation is the simulation and the Archontic manipulation system. Why wouldn't the Archon Cult wish to unleash radiation upon us to an ever-greater extreme to form

Kurzweil's 'cloud'? The plan for a synthetic human is related to the need to cope with levels of radiation beyond even anything we've seen so far. Biological humans would not survive the scale of radiation they have in their script. The Smart Grid is a technological sub-reality within the technological simulation to further disconnect five-sense perception from expanded consciousness. It's a technological prison of the mind.

Infusing the 'spirit of darkness'

A recurring theme in religion and native cultures is the manipulation of human genetics by a non-human force and most famously recorded as the biblical 'sons of god' (the gods plural in the original) who interbred with the daughters of men. The Nag Hammadi *Apocryphon of John* tells the same story this way:

He [Yaldabaoth] sent his angels [Archons/demons] to the daughters of men, that they might take some of them for themselves and raise offspring for their enjoyment. And at first they did not succeed. When they had no success, they gathered together again and they made a plan together ... And the angels changed themselves in their likeness into the likeness of their mates, filling them with the spirit of darkness, which they had mixed for them, and with evil ... And they took women and begot children out of the darkness according to the likeness of their spirit.

Possession when a discarnate entity takes over a human body is an age-old theme and continues today. It's very real and I've seen it. Satanic and secret society rituals can create an energetic environment in which entities can attach to initiates and I've heard many stories of how people have changed their personality after being initiated even into lower levels of the Freemasons. I have been inside three Freemasonic temples, one at a public open day and two by just walking in when there was no one around to stop me. They were in Ryde, the town where I live, Birmingham, England, when I was with a group, and Boston, Massachusetts. They all felt the same energetically – dark, dense, low-vibrational and sinister. Demonic attachment can happen while the initiate has no idea what is going on. To them it's just a ritual to get in the Masons and do a bit of good

business. In the far more extreme rituals of Satanism human possession is even more powerful and they are designed to make possession possible. The hierarchy of the Cult is dictated by the power and perceived status of the possessing Archon. In this way the Archon hierarchy becomes the Cult hierarchy. Once the entity has attached it can influence perception and behaviour and if it attaches to the extreme then so much of its energy (information) infuses into the body information field that the hologram starts to reflect the nature of the possessing entity. This is the *Exorcist* movie type of possession when facial features change and it's known as shapeshifting. Islam's Jinn are said to be invisible tricksters who change shape, 'whisper', confuse and take human form. These are all traits of the Archons and other versions of the same phenomenon. Extreme possession could certainly infuse the 'spirit of darkness' into a partner during sex as the Nag Hammadi texts appear to describe. Such an infusion can change genetics which is also energetic information. Human genetics is information and the 'spirit of darkness' is information. Mix one with the other and change must happen. Islam has the concept of a 'Jinn baby' through possession of the mother and by Jinn taking human form. There are many ways that human genetics can be changed and remember that Archons have been aware all along of advanced techniques to do this. What is being done in human society today – and far more – was known about by Archons at the time of the 'fallen ones' and their other versions described in religions and cultures.

Archons and their human-world Cult are obsessed with genetics as we see today and they know this dictates how information is processed into perceived reality during a human life. They needed to produce a human form that would decode the simulation and this is symbolically known as 'Adam and Eve' who left the 'garden' (prime reality) and 'fell' into Matrix reality. The simulation is not a 'physical' construct (there is no 'physical'); it is a source of information. Think Wi-Fi again. The simulation is an energetic field encoded with information and body-brain systems are designed to decode that information encoded in wave or frequency form which

is transmitted to the brain as electrical signals. These are decoded by the brain to construct our sense of reality – an illusory ‘physical’ world that only exists in the brain or the mind. Virtual reality games mimic this process using the same sensory decoding system. Information is fed to the senses to decode a virtual reality that can appear so real, but isn’t (Figs 18 and 19). Some scientists believe – and I agree with them – that what we perceive as ‘physical’ reality only exists when we are looking or observing. The act of perception or focus triggers the decoding systems which turn waveform information into holographic reality. When we are not observing something our reality reverts from a holographic state to a waveform state. This relates to the same principle as a falling tree not making a noise unless someone is there to hear it or decode it. The concept makes sense from the simulation perspective. A computer is not decoding all the information in a Wi-Fi field all the time and only decodes or brings into reality on the screen that part of Wi-Fi that it’s decoding – focusing upon – at that moment.

Figure 18: Virtual reality technology ‘hacks’ into the body’s five-sense decoding system.

Figure 19: The result can be experienced as very ‘real’.

Interestingly, Professor Donald Hoffman at the Department of Cognitive Sciences at the University of California, Irvine, says that our experienced reality is like a computer interface that shows us only the level with which we interact while hiding all that exists beyond it: 'Evolution shaped us with a user interface that hides the truth. Nothing that we see is the truth – the very language of space and time and objects is the wrong language to describe reality.' He is correct in what he says on so many levels. Space and time are not a universal reality. They are a phenomenon of decoded *simulation* reality as part of the process of enslaving our sense of reality. Near-death experiencers report again and again how space and time did not exist as we perceive them once they were free of the body – body decoding systems. You can appreciate from this why Archons and their Cult are so desperate to entrap human attention in the five senses where we are in the Matrix and of the Matrix. Opening your mind to expanded states of awareness takes you beyond the information confines of the simulation and you become aware of knowledge and insights denied to you before. This is what we call 'awakening' – *awakening from the Matrix* – and in the final chapter I will relate this to current events.

Where are the 'aliens'?

A simulation would explain the so-called 'Fermi Paradox' named after Italian physicist Enrico Fermi (1901-1954) who created the first nuclear reactor. He considered the question of why there is such a lack of extraterrestrial activity when there are so many stars and planets in an apparently vast universe; but what if the night sky that we see, or think we do, is a simulated projection as I say? If you control the simulation and your aim is to hold humanity fast in essential ignorance would you want other forms of life including advanced life coming and going sharing information with humanity? Or would you want them to believe they were isolated and apparently alone? Themes of human isolation and apartness are common whether they be the perception of a lifeless universe or the fascist isolation laws of the 'Covid' era. Paradoxically the very

existence of a simulation means that we are not alone when some force had to construct it. My view is that experiences that people have reported all over the world for centuries with Reptilians and Grey entities are Archon phenomena as Nag Hammadi texts describe; and that benevolent 'alien' interactions are non-human groups that come in and out of the simulation by overcoming Archon attempts to keep them out. It should be highlighted, too, that Reptilians and Greys are obsessed with *genetics* and *technology* as related by cultural accounts and those who say they have been abducted by them. Technology is their way of overcoming some of the limitations in their creative potential and our technology-driven and controlled human society of today is *archetypical* Archon-Reptilian-Grey modus operandi. Technocracy is really *Archontocracy*. The Universe does not have to be as big as it appears with a simulation. There is no space or distance only information decoded into holographic reality. What we call 'space' is only the absence of holographic 'objects' and that 'space' is The Field of energetic information which connects everything into a single whole. The same applies with the artificially-generated information field of the simulation. The Universe is not big or small as a physical reality. It is decoded information, that's all, and its perceived size is decided by the way the simulation is encoded to make it appear. The entire night sky as we perceive it only exists in our brain and so where are those 'millions of light years'? The 'stars' on the ceiling of the Planetarium looked a vast distance away.

There's another point to mention about 'aliens'. I have been highlighting since the 1990s the plan to stage a fake 'alien invasion' to justify the centralisation of global power and a world military. Nazi scientist Werner von Braun, who was taken to America by Operation Paperclip after World War Two to help found NASA, told his American assistant Dr Carol Rosin about the Cult agenda when he knew he was dying in 1977. Rosin said that he told her about a sequence that would lead to total human control by a one-world government. This included threats from terrorism, rogue nations, meteors and asteroids before finally an 'alien invasion'. All of these

things, von Braun said, would be bogus and what I would refer to as a No-Problem-Reaction-Solution. Keep this in mind when 'the aliens are coming' is the new mantra. The aliens are not coming – they are *already here* and they have infiltrated human society while looking human. French-Canadian investigative journalist Serge Monast said in 1994 that he had uncovered a NASA/military operation called Project Blue Beam which fits with what Werner von Braun predicted. Monast died of a 'heart attack' in 1996 the day after he was arrested and spent a night in prison. He was 51. He said Blue Beam was a plan to stage an alien invasion that would include religious figures beamed holographically into the sky as part of a global manipulation to usher in a 'new age' of worshipping what I would say is the Cult 'god' Yaldabaoth in a one-world religion. Fake holographic asteroids are also said to be part of the plan which again syncs with von Braun. How could you stage an illusory threat from asteroids unless they were holographic inserts? This is pretty straightforward given the advanced technology outside the public arena and the fact that our 'physical' reality is holographic anyway. Information fields would be projected and we would decode them into the illusion of a 'physical' asteroid. If they can sell a global 'pandemic' with a 'virus' that doesn't exist what will humans not believe if government and media tell them?

All this is particularly relevant as I write with the Pentagon planning to release in June, 2021, information about 'UFO sightings'. I have been following the UFO story since the early 1990s and the common theme throughout has been government and military denials and cover up. More recently, however, the Pentagon has suddenly become more talkative and apparently open with Air Force pilot radar images released of unexplained craft moving and changing direction at speeds well beyond anything believed possible with human technology. Then, in March, 2021, former Director of National Intelligence John Ratcliffe said a Pentagon report months later in June would reveal a great deal of information about UFO sightings unknown to the public. He said the report would have 'massive implications'. The order to do this was included bizarrely

in a \$2.3 trillion 'coronavirus' relief and government funding bill passed by the Trump administration at the end of 2020. I would add some serious notes of caution here. I have been pointing out since the 1990s that the US military and intelligence networks have long had craft – 'flying saucers' or anti-gravity craft – which any observer would take to be extraterrestrial in origin. Keeping this knowledge from the public allows craft flown by *humans* to be perceived as alien visitations. I am not saying that 'aliens' do not exist. I would be the last one to say that, but we have to be streetwise here. President Ronald Reagan told the UN General Assembly in 1987: 'I occasionally think how quickly our differences worldwide would vanish if we were facing an alien threat from outside this world.' That's the idea. Unite against a common 'enemy' with a common purpose behind your 'saviour force' (the Cult) as this age-old technique of mass manipulation goes global.

Science moves this way ...

I could find only one other person who was discussing the simulation hypothesis publicly when I concluded it was real. This was Nick Bostrom, a Swedish-born philosopher at the University of Oxford, who has explored for many years the possibility that human reality is a computer simulation although his version and mine are not the same. Today the simulation and holographic reality hypothesis have increasingly entered the scientific mainstream. Well, the more open-minded mainstream, that is. Here are a few of the ever-gathering examples. American nuclear physicist Silas Beane led a team of physicists at the University of Bonn in Germany pursuing the question of whether we live in a simulation. They concluded that we probably do and it was likely based on a lattice of cubes. They found that cosmic rays align with that specific pattern. The team highlighted the Greisen–Zatsepin–Kuzmin (GZK) limit which refers to cosmic ray particle interaction with cosmic background radiation that creates an apparent boundary for cosmic ray particles. They say in a paper entitled 'Constraints on the Universe as a Numerical Simulation' that this 'pattern of constraint' is exactly what you

would find with a computer simulation. They also made the point that a simulation would create its own 'laws of physics' that would limit possibility. I've been making the same point for decades that the *perceived* laws of physics relate only to this reality, or what I would later call the simulation. When designers write codes to create computer and virtual reality games they are the equivalent of the laws of physics for that game. Players interact within the limitations laid out by the coding. In the same way those who wrote the codes for the simulation decided the laws of physics that would apply. These can be overridden by expanded states of consciousness, but not by those enslaved in only five-sense awareness where simulation codes rule. Overriding the codes is what people call 'miracles'. They are not. They are bypassing the encoded limits of the simulation. A population caught in simulation perception would have no idea that this was their plight. As the Bonn paper said: 'Like a prisoner in a pitch-black cell we would not be able to see the "walls" of our prison,' That's true if people remain mesmerised by the five senses. Open to expanded awareness and those walls become very clear. The main one is the speed of light.

American theoretical physicist James Gates is another who has explored the simulation question and found considerable evidence to support the idea. Gates was Professor of Physics at the University of Maryland, Director of The Center for String and Particle Theory, and on Barack Obama's Council of Advisors on Science and Technology. He and his team found *computer codes* of digital data embedded in the fabric of our reality. They relate to on-off electrical charges of 1 and 0 in the binary system used by computers. 'We have no idea what they are doing there', Gates said. They found within the energetic fabric mathematical sequences known as error-correcting codes or block codes that 'reboot' data to its original state or 'default settings' when something knocks it out of sync. Gates was asked if he had found a set of equations embedded in our reality indistinguishable from those that drive search engines and browsers and he said: 'That is correct.' Rich Terrile, director of the Centre for Evolutionary Computation and Automated Design at NASA's Jet

Propulsion Laboratory, has said publicly that he believes the Universe is a digital hologram that must have been created by a form of intelligence. I agree with that in every way. Waveform information is delivered electrically by the senses to the brain which constructs a *digital* holographic reality that we call the 'world'. This digital level of reality can be read by the esoteric art of numerology. Digital holograms are at the cutting edge of holographics today. We have digital technology everywhere designed to access and manipulate our digital level of perceived reality. Synthetic mRNA in 'Covid vaccines' has a digital component to manipulate the body's digital 'operating system'.

Reality is numbers

How many know that our reality can be broken down to numbers and codes that are the same as computer games? Max Tegmark, a physicist at the Massachusetts Institute of Technology (MIT), is the author of *Our Mathematical Universe* in which he lays out how reality can be entirely described by numbers and maths in the way that a video game is encoded with the 'physics' of computer games. Our world and computer virtual reality are essentially the same.

Tegmark imagines the perceptions of characters in an advanced computer game when the graphics are so good they don't know they are in a game. They think they can bump into real objects (electromagnetic resistance in our reality), fall in love and feel emotions like excitement. When they began to study the apparently 'physical world' of the video game they would realise that everything was made of pixels (which have been found in our energetic reality as must be the case when on one level our world is digital). What computer game characters thought was physical 'stuff', Tegmark said, could actually be broken down into numbers:

And we're exactly in this situation in our world. We look around and it doesn't seem that mathematical at all, but everything we see is made out of elementary particles like quarks and electrons. And what properties does an electron have? Does it have a smell or a colour or a texture? No! ... We physicists have come up with geeky names for [Electron] properties, like

electric charge, or spin, or lepton number, but the electron doesn't care what we call it, the properties are just numbers.

This is the illusory reality Gnostics were describing. This is the simulation. The A, C, G, and T codes of DNA have a binary value – A and C = 0 while G and T = 1. This has to be when the simulation is digital and the body must be digital to interact with it. Recurring mathematical sequences are encoded throughout reality and the body. They include the Fibonacci sequence in which the two previous numbers are added to get the next one, as in ... 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, etc. The sequence is encoded in the human face and body, proportions of animals, DNA, seed heads, pine cones, trees, shells, spiral galaxies, hurricanes and the number of petals in a flower. The list goes on and on. There are fractal patterns – a 'never-ending pattern that is infinitely complex and self-similar across all scales in the as above, so below, principle of holograms. These and other famous recurring geometrical and mathematical sequences such as Phi, Pi, Golden Mean, Golden Ratio and Golden Section are *computer codes* of the simulation. I had to laugh and give my head a shake the day I finished this book and it went into the production stage. I was sent an article in *Scientific American* published in April, 2021, with the headline 'Confirmed! We Live in a Simulation'. Two decades after I first said our reality is a simulation and the speed of light is its outer limit the article suggested that we do live in a simulation and that the speed of light is its outer limit. I left school at 15 and never passed a major exam in my life while the writer was up to his eyes in qualifications. As I will explain in the final chapter *knowing* is far better than thinking and they come from very different sources. The article rightly connected the speed of light to the processing speed of the 'Matrix' and said what has been in my books all this time ... 'If we are in a simulation, as it appears, then space is an abstract property written in code. It is not real'. No it's not and if we live in a simulation something created it and it wasn't *us*. 'That David Icke says we are manipulated by aliens' – he's crackers.'

Wow ...

The reality that humanity thinks is so real is an illusion. Politicians, governments, scientists, doctors, academics, law enforcement, media, school and university curriculums, on and on, are all founded on a world that *does not exist* except as a simulated prison cell. Is it such a stretch to accept that 'Covid' doesn't exist when our entire 'physical' reality doesn't exist? Revealed here is the knowledge kept under raps in the Cult networks of compartmentalised secrecy to control humanity's sense of reality by inducing the population to believe in a reality that's not real. If it wasn't so tragic in its experiential consequences the whole thing would be hysterically funny. None of this is new to Renegade Minds. Ancient Greek philosopher Plato (about 428 to about 347BC) was a major influence on Gnostic belief and he described the human plight thousands of years ago with his Allegory of the Cave. He told the symbolic story of prisoners living in a cave who had never been outside. They were chained and could only see one wall of the cave while behind them was a fire that they could not see. Figures walked past the fire casting shadows on the prisoners' wall and those moving shadows became their sense of reality. Some prisoners began to study the shadows and were considered experts on them (today's academics and scientists), but what they studied was only an illusion (today's academics and scientists). A prisoner escaped from the cave and saw reality as it really is. When he returned to report this revelation they didn't believe him, called him mad and threatened to kill him if he tried to set them free. Plato's tale is not only a brilliant analogy of the human plight and our illusory reality. It describes, too, the dynamics of the 'Covid' hoax. I have only skimmed the surface of these subjects here. The aim of this book is to crisply connect all essential dots to put what is happening today into its true context. All subject areas and their connections in this chapter are covered in great evidential detail in *Everything You Need To Know, But Have Never Been Told* and *The Answer*.

They say that bewildered people 'can't see the forest for the trees'. Humanity, however, can't see the forest for the *twigs*. The five senses

see only twigs while Renegade Minds can see the forest and it's the forest where the answers lie with the connections that reveals. Breaking free of perceptual programming so the forest can be seen is the way we turn all this around. Not breaking free is how humanity got into this mess. The situation may seem hopeless, but I promise you it's not. We are a perceptual heartbeat from paradise if only we knew.

CHAPTER TWELVE

Escaping Wetiko

Life is simply a vacation from the infinite

Dean Cavanagh

Renegade Minds weave the web of life and events and see common themes in the apparently random. They are always there if you look for them and their pursuit is aided by incredible synchronicity that comes when your mind is open rather than mesmerised by what it thinks it can see.

Infinite awareness is infinite possibility and the more of infinite possibility that we access the more becomes infinitely possible. That may be stating the apparently obvious, but it is a devastatingly-powerful fact that can set us free. We are a point of attention within an infinity of consciousness. The question is how much of that infinity do we choose to access? How much knowledge, insight, awareness, wisdom, do we want to connect with and explore? If your focus is only in the five senses you will be influenced by a fraction of infinite awareness. I mean a range so tiny that it gives new meaning to infinitesimal. Limitation of self-identity and a sense of the possible limit accordingly your range of consciousness. We are what we think we are. Life is what we think it is. The dream is the dreamer and the dreamer is the dream. Buddhist philosophy puts it this way: 'As a thing is viewed, so it appears.' Most humans live in the realm of touch, taste, see, hear, and smell and that's the limit of their sense of the possible and sense of self. Many will follow a religion and speak of a God in his heaven, but their lives are still

dominated by the five senses in their perceptions and actions. The five senses become the arbiter of everything. When that happens all except a smear of infinity is sealed away from influence by the rigid, unyielding, reality bubbles that are the five-sense human or Phantom Self. Archon Cult methodology is to isolate consciousness within five-sense reality – the simulation – and then program that consciousness with a sense of self and the world through a deluge of life-long information designed to instil the desired perception that allows global control. Efforts to do this have increased dramatically with identity politics as identity bubbles are squeezed into the minutiae of five-sense detail which disconnect people even more profoundly from the infinite 'I'.

Five-sense focus and self-identity are like a firewall that limits access to the infinite realms. You only perceive one radio or television station and no other. We'll take that literally for a moment. Imagine a vast array of stations giving different information and angles on reality, but you only ever listen to one. Here we have the human plight in which the population is overwhelmingly confined to CultFM. This relates only to the frequency range of CultFM and limits perception and insight to that band – limits *possibility* to that band. It means you are connecting with an almost imperceptibly minuscule range of possibility and creative potential within the infinite Field. It's a world where everything seems apart from everything else and where synchronicity is rare. Synchronicity is defined in the dictionary as 'the happening by chance of two or more related or similar events at the same time'. Use of 'by chance' betrays a complete misunderstanding of reality. Synchronicity is not 'by chance'. As people open their minds, or 'awaken' to use the term, they notice more and more coincidences in their lives, bits of 'luck', apparently miraculous happenings that put them in the right place at the right time with the right people. Days become peppered with 'fancy meeting you here' and 'what are the chances of that?' My entire life has been lived like this and ever more so since my own colossal awakening in 1990 and 91 which transformed my sense of reality. Synchronicity is not 'by chance'; it is by accessing expanded

realms of possibility which allow expanded potential for manifestation. People broadcasting the same vibe from the same openness of mind tend to be drawn 'by chance' to each other through what I call frequency magnetism and it's not only people. In the last more than 30 years incredible synchronicity has also led me through the Cult maze to information in so many forms and to crucial personal experiences. These 'coincidences' have allowed me to put the puzzle pieces together across an enormous array of subjects and situations. Those who have breached the bubble of five-sense reality will know exactly what I mean and this escape from the perceptual prison cell is open to everyone whenever they make that choice. This may appear super-human when compared with the limitations of 'human', but it's really our natural state. 'Human' as currently experienced is consciousness in an unnatural state of induced separation from the infinity of the whole. I'll come to how this transformation into unity can be made when I have described in more detail the force that holds humanity in servitude by denying this access to infinite self.

The Wetiko factor

I have been talking and writing for decades about the way five-sense mind is systematically barricaded from expanded awareness. I have used the analogy of a computer (five-sense mind) and someone at the keyboard (expanded awareness). Interaction between the computer and the operator is symbolic of the interaction between five-sense mind and expanded awareness. The computer directly experiences the Internet and the operator experiences the Internet via the computer which is how it's supposed to be – the two working as one. Archons seek to control that point where the operator connects with the computer to stop that interaction (Fig 20). Now the operator is banging the keyboard and clicking the mouse, but the computer is not responding and this happens when the computer is taken over – *possessed* – by an appropriately-named computer 'virus'. The operator has lost all influence over the computer which goes its own way making decisions under the control of the 'virus'. I have

just described the dynamic through which the force known to Gnostics as Yaldabaoth and Archons disconnects five-sense mind from expanded awareness to imprison humanity in perceptual servitude.

Figure 20: The mind ‘virus’ I have been writing about for decades seeks to isolate five-sense mind (the computer) from the true ‘I’. (Image by Neil Hague).

About a year ago I came across a Native American concept of Wetiko which describes precisely the same phenomenon. Wetiko is the spelling used by the Cree and there are other versions including wintiko and windigo used by other tribal groups. They spell the name with lower case, but I see Wetiko as a proper noun as with Archons and prefer a capital. I first saw an article about Wetiko by writer and researcher Paul Levy which so synced with what I had been writing about the computer/operator disconnection and later the Archons. I then read his book, the fascinating *Dispelling Wetiko, Breaking the Spell of Evil*. The parallels between what I had concluded long before and the Native American concept of Wetiko were so clear and obvious that it was almost funny. For Wetiko see the Gnostic Archons for sure and the Jinn, the Predators, and every other name for a force of evil, inversion and chaos. Wetiko is the Native American name for the force that divides the computer from

the operator (Fig 21). Indigenous author Jack D. Forbes, a founder of the Native American movement in the 1960s, wrote another book about Wetiko entitled *Columbus And Other Cannibals – The Wetiko Disease of Exploitation, Imperialism, and Terrorism* which I also read. Forbes says that Wetiko refers to an evil person or spirit ‘who terrorizes other creatures by means of terrible acts, including cannibalism’. Zulu shaman Credo Mutwa told me that African accounts tell how cannibalism was brought into the world by the Chitauri ‘gods’ – another manifestation of Wetiko. The distinction between ‘evil person or spirit’ relates to Archons/Wetiko possessing a human or acting as pure consciousness. Wetiko is said to be a sickness of the soul or spirit and a state of being that takes but gives nothing back – the Cult and its operatives perfectly described. Black Hawk, a Native American war leader defending their lands from confiscation, said European invaders had ‘poisoned hearts’ – Wetiko hearts – and that this would spread to native societies. Mention of the heart is very significant as we shall shortly see. Forbes writes: ‘Tragically, the history of the world for the past 2,000 years is, in great part, the story of the epidemiology of the wetiko disease.’ Yes, and much longer. Forbes is correct when he says: ‘The wetikos destroyed Egypt and Babylon and Athens and Rome and Tenochtitlan [capital of the Aztec empire] and perhaps now they will destroy the entire earth.’ Evil, he said, is the number one export of a Wetiko culture – see its globalisation with ‘Covid’. Constant war, mass murder, suffering of all kinds, child abuse, Satanism, torture and human sacrifice are all expressions of Wetiko and the Wetiko possessed. The world is Wetiko made manifest, *but it doesn’t have to be*. There is a way out of this even now.

Figure 21: The mind 'virus' is known to Native Americans as 'Wetiko'. (Image by Neil Hague).

Cult of Wetiko

Wetiko is the Yaldabaoth frequency distortion that seeks to attach to human consciousness and absorb it into its own. Once this connection is made Wetiko can drive the perceptions of the target which they believe to be coming from their own mind. All the horrors of history and today from mass killers to Satanists, paedophiles like Jeffrey Epstein and other psychopaths, are the embodiment of Wetiko and express its state of being in all its grotesqueness. The Cult is Wetiko incarnate, Yaldabaoth incarnate, and it seeks to facilitate Wetiko assimilation of humanity in totality into its distortion by manipulating the population into low frequency states that match its own. Paul Levy writes: 'Holographically enforced within the psyche of every human being the wetiko virus pervades and underlies the entire field of consciousness, and can therefore potentially manifest through any one of us at any moment if we are not mindful.' The 'Covid' hoax has achieved this with many people, but others have not fallen into Wetiko's frequency lair. Players in the 'Covid' human catastrophe including Gates, Schwab, Tedros, Fauci, Whitty, Vallance, Johnson, Hancock, Ferguson, Drosten, and all the rest, including the psychopath psychologists, are expressions of Wetiko. This is why

they have no compassion or empathy and no emotional consequence for what they do that would make them stop doing it. Observe all the people who support the psychopaths in authority against the Pushbackers despite the damaging impact the psychopaths have on their own lives and their family's lives. You are again looking at Wetiko possession which prevents them seeing through the lies to the obvious scam going on. *Why can't they see it?* Wetiko won't let them see it. The perceptual divide that has now become a chasm is between the Wetikoed and the non-Wetikoed.

Paul Levy describes Wetiko in the same way that I have long described the Archontic force. They are the same distorted consciousness operating across dimensions of reality: '... the subtle body of wetiko is not located in the third dimension of space and time, literally existing in another dimension ... it is able to affect ordinary lives by mysteriously interpenetrating into our three-dimensional world.' Wetiko does this through its incarnate representatives in the Cult and by weaving itself into The Field which on our level of reality is the electromagnetic information field of the simulation or Matrix. More than that, the simulation *is* Wetiko / Yaldabaoth. Caleb Scharf, Director of Astrobiology at Columbia University, has speculated that 'alien life' could be so advanced that it has transcribed itself into the quantum realm to become what we call physics. He said intelligence indistinguishable from the fabric of the Universe would solve many of its greatest mysteries:

Perhaps hyper-advanced life isn't just external. Perhaps it's already all around. It is embedded in what we perceive to be physics itself, from the root behaviour of particles and fields to the phenomena of complexity and emergence ... In other words, life might not just be in the equations. It might BE the equations [My emphasis].

Scharf said it is possible that 'we don't recognise advanced life because it forms an integral and unsuspecting part of what we've considered to be the natural world'. I agree. Wetiko/Yaldabaoth *is* the simulation. We are literally in the body of the beast. But that doesn't mean it has to control us. We all have the power to overcome Wetiko

influence and the Cult knows that. I doubt it sleeps too well because it knows that.

Which Field?

This, I suggest, is how it all works. There are two Fields. One is the fierce electromagnetic light of the Matrix within the speed of light; the other is the 'watery light' of The Field beyond the walls of the Matrix that connects with the Great Infinity. Five-sense mind and the decoding systems of the body attach us to the Field of Matrix light. They have to or we could not experience this reality. Five-sense mind sees only the Matrix Field of information while our expanded consciousness is part of the Infinity Field. When we open our minds, and most importantly our hearts, to the Infinity Field we have a mission control which gives us an expanded perspective, a road map, to understand the nature of the five-sense world. If we are isolated only in five-sense mind there is no mission control. We're on our own trying to understand a world that's constantly feeding us information to ensure we do not understand. People in this state can feel 'lost' and bewildered with no direction or radar. You can see ever more clearly those who are influenced by the Fields of Big Infinity or little five-sense mind simply by their views and behaviour with regard to the 'Covid' hoax. We have had this division throughout known human history with the mass of the people on one side and individuals who could see and intuit beyond the walls of the simulation – Plato's prisoner who broke out of the cave and saw reality for what it is. Such people have always been targeted by Wetiko/Archon-possessed authority, burned at the stake or demonised as mad, bad and dangerous. The Cult today and its global network of 'anti-hate', 'anti-fascist' Woke groups are all expressions of Wetiko attacking those exposing the conspiracy, 'Covid' lies and the 'vaccine' agenda.

Woke as a whole is Wetiko which explains its black and white mentality and how at one it is with the Wetiko-possessed Cult. Paul Levy said: 'To be in this paradigm is to still be under the thrall of a two-valued logic – where things are either true or false – of a

wetikoized mind.’ Wetiko consciousness is in a permanent rage, therefore so is Woke, and then there is Woke inversion and contradiction. ‘Anti-fascists’ act like fascists because fascists *and* ‘anti-fascists’ are both Wetiko at work. Political parties act the same while claiming to be different for the same reason. Secret society and satanic rituals are attaching initiates to Wetiko and the cold, ruthless, psychopathic mentality that secures the positions of power all over the world is Wetiko. Reframing ‘training programmes’ have the same cumulative effect of attaching Wetiko and we have their graduates described as automatons and robots with a cold, psychopathic, uncaring demeanour. They are all traits of Wetiko possession and look how many times they have been described in this book and elsewhere with regard to personnel behind ‘Covid’ including the police and medical profession. Climbing the greasy pole in any profession in a Wetiko society requires traits of Wetiko to get there and that is particularly true of politics which is not about fair competition and pre-eminence of ideas. It is founded on how many backs you can stab and arses you can lick. This culminated in the global ‘Covid’ coordination between the Wetiko possessed who pulled it off in all the different countries without a trace of empathy and compassion for their impact on humans. Our sight sense can see only holographic form and not the Field which connects holographic form. Therefore we perceive ‘physical’ objects with ‘space’ in between. In fact that ‘space’ is energy/consciousness operating on multiple frequencies. One of them is Wetiko and that connects the Cult psychopaths, those who submit to the psychopaths, and those who serve the psychopaths in the media operations of the world. Wetiko is Gates. Wetiko is the mask-wearing submissive. Wetiko is the fake journalist and ‘fact-checker’. The Wetiko Field is coordinating the whole thing. Psychopaths, gofers, media operatives, ‘anti-hate’ hate groups, ‘fact-checkers’ and submissive people work as one unit *even without human coordination* because they are attached to the *same* Field which is organising it all (Fig 22). Paul Levy is here describing how Wetiko-possessed people are drawn together and refuse to let any information breach their rigid

perceptions. He was writing long before 'Covid', but I think you will recognise followers of the 'Covid' religion *oh just a little bit*:

People who are channelling the vibratory frequency of wetiko align with each other through psychic resonance to reinforce their unspoken shared agreement so as to uphold their deranged view of reality. Once an unconscious content takes possession of certain individuals, it irresistibly draws them together by mutual attraction and knits them into groups tied together by their shared madness that can easily swell into an avalanche of insanity.

A psychic epidemic is a closed system, which is to say that it is insular and not open to any new information or informing influences from the outside world which contradict its fixed, limited, and limiting perspective.

There we have the Woke mind and the 'Covid' mind. Compatible resonance draws the awakening together, too, which is clearly happening today.

Figure 22: The Wetiko Field from which the Cult pyramid and its personnel are made manifest. (Image by Neil Hague).

Spiritual servitude

Wetiko doesn't care about humans. It's not human; it just possesses humans for its own ends and the effect (depending on the scale of

possession) can be anything from extreme psychopathy to unquestioning obedience. Wetiko's worst nightmare is for human consciousness to expand beyond the simulation. Everything is focussed on stopping that happening through control of information, thus perception, thus frequency. The 'education system', media, science, medicine, academia, are all geared to maintaining humanity in five-sense servitude as is the constant stimulation of low-vibrational mental and emotional states (see 'Covid'). Wetiko seeks to dominate those subconscious spaces between five-sense perception and expanded consciousness where the computer meets the operator. From these subconscious hiding places Wetiko speaks to us to trigger urges and desires that we take to be our own and manipulate us into anything from low-vibrational to psychopathic states. Remember how Islam describes the Jinn as invisible tricksters that 'whisper' and confuse. Wetiko is the origin of the 'trickster god' theme that you find in cultures all over the world. Jinn, like the Archons, are Wetiko which is terrified of humans awakening and reconnecting with our true self for then its energy source has gone. With that the feedback loop breaks between Wetiko and human perception that provides the energetic momentum on which its very existence depends as a force of evil. Humans are both its target and its source of survival, but only if we are operating in low-vibrational states of fear, hate, depression and the background anxiety that most people suffer. We are Wetiko's target because we are its key to survival. It needs us, not the other way round. Paul Levy writes:

A vampire has no intrinsic, independent, substantial existence in its own right; it only exists in relation to us. The pathogenic, vampiric mind-parasite called wetiko is nothing in itself – not being able to exist from its own side – yet it has a 'virtual reality' such that it can potentially destroy our species ...

...The fact that a vampire is not reflected by a mirror can also mean that what we need to see is that there's nothing, no-thing to see, other than ourselves. The fact that wetiko is the expression of something inside of us means that the cure for wetiko is with us as well. The critical issue is finding this cure within us and then putting it into effect.

Evil begets evil because if evil does not constantly expand and find new sources of energetic sustenance its evil, its *distortion*, dies with the assimilation into balance and harmony. Love is the garlic to Wetiko's vampire. Evil, the absence of love, cannot exist in the presence of love. I think I see a way out of here. I have emphasised so many times over the decades that the Archons/Wetiko and their Cult are not all powerful. *They are not*. I don't care how it looks even now *they are not*. I have not called them little boys in short trousers for effect. I have said it because it is true. Wetiko's insatiable desire for power over others is not a sign of its omnipotence, but its insecurity. Paul Levy writes: 'Due to the primal fear which ultimately drives it and which it is driven to cultivate, wetiko's body politic has an intrinsic and insistent need for centralising power and control so as to create imagined safety for itself.' *Yeaaaaaaes!* Exactly! Why does Wetiko want humans in an ongoing state of fear? Wetiko itself *is* fear and it is petrified of love. As evil is an absence of love, so love is an absence of fear. Love conquers all and *especially* Wetiko which *is* fear. Wetiko brought fear into the world when it wasn't here before. *Fear* was the 'fall', the fall into low-frequency ignorance and illusion – fear is **False Emotion Appearing Real**. The simulation is driven and energised by fear because Wetiko/Yaldabaoth (fear) *are* the simulation. Fear is the absence of love and Wetiko is the absence of love.

Wetiko today

We can now view current events from this level of perspective. The 'Covid' hoax has generated momentous amounts of ongoing fear, anxiety, depression and despair which have empowered Wetiko. No wonder people like Gates have been the instigators when they are Wetiko incarnate and exhibit every trait of Wetiko in the extreme. See how cold and unemotional these people are like Gates and his cronies, how dead of eye they are. That's Wetiko. Sabbatians are Wetiko and everything they control including the World Health Organization, Big Pharma and the 'vaccine' makers, national 'health'

hierarchies, corporate media, Silicon Valley, the banking system, and the United Nations with its planned transformation into world government. All are controlled and possessed by the Wetiko distortion into distorting human society in its image. We are with this knowledge at the gateway to understanding the world. Divisions of race, culture, creed and sexuality are diversions to hide the real division between those possessed and influenced by Wetiko and those that are not. The 'Covid' hoax has brought both clearly into view. Human behaviour is not about race. Tyrants and dictatorships come in all colours and creeds. What unites the US president bombing the innocent and an African tribe committing genocide against another as in Rwanda? What unites them? *Wetiko*. All wars are Wetiko, all genocide is Wetiko, all hunger over centuries in a world of plenty is Wetiko. Children going to bed hungry, including in the West, is Wetiko. Cult-generated Woke racial divisions that focus on the body are designed to obscure the reality that divisions in behaviour are manifestations of mind, not body. Obsession with body identity and group judgement is a means to divert attention from the real source of behaviour – mind and perception. Conflict sown by the Woke both within themselves and with their target groups are Wetiko providing lunch for itself through still more agents of the division, chaos, and fear on which it feeds. The Cult is seeking to assimilate the entirety of humanity and all children and young people into the Wetiko frequency by manipulating them into states of fear and despair. Witness all the suicide and psychological unravelling since the spring of 2020. Wetiko psychopaths want to impose a state of unquestioning obedience to authority which is no more than a conduit for Wetiko to enforce its will and assimilate humanity into itself. It needs us to believe that resistance is futile when it fears resistance and even more so the game-changing non-cooperation with its impositions. It can use violent resistance for its benefit. Violent impositions and violent resistance are *both* Wetiko. The Power of Love with its Power of No will sweep Wetiko from our world. Wetiko and its Cult know that. They just don't want us to know.

AI Wetiko

This brings me to AI or artificial intelligence and something else Wetikos don't want us to know. What is AI *really*? I know about computer code algorithms and AI that learns from data input. These, however, are more diversions, the expeditionary force, for the real AI that they want to connect to the human brain as promoted by Silicon Valley Wetikos like Kurzweil. What is this AI? It is the frequency of *Wetiko*, the frequency of the Archons. The connection of AI to the human brain is the connection of the Wetiko frequency to create a Wetiko hive mind and complete the job of assimilation. The hive mind is planned to be controlled from Israel and China which are both 100 percent owned by Wetiko Sabbatians. The assimilation process has been going on minute by minute in the 'smart' era which fused with the 'Covid' era. We are told that social media is scrambling the minds of the young and changing their personality. This is true, but what is social media? Look more deeply at how it works, how it creates divisions and conflict, the hostility and cruelty, the targeting of people until they are destroyed. That's Wetiko. Social media is manipulated to tune people to the Wetiko frequency with all the emotional exploitation tricks employed by platforms like Facebook and its Wetiko front man, Zuckerberg. Facebook's Instagram announced a new platform for children to overcome a legal bar on them using the main site. This is more Wetiko exploitation and manipulation of kids. Amnesty International likened the plan to foxes offering to guard the henhouse and said it was incompatible with human rights. Since when did Wetiko or Zuckerberg (I repeat myself) care about that? Would Brin and Page at Google, Wojcicki at YouTube, Bezos at Amazon and whoever the hell runs Twitter act as they do if they were not channelling Wetiko? Would those who are developing technologies for no other reason than human control? How about those designing and selling technologies to kill people and Big Pharma drug and 'vaccine' producers who know they will end or devastate lives? Quite a thought for these people to consider is that if you are Wetiko in a human life you are Wetiko on the 'other side' unless your frequency

changes and that can only change by a change of perception which becomes a change of behaviour. Where Gates is going does not bear thinking about although perhaps that's exactly where he wants to go. Either way, that's where he's going. His frequency will make it so.

The frequency lair

I have been saying for a long time that a big part of the addiction to smartphones and devices is that a frequency is coming off them that entraps the mind. People spend ages on their phones and sometimes even a minute or so after they put them down they pick them up again and it all repeats. 'Covid' lockdowns will have increased this addiction a million times for obvious reasons. Addictions to alcohol overindulgence and drugs are another way that Wetiko entraps consciousness to attach to its own. Both are symptoms of low-vibrational psychological distress which alcoholism and drug addiction further compound. Do we think it's really a coincidence that access to them is made so easy while potions that can take people into realms beyond the simulation are banned and illegal? I have explored smartphone addiction in other books, the scale is mind-blowing, and that level of addiction does not come without help. Tech companies that make these phones are Wetiko and they will have no qualms about destroying the minds of children. We are seeing again with these companies the Wetiko perceptual combination of psychopathic enforcers and weak and meek unquestioning compliance by the rank and file.

The global Smart Grid is the Wetiko Grid and it is crucial to complete the Cult endgame. The simulation is radiation and we are being deluged with technological radiation on a devastating scale. Wetiko frauds like Elon Musk serve Cult interests while occasionally criticising them to maintain his street-cred. 5G and other forms of Wi-Fi are being directed at the earth from space on a volume and scale that goes on increasing by the day. Elon Musk's (officially) SpaceX Starlink project is in the process of putting tens of thousands of satellites in low orbit to cover every inch of the planet with 5G and other Wi-Fi to create Kurzweil's global 'cloud' to which the

human mind is planned to be attached very soon. SpaceX has approval to operate 12,000 satellites with more than 1,300 launched at the time of writing and applications filed for 30,000 more. Other operators in the Wi-Fi, 5G, low-orbit satellite market include OneWeb (UK), Telesat (Canada), and AST & Science (US). Musk tells us that AI could be the end of humanity and then launches a company called Neuralink to connect the human brain to computers. Musk's (in theory) Tesla company is building electric cars and the driverless vehicles of the smart control grid. As frauds and bullshitters go Elon Musk in my opinion is Major League.

5G and technological radiation in general are destructive to human health, genetics and psychology and increasing the strength of artificial radiation underpins the five-sense perceptual bubbles which are themselves expressions of radiation or electromagnetism. Freedom activist John Whitehead was so right with his 'databit by databit, we are building our own electronic concentration camps'. The Smart Grid and 5G is a means to control the human mind and infuse perceptual information into The Field to influence anyone in sync with its frequency. You can change perception and behaviour en masse if you can manipulate the population into those levels of frequency and this is happening all around us today. The arrogance of Musk and his fellow Cult operatives knows no bounds in the way that we see with Gates. Musk's satellites are so many in number already they are changing the night sky when viewed from Earth. The astronomy community has complained about this and they have seen nothing yet. Some consequences of Musk's Wetiko hubris include: Radiation; visible pollution of the night sky; interference with astronomy and meteorology; ground and water pollution from intensive use of increasingly many spaceports; accumulating space debris; continual deorbiting and burning up of aging satellites, polluting the atmosphere with toxic dust and smoke; and ever-increasing likelihood of collisions. A collective public open letter of complaint to Musk said:

We are writing to you ... because SpaceX is in process of surrounding the Earth with a network of thousands of satellites whose very purpose is to irradiate every square inch of the

Earth. SpaceX, like everyone else, is treating the radiation as if it were not there. As if the mitochondria in our cells do not depend on electrons moving undisturbed from the food we digest to the oxygen we breathe.

As if our nervous systems and our hearts are not subject to radio frequency interference like any piece of electronic equipment. As if the cancer, diabetes, and heart disease that now afflict a majority of the Earth's population are not metabolic diseases that result from interference with our cellular machinery. As if insects everywhere, and the birds and animals that eat them, are not starving to death as a result.

People like Musk and Gates believe in their limitless Wetiko arrogance that they can do whatever they like to the world because they own it. Consequences for humanity are irrelevant. It's absolutely time that we stopped taking this shit from these self-styled masters of the Earth when you consider where this is going.

Why is the Cult so anti-human?

I hear this question often: Why would they do this when it will affect them, too? Ah, but will it? Who is this *them*? Forget their bodies. They are just vehicles for Wetiko consciousness. When you break it all down to the foundations we are looking at a state of severely distorted consciousness targeting another state of consciousness for assimilation. The rest is detail. The simulation is the fly-trap in which unique sensations of the five senses create a cycle of addiction called reincarnation. Renegade Minds see that everything which happens in our reality is a smaller version of the whole picture in line with the holographic principle. Addiction to the radiation of smart technology is a smaller version of addiction to the whole simulation. Connecting the body/brain to AI is taking that addiction on a giant step further to total ongoing control by assimilating human incarnate consciousness into Wetiko. I have watched during the 'Covid' hoax how many are becoming ever more profoundly attached to Wetiko's perceptual calling cards of aggressive response to any other point of view ('There is no other god but me'), psychopathic lack of compassion and empathy, and servile submission to the narrative and will of authority. Wetiko is the psychopaths *and* subservience to psychopaths. The Cult of Wetiko is

so anti-human because it is *not* human. It embarked on a mission to destroy human by targeting everything that it means to be human and to survive as human. 'Covid' is not the end, just a means to an end. The Cult with its Wetiko consciousness is seeking to change Earth systems, including the atmosphere, to suit them, not humans. The gathering bombardment of 5G alone from ground and space is dramatically changing The Field with which the five senses interact. There is so much more to come if we sit on our hands and hope it will all go away. It is not meant to go away. It is meant to get ever more extreme and we need to face that while we still can – just.

Carbon dioxide is the gas of life. Without that human is over. Kaput, gone, history. No natural world, no human. The Cult has created a cock and bull story about carbon dioxide and climate change to justify its reduction to the point where Gates and the ignoramus Biden 'climate chief' John Kerry want to suck it out of the atmosphere. Kerry wants to do this because his master Gates does. Wetikos have made the gas of life a demon with the usual support from the Wokers of Extinction Rebellion and similar organisations and the bewildered puppet-child that is Greta Thunberg who was put on the world stage by Klaus Schwab and the World Economic Forum. The name Extinction Rebellion is both ironic and as always Wetiko inversion. The gas that we need to survive must be reduced to save us from extinction. The most basic need of human is oxygen and we now have billions walking around in face nappies depriving body and brain of this essential requirement of human existence. More than that 5G at 60 gigahertz interacts with the oxygen molecule to reduce the amount of oxygen the body can absorb into the bloodstream. The obvious knock-on consequences of that for respiratory and cognitive problems and life itself need no further explanation. Psychopaths like Musk are assembling a global system of satellites to deluge the human atmosphere with this insanity. The man should be in jail. Here we have two most basic of human needs, oxygen and carbon dioxide, being dismantled.

Two others, water and food, are getting similar treatment with the United Nations Agendas 21 and 2030 – the Great Reset – planning to

centrally control all water and food supplies. People will not even own rain water that falls on their land. Food is affected at the most basic level by reducing carbon dioxide. We have genetic modification or GMO infiltrating the food chain on a mass scale, pesticides and herbicides polluting the air and destroying the soil. Freshwater fish that provide livelihoods for 60 million people and feed hundreds of millions worldwide are being 'pushed to the brink' according the conservationists while climate change is the only focus. Now we have Gates and Schwab wanting to dispense with current food sources all together and replace them with a synthetic version which the Wetiko Cult would control in terms of production and who eats and who doesn't. We have been on the Totalitarian Tiptoe to this for more than 60 years as food has become ever more processed and full of chemical shite to the point today when it's not natural food at all. As Dr Tom Cowan says: 'If it has a label don't eat it.' Bill Gates is now the biggest owner of farmland in the United States and he does nothing without an ulterior motive involving the Cult. Klaus Schwab wrote: 'To feed the world in the next 50 years we will need to produce as much food as was produced in the last 10,000 years ... food security will only be achieved, however, if regulations on genetically modified foods are adapted to reflect the reality that gene editing offers a precise, efficient and safe method of improving crops.' Liar. People and the world are being targeted with aluminium through vaccines, chemtrails, food, drink cans, and endless other sources when aluminium has been linked to many health issues including dementia which is increasing year after year. Insects, bees and wildlife essential to the food chain are being deleted by pesticides, herbicides and radiation which 5G is dramatically increasing with 6G and 7G to come. The pollinating bee population is being devastated while wildlife including birds, dolphins and whales are having their natural radar blocked by the effects of ever-increasing radiation. In the summer windscreens used to be splattered with insects so numerous were they. It doesn't happen now. Where have they gone?

Synthetic everything

The Cult is introducing genetically-modified versions of trees, plants and insects including a Gates-funded project to unleash hundreds of millions of genetically-modified, lab-altered and patented male mosquitoes to mate with wild mosquitoes and induce genetic flaws that cause them to die out. Clinically-insane Gates-funded Japanese researchers have developed mosquitos that spread vaccine and are dubbed 'flying vaccinators'. Gates is funding the modification of weather patterns in part to sell the myth that this is caused by carbon dioxide and he's funding geoengineering of the skies to change the atmosphere. Some of this came to light with the Gates-backed plan to release tonnes of chalk into the atmosphere to 'deflect the Sun and cool the planet'. Funny how they do this while the heating effect of the Sun is not factored into climate projections focussed on carbon dioxide. The reason is that they want to reduce carbon dioxide (so don't mention the Sun), but at the same time they do want to reduce the impact of the Sun which is so essential to human life and health. I have mentioned the sun-cholesterol-vitamin D connection as they demonise the Sun with warnings about skin cancer (caused by the chemicals in sun cream they tell you to splash on). They come from the other end of the process with statin drugs to reduce cholesterol that turns sunlight into vitamin D. A lack of vitamin D leads to a long list of health effects and how vitamin D levels must have fallen with people confined to their homes over 'Covid'. Gates is funding other forms of geoengineering and most importantly chemtrails which are dropping heavy metals, aluminium and self-replicating nanotechnology onto the Earth which is killing the natural world. See *Everything You Need To Know, But Have Never Been Told* for the detailed background to this.

Every human system is being targeted for deletion by a force that's not human. The Wetiko Cult has embarked on the process of transforming the human body from biological to synthetic biological as I have explained. Biological is being replaced by the artificial and synthetic – Archontic 'countermimicry' – right across human society. The plan eventually is to dispense with the human body altogether

and absorb human consciousness – which it wouldn't really be by then – into cyberspace (the simulation which is Wetiko/Yaldabaoth). Preparations for that are already happening if people would care to look. The alternative media rightly warns about globalism and 'the globalists', but this is far bigger than that and represents the end of the human race as we know it. The 'bad copy' of prime reality that Gnostics describe was a bad copy of harmony, wonder and beauty to start with before Wetiko/Yaldabaoth set out to change the simulated 'copy' into something very different. The process was slow to start with. Entrapped humans in the simulation timeline were not technologically aware and they had to be brought up to intellectual speed while being suppressed spiritually to the point where they could build their own prison while having no idea they were doing so. We have now reached that stage where technological intellect has the potential to destroy us and that's why events are moving so fast. Central American shaman Don Juan Matus said:

Think for a moment, and tell me how you would explain the contradictions between the intelligence of man the engineer and the stupidity of his systems of belief, or the stupidity of his contradictory behaviour. Sorcerers believe that the predators have given us our systems of beliefs, our ideas of good and evil; our social mores. They are the ones who set up our dreams of success or failure. They have given us covetousness, greed, and cowardice. It is the predator who makes us complacent, routinary, and egomaniacal.

In order to keep us obedient and meek and weak, the predators engaged themselves in a stupendous manoeuvre – stupendous, of course, from the point of view of a fighting strategist; a horrendous manoeuvre from the point of those who suffer it. They gave us their mind. The predators' mind is baroque, contradictory, morose, filled with the fear of being discovered any minute now.

For 'predators' see Wetiko, Archons, Yaldabaoth, Jinn, and all the other versions of the same phenomenon in cultures and religions all over the world. The theme is always the same because it's true and it's real. We have reached the point where we have to deal with it. The question is – how?

Don't fight – walk away

I thought I'd use a controversial subheading to get things moving in terms of our response to global fascism. What do you mean 'don't fight'? What do you mean 'walk away'? We've got to fight. We can't walk away. Well, it depends what we mean by fight and walk away. If fighting means physical combat we are playing Wetiko's game and falling for its trap. It wants us to get angry, aggressive, and direct hate and hostility at the enemy we think we must fight. Every war, every battle, every conflict, has been fought with Wetiko leading both sides. It's what it does. Wetiko wants a fight, anywhere, any place. Just hit me, son, so I can hit you back. Wetiko hits Wetiko and Wetiko hits Wetiko in return. I am very forthright as you can see in exposing Wetikos of the Cult, but I don't hate them. I refuse to hate them. It's what they want. What you hate you become. What you *fight* you become. Wokers, 'anti-haters' and 'anti-fascists' prove this every time they reach for their keyboards or don their balaclavas. By walk away I mean to disengage from Wetiko which includes ceasing to cooperate with its tyranny. Paul Levy says of Wetiko:

The way to 'defeat' evil is not to try to destroy it (for then, in playing evil's game, we have already lost), but rather, to find the invulnerable place within ourselves where evil is unable to vanquish us – this is to truly 'win' our battle with evil.

Wetiko is everywhere in human society and it's been on steroids since the 'Covid' hoax. Every shouting match over wearing masks has Wetiko wearing a mask and Wetiko not wearing one. It's an electrical circuit of push and resist, push and resist, with Wetiko pushing *and* resisting. Each polarity is Wetiko empowering itself. Dictionary definitions of 'resist' include 'opposing, refusing to accept or comply with' and the word to focus on is 'opposing'. What form does this take – setting police cars alight or 'refusing to accept or comply with'? The former is Wetiko opposing Wetiko while the other points the way forward. This is the difference between those aggressively demanding that government fascism must be obeyed who stand in stark contrast to the great majority of Pushbackers. We saw this clearly with a march by thousands of Pushbackers against lockdown in London followed days later by a Woker-hijacked

protest in Bristol in which police cars were set on fire. Masks were virtually absent in London and widespread in Bristol. Wetiko wants lockdown on every level of society and infuses its aggression to police it through its unknowing stooges. Lockdown protesters are the ones with the smiling faces and the hugs, The two blatantly obvious states of being – getting more obvious by the day – are the result of Wokers and their like becoming ever more influenced by the simulation Field of Wetiko and Pushbackers ever more influenced by The Field of a far higher vibration beyond the simulation. Wetiko can't invade the heart which is where most lockdown opponents are coming from. It's the heart that allows them to see through the lies to the truth in ways I will be highlighting.

Renegade Minds know that calmness is the place from which wisdom comes. You won't find wisdom in a hissing fit and wisdom is what we need in abundance right now. Calmness is not weakness – you don't have to scream at the top of your voice to be strong. Calmness is indeed a sign of strength. 'No' means I'm not doing it. NOOOO!!! doesn't mean you're not doing it even more. Volume does not advance 'No – I'm not doing it'. You are just not doing it. Wetiko possessed and influenced don't know how to deal with that. Wetiko wants a fight and we should not give it one. What it needs more than anything is our *cooperation* and we should not give that either. Mass rallies and marches are great in that they are a visual representation of feeling, but if it ends there they are irrelevant. You demand that Wetikos act differently? Well, they're not going to are they? They are Wetikos. We don't need to waste our time demanding that something doesn't happen when that will make no difference. We need to delete the means that *allows* it to happen. This, invariably, is our cooperation. You can demand a child stop firing a peashooter at the dog or you can refuse to buy the peashooter. If you provide the means you are cooperating with the dog being smacked on the nose with a pea. How can the authorities enforce mask-wearing if millions in a country refuse? What if the 74 million Pushbackers that voted for Trump in 2020 refused to wear masks, close their businesses or stay in their homes. It would be unenforceable. The

few control the many through the compliance of the many and that's always been the dynamic be it 'Covid' regulations or the Roman Empire. I know people can find it intimidating to say no to authority or stand out in a crowd for being the only one with a face on display; but it has to be done or it's over. I hope I've made clear in this book that where this is going will be far more intimidating than standing up now and saying 'No' – I will not cooperate with my own enslavement and that of my children. There might be consequences for some initially, although not so if enough do the same. The question that must be addressed is what is going to happen if we don't? It is time to be strong and unyieldingly so. No means no. Not here and there, but *everywhere* and *always*. I have refused to wear a mask and obey all the other nonsense. I will not comply with tyranny. I repeat: Fascism is not imposed by fascists – there are never enough of them. Fascism is imposed by the population acquiescing to fascism. *I will not do it*. I will die first, or my body will. Living meekly under fascism is a form of death anyway, the death of the spirit that Martin Luther King described.

Making things happen

We must not despair. This is not over till it's over and it's far from that. The 'fat lady' must refuse to sing. The longer the 'Covid' hoax has dragged on and impacted on more lives we have seen an awakening of phenomenal numbers of people worldwide to the realisation that what they have believed all their lives is not how the world really is. Research published by the system-serving University of Bristol and King's College London in February, 2021, concluded: 'One in every 11 people in Britain say they trust David Icke's take on the coronavirus pandemic.' It will be more by now and we have gathering numbers to build on. We must urgently progress from seeing the scam to ceasing to cooperate with it. Prominent German lawyer Reiner Fuellmich, also licenced to practice law in America, is doing a magnificent job taking the legal route to bring the psychopaths to justice through a second Nuremberg tribunal for crimes against humanity. Fuellmich has an impressive record of

beating the elite in court and he formed the German Corona Investigative Committee to pursue civil charges against the main perpetrators with a view to triggering criminal charges. Most importantly he has grasped the foundation of the hoax – the PCR test not testing for the ‘virus’ – and Christian Drosten is therefore on his charge sheet along with Gates frontman Tedros at the World Health Organization. Major players must not be allowed to inflict their horrors on the human race without being brought to book. A life sentence must follow for Bill Gates and the rest of them. A group of researchers has also indicted the government of Norway for crimes against humanity with copies sent to the police and the International Criminal Court. The lawsuit cites participation in an internationally-planned false pandemic and violation of international law and human rights, the European Commission’s definition of human rights by coercive rules, Nuremberg and Hague rules on fundamental human rights, and the Norwegian constitution. We must take the initiative from hereon and not just complain, protest and react.

There are practical ways to support vital mass non-cooperation. Organising in numbers is one. Lockdown marches in London in the spring in 2021 were mass non-cooperation that the authorities could not stop. There were too many people. Hundreds of thousands walked the London streets in the centre of the road for mile after mile while the Face-Nappies could only look on. They were determined, but calm, and just *did it* with no histrionics and lots of smiles. The police were impotent. Others are organising group shopping without masks for mutual support and imagine if that was happening all over. Policing it would be impossible. If the store refuses to serve people in these circumstances they would be faced with a long line of trolleys full of goods standing on their own and everything would have to be returned to the shelves. How would they cope with that if it kept happening? I am talking here about moving on from complaining to being pro-active; from watching things happen to making things happen. I include in this our relationship with the police. The behaviour of many Face-Nappies

has been disgraceful and anyone who thinks they would never find concentration camp guards in the 'enlightened' modern era have had that myth busted big-time. The period and setting may change – Wetikos never do. I watched film footage from a London march in which a police thug viciously kicked a protestor on the floor who had done nothing. His fellow Face-Nappies stood in a ring protecting him. What he did was a criminal assault and with a crowd far outnumbering the police this can no longer be allowed to happen unchallenged. I get it when people chant 'shame on you' in these circumstances, but that is no longer enough. They *have* no shame those who do this. Crowds needs to start making a citizen's arrest of the police who commit criminal offences and brutally attack innocent people and defenceless women. A citizen's arrest can be made under section 24A of the UK Police and Criminal Evidence (PACE) Act of 1984 and you will find something similar in other countries. I prefer to call it a Common Law arrest rather than citizen's for reasons I will come to shortly. Anyone can arrest a person committing an indictable offence or if they have reasonable grounds to suspect they are committing an indictable offence. On both counts the attack by the police thug would have fallen into this category. A citizen's arrest can be made to stop someone:

- Causing physical injury to himself or any other person
- Suffering physical injury
- Causing loss of or damage to property
- Making off before a constable can assume responsibility for him

A citizen's arrest may also be made to prevent a breach of the peace under Common Law and if they believe a breach of the peace will happen or anything related to harm likely to be done or already done in their presence. This is the way to go I think – the Common Law version. If police know that the crowd and members of the public will no longer be standing and watching while they commit

their thuggery and crimes they will think twice about acting like Brownshirts and Blackshirts.

Common Law – common sense

Mention of Common Law is very important. Most people think the law is the law as in one law. This is not the case. There are two bodies of law, Common Law and Statute Law, and they are not the same. Common Law is founded on the simple premise of do no harm. It does not recognise victimless crimes in which no harm is done while Statute Law does. There is a Statute Law against almost everything. So what is Statute Law? Amazingly it's the law of the *sea* that was brought ashore by the Cult to override the law of the land which is Common Law. They had no right to do this and as always they did it anyway. They had to. They could not impose their will on the people through Common Law which only applies to do no harm. How could you stitch up the fine detail of people's lives with that? Instead they took the law of the sea, or Admiralty Law, and applied it to the population. Statute Law refers to all the laws spewing out of governments and their agencies including all the fascist laws and regulations relating to 'Covid'. The key point to make is that Statute Law is *contract law*. It only applies between *contracting* corporations. Most police officers don't even know this. They have to be kept in the dark, too. Long ago when merchants and their sailing ships began to trade with different countries a contractual law was developed called Admiralty Law and other names. Again it only applied to *contracts* agreed between *corporate* entities. If there is no agreed contract the law of the sea had no jurisdiction *and that still applies to its new alias of Statute Law*. The problem for the Cult when the law of the sea was brought ashore was an obvious one. People were not corporations and neither were government entities. To overcome the latter they made governments and all associated organisations corporations. All the institutions are *private corporations* and I mean governments and their agencies, local councils, police, courts, military, US states, the whole lot. Go to the

Dun and Bradstreet corporate listings website for confirmation that they are all corporations. You are arrested by a private corporation called the police by someone who is really a private security guard and they take you to court which is another private corporation. Neither have jurisdiction over you unless you consent and *contract* with them. This is why you hear the mantra about law enforcement policing by *consent* of the people. In truth the people 'consent' only in theory through monumental trickery.

Okay, the Cult overcame the corporate law problem by making governments and institutions corporate entities; but what about people? They are not corporations are they? Ah ... well in a sense, and *only* a sense, they are. Not people exactly – the illusion of people. The Cult creates a corporation in the name of everyone at the time that their birth certificate is issued. Note birth/ *berth* certificate and when you go to court under the law of the sea on land you stand in a *dock*. These are throwbacks to the origin. My Common Law name is David Vaughan Icke. The name of the corporation created by the government when I was born is called Mr David Vaughan Icke usually written in capitals as MR DAVID VAUGHAN ICKE. That is not me, the living, breathing man. It is a fictitious corporate entity. The trick is to make you think that David Vaughan Icke and MR DAVID VAUGHAN ICKE are the same thing. *They are not*. When police charge you and take you to court they are prosecuting the corporate entity and not the living, breathing, man or woman. They have to trick you into identifying as the corporate entity and contracting with them. Otherwise they have no jurisdiction. They do this through a language known as legalese. Lawful and legal are not the same either. Lawful relates to Common Law and legal relates to Statute Law. Legalese is the language of Statue Law which uses terms that mean one thing to the public and another in legalese. Notice that when a police officer tells someone why they are being charged he or she will say at the end: 'Do you understand?' To the public that means 'Do you comprehend?' In legalese it means 'Do you stand under me?' Do you stand under my authority? If you say

yes to the question you are unknowingly agreeing to give them jurisdiction over you in a contract between two corporate entities.

This is a confidence trick in every way. Contracts have to be agreed between informed parties and if you don't know that David Vaughan Icke is agreeing to be the corporation MR DAVID VAUGHAN ICKE you cannot knowingly agree to contract. They are deceiving you and another way they do this is to ask for proof of identity. You usually show them a driving licence or other document on which your corporate name is written. In doing so you are accepting that you are that corporate entity when you are not. Referring to yourself as a 'person' or 'citizen' is also identifying with your corporate fiction which is why I made the Common Law point about the citizen's arrest. If you are approached by a police officer you identify yourself immediately as a living, breathing, man or woman and say 'I do not consent, I do not contract with you and I do not understand' or stand under their authority. I have a Common Law birth certificate as a living man and these are available at no charge from commonlawcourt.com. Businesses registered under the Statute Law system means that its laws apply. There are, however, ways to run a business under Common Law. Remember all 'Covid' laws and regulations are Statute Law – the law of *contracts* and you do not have to contract. This doesn't mean that you can kill someone and get away with it. Common Law says do no harm and that applies to physical harm, financial harm etc. Police are employees of private corporations and there needs to be a new system of non-corporate Common Law constables operating outside the Statute Law system. If you go to davidicke.com and put Common Law into the search engine you will find videos that explain Common Law in much greater detail. It is definitely a road we should walk.

With all my heart

I have heard people say that we are in a spiritual war. I don't like the term 'war' with its Wetiko dynamic, but I know what they mean. Sweep aside all the bodily forms and we are in a situation in which two states of consciousness are seeking very different realities.

Wetiko wants upheaval, chaos, fear, suffering, conflict and control. The other wants love, peace, harmony, fairness and freedom. That's where we are. We should not fall for the idea that Wetiko is all-powerful and there's nothing we can do. Wetiko is not all-powerful. It's a joke, pathetic. It doesn't have to be, but it has made that choice for now. A handful of times over the years when I have felt the presence of its frequency I have allowed it to attach briefly so I could consciously observe its nature. The experience is not pleasant, the energy is heavy and dark, but the ease with which you can kick it back out the door shows that its real power is in persuading us that it has power. It's all a con. Wetiko is a con. It's a trickster and not a power that can control us if we unleash our own. The con is founded on manipulating humanity to give its power to Wetiko which recycles it back to present the illusion that it has power when its power is *ours* that we gave away. This happens on an energetic level and plays out in the world of the seen as humanity giving its power to Wetiko authority which uses that power to control the population when the power is only the power the population has handed over. How could it be any other way for billions to be controlled by a relative few? I have had experiences with people possessed by Wetiko and again you can kick its arse if you do it with an open heart. Oh yes – the *heart* which can transform the world of perceived 'matter'.

We are receiver-transmitters and processors of information, but what information and where from? Information is processed into perception in three main areas – the brain, the heart and the belly. These relate to thinking, knowing, and emotion. Wetiko wants us to be head and belly people which means we think within the confines of the Matrix simulation and low-vibrational emotional reaction scrambles balance and perception. A few minutes on social media and you see how emotion is the dominant force. Woke is all emotion and is therefore thought-free and fact-free. Our heart is something different. It *knows* while the head *thinks* and has to try to work it out because it doesn't know. The human energy field has seven prime vortexes which connect us with wider reality ([Fig 23](#)). Chakra means

'wheels of light' in the Sanskrit language of ancient India. The main ones are: The crown chakra on top of the head; brow (or 'third eye') chakra in the centre of the forehead; throat chakra; heart chakra in the centre of the chest; solar plexus chakra below the sternum; sacral chakra beneath the navel; and base chakra at the bottom of the spine. Each one has a particular function or functions. We feel anxiety and nervousness in the belly where the sacral chakra is located and this processes emotion that can affect the colon to give people 'the shits' or make them 'shit scared' when they are nervous. Chakras all play an important role, but the Mr and Mrs Big is the heart chakra which sits at the centre of the seven, above the chakras that connect us to the 'physical' and below those that connect with higher realms (or at least should). Here in the heart chakra we feel love, empathy and compassion – 'My heart goes out to you'. Those with closed hearts become literally 'heart-less' in their attitudes and behaviour (see Bill Gates). Native Americans portrayed Wetiko with what Paul Levy calls a 'frigid, icy heart, devoid of mercy' (see Bill Gates).

Figure 23: The chakra system which interpenetrates the human energy field. The heart chakra is the governor – or should be.

Wetiko trembles at the thought of heart energy which it cannot infiltrate. The frequency is too high. What it seeks to do instead is close the heart chakra vortex to block its perceptual and energetic influence. Psychopaths have 'hearts of stone' and emotionally-damaged people have 'heartache' and 'broken hearts'. The astonishing amount of heart disease is related to heart chakra

disruption with its fundamental connection to the 'physical' heart. Dr Tom Cowan has written an outstanding book challenging the belief that the heart is a pump and making the connection between the 'physical' and spiritual heart. Rudolph Steiner who was way ahead of his time said the same about the fallacy that the heart is a pump. *What?* The heart is not a pump? That's crazy, right? Everybody knows that. Read Cowan's *Human Heart, Cosmic Heart* and you will realise that the very idea of the heart as a pump is ridiculous when you see the evidence. How does blood in the feet so far from the heart get pumped horizontally up the body by the heart?? Cowan explains in the book the real reason why blood moves as it does. Our 'physical' heart is used to symbolise love when the source is really the heart vortex or spiritual heart which is our most powerful energetic connection to 'out there' expanded consciousness. That's why we feel *knowing* – intuitive knowing – in the centre of the chest. Knowing doesn't come from a process of thoughts leading to a conclusion. It is there in an instant all in one go. Our heart knows because of its connection to levels of awareness that *do* know. This is the meaning and source of intuition – intuitive *knowing*.

For the last more than 30 years of uncovering the global game and the nature of reality my heart has been my constant antenna for truth and accuracy. An American intelligence insider once said that I had quoted a disinformant in one of my books and yet I had only quoted the part that was true. He asked: 'How do you do that?' By using my heart antenna was the answer and anyone can do it. Heart-centred is how we are meant to be. With a closed heart chakra we withdraw into a closed mind and the bubble of five-sense reality. If you take a moment to focus your attention on the centre of your chest, picture a spinning wheel of light and see it opening and expanding. You will feel it happening, too, and perceptions of the heart like joy and love as the heart impacts on the mind as they interact. The more the chakra opens the more you will feel expressions of heart consciousness and as the process continues, and becomes part of you, insights and knowings will follow. An open
